ASCENT OF MONT BLANC WITHOUT GUIDES.—The Rev. C. Smyth, one of the Curates of St. Nicholas' Church, Great Yarmouth, who recently succeeded in reaching the summit of Mont Blanc without guides, says that on looking up the rugged sides of the mountain, seen from the Vale of Aoste, an avalanche of snow seemed the only height to be gained, and to attempt that was upon them. The party left from Courmayeur, at the very foot of the mountain. After great perseverance, the third not of Mont Blanc was reached on the second day, but a storm of hail and snow compelled the mountain-sailors to put in for further advance, and there was nothing else for it but to retreat to Courmayeur. The party then determined to make another trial from St. Gervais Last year two or three climbers succeeded in reaching the summit, from St. Gervaise, and returned the following day. "We planned a similar exploit, but instead of returning to St. Gervais, resolved to make a pass of sun, at, as usually the good people of Chamounix. In this we happily succeeded. The night's encampment was much pleasanter than the last, as the rocks were warmer. The spot selected for the bivouac was chosen under the summits, in three hours and a half. Here we rested for sixty years ago, De Saussure, the philosopher, built for his sci [illegible] We started at daybreak, and reached the Dome [illegible] one of the summits, in three hours and a half. Here we rested to carry on [illegible] and provisions for five hours more, to the real summit. The difficulties centered up by [illegible] were successively vanquished, and that with no violent sickness or hemorrhage. The most adventurous part of our journey now commenced. We wished, instead of returning to [illegible] to descend in Switzerland, on the Chamounix side. To [illegible] it was quite new ground, and [illegible] which we knew [illegible] account, and that of others successful mountaineers. Yet in one place alone did we experience [illegible] which in ascending from one glacier to another below the Dome [illegible] where people take provisions for eight days. We had [illegible] mons, by all sorts of narrow ledges of ice, over snow bridges of doubtful strength, but had to continually cut with our hatchets. In [illegible] ist the track, and being tolerably steep after the fatigues of the day, we [illegible] ourselves down to sleep under the trees. About midnight some one awoke, and [illegible] that it was bright as day, and morning up, we should return [illegible] our steps and see if we could find any accommodation there. To our joy we [illegible] a bayloft with some fresh hay in it, and many hours elapsed before any of us awoke from the sound and refreshing sleep we there obtained. One hour more brought us to Chamounix, and we are now [illegible]."

ANOTHER ASCENT.—D. W. C. sends to the papers an account of the ascent of Mont Blanc from a boy of seventeen (Mr. K. Alfred Chapman), who has just left Eton, at which time, with a single guide made the ascent of Monte Rosa most successfully. On the first day's trial he and his companions got to a height of 9000 feet, when he resolved next day to ascend to the top He bore the next day unwell, and by great exertion gained the Grands Mulets [illegible] good beginning. On Friday morning we started at 2 30 from the Grands Mulets, and after seven hours walking, arrived at the summit of the highest mountain in Europe, to the great gratification of his delighted companions. Two or three guides were unable to reach the summit, one being so handled by the snow that he was obliged to be hauled along by another, as it was quite unsafe to allow him any of the caravan alone. We two reached the summit—though I, for one, hardly knew I was there, as when once one has lost one's breath no at tempt to recover it is of any long time before one can [illegible] I was assisted slightly in the last quarter of an hour, as I had been by my friend advised to be so, and arrived in as little by as any of them; and oh! how happy I was when I got a good swig of champagne, as I was half dead of thirst; and I am sorry to say that, in my hurry to drink it, I quite forgot the health of the Queen, which I cannot now, at 120; stand there half an hour; and were down again at the Grands Mulets at 2 45, without hurrying at the least: we started about 1 45, stopped on the road at the usual place to treat our guides; and arrived at Chamounix at 5 30 quite fresh, to the astonishment of everybody."

TREATMENT OF FRENCH PRISONERS IN RUSSIA.—A considerable [illegible] of French prisoners [illegible] at Odessa. From some of the French [illegible] who have arrived at Constantinople, some curious particulars have been elicited. These officers concur unanimously in doing justice to the kind intentions of the Emperor of Russia with respect to themselves. His orders were full of kind foresight, and here the impress of a generous character. Alexander de Tsare orders that they should all receive fresh equipments (many of them wanted it badly enough); their pay also were to be paid if they had returned any at the depot. Unfortunately the Russian administration, which [illegible] is very great reputation for neutrality, saw in this an opportunity for a little profitable trade, which it took care not to neglect.

NATIONAL SPORTS.

DONCASTER, with its St. Leger, its Cup, and its ever-interesting sales, has held another right jovial anniversary, which has defeated the high hopes of the "Squire of Elberston," and given the "Squire of Wantage" a wondrous turn. The racing venue will be changed on Monday and Tuesday to Pontefract, where a very nice ten-event list awaits discussion on one of the very prettiest race-courses in the kingdom. Lichfield is also fixed for the same days; Leicester, for Wednesday and Thursday; Lanark, for Thursday and Friday; Manchester Autumn, for Thursday and Friday; and the Liverpool Hunt Races at Hoylake, for Saturday—so that the week will quite contribute its quota to the Weatherby racing records.

Yachting and rowing begin to own to the near approach of "the fall of the year," and there are at present only four fixtures in our knowledge on the public list. Of these, Westrell's pair-oar race and the Nottingham Regatta come off on Monday; the Margate Regatta, on Tuesday; and the Horsleydown Regatta, on Thursday.

Yorkshire will have nearly all the great cricketing "talent" of England on its greensward next week. All England play at Hull on Monday, and the United All England meet twenty two at Rotherham on the same day, and then adjourn to Bradford to pit themselves against eighteen on Thursday

DONCASTER MEETING.

Doncaster has seldom known a more successful meeting. The brilliant weather and the timely announcement of the fall of the modern Troy gave a fillip to the holiday-seekers flocking in to such an extent that the Grand Stand receipts on Tuesday exceeded those of Tuesday of last year by about £250, and were about £25 more than the whole of the four days' receipts in 1850. The attendance of the higher class of racing visitors was not quite up to the average. Lords Zetland and Exeter were both absent, and Lord Derby contented himself with a flying visit to Doncaster in the Highlands. Taking it altogether, the St. Leger week was not very spirited, and, in consequence of the bad ground and [illegible] tions of Tuesday, betting, different by no means held that command ing place in public favour which his running at York entitled him to. There was a large attendance at the course on the morning of Tuesday to see the St. Leger horses take their last gallops, and the public had their first peep at the mysterious Grimalbo Emiriens, who walked second in the Scott's string. Their impressions, after the first blush of excitement, were not favourable as to his chances of staying, and by night he was quoted at five points more than Marchioness, with whom it was stated that he had not been tried

The racing in the afternoon opened with the Fitzwilliam Handicap, and the severe knockings about over long distances which Hospodar has had of late told its tale, as he was unable to get a mile, and was cut down with the greatest ease by the Professor. Porto Rico and Eulogist ran away with their races; and Old Rataplan, who was brought out on the faith of his running with Homily at Warwick, gave Wild Huntsman 30 lb. for a year in the Handicap, and ran him a neck. The resolution with which the old horse struggled was beautiful to see, and the disappointment felt at his defeat was exceedingly great, as he is quite "the favourite of the million," as Dr. Syntax, Beeswing, Nancy, and the Dutchman, &c., were in their time. The blood of the latter triumphed signally in the Champagne Stakes, for which his son, Ellington (who had been backed heavily for the Derby before the race) run first, and his daughter, the much-fancied but weak-backed Mary Copp, last. It was one of the most exciting Champagnes we remember, as the Handledon crack, Artillery, was a bad, short style of horse to look at), and Danube, the supposed flower of Danebury, were, with Mary Copp, all beaten by the four non-favourites Bird-in-Hand ran a very game horse under punishment, but the ground did not suit his somewhat feeble legs; and Vandermeulen's fine looks earned him numerous admirers. The Selling Plate produced £110 to the fund; and the Filly Stakes ended by a very excellent race between Zeta and Bonner and Buxom, in which Job Marson had to sit down and administer the whip to his filly to downright some purpose.

The general attendance on the St. Leger was not above the average, and it is thought that the sum-total of the Stand receipts will not be greater than last year. Mangaroe carried off the Municipal in a canter; Lord Glasgow's Brown Maid of Masham colt being quite out of the race at the distance, as all his luckless Lordship's horses have been this meeting. Stork made quite as short work of the Twos and Threes; and Baroda won the Doncaster Plate after a gallant fight with Acrobat. Twelve starters were then sent to the post for the St. Leger, out of the sixteen "coloured;" but much of the interest was taken out of the race by the scratching of Lord of the Isles on the previous evening. Rifleman contrived to run [illegible] unite to the last, but so little was Saucebox fancied by the pub. that he was not backed for more than a mere trifle when the numbers arrived, and few took the trouble to look at him. Any odds might have been got about him from 20 to 1 to 50 to 1. The last-named were taken about him in the London train that morning, and he was hardly mentioned in the rooms on the previous evening. Gracchus Esurens looked remarkably well, but was too big and leggy to stay, while Marchioness was very light and narrow. Rifleman seemed in good form, not perhaps lighter, but in harder condition than he was at York; but Oulston was the horse that excited most confidence in the ring, when Alfred Day mounted him The Clementina colt was not announced, and was good-looking and very like his sire Surplice. The preliminary canters were performed with all due solemnity, and the lot got well off at the first attempt, with the exception of the Clementina colt, who was slow on his legs, and did not reach his horses till they had gone a considerable distance. Lady Tatton was sent to make running for Rifleman, and secured away at her best pace (which is nothing very great) leading round the bend, and till about two distances from home, when Oulston was beaten, and Lady Tatton, who was next the rails, fell back, still doing her task. Rifleman then went on with the lead for a hundred yards, and there was a loud shout of "The Squire wins!" Near the distance post, however, Wells brought out Saucebox on the muddy, beaten Rifleman, and Nat found that his colt was in trouble. Opposite the stand the race was over, Wells hustling Saucebox along to oat his rival down, and Nat nursing Rifleman for a final effort. No horse could have struggled more resolutely; but the task was not to be his; and Saucebox cleared the post, after a smart contest first, by three parts of a length, Lady Tatton was beat half a length, and the retirement of Oulston let up a rack of horses, headed by Rotherham, who was in trouble half-way up the distance, and finished fourth, but two lengths from Lady Tatton. [illegible] ing Heather was fifth, Marchioness sixth, and Clementina colt seventh The race was run in 8 mins. 21 secs., which is exactly the time cupied in Voltigeur's and Stockwell's years, so that the pace was means light. There was a deal of running in the race, and Saucebox never returned to scale, but the public, who were fully prepared to give "the Squire" an ovation, were sadly disappointed. Tom Parr is one of the most extraordinary men on the turf. He was, we believe, originally a waterman on the Bath road, and great as has been his luck with Weatherby and Defiance, his friends were little prepared to see him win the St. Leger with a horse that has been backed here, there, and every where about the country this year. He is a neat, stout little horse, by St. Lawrence out of Franklin Imboy, and he was originally bred by the Stevenings, who sold him as a yearling to Mr. Joe. Arnold, from whom, we believe, Mr. Parr purchased him for a short price at Tattersall's. It is also worthy of notice that the Stebbings' stable won this race last year with a horse they had hired, so that they must two Parrs on the St. Leger winners in their hands at one time. Luckily for Mr. Parr, Saucebox was not entered by Mr. Hesketh's name, but by the [illegible] of the three great races. The Portland Plate brought out a very large field of twenty-three runners, and bargains easily disposed of that are [illegible] old falcon, from whom she only received 2 lb. for the two years. Two other races brought a very extraordinary and a beautifully fine [illegible] day (of which it was the eighteenth anniversary) to a close. Subjoined is a return of the running.

TUESDAY

Fitzwilliam Handicap Stakes.—The Professor, 1. Hospodar, 2
Glasgow Stakes.—Porto Rico, 1. Gudgeon, 2
Second Place. Eulogist, 1. Sir Roger de Coverley
Champagne Stakes. Ellington, 1. Bird-in-Hand, 2
Great Yorkshire Handicap.—Wild Huntsman, 1. Rataplan,
Keyhoe Plate.—Hyrne, 1. Comfort.
Selling Stakes.—T.Y.C.—Scamp, 1. Excitement,
Filly Stakes.—Zeta, 1. Bonner and Buxom, 2.

WEDNESDAY

Municipal Stakes.—Mangaroe, 1. Kalpyg, 2
Sweepstakes.—Stork, 1. Bonner and Buxom, 2.
Doncaster Plate.—Baroda, 1. Acrobat, 2.
St. Leger.—Saucebox, 1. Rifleman, 2. Lady Tatton, 3.
Portland Plate.—Mangaroe, 1. Falcon, 2
Queen's Plate.—Rataplan, 1. Jack Leeming, 2
Corporation Plate.—Heather, 1. Assayer, 2.

THURSDAY.

Sweepstakes of 10 sovs. Warlock, 1. Announcement, 2.
Cleveland Handicap.—Welham, 1. Pantaloon, 2.
Egerton Stakes.—Coroner, 1. Mangarose, 2.
Juvenile Stakes.—Tennessee, 1. Alice out, 2
Hardway Sweepstakes.—Ottenian, 1. Merlin, 2.
Scarborough Stakes.—Pardango walked over.

OUTRAGE UPON AN ENGLISHMAN AT ANTWERP.—The following is an extract from a letter published in the *Journal d'Anvers* of Friday last, and the outrage to which it refers appears to call for some explanation:—"A ship, loaded with powder, chartered by a Colonel staying at the Hôtel Fleur de Blé, at Bruges, and agent of the English Government at Cologne, left Westeren for Lond n, she had soldiers on board, was furnished with all necessary papers, and had orders to proceed on her voyage with all d spatch [illegible] at Bruges the ship was permitted to enter the basin of the canal, without being told that there was not sufficient water to enable her to continue her voyage afely. When in the basin the Captain was desired to take out the ship at his own expense, which he refused to do, saying that, as he had paid the port charges, and as the authorities had allowed him to enter, it was their duty, and not his, to rescue the ship from her improper position. Last Friday, whilst the Captain was on board, the Captain of the Port came and asked him to speak to the Commissary of Police, and, as the Captain personally knew that gentleman, he consented to do so. As soon, however, as he had put his foot on shore he was asked again whether he would withdraw his ship, to which he replied, 'No, not at my own expense: but you may move her if you please.' Upon this they attacked and seized him, endeavoured to put handcuffs upon him. The Captain, not liking to be treated like a malefactor on a thief, naturally resisted, struggled with them, reached the palace, and finally got one and off there John into the water. After this he was conducted before [illegible] and sent to prison for several hours, when he was set at liberty. The ship was then removed from her position by the people of the place."

AN ENGLISH PRISONER IN SEBASTOPOL.—The following are extracts from a letter from an English officer, prisoner in Sebastopol, to his brother:—"August.—No description of mine could give you an adequate idea of the misery existing within this fort. When our army was in the greatest distress last winter, we were healthy and happy compared to what the Russian troops in Sebastopol have been since I was made prisoner, and, by all accounts, for months before. All ranks appear to see and feel that sooner or later the place must fall, and, in private, the officers say openly that had there been but one head, instead of two, directing the Allied armies, Sebastopol would long ago have been in possession of the French and English. The prisoners [illegible] cered for, particularly the officers, by the Russian authorities, and have little to complain of beyond loss of liberty. The scoundrels who despoiled from our ranks will be doing have long agofound out their mistake, I fancy. The prisoners [illegible] sorely distrus ed by their new friends and kept in a sort of [illegible] but looked very strictly after. One of them, a miscreant [illegible] once ago from one of the English regiments, and the whole [illegible] to me the other day, and complain that he was "worse treated than the prisoners" He asked 'what would be his fate if Sebastopol fell into the hands of the Allies; would he be shot?' I replied, 'Certainly not; but he would be hung before the whole army, and by the hands of the lowest Greek or Bulgarian that could be found in the Camp.' * * * It is surprising how well the Russians have everything that goes on in our camp; there must be many spies in our lines. * * * The Russians speak of the bravery of our men, humanity and cavalry, as something perfectly marvellous, but they seem to think our troops are not well handled by the Generals, and that we in throw away our best chances. An artillery officer confessed to me the other day that in the open field, with equal numbers [illegible] a fight, you, sir,' he added, 'your superior officers let the whole affair [illegible] want of arrangement and utter confusion.' Nearly all the younger Russian officers, and many of the seniors, speak English perfectly well, so I can get on pretty well in [illegible] Our [illegible] Fenwick [illegible] other wish myself back in London, or even with the [illegible] Cox or Fenwick * * * The Russian officers think we were [illegible] at the Redan [illegible] as the Malakoff. If the latter was taken, the former must have fallen; but if the Malakoff had been held by the Russians, no troops in the world could have held the Redan. They say that, if the combined forces of the Allies had gone on for the Malakoff on the famous 18th, Polissier and Raglan would have commanded within Sebastopol But this chance has gone."

FALL OF SEBASTOPOL. PUBLIC REJOICINGS.

When the news of the fall of Sebastopol arrived in the metropolis (Monday afternoon) the newspaper offices were besieged by crowds of persons waiting for a confirmation of the rumours which [illegible] town. The Strand was crowded by persons reading the pape [illegible] gas-lamps and by the lights from the shops, and in the City [illegible] venders [illegible] were so vigorously attacked by excited customers, that the exertions of the police were called into requisition From many houses flags were seen flying, but this is not to any means general; no intimation has yet been received from any external source of the part of the people would at present be expected At St. George's Barracks the troops were made acquainted with the glorious success obtained [illegible] and the bands were at the roll-call, nine o'clock, and the bands of Trains struck up in their fullest power, "God Save the Queen" and "Partant pour la Syrie

The offices of the French Ambassador, at Albany [illegible] illuminated on Monday night, although the order [illegible] was not given until half-past six in the evening [illegible] were brilliantly lighted around the windows, and in the lines of the parapet and balustrades; and over the portico was fix [illegible] design in the first square, with the Franch and English crowns, [illegible] of each nation, and the letters N and E, V and A, surrounded [illegible] laurels. There was also upon the south front of the house the word "Sebastopol," in red, white, and blue. The illumination continued altogether of 10,000 lamps. We have engraved the scene of this well-timed [illegible] ornation

Official information was received at a late hour on Monday night by the Deputy-Lieutenant-Governor of the Tower, with instructions to fire at an early hour the next morning a grand *feu-de-joie* [illegible] Tower. The welcome and glorious news soon [illegible] out the garrison, and was received with tremendous cheering. At seven o'clock on Tuesday morning the whole of the artillery on duty [illegible] Tower were on parade, when the order of Saturday was repeated, and a salute of sixty two guns ordered to be fired; and at eight o'clock the guns were mounted and fired, the Royal standard being hoisted on the White Tower at the same time.

The lingering doubts with which the sceptical portion of the public had retired to bed on Monday night, as to the authenticity of the news announced in the examination of South Sebastopol by the Allies, were dispersed by the echoes of the *feu-de-joie*, which, reverberating far and [illegible] over the metropolis, gave to the intelligence the undoubted stamp of official authority. As the day wore on, flags might be observed floating [illegible] many [illegible] church steeple, from private residences, the Monument, [illegible] but the Government buildings at the West-end, to the surprise of many, formed a conspicuous exception to the general rejoicing of the Admiralty, where the usual flag was hoisted in the afternoon. Generally speaking, there was a marked absence of such triumphal decorations throughout the streets of the metropolis; but the river below bridge was exceedingly gay with flags and streamers, which fluttered profusely from the vessels lying there. The most intense anxiety to obtain the latest intelligence from the seat of war was manifested throughout Tuesday, as on Monday evening; and it was curious to remark the crowds assembled before the windows of print-shops where pictures of the contending forces and Sebastopol were exposed for sale, busily engaged in scrutinising the exact localities of the Malakoff and the Redan, and scanning the distances that existed between the north and south sides of Sebastopol. In the course of the morning large numbers of people assembled in front of the Royal Exchange in expectation that the Lord Mayor would proclaim the victory; but in this they were destined to disappointment, his Lordship not having returned from Sheffield, whither he had gone to attend the Cutlers' Feast, and no official intimation on the subject reached the Mansion-house.

At Deptford and Greenwich the Royal standard and the union-jack were hoisted. At Woolwich a salute of sixty-two guns was fired and the greatest enthusiasm and excitement prevailed throughout the [illegible] At Windsor the bells of the Chapel Royal, of St [illegible] and St John's Churches, sent forth merry peals throughout the [illegible] the early part of the day the Corporation ordnance, at the Bachelor's-acre, by the town bombardier; a whole holiday was given at all the private schools; and Mr. Nash, the proprietor of the Windsor theatre, gave a gratuitous entertainment to the public. At Portsmouth the ships in port hoisted masthead flags and fired a salute in honour of the Allied successes. In Manchester, Sheffield, Bristol, Leeds, Liverpool, and indeed, everywhere throughout the whole kingdom the same enthusiasm prevailed.

The news was received on Tuesday with universal [illegible] In Lombard-street and the Royal Exchange [illegible] the Bachelor's-acre, by the town bombardier; a whole holiday was given at all the private schools; and Mr. Nash, the proprietor of the Windsor theatre, gave a gratuitous entertainment to the public. At Portsmouth the ships in port hoisted masthead flags and fired a salute in honour of the Allied successes. "THE RECRUIT" STEAM GUN-BOAT.

"THE RECRUIT" STEAM GUN-BOAT.

THE bombardment of Taganrog, in the Sea of Azoff, which was so successfully performed by Lieutenant Day, in the *Recruit*, on the 3rd June last, has illustrated forcibly the great service which may be derived in the present war from the possession of a large flotilla of such vessels for the general purposes of naval warfare.

The *Recruit* is one of a class of vessels of which, unfortunately, there are at present only two in our service, and possessing all the requisites of that which will be for the future a most important arm of the service.

We have engraved the *Recruit*, so as to show the peculiar nature of the service which such a vessel is calculated to render; and we venture, at the same time, to call public attention to the important part which steam gun-boats may perform in the present war.

The three essential qualities which an efficient flotilla of steam gun-boats ought to possess are:—

1st. Very light draught of water, to enable them to approach as near as possible to points to be attacked that would otherwise be inaccessible; and further, to enable them to escape from a more powerful adversary by running into shallow water, where it would be impossible to follow them.

2nd. To carry a heavy armament of the largest class of gun to enable them under all circumstances to cope with the artillery of large ships, and heavy fortifications.

3rd. To possess the highest-known rate of speed, to enable them to keep up with and outstrip all other ships, and give them the power to choose their own time and place of attack.

These three great points ought of course to be obtained without sacrificing the good qualities which every ship should possess. Now, all these do appear to be combined in the *Recruit*. In the first place, although she is a ship of 550 tons burden, her deepest draught of water is seven feet, and her light draught only five feet. When in good fighting condition she need not draw more than six feet of water. With this light draught of water she carries—what no other vessel but her sister ship, the *Weser*, can carry and effectually use—four long 68 pounder guns, and in this condition the speed of the vessel through the water is fifteen statute miles an hour. There is another quality of such vessels, and which is of very considerable importance, namely, that they are ready to act as despatch-vessels in conducting the communications of a fleet, as well as to act as powerful batteries in cases of bombardment; and, moreover, being paddle-vessels of 160 horse power, they can act as tug-boats to sailing transports, while themselves have large decks for the accommodation of troops.

The only point which has hitherto been urged against the employment of a large fleet of such vessels is the prejudice which has long existed against the employment of iron; but that prejudice must rapidly disappear before the practical experience now being acquired of the efficiency of such vessels in all respects for every practical purpose.

The *Recruit*, and her sister vessel the *Weser*, were originally built on the River Thames for the Prussian Government, and were bought by our Government during the present war. Although they had formerly proved themselves excellent sea-boats, this is the first occasion in which their efficiency in action has been practically proved.

Their dimensions are—Length, 189 feet; breadth, 26th feet. Burden 550 tons, 160 horse power. Armament, four 68-pounders.

The following is an extract from the official report of the part taken by the *Recruit* in the bombardment of Taganrog:—

I have the honour to inform you that I anchored in eighteen feet water, with the squadron under my orders, in Taganrog inner roads, at about eight miles and a half from the town, on the evening of the 1st inst. (June), without any accident, although the enemy had removed the beacons. The 2nd was employed in reconnoitring the town, which I was enabled to do satisfactorily in the *Recruit*—Lieutenant Day, commanding that vessel, having found a passage during the night. I had arranged to proceed at three a.m. the following morning to summon the town, and, in the event of a refusal to surrender, to endeavour to destroy the immense stores of grain and other Government property in that place. Having concerted measures with M. de Sedaiges, commanding the French steamers, I proceeded at three a.m., in the *Recruit*, with the vessels and boats, and accompanied by the lightest French steamers (M. de Sedaiges being on board one of them) towing their launches. Having anchored the *Recruit* at fourteen hundred yards from the Mole-head, and collected all the boats astern, I sent Lieutenant-Commander Horton with a flag of truce, accompanied by a French officer with similar orders from M. de Sedaiges, to demand the surrender of all Government property of every description whatsoever, and of all grain, flour, and provisions: one hour to be allowed for a decision, and no modification of the terms to be entertained. At the expiration of the hour Lieutenant Horton and the French officer were informed that the Governor refused the terms, and that, having troops at his disposal, he intended to defend the place. Shortly afterwards the *Recruit* commenced firing, accompanied by the French boats; and so heavy a fire opened that, although the enemy made repeated attempts to get down to the houses, along the beach so as to save the long range of storehouses from destruction, they never succeeded in doing so in sufficient numbers. The *Recruit*, from her light draught of water, was enabled to take an effective position at 1400 yards, and so was the *Mouette*, French steamer. By three p.m. all the long ranges of stores of grain, plank, tar, and the vessels on the stocks were in a blaze, as well as the Custom-house and other Government buildings, and unfortunately but unavoidably, the town in many places; and, our purpose being amply effected, the boats returned to the *Recruit*.

THE FALL OF SEBASTOPOL.—THE FRENCH EMBASSY AT ALBERT-GATE, ILLUMINATED.—(SEE PRECEDING PAGE.)

MARBLE STATUE OF THE LATE DUKE OF WELLINGTON, BY NOBLE. JUST ERECTED AT THE EAST INDIA HOUSE.

MARBLE STATUE TO THE LATE DUKE OF WELLINGTON.—BY M. NOBLE.

The Statue from which this Engraving was made, has just been placed in the General Court-room at the East India-house, and was voted by the General Court of the East India Company as a mark of their deep sense of the important and brilliant services rendered by the Duke in the early part of his career in India, as well as of their admiration of his character. The commission to carry out this vote was given, we understand, in a very handsome and liberal manner, to Mr. Noble, of Bruton-street, who, in a corresponding spirit, has certainly produced a very admirable and characteristic statue of England's illustrious hero. The Chairman and Directors of the Company, we have been informed, have expressed their entire satisfaction with the work in every respect.

THE DONCASTER CUP.

This Cup, which was contested for on Friday last, is a group impersonating, so to speak, an incident of romantic interest. It consists of five statuettes: two are equestrian, two are figures of men on foot, and one is the effigy of an old English mastiff, or "ban" dog. The story told by these figures is the meeting in the Yorkshire Forest of the Prior of Jervaux Abbey and the Knight Templar, Sir Brian de Bois Gilbert, with the thralls, or serving men, Gurth and Wamba, so felicitously described by Sir Walter Scott, in his famous romance of "Ivanhoe." The figures are well combined in the composition. The silver is oxidised, so that the glare of the metal being subdued, the elaborate finish of the workmanship, as well as the breadth of light and shadow, are well preserved. The moment chosen by the artist is when the Prior restrains the Templar from chastising the insolence of the herdsman and the impertinence of the jester. The costume, the armour, the weapons, the respective characteristics, and the attitudes of the individuals, are made to contrast with admirable effect, and the story is well told. The following is the passage illustrated:—

"I know not," said Gurth sullenly, "if I should show the way to my master's house, to those who demand as a right, the shelter which most are fain to ask as a favour." "Do you dispute with me, slave!" said the soldier, and, setting spurs to his horse, he caused him to make a demivolte across the path, raising at the same time the riding rod—with a purpose of chastising what he considered the insolence of the peasant. Gurth darted at him a savage and revengeful scowl, and with a fierce yet hesitating motion had his hand upon the haft of his knife; but the interference of the Prior Aymer prevented the meditated violence."

The "Cup" has been modelled by Mr. Armstead, and has been very ably manufactured at the establishment of Mr. Hancock, of Bruton-street.

THE DONCASTER RACE PLATE, 1855.

COMMENCEMENT OF THE SILLOTH RAILWAY.

The ceremony of commencing this line of railway was performed on Friday the 31st ult., by Sir James Graham, with the accustomed forms.

This short line of 12¾ miles is intended to complete the communication between the German Ocean and the Irish Sea. It branches off from the Port Carlisle Railway at a place called Drumburgh, about eight miles north-west of the city of Carlisle, and will be carried to the Cumberland

SIR JAMES GRAHAM COMMENCING THE SILLOTH RAILWAY.

shore of the Solway Frith, at Silloth Bay, where there is deep water and good anchorage, and where it is intended to establish docks

When completed, this line, together with the Newcastle and Carlisle Railway, and the Port Darlington Railway, will form the shortest communication between the eastern and western coasts of England

The work was commenced at Drumburgh, a small township to the south east of Bowness, and within sight of the Solway Frith, of which, and the Scotch hills on the opposite shore, with famed Criffell towering above them, a most interesting and splendid view is to be obtained on a fine day. The place is full of historical interest, and the neighbourhood has been the scene of many a struggle in the days of Border warfare. Drumburgh Castle, now used as a farmhouse, is built upon the site of the Roman station, Gabrosentum, and in the vicinity, until lately, might be traced a vallum and the old ditch and embankment, raised previously to the erection of the Roman wall.

A large marquee was used in a meadow immediately adjoining the point of interest, with a supplementary tent well stocked with refreshment. The dinner was to take place at three o'clock. At two o'clock a train of sixteen carriages crammed with sightseers started from the Carlisle terminus of the Maryport and Carlisle Railway, and the scene of crowd assembled to witness the departure. Invitations had been sent to the corporation, who attended in a body. Mr. Fergusson, M.P. for the city, Mr. F. H. Howard, Mr. R. James, and other gentlemen of influence in the locality joined the party. The James Graham left the Citadel shortly before three o'clock, by which time several hundred persons, male and female, had assembled upon the ground. Meantime Sir James Graham had arrived from Netherby, and, with his usual business like dispatch, proceeded to turn the sod in the usual and most approved manner, after which he wheeled for a few yards, and then deposited the contents upon the green sward amid the vociferous "hur ahs" of the crowd. The spade and the wheelbarrow were the ordinary implements used by the navvies. At the close of the operations Sir James Graham addressed the assembly briefly, and the event was celebrated by a public dinner, at which about one hundred and sixty guests were present.

In the accompanying sketch of the cutting of the turf, the building seen on the left is Drumburgh Castle; and to the right are the Solway Frith and the Scottish Hills.

PHOTOGRAPHS OF THE SEAT OF WAR.—Mr. Fenton, of Lancashire, Photographer to the Queen, having been commissioned by Mrs. A. Agnew and Sons, of this city, to proceed to the East, for the purpose of [illegible] for future publication, has delivered in detail numbers of them, started in the precedence of danger. He still Leads the shells whistle about his wooden [illegible] and full round it; he regarded them with great unconcern, though on one occasion a better-directed shell than usual [illegible] a piece, and a large portion of the roof! Mr. Fenton, with Mr. W. Agnew, jun., being in Paris last week, with the entire collection of 300 photographs, received the Imperial command to present the pictures at the Palace of St. Cloud, which they did at an early hour on Thursday week. [illegible] condescension and kindness by the Emperor, who spent upwards of an hour and a half in looking over the views. He requested them to be seated, and [illegible] for the absence of the Empress, who was not well; but she was in an adjoining room of the suite and whenever the Emperor saw a photograph that particularly pleased or interested him he took it into her room, and went to show it to her Imperial Majesty. [illegible] Mr

ILLUSTRATIONS OF HER MAJESTY'S VISIT TO FRANCE.

THE GRAND GALERIE DES GLACES, AT VERSAILLES.

IN the ILLUSTRATED LONDON NEWS of last week we engraved, in the series of Illustrations of the Royal Visit, a large view of the Grand Front of the Palace of Versailles, together with the Great Trianon, and the superb Theatre, during the Imperial supper. We now engrave the most magnificent Gallery in the suite of the *Grand Appartements*, which occupy the whole of the first floor of the central projecting building facing the garden. Adjoining the *Salon de la Guerre*, dedicated to the military glory of Louis XIV.—its ceiling painted by Lebrun, with France chastising Germany, Spain, and Holland—we reach the *Grande Galerie des Glaces* (or, *de Louis XIV.*), one of the finest rooms in the world, extending with the *Salon de la Guerre* and the *Salon de la Paix*, at the opposite extremity, along the whole of the central façade, and measuring 240 feet in length, 35 in width, and 43 in height. It is lighted by seventeen large arched windows, which correspond with arches on the opposite wall, filled with mirrors, hence the name *Galerie des Glaces*. Sixty Corinthian pilasters of red marble, with bases and capitals of gilt bronze, fill up the interspaces of the windows and arches; and each of the entrances is adorned with columns of the same order. Above are figures in alto-relievo, sculptured by Coysevox, from the designs of Le Brun. The vaulted ceiling was painted along its whole length by Lebrun, and is divided into nine large and eighteen smaller compartments, in which are allegorically represented the principal events in the history of Louis XIV., from the peace of the Pyrenees, in 1659, to that of Nimeguen, in 1678. In niche on each side are marble statues of Venus, Minerva, Adonis, and Bacchus. "It is in this gallery," says M. Vatout, "that Louis XIV. displayed all the grandeur of Royalty; and such was the luxury of the times, such the splendour of the Court, that its immense size could hardly contain the crowd of courtiers that pressed round the Monarch." Several splendid fêtes were held in it, of which those on the marriage of the Duke de Bourgogne, in 1697, and on the arrival of Marie Antoinette, were the most brilliant.

THE HOTEL DE VILLE ILLUMINATED.

In our Journal of September 1st we illuminated the magnificent fête given in honour of her Majesty by the Prefect of the Seine; the scene represented being the grand *salon de danse*. In our Journal of the following week, September 8th, we engraved the Court-yard of the Hôtel de Ville, which was converted into a superb saloon for the occasion; and we now complete our illustrations of this fête of unexampled grandeur with a view of the exterior of the Hôtel de Ville illuminated for the Royal reception; and this illustration is additionally interesting from the noble specimen which it presents of the recent improvement and embellishment of Paris. The scene on the night of the fête was truly gorgeous. The Grand Place, which the munificent designs of the Emperor has lately erected in front of the Hôtel de Ville, was ornamented by a double series of pygantic pyramids, illuminated from the base to the summit with variegated lamps. There were sixteen of these pyramids, eight on each side of the square, the number being occupied by mounted cavalry. The whole façade of the Hôtel de Ville was one blaze of illumination from gas jets running along the architectural lines of the building. Beneath all the windows on the principal floor the flags of France and England were tastefully arranged; and the monograms of the Emperor and the Queen, embroidered in gold, on crimson velvet shields, were displayed in a variety of prominent positions. In the evening the whole line of road was brilliantly illuminated, decked with flags, and thronged by myriads of human spectators,

THE ORGANISATION OF THE BRITISH EMPIRE.—(No. II.)

WE have spoken of the area, the population, and the natural products of North America. We now proceed to illustrate its commercial activity, as deduced from its exports and imports; observing that the following statistics relate to the year 1850, since which date there has been an increase in both departments. The following were the imports:—

Canada	£2,500,000
Nova Scotia	1,001,417
New Brunswick	1,110,800
Newfoundland	746,315
Prince Edward Island	209,784
	238,511
	£11,400,027

The following were the exports:—

Canada	£1,750,000
Nova Scotia	1,250,000
New Brunswick	746,315
Prince Edward Island	212,975
Newfoundland	965,772
	£4,925,062

Mr. Howe computes that the annual value of ships built and sold in North America is £1,000,000 sterling. The mercantile fleet possessed by the people is indeed remarkable, and the fisheries are a permanent nursery of a hardy race of seamen. Nova Scotia is the chief maritime province. Taking her tonnage, and applying to all the other provinces her ratio of increase since 1846, it is computed that they collectively own 6139 vessels, measuring 453,000 tons, which equals, only less by 946 tons, the aggregate tonnage of fifteen of the United States. In 1853 the tonnage of Scotland was only 532,220 tons a trifle more than that of British America; while the combined tonnage of the latter is said to equal that of Holland, Belgium, and the Two Sicilies.

Another illustration of the wealth of a State is its revenue; and here British America makes a respectable figure; and it should be borne in mind that it is raised by a low rate of taxation of which no class complains.

Canada collects	£1,052,021
Nova Scotia	130,000
New Brunswick	130,000
Prince Edward Island	25,715
Newfoundland	81,251
	£1,417,111

There is every prospect of this ratio rapidly increasing, as the population is steadily advancing. In ten years the population of Canada has increased 68 per cent. New Brunswick has advanced nearly in the same ratio, while Nova Scotia has quintupled her population in fifty years. It is confidently anticipated, from the proportionate augmentation actually realised, that, before a new century begins, British America will contain ten millions of souls.

The statistics furnished prove the growing importance of these provinces. They are not like an island, or a congeries of small islands, whose area is bounded within narrow limits. Here we have to deal with one-ninth of the globe. A healthy climate, a fertile soil, mineral and metallic riches, an immense sea-coast with fine harbours, inland lakes, and navigable rivers, with the modern addition of railways in due time to be spread all over the country—all these advantages foreshadow a mighty population. Now we may, with this knowledge of facts, propound the grave question, What are to be the future relations of British North America with the mother country, or are those relations to be completely severed? In 1775, when the American colonies declared their independence, their population was only 2,943,000, and their revenue but £1,200,000; yet they became a nation, and are now one of the mightiest on the earth. There are politicians in North America who cite this precedent as one to be followed, but they forget that England was not so populous in 1775 as she is now, and that steam navigation for the conveyance of troops was then unknown. However, the Canadian rebellion of 1837 aimed at separation from the mother country; and the same agitators are now seeking to sever United Canada, and restore the old division into two provinces with independent legislatures. This scheme is too absurd to dwell upon; it is, in fact, a mere party move, and it is only noticed here to show that public opinion is not yet wholly reconciled to the last political consolidation.

A topic once extremely popular was the the annexation of North America to the United States. In favour of that policy it was urged that the country would rise, through such a measure, from the humiliation of a colony to the dignity of a nation; that perpetual peace would be secured with a powerful neighbour along a frontier of 1500 miles; and that a trade, unobstructed with tariffs, would be established over the whole continent. This last argument has not nearly lost all its force, owing to the successful negotiations of the Earl of Elgin with the United States Government, which have removed most of the impediments to unfettered commerce. Mr. Howe brings two arguments to bear against annexation: the first is the existence of slavery in the States, the stain of which would attach to North Americans, were they to join the Great Federation. On this we may observe, though Mr. Howe has not touched the point, that the Southern States have ever been hostile to the plan, as it would give a decided preponderance in the Legislature to the Abolitionists; and the probable result would be a breaking up of the existing union. Mr. Howe's second objection is based on his conviction that the United States are large enough already; and his reasoning is to the effect that's representative nation may become too unwieldy for its own government. At present Congress sits for half a year. The time is not very distant when the population of the United States will amount to 100,000,000. When that period arrives, will the Legislature be able to transact all the public business that will press upon it? If North America were annexed, the difficulty would be largely increased. At present the Legislature of Nova Scotia sits about ten weeks in the year; that of New Brunswick the same time; that of Canada about four months; and, as their population is augmented, their Sessions must be prolonged. There appears, then, to be some future date at which the Congress will be overwhelmed with its duties, and then perhaps a separation will be inevitable; but it is certain that such a crisis would be precipitated by annexation.

The next point discussed is whether North America should not consolidate the five provinces into which she is now divided, and out of them form a kingdom or confederation for itself. The modes of carrying out such a scheme are various, and would probably lead to difficulties—perhaps to fatal collisions. Some would be in favour of a Monarchy; others would prefer a Republic; a third class might favour a Federal and Democratic Union. A Monarchy could hardly be founded, for it requires an hereditary Peerage for its support; and in North America such an institution would lack the props of feudal traditions. It would have to be created before the eyes of all, and Democracy would strangle it in its cradle. But suppose it escaped this danger, would the United States tolerate Royalty on its frontier? Would they not extinguish by war, if necessary, a system which might prove fatal to their own form of Government? A Republic would be more feasible, and still more likely to succeed would be a Federal and Democratic Union; but objections, and serious ones, too, might still be raised. The population of Canada East is of French extraction, and among them the Roman Catholic religion dominates. The population of Canada West is of British origin, and Protestant. Between the two jealousy and strong antagonism prevailed, before the two provinces were united, and though now subdued, it is not extinguished. The question then arises, would Eastern Canada consent to the proposed amalgamation? Probably not, for all the other provinces are British and Protestant, and she would be left in a hopeless minority.

Mr. Howe's scheme is of a very different character—it is bold and grand. He would organise the whole empire, conferring equal citizenship on all its members, in whatever part of the globe they may be found. He puts down the people of the United States at 30,000,000, and then enumerates the Colonial population of Great Britain in the following order:

West Indies	...	...	900,000 inhabitants
Australia	...	...	307,645 ,,
Africa	...	...	218,908 ,,
Ceylon	...	...	1,505,326 ,,
Mauritius	...	...	168,248 ,,
New Zealand	...	...	204,000 ,,
India	...	...	94,210,213 ,,
			97,514,341 ,,

This (says Mr. Howe) includes the Colonial portion of the empire, strictly speaking; but to these 97,000,000, three times the population of the United States, we must add 133,113,000, being the population of the States which are our allies or tributaries in the East. We again 30,000,000 the population of the British Islands, and we have around us a number of 000,000 of people within the boundaries or subject to the influence of the empire to which we at present belong. All the States of the Union but 233,000,000 people. Then, Sir, I will ask any Nova Scotian, who pretends to be a statesman, will any North American, with his heart in its right place, lightly entertain the idea of withdrawing from the enjoyment of free commercial intercourse with 260,000,000 of human beings, from participation in the securities, the honour, and pride, which such an empire affords, to form, without cause, an isolated community of two millions and a half, or even ten millions, or to seek a dishonourable share of the advantages enjoyed by 30,000,000?

Mr. Howe repudiates annexation to the United States, and is unwilling to erect North America into an independent kingdom, though he would recommend the latter course if Great Britain refuses to identify herself with the provinces, to the extent of allowing them representation in the Imperial Parliament, and participation in the public employments and distinctions of the Empire. Were this new organisation of the empire effected, it is plain that we might set all hostile tariffs at defiance. Among ourselves we could produce all commodities of which we stand in need. Our international customers would amount to two hundred and sixty millions of producers and consumers, among whom perfect freedom of trade might be established without any chance of its being interrupted. This is, indeed, a bright picture of a mighty Zollverein. We need not exclude other nations, but we might dictate our own terms to them. If they desired freely to trade with us they would know that the only terms on which they could be admitted would be those of reciprocity. What opposes such a plan as this, but narrow prejudice founded on the traditions of a false pride? What are the Colonies, if not integral portions of the mother country, only separated from it by a broader stream of water than that which flows between Surrey and Middlesex, or between England and Ireland? We have dismissed the old folly which taught that "natural enemies" dwelt on either side of the Strait of Dover; is it too great an effort to advance somewhat further in wisdom, and recognise the British race dwelling in North America as citizens of the United Kingdom. In point of distance, Halifax is as near to London as Edinburgh was at the time of the Union; and, in a few years, a few seconds will place it in direct communication with Downing-street through the electric telegraph. A line of railroad, commencing at Boston, might run through all the provinces to the United States, and passengers from Liverpool, who now go on to Boston or New York, would avoid several hundred miles of dangerous coast navigation.

This organisation of the empire would not only render us independent of all hostile commercial tariffs, but secure to us strong military reinforcements in the event of war. What is our present position? We recruit a foreign legion: we subsidise Sardinia; we seek to conciliate the friendship of Austria; and to secure, if not the co-operation, at least the neutrality of Prussia; but we cannot command by law a single soldier in North America where flies the British flag; yet there we could raise a formidable army, unsurpassed as mark-men. The Russian empire contains but sixty millions of people, whereas the British empire contains one hundred and thirty millions. The former concentrates all its power against us; but, for want of organisation, though we are twice as numerous, we are dependent on foreign legions, and take them into our pay? Why, then, should we not so reorganise our system as to avail ourselves of the aid of our Colonial brethren? If we embattled one in seven of our population of one hundred and thirty millions, we could show a warrior front of eighteen millions. Why, then, should we, secure within our self-sufficiency, dance attendance at Vienna or Berlin on Emperor or King? Concentrate our strength, and with our command of wealth to set it in motion, what Power could resist us? In union with France—which we sincerely hope may be perpetual—what despot would dare to hurl defiance at us? What trodden nationality would not again rise erect at our command? Let, then, the policy of complete incorporation with our out-lying provinces be at least carefully studied: in peace, it would secure inexhaustible markets; in war, it would array an invincible phalanx. The points of intercolonial difference between Mr. Howe and Mr. Hincks, and the objections of the latter to the proposed Organisation of the Empire, will be considered in our next Number.

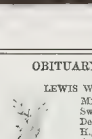
THE MIDLAND INSTITUTE.—The council of the Midland Institute met last week to decide upon the design which should be adopted for the building of the institute: about to be erected contiguous to the Town-hall, Birmingham. There were ten designs or drawings sent in, the majority of which were by local architects. That selected, however, was by Mr. E. M. Barry, of London. It is in the modern Italian style for elevations.

RUSSIA PULLING THE WIRES AT NAPLES.—A report is current that very decided steps are resolved upon with regard to Naples. Perhaps it would be not of course to suggest the propriety of circumspection being used with regard to the insignificant tyrant of Naples, who, in all probability, is employed as a tool, and if may be a blind tool, by Russia, in order to prevent France to the employment of severe measures of retaliation. King Bomba would not dare to insult the French flag if not urged to do so by a voice behind the curtain, in whose potency he places faith. Is it not quite clear to any one who reflects for a moment that Russia, crushed up in the Crimea, where she must succumb, has but one chance left, that of embroiling Central Europe? Hitherto her schemes have been baffled by the sheer timidity of the German powers. But if she could only stir up the revolutionary spirit, and frighten Austria out of her prudence by the prospect of successful rebellion, she would probably force that country once more into dependence on herself. Let then the King of Naples only bring on himself the wrath of France, and, as a consequence, revolution would follow in Italy, and revolution would, as Russia calculates, bring Austria into the field as her ally. Perhaps the Czar may, as a desperate measure, allow his own Poland to rise. Let us not be too hasty in clapping our hands at the news of Panmure's corps being on the march for the Crimea. There may be deeper motives for stripping Poland of troops than necessity for reinforcing Gortschakoff. The telegraph tells us that Nesselrode is going on his travels, and it is nothing good he is preparing to whisper in the ears of great and little monarchs. The French Government will assuredly not allow itself to be caught in a trap by even the clumsy insolence of a Bomba. The strategy of Russia in war may be united with no less effect in politics. That shrewd old soldier was not to be caught by Gortschakoff's "four hours' waiting." Muscovite lures are understood in the Crimea. Let them be equally appreciated elsewhere; above all, let us not play the game of Russia by any rash notice of the conduct of Naples or other Italian sympathisers with the Czar.—*Letter from Paris*.

SARDINIA AND TUSCANY.—A diplomatic "difference" has arisen between Sardinia and Tuscany. In July last the Piedmontese Cabinet appointed Count Antonio Casati an *attaché* to the Sardinian Legation at Florence. Count Casati is the youngest son of the Lombardi (exiled) Count Gabrio Casati, who was, in 1848, the President of the Provisional Government of Lombardy, and now is a naturalised Sardinian subject and a senator of this kingdom. The appointment of the young Casati was previously communicated to the Tuscan Government, who made no objection to it. Count Casati went to Florence early in August, but when the Marquis Sauli, the Sardinian Minister there, asked the Grand Duke to leave to have the honour to introduce to him his new attaché, the Grand Duke refused to comply with that demand. It appears that the Austrian Minister and the Grand Duchess of Tuscany had strongly urged upon the Grand Duke no to receive the Sardinian attaché, and that they had succeeded in bringing about a change in the former resolution of the Tuscan Cabinet. The Sardinian Government, being informed of what had happened, have immediately recalled from Florence their Legation.

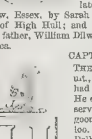
OBITUARY OF EMINENT PERSONS.

LEWIS WESTON DILLWYN, ESQ., F.R.S.



MR. DILLWYN died at his seat, Sketty-hall, near Swansea, on the 31st ult. He was a magistrate and Deputy-Lieutenant for Glamorganshire, served as its High Sheriff in 1815, and was one of the knights of the shire in the Parliament of 1832. Born 21st August, 1778, he married 13th July, 1807, Mary, daughter of the late John Llewelyn, Esq., of Penllergare and Maryes-y-gerwn, and leaves surviving issue, John of Penllergare, who has taken the name Llewelyn, Lewis-Llewelyn, of Hendrefollan, Fanny Llewelyn, married to Matthew Moggridge, Esq., and Mary Ely a pedigree preserved in the Haridan Collection, the family of Dillwyn is traced from Sir John Dilwyn, of Dilwyn, county Hereford. The eldest son was son and heir of the late William Dillwyn, Esq., of Higham Lodge, Walthamstow, Essex, by Sarah his wife, daughter and heiress of Lewis Weston, Esq., of High Hall; and grandson of John Dilwyn, Esq., of Philadelphia, whose father, William Dilwyn, went from Bressonslire with Governor Penn to America.

CAPTAIN WILLIAM HAY, C.B.



THE death of this gallant officer occurred on the 29th ult., at his residence in Cadogan-place. Captain Hay had been for nearly fifty years in the military service. He entered the Army as Ensign in the 52nd Foot, and served with that regiment and the 12th Light Dragoons from 1810 to 1815, from Torres Vedras to Waterloo. Subsequently, he accompanied the late Lord Dalhousie as Aide-de-Camp to America; and on his return to England, after an absence of nine years, obtained his troop in the 5th Dragoon Guards, in which regiment he continued until his final retirement, by the sale of his commission, in 1839. In 1839 he was appointed Inspecting Superintendent of the Metropolitan Police, and eventually succeeded Sir Charles Rowan as Military Commissioner. Captain Hay was born in 1794, the eldest son of Robert Hay, Esq., of Lawfield and Spott, whose grandfather, Lord Alexander Hay, was fifth son of the first Marquis of Tweeddale. He married, in 1829, Sarah, daughter of Richard Sparkes, Esq., and by her (who died in March, 1854) leaves one daughter.

THE WILL OF THE LATE ABBOTT LAWRENCE.—Besides numerous private gifts, the will of the late Abbott Lawrence bequeaths 180,000 dollars for public benevolence, as follows:—The Lawrence Scientific School, 50,000 dols.; for building model lodging-houses, 50,000 dols.; Boston Public Library, 10,000 dols.; Franklin Library in the city of Lawrence, 5000 dols.; American Bible Society, 5000 dols.; American Tract Society, 5000 dols.; and Home Mission ary Society, 5000 dols. One half of the net rents of the lodging-houses is to be annually distributed to various charitable institutions in Boston, and the other half is to accumulate in order to constitute a fund for keeping the lodging houses in order.

COLLISION WITH AN ICEBERG.—A correspondent of a New York paper narrates an incident which occurred to the barque *Mary Morris*, bound from Greenock to New York:—"We left Greenock June 16. Nothing unusual occurred until the 1st of July. At noon on that day the atmosphere became cold, and a thick fog obscured all beyond a few yards of the ship. The Captain, as soon as he saw thick weather setting in, ordered 'a sharp look-out ahead.' At 1 30 p.m. the look-out gave the alarm that an iceberg was immediately ahead, and on our weather bow. Mr Bradley, the first officer, seized the wheel and put the helm up, and gave orders for heading the ship off. The orders were promptly obeyed. Captain M'Leary was at his post on the instant, and never did man exhibit more energy and presence of mind; but human foresight could not avert the calamity. Instantaneously the awful iceberg was upon us, towering 100 feet above the top of our mainmast, and presenting a front of about three quarters of a mile. It rose in ragged points to a cone, and appeared to be sloping off at the base, as the upper part projected several feet over the ship. The ship, nothing dismayed, continued to exhibit the greatest activity and the most endeavouring by such example to influence others. Finally the main had arrived; her bowsprit, jibboom, and starboard anchor were forced in across the forecastle, and the outwaster and larboard bow were stove in. At this juncture the Captain organised two gangs of passengers, and furnished them with spars to spar her off, and ordered the pumps to be sounded. The carpenter reported no water. The wind continued to blow the ship to the ice, so a gang was ordered to her bows to lear her off there, and one of the small boats to be lowered, and lines made fast for the purpose of towing. These orders met with the greatest alacrity, but the wind proved too much for us. The ship now came broadside to the berg, bringing down the foretopmast, fore and maintopgallant masts, rigging, yards, and sails with a terrible crash. The ice now began to emit sounds like the report of numerous rifles, and we were in imminent danger of the projecting portion falling and burying us beneath it. The Captain now commanded provisions and water to be prepared for the boats, at the same time ordering two more boats to be lowered for the purpose of taking another tow-line from the ice. These boats were under the command of Mr. Brown, second mate. The boats succeeded to some extent, and from an opening between the large berg and the land came a gust of wind puffed out which filled the barque's mainsail and gently moved her off. The pumps during this time were repeatedly sounded, and Mr. Bradley, the chief mate—a man of great courage, with sound forethought—was at his post, imparting hope and confidence to the passengers. In a little while the small boats were brought alongside, and all hands, through the prompt and energetic conduct of these men and the blessing of Providence, escaped the jaws of death."

A report is current that Prince Frederick William, heir-presumptive to the crown, who has left Berlin on a visit to his mother, the Princess of Prussia, at Coblentz, will afterwards proceed to England.

A few days ago, a spark from the engine propelling a cheap trip train from Sheffield fell in a field of standing barley on the side of the line, and set it on fire. The blaze was observed by some children, who immediately raised an alarm, and some men proceeding with scythes, &c., cut it down, and stayed the progress of the fire before any serious amount of damage was done.

THE PARIS UNIVERSAL EXHIBITION.

(From our Special Correspondent.)

We intend from time to time to present to our readers some of the more remarkable contributions sent to this curious, this splendid Exhibition; for, if the great effects of this Exhibition fall short, in comprehensiveness, of that gathered together in Hyde-park in 1851, the separate articles are in many points greatly superior. The splendours of the Horticultural Building—the long line of French jewellers' cases—the marvellous array of French and Belgian machinery—the scientifically arranged products of Algeria: the timber trophy of Canada, surrounded with the raw produce and manufactures of this great colony—the wonderful Indian bazaars, which we have already produced—and the array of Lyons silks, are separate exhibitions within the Universal Exhibition, peculiar to the Palais de l'Industrie and its dependencies. The Exhibition glitters with gold, and silks, and satins, in every part; it deals in costly and the gaudy. Ladies no longer wear violets in their bonnets, but prize roses, grapes, plums, and cherries! Simple silk will no longer serve for the elaboration of a mantle or a dress: lace the most expensive, and jewels, and flowers, and feathers must be added. A toilette is no longer judged by its relation to art; it is appraised. With these preliminary remarks we will enter upon our task of presenting to our readers some of the more remarkable groups or features of the Universal Exhibition.

STATUETTES OF THE EMPERORS NAPOLEON I. AND III.

IN Mr. Hancock's exceedingly attractive display of jewellery and silverwork at the Paris Exhibition are included the two equestrian statuettes which we have engraved. These have been wrought most delicately in silver, oxidised, and represent in one instance, Napoleon crossing the Alps; and, in the other, his Majesty Napoleon III. mounted upon a spirited charger. The former of these works was produced for, and at the express command of, the present Emperor. In each case the horse was modelled by Mr. McCarthy, and the figure by M. Frerét. The highest credit to these gentlemen results from their united and truly artistic efforts. We should mention that the "Crossing the Alps" was designed by M. Eugene Lampi.

THE WAR IN THE CRIMEA.

(From our Artist and Special Correspondent.)

CAMP BEFORE SEBASTOPOL, Sept. 1, 1855.

THE daily battle of parallel against parallel, trench against trench, is the most monotonous and uninteresting of all possible encounters. It has excitement, perhaps, for the engineer, whose ingenuity is taxed to discover new positions in which to open an embrasure, or whose soul is wrapped in the probable effects of a mine; but besides his own there are few portions of an army that can feel ought but impatience at the slow progress of a siege. The impatience which characterises the soldier who does his duty in the trenches, where he sees his comrades overturned by a fragment of shell, or a splinter of stone or wood, without a chance of measuring his personal strength with that of the enemy before him, is doubtless shared in by the people of England. It certainly sets upon the spirits of your Correspondent, who asks himself whether all on home are not as tired as he is of discovering that covered way No. 6 has been heightened two feet and made thicker by six inches; that embrasure No. 9 has been opened in battery No. 10, and that the works of the new *place d'armes*, nearest the enemy, are in a fair state of completion. The most attentive observer of the advanced works will find little besides this to record, and the danger of the survey is not repaid by the descriptive result. I fear that these remarks can lead you to expect little news of the state of the siege. It is indeed so. All that can be said of it is that certain works have been strengthened, others added, and that both French and English are as active as ever in their approaches to the Redan and Malakoff. The cessation of our bombardment has given the Russians leisure again to open from these works vigorously, and they keep up, not only a sharp fire of shot and shell, but a well-fed rattle of musketry. The advanced trenches on both sides consequently present at nightfall, not only the usual spectacle of shells performing their parabola, but that of bursting lights at intervals from end to end from the small sparkling explosions of the rifle, of which the fires seem to flit like the glow of the firefly along the skirts of an Oriental woodland. A painful variety was afforded me on the night of the 29th of August to the usual episodes of the siege. Whilst the French train were unloading a powder-cart in the vicinity of their powder-magazines on the Mamelon Vert, a shell from the enemy fell into a powder-cask, ignited the magazine, and blew its contents into the air. The night was calm and the sky pure, and the explosion consequently spread alarm throughout the Camps. It shook the earth for a mile and more, and frightened the horses in Camp, whose ears cannot be considered sensitive to sounds of war. The effects of the explosion were terrific. The magazine contained ten tons of powder; and, as it exploded, it hurled the fragments of beams and stones which confined it far away into the air, filling it with blazing shreds of wood, lurid flame and smoke. The fragments falling into our trenches killed or wounded ten or fifteen men, after doing fatal execution amongst the French assembled near the spot. The horror of the moment was increased by the wild hurrah of the Russians as they witnessed the explosion. As the smoke cleared off, a dreadful sight met the eye. The spot was marked by a vast crater of jagged disintergrees, gaping in the darkness and emitting the sinking effluvia of nitre and sulphur. Fourteen soldiers and four officers lay round about, shockingly mangled, whilst the more distant parts of the battery were strewed with the apparently lifeless forms of 144 wounded men. A dead pause in the fires of besiegers and besieged was noticeable for a moment, and then the spitting sound of small arms, and the broader boom of large guns told that the work of the night would not be interrupted. By a strange chance not one of the mortars in the battery was damaged by the explosion. With the exception of this incident there was nothing during the week to disturb the usual routine of the Camps. Fears of an attack on the Tchernaya were still entertained and led to the adoption of renewed precautions, which gave us security. The Piedmontese, who are the most indefatigable of soldiers made gabionades along the assailable portions of their position, and improved their communication with the hills on which their outposts hold breastworks. The Russians, however, did not make their appearance, and the Chasseurs d'Afrique made their usual rounds by the foot of Bulboquet and Gringalet without encountering the enemy. It was thought proper, in the meanwhile, to throw back the cavalry encampment on the Tchernaya a little further from the river, in view of possible operations. Part of D'Allouville's brigade at the same time returned from Baidar, and encamped by the Chasseurs. This leads to the belief that the supply of forage in the vale is garnered. Large ricks of it have been erected at Balaclava.

On the 27th the grateful ceremony of investing our most meritorious general officers with the insignia of the Order of the Bath was performed in front of head-quarters by Lord Stratford de Redcliffe. A prettily-decorated marquee had been tastefully erected in front of the house inhabited by General Simpson, under the directions of the boatswain of the *Royal Albert*—no novice, as Admiral Lyons briefly said, in the art of decoration. The Royal standard fell in drooping folds from a flagstaff in the centre, whilst on the extremities of the buildings were the "triqolor and red ensign." The Sardinian and Turkish flags were on each side of the Royal standard. A glittering crowd of officers was gathered together at two o'clock to see the ceremony. One officer from each regiment of cavalry and infantry, and subordinate corps, and two officers from the Royal Artillery, Naval Brigade, Marines, Medical and Commissariat Staffs, were invited on the occasion and a guard of honour from Sir De Lacy Evans's old division, now commanded by General Markham, was under the orders of Colonel Blane. At the hour appointed Lord Stratford de Redcliffe, dressed in his most gorgeous attire, appeared, surrounded by officers of all the Allied armies, and in the midst of deep attention, conferred the insignia of the Order on General Sir Colin Campbell, G.C.B. Sir Edmund Lyons, G.C.B., was the next in order; and was followed by General Sir H. Bentinck, K.C.B.; Rear Admiral Sir Houston Stewart, K.C.B.; General Sir W. Codrington, K.C.B.; General Sir R. Airey, K.C.B.; General Hon. Sir J. Y. Scarlett, K.C.B.; General Sir Harry Jones, K.C.B.; and General Sir William Eyre, K.C.B. The ceremony was witnessed by General Pelissier; and after it had taken place, a salute was fired, when the officers separated.

Scarcely an hour had elapsed after the conclusion of this ceremony, when most of those present were again assembled at another entertainment vastly different, but not less interesting. General Simpson, General Pelissier, and a host of others, honoured M. Soyer with a visit to his cooking stoves, which had been neatly arranged in a spot at the rear of the First Division. Lord Rokeby and General Pelissier were presented with the various kinds of soups by M. Soyer himself, whilst General Simpson gravely inspected the details of the portable kitchens. As usual, M. Soyer had not neglected his guests, and did not confine them to the simple comforts of broth. Jellies and champagne were handed about in profusion, and did honour at once to the maker and entertainer.

ARRIVAL OF PRINCE NAPOLEON BONAPARTE IN ENGLAND.—His Imperial Majesty's yacht *Ariel*, which left Cherbourg at three o'clock on Sunday morning, arrived in Plymouth Sound at seven that evening, having on board Prince Napoleon and suite, consisting of Colonel De Marest, Captain De Larouchiere, R.N; Colonel Cyprnani, of the Piedmontese Army; Dr. Ryan, and Commander Feay Pisany. The yatch proceeded into the Hamoaze, and his Highness landed immediately and went to the Government House, Mount Wyse, where he was received by Port Admiral Sir William Parker, Bart., G.C.B. Orders had been given to receive the Prince with the usual salutes, but the non-arrival of the Admiral precluded this mark of attention. This morning Vice-Admiral Sir W. Parker, Commander-in-Chief; Major-General Eden, commanding the western district; Rear-Admiral Superintendent Flemridge, and other officers, went on board the *Ariel* to pay their respects to the Prince, who subsequently landed in the Admiral's state barge at Keyham

OFFICIAL DESPATCHES.

DESPATCH FROM GENERAL SIMPSON.

War Department, Sept. 10.

Lord Panmure has this day received a despatch and its enclosures, of which the following are copies, addressed to his Lordship by General Simpson:—

Before Sebastopol, August 29.

My Lord, Since the attempt of the enemy to force the passage of the Tchernaya on the 16th inst., no movement of aggression has taken place; but all the accounts I have received tend to show a disposition on their part to renew the attack. I have considered it necessary to send the 2d Cavalry Division (composed of the 42nd, 71st, 79th, and 93rd Regiments), under the command of Lieut.-General Sir C. Campbell, to reinforce our extreme right, and they are now encamped on the slopes of the heights overhanging the village of Kamara.

I have likewise placed fifty guns and the cavalry in reserve, to act on the first appearance of the enemy.

The 50th Regiment has arrived, and I have attached it to the First Division.

The siege operations are progressing favourably; but, owing to the brightness of the nights, a large amount of work cannot be executed.

The raft bridge from the north side to the south shore has been completed, and is naturally used by the enemy, and a considerable increase of troops, with a good deal of movement, is observable in the town.

The installation of the Knights of the Bath took place yesterday at the head-quarters, and was conducted with great dignity and solemnity by Viscount Stratford de Redcliffe.

The effect was most imposing, attended as the ceremony was by the naval and military commanders-in-chief of the Allied forces; and after the delivery by her Majesty's Ambassador of a peculiarly eloquent discourse upon the character and history of the most honourable order, the several Knights were respectively invested with the insignia of their class.

I transmit the weekly report of the principal medical officer, which shows a decided improvement in the health of the army, and the list of casualties to the 26th inst.

I have, &c., JAMES SIMPSON, General Commanding.

The Lord Panmure, &c.

OFFICERS, NON-COMMISSIONED OFFICERS, AND PRIVATES KILLED AND WOUNDED FROM THE 12TH TO THE 26TH AUG. INCLUSIVE.

KILLED.

Aug. 24.—19th Foot. Corporal James Roe [illegible] Private John Lattin.—33rd Private Lewis Rowe, Henry Edgar, George Edwards [illegible] Private Rea. Henry Peat. 19th Foot. Private James Burke. 47th Private [illegible] 49th. Private George Radford. 50th Private John Riley. 93rd. M'Mahon. 97th. Private Stephen Fry.

Aug. 25.—14th Foot. Private John Lloyd. 18th Private John Kirby. Thomas Kavanagh. Philip Smyth, Thomas Donovan. 23rd Private John Arnold. 34th Private Thomas Newton. 41st Private William Rigsby. 57th. Private John Conroy. 97th [illegible]

WOUNDED.

Brevet Major R. W. [illegible], severely, 19th Foot. Lieut. [illegible] Royal Marine Light Infantry, severely. Lieut. [illegible] Engineers, severely. Captain J. F. M. Brown, severely, Royal Engineers, August 21.

Lieut. [illegible] R. Drummond, dangerously, 1st Battalion Coldstream Guards. Lieut.-Colonel [illegible] severely, Scots Fusilier Guards. Lieut.-Col. J. D. Lauric, slightly, 46th Foot August 2.

Lieut. W. J. Ross severely, 90th Foot. Capt. C. G. Arbuthnot, severely, Royal Artillery August 20.

Aug. 21st Battalion 1st Foot: Corporal Michael M'Mahon, severely. Privates John Creagh, [illegible] Smart, severely. 7th. Privates Thomas Brown, severely; Charles Frith, slightly. 23. Private Henry Cuesley, slightly. 19th. Privates William Cranston, John Whelan, Patrick Mahahan, severely. 20th. Private William Holmes, dangerously. Henry Wood [illegible] 33rd Corporal Charles Wynn, severely. Privates John Griffin, [illegible] severely. 34th. Private Charles Murphy, dangerously; James Gannon, slightly. 49th. Privates Owen Smith, Lachi Sullivan, Private R. Sutton. James Geoghegan, slightly. 46th. Sergeant Rodolphus Hall, severely. Private Thomas Dunn, dangerously; John Tyson, severely. 50th. Lance-Corporal John Pinding, severely. Private Patrick [illegible] slightly. 97th. Private Alexander Liddle, severely. 7th. Private Robert Green, slightly. 88th. Private John Fury, slightly. 20th. Private George Bush severely. 97th. Private M'Donald, severely. Rear Sergeant and Major Lance-Corporal William Baker, slightly.

August 23. 3rd Battalion Grenadier Guards: Private Stephen Gray [illegible] slightly. 1st Battalion Coldstream Guards: Privates Henry Turner, Daniel Baines, severely. 1st Battalion Scots Fusilier Guards: Private James Hoy, severely. Ensign Sir Simon Alder John Ford, Henry Worthington, Adam Thompson, Joseph Baker, slightly. 2nd Battalion 1st Foot: Private Hugh Brennan, slightly. 3rd: Corporal Peter Galagher. [illegible] Privates Malachi Gallery, dangerously; Denis Conroy, Luke Neil, severely; Bartholomew Eagan, slightly. 14th: Private John M'Ardle, slightly. 20th. Private William Dugan, George Read, James Murphy, slightly. 23rd. Corporal James Chadwick, slightly. 30th: Private John Edwards, Edward Rose. Thomas Kiely, John Regan, severely. 34th: Privates Francis Tuite, Peter M'Grath, slightly. 33rd: Private George Herbert, severely. 41st: Private William Chapman, dangerously; Patrick Cunningham, John Hurley, Patrick M'Bride, Patrick Sweeney, slightly. 47th: Private Michael Nail, slightly. 49th: Privates Thomas Walsh, [illegible] Daniel Wilson, John Gannon, James Hallahan, severely. Private [illegible] slightly. 50th: Private Richard Hyth, severely. 69th: Sergeant Thomas M'[illegible] Private John M'Donald, slightly. Royal Artillery: Gunner Patrick Gallagher, severely. Aug. 20.—3rd Foot: Privates John Tegg, severely; James Dunbar, severely. 7th. Welch, James Kearney, Patrick Cronin, dangerously; Patrick Lawler, severely. 23rd. Private Thomas Carty, dangerously. 14th: Sergeant H. Peter slightly. [illegible] slightly. 18th: Corporal Charles Sweeney, severely; Private Henry Cox, John Carey, Martin Sunday, severely, John Quilligan, Daniel Kane, Charles Collins, Hugh M'Cann, slightly. 20th: Lance Corporal William Davis, severely. Private Robert Bray, severely. James Grover, slightly. 30th: Private Thomas Hall, severely. 34th: Private W. Sullivan, slightly. 39th: Private Joseph Brown, slightly. 41st: Private Thos Carey, slightly. 46th: Martin Daly, slightly. 49th: Private Edward Hall, slightly. 50th: Private Thomas Hall, severely. 68th: Private Thos. Gannon, slightly. 88th. Corporal John Riely, severely. Private Thomas M'Manus, John Dwyer, severely. 93rd: Private Alexander Chisholm, severely. M'Loughlen, Edward Quinlan, dangerously; John Low, slightly. 97th: Private John Lennon, slightly. 1st Battalion Rifle Brigade: Private Michael O'Meara, severely. M'Neil, Christopher [illegible] Edward Connell, Patrick [illegible] Sammie, Curley, [illegible] Welch, John Fair [illegible] M'Donald, severely. General Dannenberg, was present, inquired why it was that the system of attack had not been followed up when the enemy were suffering from disease, and had not those reinforcements which our ranks included in our guarantee. Prince Menschikoff answered that the assertions were false, and that there had never been any want of either provisions or munitions in the Crimea or elsewhere. Prince Menschikoff retorted that the Minister of War did not know what he was saying; and that a person who had neither powder nor ammunition was incompetent to give an opinion on that question. If the Emperor had not dissolved the Council, by ordering General Aide-de-Camp Count Alexis Orloff to institute an inquiry, with the view of ascertaining the truth of the two statements, no one knows to what length the dispute might have gone. The continuance of the war will destroy the military reputation of Prince Gortschakoff, as it has already done with regard to Prince Dolgorucky, Prince Menschikoff, General Dannenberg, and many others. General Perowski, known for his unfortunate expedition to Khiva, and who [illegible] a Minister of the Apanage is already spoken of as his successor.—*Letter from St. Petersburgh, Sept. 4.*

CRIME IN CALIFORNIA.—The crime of homicide continues to prevail all over the country to an extent which in any other country than this would be taken as a proof that civil society was completely disorganised. Our familiarity with such a relief. These two cases occurred at different times; the disputes were short and sudden, and followed by a speedy death. Another affair appears to have ended as tragically on equally slight provocation. In a recent number I alluded to the murder (on the Sonora Mining River) one man "rubbed against or pushed" another several times. This offence was expiated with the offender's life, for the man "pushed" struck him on "the head with a bar of steel" which he "suddenly seized, and he "fled about four hours afterwards." The murderer "slipped from the crowd and made his escape." Both were known and their names are given, but no [illegible] was made at any prosecution for such a [illegible] This case is the more remarkable from the novelty of the weapon being anything else than a revolver. At Onve [illegible] a gambling-table, two Chilians were killed on the spot, and [illegible] a person, in difficulty over a game of cards, a man [illegible] In Tuolumne a blacksmith unluckily asserted that one of his [illegible] say rather too much about a robbery which he committed at [illegible] from this "a dispute arose, angry words ensued, both were armed, and the quarrel ended" by the poor blacksmith being "shot dead in his own shop." In a case of attempted resistance to an officer at the law, the man resisting, although he had no fire arms, only a knife, was shot down by a looker-on, who seemed determined neither to "take a prisoner nor give quarter," if one may judge from the report of the case. To these cases may be added the [illegible] of one [illegible] gentleman who was shot dead in a duel fought with double-barr [illegible] with ball, instances of forty pieces, for writing a newspaper [illegible] Northern Mines.—*Letter from San Fran*

among other articles of cargo, an engine for a small steamer said to be there, but the opportune arrival of some of the squadron off the port prevented her leaving. As I found her deserted, and her sails, boat, and anchors are not to be found, she will be destroyed.

I am disappointed in not having succeeded in opening a communication with the inhabitants, who have fled from the town; for I hoped to obtain the release of the two English prisoners they have among them; I learn, however, from the Americans that they are very well treated.

In conclusion, I desire to add that, although it has necessarily been a great disappointment to the squadron under my command to find upon arrival at this place, more than 3000 miles outside their station, that the enemy had escaped, and the batteries were deserted, yet their Lordships will not fail to observe that not the less credit is due for the great zeal and anxiety that has been shown by each of the officers and men employed, in the hope of being in time to take part in the anticipated operations at this port."

The best understanding subsisted between Captain Penaurs, of the [illegible] and me; and I cannot say too much in favour of the zeal and activity he displayed to meet every wish of mine, and to keep the appointed rendezvous; the same continues with respect to Admiral Fanshawe.

I am, &c., H. W. BRUCE.

The Secretary of the Admiralty [illegible] Rear-Admiral and Commander-in-Chief [illegible] off Baltic, July 17, 1855.

SIR,—I request you will inform the Lords Commissioners of the Admiralty, that, before leaving Petropaulovski, I succeeded in opening a communication with Captain Martinhoff, the temporary governor of that place, who had retired into the interior, having for its object the release of two prisoners taken last year, as reported in my general letter of the 15th ult.

Having forwarded a safe conduct to Captain Martinhoff, through the kind offices of an American resident in Petropaulovski, that officer sent 150 versts inland for them, and on their arrival, on the 26th ult., delivered them up to Captain Houston, of her Majesty's ship *Trincomalee*, and three Russians had been detained on board the French brig *Oscgalo* since last year, were given in exchange.

The two men proved to be William Gas[illegible] ordinary seaman of her Majesty's ship *Pique*, and Pierre Langois, of the [illegible] frigate *Forte*. The latter will be handed over to the *Forte*, on my arrival at San Francisco, and the former will, at his own request, be appointed to the *Brisk*, his proper ship during the period for which he engaged, as he appears to have been treated with much kindness during the time they have been in the hands of the enemy.

I have, &c., H. W. BRUCE

The Secretary of the Admiralty.

RUSSIAN POLICE.—A police officer was once requested by the Emperor Alexander to hunt up a book which contained most republican sentiments, but which, as he had been informed, had reached his Court. "I trust to you," said he, "to find out the owner and to punish him." The officer went away, but returned in a few days with the book. "Your Majesty will find the owner will be sent to the fortress." Within a few days the officer returns. "Where is the book? Who is the culprit?" "Your Majesty will find the book in the cabinet of the Empress Marie Fedorovna, on the writing-table behind the first row of books." So it was.—*Recollections of Russia, by a German Nobleman.*

THE CZAR NICHOLAS AND THE RUSSIAN FLEET.—On the night of the 7th the French General telegraphed to Paris:—"Our artillery has been firing during the last twenty-four hours. A French shell has this day fired a Russian frigate, which is burning now." This is the second ship destroyed by the advanced artillery of the Allies. It is pretty evident, therefore, that the remainder of the Russian squadron, which was so brave at Sinope, has no longer a harbour to shelter it from our shot and shell if the enemy may not reach. One of the most positive orders of the Czar Nicholas was, when the war commenced, to save the shipping at any cost. The Admirals were not to be tempted by the protestation of the foe, by the most inviting offers of the enemy. If half a dozen vessels of the Allied squadrons were burning the Imperial stores of a depôt within sight of the Russian fleet, they were not to venture out. In this they have been most faithful to their Imperial Master, should run the chance of being damaged. The paternal Government of Russia cares not for private property. On more than one occasion we hear of the Russian fleet having left its harbours for Sweden, or even St. Petersburg to leave their stone prison, but the request has always been denied. If a Russian ship of war can only get sight of the enemy, steam is put on, and sail crowded for the natural port. Such is the instruction of the Czar from home. If we ever get a Russian ship, it will be by fishing for it. It is quite possible, that Russia find our guns capable of doing further damage to their shipping, the *Leader Apostle* and *Prince* may be raised from the surface of the water, and do that peculiar land duty invented by Russian admirals. The jealousy which the Czar and his Government show about the navy should convince the Allies what are the real resources of Russia. The present navy may be repaired in a very brief space of time, but a Russian fleet will take years to build and make efficient.—*Letter from Paris*

THE CZAR AND HIS COUNSELLORS. On the receipt of Prince Gortschakoff's despatch announcing the failure at the Tchernaya, the Emperor Alexander immediately summoned a Council of War, composed of all his most competent Generals. The Emperor read the despatch to them, and a discussion took place as to the best means to be adopted in order to restore confidence to the troops the moral courage which this defeat had shaken. Thereupon the Emperor ordered an inquiry into the conduct of General Read. The Emperor, addressing himself to Prince Dolgorucky, the Minister of War, and bitterly upbraided him for his innocence, while he [illegible] in not keeping the army well supplied with all the necessary munitions of war. Prince Dolgorucky gruffly answered that the assertions were false, and that there had never been any want of either provisions or munitions in the Crimea or elsewhere. Prince Menschikoff retorted that the Minister of War did not know what he was saying; and that a person who had neither powder nor ammunition was incompetent to give an opinion on that question. If the Emperor had not dissolved the Council, by [illegible] General Aide-de-Camp Count Alexis Orloff to institute an inquiry, with the view of ascertaining the truth of the two statements, no one knows to what length the dispute might have gone. The continuance of the war will destroy the military reputation of Prince Gortschakoff, as it has already done with regard to Prince Dolgorucky, Prince Menschikoff, General Dannenberg, and many others. General Perowski, known for his unfortunate expedition to Khiva, and who [illegible] a Minister of the Apanage is already spoken of as his successor.—*Letter from St. Petersburgh, Sept. 4.*

CRIME IN CALIFORNIA.—The crime of homicide continues to prevail all over the country to an extent which in any other country than this would be taken as a proof that civil society was completely disorganised. Our familiarity with such a relief. These two cases occurred at different times; the disputes were short and sudden, and followed by a speedy death. Another affair appears to have ended as tragically on equally slight provocation. In a recent number I alluded to the murder (on the Sonora Mining River) one man "rubbed against or pushed" another several times. This offence was expiated with the offender's life, for the man "pushed" struck him on "the head with a bar of steel" which he "suddenly seized, and he "fled about four hours afterwards." The murderer "slipped from the crowd and made his escape." Both were known and their names are given, but no [illegible] was made at any prosecution for such a [illegible] This case is the more remarkable from the novelty of the weapon being anything else than a revolver. At Onve [illegible] a gambling-table, two Chilians were killed on the spot, and [illegible] a person, in difficulty over a game of cards, a man [illegible] In Tuolumne a blacksmith unluckily asserted that one of his [illegible] say rather too much about a robbery which he committed at [illegible] from this "a dispute arose, angry words ensued, both were armed, and the quarrel ended" by the poor blacksmith being "shot dead in his own shop." In a case of attempted resistance to an officer at the law, the man resisting, although he had no fire arms, only a knife, was shot down by a looker-on, who seemed determined neither to "take a prisoner nor give quarter," if one may judge from the report of the case. To these cases may be added the [illegible] of one [illegible] gentleman who was shot dead in a duel fought with double-barr [illegible] with ball, instances of forty pieces, for writing a newspaper [illegible] Northern Mines.—*Letter from San Fran*

DESPATCHES FROM REAR-ADMIRAL BRUCE.

Admiralty, Sept. 10.

Despatches, of which the following are copies, have been received from Rear-Admiral Bruce, Commander-in-Chief of her Majesty's ships and vessels on the Pacific station:—

President. at Petropaulovski, June 15, 1855

SIR,—I have to report, for the information of the Lords Commissioners of the Admiralty, that, arriving off this port on the 30th of May, I found the place completely evacuated, not a vestige of gun, or person to be seen; nothing but empty embrasures and deserted houses

I entered the inner harbour on the following day in the *Barracouta*, accompanied by Captain Penaurs, of the French frigate *Alcaste*, when we found three American ships (residents left), from whom we learned that the Russian ships named in the margin (*Aurora*, 44; *Dvina*, 20; *Obaniza*, 20; transports *Baikal*, *Irtisch*) were cut through the ice and took their departure, on the 17th (4th) April, with all the guns and munitions of war, the soldiers and Government *employés*, 600 in number but of their destination we could obtain no clue.

I reached the rendezvous, lat. 50 N., in Ha[illegible] on the 14th of May, and the *Fox* and *Miranda* on the 15th, the remainder of the squadron and *Barracouta* had been there since the 14th of April. Great credit is due to Captain O'Callaghan and Commander Stirling for the zealous exertion by which they effected this object; and their Lordships will remark the promptitude with which they were dispatched by Rear-Admiral Sir Fanshawe Martin.

The French frigate *Alcaste*, and the *Brisk*, were in the vicinity of the rendezvous at the same time; but the prevalence of thick fogs and adverse weather prevented my seeing the Bay of Acoutska before the 20th ult., when six of the ships being together, I trusted to the prompt appearance of the seventh, and accordingly proceeded to the port in tow of the *Barracouta*, followed by the *Alcaste* in tow of the *Brisk*. The *Dido*, *Pique*, and *Encounter* arrived the same evening.

Commander Stirling, of her Majesty's steam-sloop *Barracouta*, while separated from the squadron, having, during a break in the fog, looked into the anchorage to see if it was there, took, with much judgment, that opportunity of reconnoitring the harbour; and I was informed by him of the ships being no longer in it.

The *Amphitrite*, from Honolulu, having met me on the 11th inst., while I was in the act of following the Russian ships into the Sea of Ochotsk, has given me such information as to convince me that a considerable force of French force was already there, instead of proceeding I despatched her Majesty's ships *Pique* and *Barracouta* on the 13th, and *Amphitrite* on the 14th, to reinforce the squadron of Sir James Stirling at the mouth of the Amoor. The *Encounter* sailed on the 12th for Sir James Stirling's rendezvous at Hakodadi, in the Strait of Makamai, to inform his Excellency of the movements of the other ships, in case he should not have left there. The *Amphitrite* will rejoin my flag off Sitka, as soon as Captain Frederick finds her services are not required in the Sea of Ochotsk.

Resuming the subject of Petropaulovski, I would observe that the enemy must have worked in an indefatigable manner after the departure of the Allied squadron last year, as we found a fort for 24 guns, which had been constructed with much skill and labour, by means of fascines strongly bound together, 25 feet thick, staked and filled in with earth, and some of them dished round, with covered ways leading from one to the other, and breastplanked in the rear. Every possible preparation had been made to receive prior to the orders arriving from St. Petersburg to evacuate it.

I caused the batteries to be destroyed, but, having met with no opposition approaching Petropaulovski, I considered it a point of honour to respect the town.

I found hidden in the Rakovia Harbour a fine Russian [illegible] called the *Anna*, built at Abo in 1853. She would have sailed from here weeks since for Aian, with the family of the governor of the place, and

---

ARRIVAL OF PRINCE NAPOLEON BONAPARTE IN ENGLAND.—His Imperial Majesty's yacht *Ariel*, which left Cherbourg at three o'clock on Sunday morning, arrived in Plymouth Sound at seven that evening, having on board Prince Napoleon and suite, consisting of Colonel De Marest, Captain De Larouchiere, R.N; Colonel Cyprnani, of the Piedmontese Army; Dr. Ryan, and Commander Feay Pisany. The yatch proceeded into the Hamoaze, and his Highness landed immediately and went to the Government House, Mount Wyse, where he was received by Port Admiral Sir William Parker, Bart., G.C.B. Orders had been given to receive the Prince with the usual salutes, but the non-arrival of the Admiral precluded this mark of attention. This morning Vice-Admiral Sir W. Parker, Commander-in-Chief; Major-General Eden, commanding the western district; Rear-Admiral Superintendent Flemridge, and other officers, went on board the *Ariel* to pay their respects to the Prince, who subsequently landed in the Admiral's state barge at Keyham

DESTRUCTION OF PETROPAULOVSKI AND FLIGHT OF THE RUSSIANS.

By the mail-steamer from the United States, which arrived at Liverpool on Saturday, we have full accounts of the operations of the Allied fleets against the Russian possessions on the northern shores of the Pacific Ocean, both in Asia and America. These accounts reached the United States by way of California.

It will be recollected that the Allied squadron in the Pacific made an attack upon Petropaulovski in the early part of last September; and having been rather roughly handled sailed southward without having effected the reduction of the place. Petropaulovski is the capital of Kamschatka, and is a place of considerable importance. It is situated on a kind of inner bay, divided from the outer one by a sand bar, which runs parallel to the town, leaving a narrow entrance for vessels seeking the inner harbour. It will be recollected that the *Dwina* was moored behind this bar when the first attack was made on the place, and, being completely sheltered from the guns of the Allied fleet, did good execution.

From time to time intelligence has been received of the movement of all the vessels belonging to the Allied fleet in the Pacific to the northward during the past spring, and it appears that it was determined that another attack was to be made on Petropaulovski, and its reduction was to be effected at any cost. Accordingly, in the early part of last May the Allied fleet, augmented by the arrival of other vessels of war, appeared before the devoted town, and commenced preparations for the attack. When they approached sufficiently near to be able to discern objects on the shore, they were greatly surprised to find that the American flag had been substituted for the Russian, and that a most extraordinary stillness reigned around. On landing they found that the town had been deserted and not a single human being remained save two Yankees, and a Frenchman who acted as their servant. From them they learned that orders had come from Siberia for the removal of the Russian troops to the garrison at the mouth of the Amoor river, and that the inhabitants had also fled to the village of Avatscha, some miles distant. Immediately after the desertion of the place, the American flag was hoisted by the two Americans, who remained behind, as a signal to the Allied fleet, which it appears was expected. The town, after the desertion of the garrison and the inhabitants, presented of course a very lonely appearance. Packs of dogs scoured through the silent streets in search of food. The houses were all tenantless, and a solemn stillness reigned around.

It appears that on the morning of the 17th last fall, it was determined to strengthen the fortifications of the place, in order that they might be able to give them a warmer reception on their second appearance. The fortifications were composed of logs of wood, fascines, and earth, about fifteen feet in thickness; and the embrasures indicated the fact that no less than fifty one guns were mounted. Some of these of the heaviest calibre; but, strange to say, not one of the guns, nor any of the ammunition and stores, could be found by the Allies when they arrived there last May. They were either carried to the Amoor river, or buried. The probability is that they were disposed of in the latter way. The arsenals, magazines, &c., which were principally frame buildings, were burned down by the Allies, and all the property belonging to the Government which could be found was destroyed. The stores and private dwellings were, however, scrupulously respected.

From the two Americans the Allies learned the particulars of the exodus of the garrison and the inhabitants. It appears that on the receipt of the news of the defeat, on the first attack, in England, the English screw-steamer *Barracouta*, fourteen guns, and the steamer *Encounter*, six guns, were ordered from China to Petropaulovski, to watch the movements there. Both lay off the coast, some distance from the town, during the whole spring; but on the 17th April the whole garrison embarked on board the *Aurora* and the *Dwina*, and four merchantmen, and, taking with them all their stores and ammunition, set sail for the Amoor river. The move ment was not perceived on board the English steamers in consequence of the thickness of the weather occasioned by the snow and fogs. The inhabitants all moved to the village of Avastcha, where the wife of the commandant also remained, not being able to proceed with the troops in consequence of the delicate state of her health at that time.

Before leaving, the Allies destroyed all the fortifications, and erected a fence around the graves of Admiral Price, and the English and French who fell on that occasion, having been drawn into an ambuscade while marching upon one of the batteries by which the harbour was protected. It is difficult to divine what were the reasons of the Russians in abandoning the place. It was well fortified both by nature and art, and the result of the first attack showed that the place could be successfully defended even against a larger force than the Allies could muster in the Pacific.

The *Obligado*, Captain de Koenouru, which arrived at San Francisco on the 18th July, left at Petropaulovski, the British man-of-war *Trincomalee*, on board of which two Russian prisoners had been placed, for the purpose of exchanging them for a French sailor who had both his arms cut off in the attack made on the place by the Allies first, and was left behind when it was captured by the Russians. It is stated that he received the kindest treatment. The British frigates *Pique* and *Amphitrite*, after the destruction of the works at Petropaulovski, sailed for the Ochotsk Sea. The English vessels were to proceed to Vancouver's Island, and the French to San Francisco. A portion of the fleet was to remain at the North for some time, and cruise around the Aleutian Islands.

In a despatch dated Petropaulovski, from Rear-Admiral Fourichon, of the French fleet, he states, after briefly recapitulating the facts above enumerated, that the Russian garrison, numbering some 1200 men, had doubtless sailed for the mouth of the Amoor river, which drains the southern portion of Siberia, and flows into the Gulf of Sachalien, an arm of the Sea of Ochotsk. They left for this point on the 17th of April, and were there before the French and English arrived at Kamschatka. This river is regarded as the dividing line between China and Asiatic Russia, and at its mouth is a very strong series of fortifications, which have been greatly strengthened from time to time by the Russians. It is thought by some of the officers of the *Obligado* that the immense armament of Petropaulovski was carried there with the garrison.

After the destruction of Petropaulovski, a portion of the Allied fleet paid a visit to Sitka: but the compact between the Russian and British Governments, whereby the Russian-American Company and the Hudson's Bay Company are mutually exempted from an assault on land from either of the two belligerent Powers, was completely respected by the Allies. The object of their visit seems merely to have been to ascertain whether any naval force belonging to the Czar was to be found in that quarter, and, satisfied upon this point, the Admirals did not think proper to exercise a right reserved in the compact of blockade.

On arriving off the harbour the Allied ships did not enter, but the English and French Admirals, with their suites, embarked on board the English steamer *Brisk*, and entered the port. They were waited upon by a boat from the shore containing the Governor of the Settlement, who communicated the information that, in accordance with the spirit of the treaty between England and their Government, no preparations for defence had been done necessary, and that none had been made. If the French Admiral should think proper to assail the town, no resistance would be offered, and they could only ask that they be taken on board the men-of-war as prisoners, for if their defences against the hostile Indians were destroyed and the town burnt, the whole population—men, women, and children—would be at the mercy of the savages, who surrounded the place in such numbers that their destruction would be inevitable.

The fleet arrived at Sitka in twenty three days from Petropaulovski, and sailed on the 13th July for San Francisco.

SEA OF AZOFF.—CURIOUS FACT.—The following is an extract from a letter written by the captain of a Hull vessel:—"I forgot to tell you that I had an Englishman living on board nearly a fortnight, some time ago. He had been knocking about here five or six years. He had been an engineer in the Russian service; but would not serve any more on the war breaking out, and has been doing nothing at Kertch ever since, yet the authorities would allow him to leave the country. He is now on board H.M.S. Terrible, as interpreter, and is getting 7s. 6d. per day. He was very badly off when I took him on board; but now he is all right, and is liked very much. He says he shall never forget me as long as he lives. It appears by what he told me that the Russians have been receiving a great many supplies through Kertch—not only provisions, but also guns and men. The guns came from a place a few miles to Kertch over Don, above Taganrog, at Rostoff, where there is a very large foundry for cannon. The soldiers even came from Moscow by Kertch to get to Sebastopol, which seems rather strange when you look at the map of Russia. And if you trace the river Don from Taganrog to its source, you will find that it approaches very near to Moscow, and when once embarked on that river can ride all the way to Kertch, which would make a material difference to them on their arrival at Sebastopol; for one would think that if they had to march all the way, especially in the summer time in a burning hot sun, they would not be of much use for a few weeks after the arrival.

PREPARATIONS FOR WINTER.—Every year each Mussulman family receives one or two sheep at the fete of the Courban-Bairam. This custom has just afforded the population of Constantinople an occasion of patriotism, for the Government, having begged the Imauns to recommend the inhabitants to give the sheepskins for the use of the troops in the approaching winter, not less than 60,000 were collected on the second day of the fete at the bridge of Galata.

NAVAL AND MILITARY INTELLIGENCE.

EXTRA FIELD ALLOWANCE TO THE ARMY.—VICTORIA R.—Whereas we deem it expedient to grant a field allowance to the non-commissioned officers and soldiers of our regular army, when engaged in active operations in the field against an enemy: our will and pleasure is, that from the 1st day of July, 1855, every non-commissioned officer and soldier then serving in the field, and every other non-commissioned officer and soldier from the date of arrival at the seat of war, shall be entitled to the field allowance of sixpence a day in addition to his daily pay, to be continued to him so long as he shall remain on active duty in the field. During the period of a non commissioned officer or soldier being in hospital his field allowance will cease, but will be allowed from the day he returns to duty in the field. Given at our Court at St. James's, the 16th day of August, 1855, in the 19th year of our reign. By her Majesty's command. PANMURE.

MAJOR CLAREMONT, lately attached to the Staff of the French army in the Crimea, has been appointed Military Commissioner in Paris, in the place of Major-General Sir Arthur Wellesley Torrens, deceased.

SOME of the huts contracted for by Messrs. Lucas, Brothers, of Lowestoft, are now in the course of shipment for the Crimea. The huts for the soldiers, of which Messrs. Lucas have provided fifty three, are designed to accommodate twenty-two men each, and are 32 feet by 16 feet.

IN consequence of much inconvenience having been occasioned to the public service by repeated applications having been made by the relatives and friends of seamen, soldiers, and marines serving in the East, notice has been given that no application will be attended to unless addressed to the proper departments. Inquiries relative to persons belonging to the household troops are to be addressed to the commanding officer of the regiment in which the soldier is serving, Orderly-room, Horse guards; and for soldiers serving in the Cavalry, Infantry, Artillery, Foreign Legion, Land Transport Corps, &c., to the War office, Horse Guards. Inquiries relative to persons serving in the Fleet to be made to the Admiralty. Relatives, &c., of persons in contract transports must apply for information to the owners or agents of the respective ships.

THE recruiting for the division of the Land Transport Corps now in course of formation has been very successful, and a large body are now assembled at the head quarters, at Horfield Barracks, in the vicinity of Bristol. The number to be enrolled is 3000, and upwards of two-thirds have already been raised. These are to be "drivers," with a small remuneration than the other branches sent out, but they are to be officered upon a similar system. The whole are now undergoing active and systematic drill in the large barrack-square. Horfield Barracks are the head quarters for the entire force.

AN active transport corps is being organised in connection with the Turkish Contingent. A large number of discharged soldiers are being engaged for the purpose of artillery, engineers, &c., of which corps, so far as the English portion is concerned, will be a very efficient one

THE whole of the batteries at the mouth of the Tyne are being strongly fortified. A half-moon battery will be erected at the end of the Lawe Cliffs; and the Spanish Battery, which has been in a ruinous state the time of the Spanish Armada, is being reconstructed. These defences will completely command the mouth of the harbour. Four more powerful big steamers have left the Tyne for Constantinople. About a dozen of these craft have gone to the East during the year.

THE *Neptune*, 120, *St. George*, 120, *Malaca*, 17, and *Rosamond*, 6, are ordered immediately to Lisbon, the two latter steam vessels in attendance upon the sailing three-deckers. The *Neptune* and *Rosamond* left Spithead on Sunday afternoon, and the *St. George* and *Malacca* next day. The squadron goes to pay homage to the King of Portugal on his coming to the throne, on the 16th inst. (to-morrow), and to assist in inaugurating that event. The *Simspared*, 71, steam-ship, Captain Williams, which is to proceed to the Black Sea to-day, with mortars and munitions of war, is also ordered to put in at Lisbon on the same object.

A SMALL locomotive engine called "The Alliance," was sent from the railway foundry, Leeds, last week, for Balaclava. The engine is what is called a tank engine, with 11-inch cylinders, 17 inches stroke, six wheels of three feet coupled, and is intended for the use of Lieut. Wilkinson, agent. The words "the Alliance," and the national flags of England, France, Turkey, and Sardinia were painted on the engine.

CAPTAIN LAWRENCE and Lieutenant Horsey, of the Royal Marine Artillery, arrived all the Sebastopol on Saturday to take charge of and conduct to head quarters at Portsmouth the Royal Marine Artillery detachments serving in the nine mortar-vessels lately returned from the Baltic. The steam-vessel *Fearless*, Master-Gunner Chichester, will be selected them from their respective vessels, and proceeded with them for Chatham Marine Barracks. They were to leave Chatham next morning for Portsmouth. An early inquiry is ordered to take place at Sheerness by a committee of officers appointed by the Admiralty and Ordnance Departments, to ascertain the cause of the bursting of the mortars.

THE Board of Admiralty have invited tenders to be sent into Somerset-house, London, for vessels to convey about 2000 tons of ordnance stores to Balaclava. The stores are light, being chiefly composed of timber of 11 feet lengths. The vessels to be quite ready to receive cargo, and to be tendered for at a rate per day per ton for such stores delivered. To-day, the 11th instant, at noon, is the last hour for receiving tender.

NOTICES have been issued warning men who belong to the Naval Coast Volunteers not to enlist in the regiments of the Line, the Militia, or the East India Company's service, as they will thereby render themselves liable to imprisonment for six months.

THE Queen's Own Worcestershire Yeomanry Cavalry is now on permanent duty at Worcester, under the command of Colonel Lord Ward, who has just returned from the Crimea. The regiment is 300 strong. The Colonel has provided each trooper with a new saddle and bridle, and small portmanteau, to be strapped behind the saddle, in lieu of the haversack, to which the men objected

DURING the past week, an experiment has been carried on in the Royal Arsenal, at Woolwich, to ascertain the durability of two different kinds of vents for iron guns. Two 8 inch 65 cwt. guns will be employed, which were brought down to the Butt, one of them having the ordinary iron vent, and the other a copper vent. Each gun was loaded with cartridge of 12 lb. and one shot, and two hundred rounds were fired off from each. the guns being fired as quick as if engaged in action. When the number of rounds was done, and the guns examined, it was found that the one with the iron vent had begun to get enlarged, and the copper one had not been in the least disturbed. The experiment was carried on under the superintendence of Captain A. Vandeleur, instructor of Royal gun factories.

ON the night of the 14th ult. a terrific hurricane swept over the Mosquito coast, involving the total loss of her Majesty's sloop-of-war *Wolverine*. Her cutter reached San Juan del Sur on the 16th with despatches for the station flagship *Diamond*. The latter left Aspinwall to render immediate assistance, and she left for the scene of disaster as soon as steam was got up. Some of the circumstances mentioned in the paragraph give ground for hope that the loss of the ship may not be so complete as here affirmed, or at least that all lives are saved.

A VERY useful addition is about to made to the Army in the shape of a new corps of "instructors of musketry," which is to be immediately organised on a permanent footing. The head-quarters will be at Hythe, where there will be always stationed a commandant, with pay at staff colonel; a captain, with an allowance of £150 a year; a subaltern with £100, in addition to their ordinary regimental pay; a paymaster and quartermaster, and a surgeon. with a sergeant-major, five first-class instructors, a clerk, an armourer, and twelve privates as fatigue men. These will also be present, in the first instance, with one captain, nine subalterns, 100 first-class instructors, and 100 second class instructors, who, as soon as they are sufficiently experienced, will be distributed among the depôt battalions, and regiments, as the Commander-in-Chief may direct. The officers may be employed in inspecting and reporting for the information of the authorities. The 205 instructors are to be chosen from sergeants and corporals, or occasionally privates especially recommended by their commanding officers: they must be intelligent, unmarried, not exceeding five years' service, of active habits, able to write from dictation, and with a [illegible] They will be exempted from [illegible] instructor, who will be responsible that the system, as taught at Hythe, is efficiently carried out in the regiment to which he belongs.

THE BRITISH CAVALRY. In consequence of the daily apprehension of an attack, the English cavalry is regularly turning out every morning and coming down to the valley, as it was hazardous for the grooms to be picked off, and watching an opportunity to revenge them. The disasters which befell our cavalry last year have left no trace; and, phœnix-like, it has arisen more brilliant than ever from its ashes. The Russians, it is said, think they might say, if anything human could be called so. Horses and men are in excellent condition—as fit for work as any cavalry can be. It would, however, not be at all desirable that this daily turnout should continue. It has, indeed, the advantage of saving the turning out for parade, so that the horses rest after they come back from the valley, except to go down for water; but if those daily morning rides are to last, they will soon bring down the horses in condition, and then they would have some difficulty in facing a Crimea. winter, even in good stables.—*Letter from the Camp.*

The coal proprietors of Upper Austria are about to form a joint stock company for the working of their mines. A branch railway, connecting it at Lambach [illegible] about to be made, in order to join the [illegible]

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

Earl Granville will continue in attendance on the Queen, at Balmoral, until the week after next, when he will be relieved by the Right Hon. Sir G. Grey, who is detained in town by public business

The Emperor of the French left Paris on Tuesday for the Camp at St. Omer, to review the troops under orders for the Crimea

The Queen, upon the recommendation of Sir William Molesworth, has appointed Mr. Hincks, a distinguished member of the Canadian Legislature, to the Governorship of Barbadoes.

Private letters from Berlin speak of the King of Prussia's health as being seriously impaired. His breathing has become difficult.

The Earl of Ellesmere will be the Lord-Lieutenant of Lancashire, in the room of the Earl of Sefton, deceased.

It is positively asserted (says the *Cologne Gazette*) that Lord Westmoreland will not again return to Vienna as Ambassador; but Lady Westmoreland has just arrived there from Prague

A letter from Munich states that King Maximilian had been attacked slightly with fever, which, it was thought, would prevent his Majesty from being present at the opening of the Chambers next week.

The Queen, on her visit to France, did not escape the petitioning fraternity. No fewer than 100,000 petitions, or begging letters, were forwarded to her.

The Sultan has ordered that the fête days of the Sovereigns in alliance with the Sublime Porte shall for the future everywhere in his dominions be celebrated with great ceremony.

Her Majesty has caused a letter to be written to Mdlle. Bonheur, expressive of her admiration of her picture—a rather exceptional, and therefore very complimentary, manner of announcing Royal gratification.

The Grand Duke Nicolas Nicolajewitch is at present building a splendid palace. Marbles of Finland and Siberia have been ordered for the new ornament of the Russian capital

Lord and Lady Brougham have been receiving a succession of visitors at Brougham Hall, Penrith. The noble and learned Lord will complete the 76th year of his age on the 19th inst., when a party will be entertained at the hall to celebrate the event.

The Princess Royal of Sweden has had the misfortune to break her arm at the baths of Sandefjord.

The Hereditary Grand Duchess of Mecklenburg-Strelitz, accompanied by her youthful family, left the Duchess of Cambridge's residence at Kew on Monday, on her return to the Hereditary Grand Duke of Strelitz.

The Earl of Stamford and Warrington killed on Friday, the 7th of September, with his own gun, at Withington, near Erville Hall, 219 partridges, 7 hares, 4 landrails, and 3 rabbits; together 233 head.

A letter in the *Patrie* contradicts the telegraphic report of Count Nesselrode being about to travel, and affirms that he has no intention of leaving St. Petersburg.

Sir James Hudson, British Ambassador to the Court of Turin, has sent 50*l.* to the committee of the fund for the Piedmontese troops in the Crimea.

Last Sunday afternoon the Rev. Dr. M'Neil, of Liverpool, preached in the open air at Buxton. The rev. gentleman took his stand in the colonnade of the Crescent, and preached a powerful and eloquent sermon to a large and attentive audience.

The Papal See has no Nuncios at present in Spain, Sardinia, Switzerland, Brazil, and New Grenada.

Prince Charles Lucien Bonaparte (Prince of Canino) was expected to arrive in Glasgow early this week, to attend the meeting of the British Association in that city

Mr. Charles Dickens intends visiting Sheffield early in December, in order to give a reading for the benefit of the Mechanics' Institution of that town.

The Committee of the London City Mission has acknowledged a donation of £500, as "A thank-offering from the other members of his family for the recovery of Sir E. N. Buxton, Bart., from severe illness."

Marshal Radetzki last week fêted his fiftieth anniversary as his promotion to the grade of General. He is eighty-nine years of age, and has served seventy-one years

Mr. Oliveira, M.P., has gone to Portugal for the purpose of examining the state of the vineyards, the stocks of wines and the vintage; especially in Oporto district, to obtain the best information upon the subject of a reduced duty.

Great changes are proposed in the Spanish Court. The great dignitaries of the Palace are to be reduced to three—the intendant, the major-domo, and the secretary of the Queen. The household of the King is to be placed on a military footing, and four colonels are to form his staff.

The recently-circulated report, that the editorship of the *Quarterly Review* had passed into the hands of Mr. Stanley is contradicted. No change has taken place.

The *Adelaide Reporter*, speaking of the first assembly ball, attended by the new Governor and his lady, says: "We may remind our readers that the dancing commences precisely at eight, and finishes sternly at two o'clock."

Le Chevalier Paolo Balbo, youngest son of Count Cesar, goes to join the army of the East as a common soldier

The fortune left by the late Baron Diedritch of Vienna to his grandson, Prince Sulkowsky, amounts to eighteen millions of florins (about £1,800,000). There were found in the cellar twenty-two bags, each containing 1000 ducats in gold, and in different chests securities out of date, and lost, for a sum of 188,000 florins

It has been determined to entertain Mr. Gavan Duffy at a public banquet previous to his departure for Australia. A committee propose to make the banquet a tribute of respect to Mr. Duffy from his friends and admirers of all political and religious denomination

The *Diritto* announces that the widow of General Pepe has sent a subscription of 500 fr. to the Society of Italian Emigration.

Francis Rodbury, Esq., barrister-at-law, the Commissioner appointed by the Master in Chancery to wind up the affairs of the National Land Company, is travelling through Yorkshire to receive claims.

M. Taxile Delord, the well-known writer in the *Charivari*, has joined the staff of the *Siecle*.

The concession has been granted to a French company for the construction of the railway from Ancona to Rome and Civita Vecchia.

Another musical festival is contemplated by the gentlemen of Bradford, to be held in their Town-hall next year.

Letters from Naples of the 1st say that the bastinado has been done away with in that kingdom, on the remonstrance of the Archduke Ferdinand Max during a visit he has just made to that city.

St. Petersburg journals announce that an Exhibition of Fine Arts will be held in that capital this year—in spite of the war.

A dramatic performance was given in the Chesterfield Theatre, on Wednesday evening, by the officers of the Chatsworth Rifles, in aid of the Crimean fund.

The members of the London Society of Arts were entertained by the Paris Commissioners of the Exhibition, last week, in the handsome apartments used for the Friday evening receptions

A woman has been accidentally poisoned at Battle, in Sussex, owing to taking arsenic by mistake for carbonate of soda. Even when she became aware of the error, she foolishly kept the matter secret until it was too late.

The Belgian Government has directed M. Stas, professor of chemistry at the Military School of Brussels, and M. Quetelet, professor of chemistry applied to medicine, at the University of Liege, to examine and report on the measures adopted in France for the condemnation of deleterious gases in manufactories of chemical products.

A company has been established for the purpose of working coals in the valley of the Damoodah, in Bengal, and of supplying the market of Calcutta for that article.

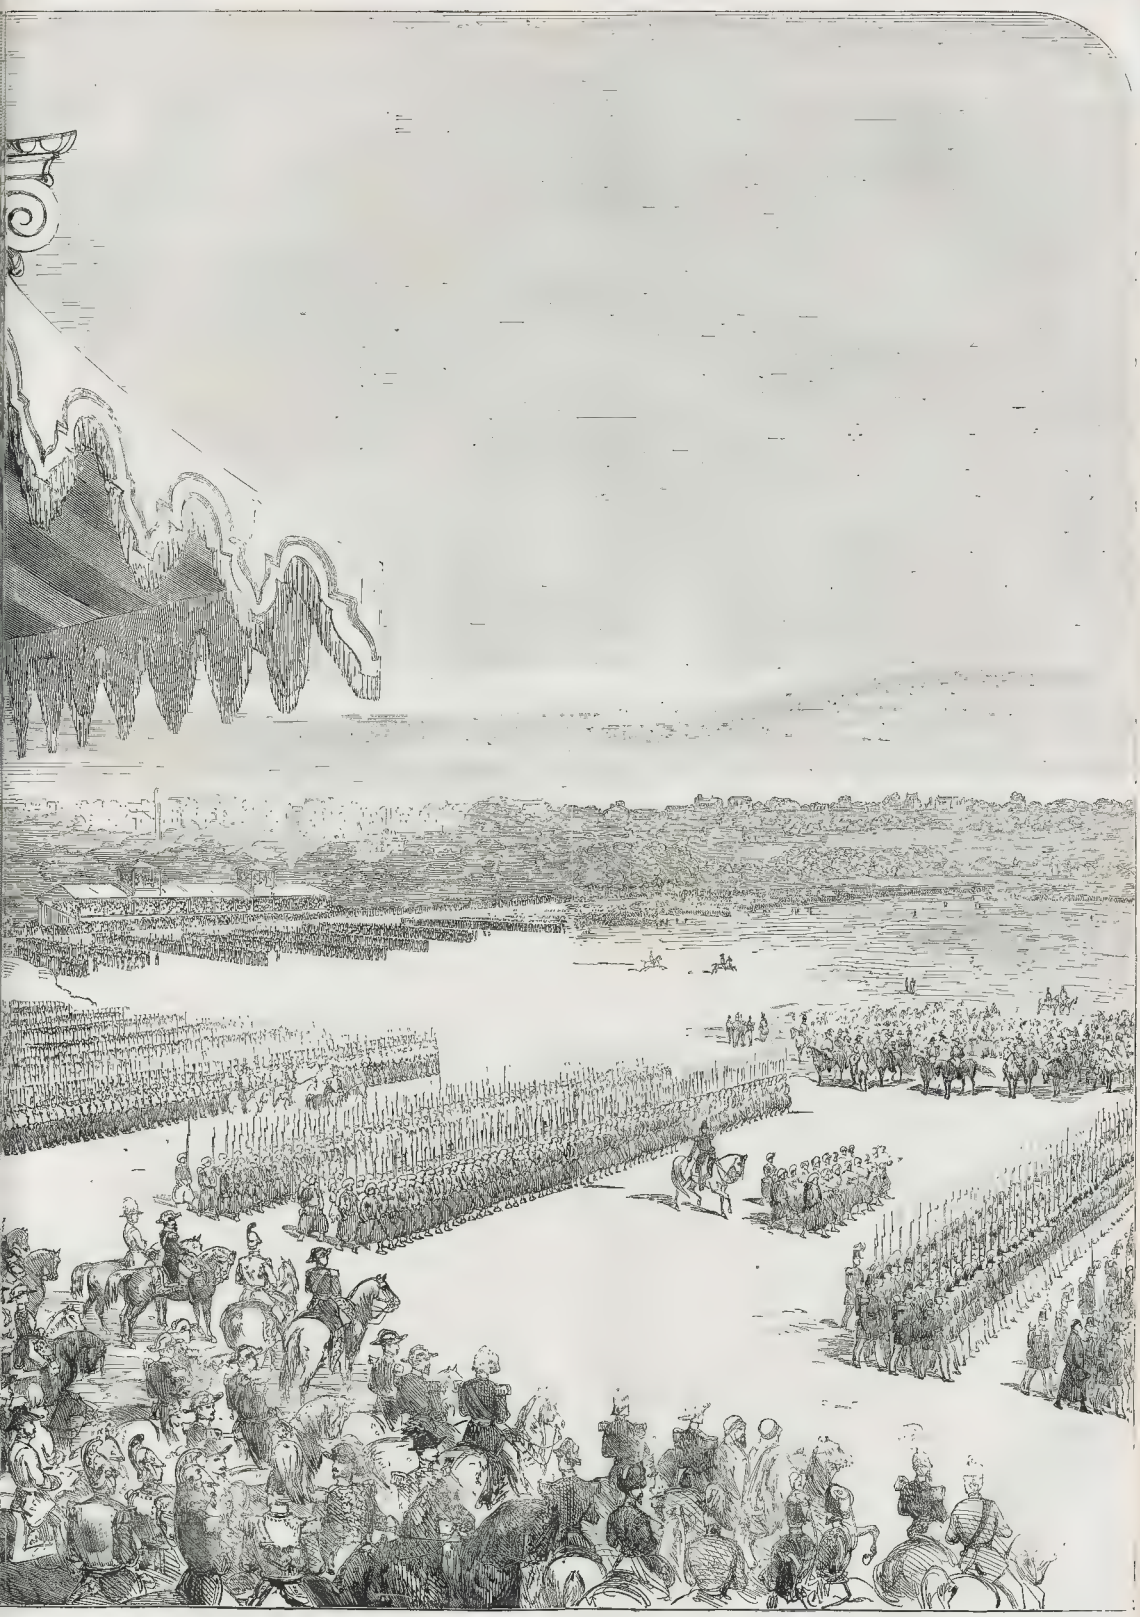
The satisfactory appearance of the vineyards in the provinces of Asti and Alessandria, in Italy, has lately led to a rise of thirty per cent in the price of wine, and the grapes themselves are sold at a low rate.

The International Statistical Congress opened its sittings on Monday, in the Palace of the Corps Legislatif. The Minister of Agriculture, Commerce, and Public Works presided and made an inauguration speech, thanking, in the name of the Emperor, those Governments which had sent official representatives

About 1200 of the boys employed in some of the shipbuilding yards in Dumbarton struck work last week for an advance of wages from 2s. 6d. to 3s. per week. After remaining on strike for [illegible] days the advance was made, and the lads went to work again.

The direct communication between Turin and Lyons is interrupted at present in consequence of the inundation of part of the road below Saint Genand and St. Michel. The dangerous from France have had to stop at the former place.

THE GRAND REVIEW I



E CHAMP DE MARS.—(SEE PAGE 330.)

OUR LODGERS.—(No. III.)

THE FRONT ATTIC.

I'LL thank you not to tell me again that you consider me a hard man and selfish. If you do I shall discontinue these papers, and I don't suppose you would like that. Besides, I should hope when you have read the Front Attic, you will have cause to alter your opinion.

Mr. Fitzormond (real name, because I believe it to be fictitious, and so can't matter to any one) occupied our front attic for about two years. He was what is called a prompter at one of the minor theatres, and occasionally went on for small parts. He had been a copying clerk to a lawyer, and having starved at that as long as he could, he took to copying for the theatres, and ultimately became, as I have said, a prompter. Mr Fitz, as we used to call him, was one of the quietest men I ever knew, so unlike what I always thought play actors were, though he has told me often that he was no better than many others of his profession. He used to come home after the play was over, and perhaps make himself a cup of tea, and then sit down to his desk and copy away till three or four o'clock in the morning. He had a son, a poor, sickly, little fellow, that had much better have died when his mother did than have dragged on from day to day a continual expense and a trouble to everybody but his fond fool of a father. I declare it has made me quite angry sometimes when I have seen Mr. Fitz neglect his copying early in the morning to take out his son for walk in the fields at the back of our house, when he must have known the child was doomed to be nipped in the bud, as I used to tell him.

Oh don't say that, Mr. Mungo," he would answer. "I think if I had not him to work for, I should give up and die at once. You did not know his mother—he grows more like her every day, and often, when he is sleeping I fancy that she has come back again." He said this so often to me that I remembered it word for word. I used to think at the time it was one of his player's speeches, but I am not sure now but he really meant it. If the day time he used to take the boy with him to the theatre, carrying him there and back, a matter of three miles each way; but when it was wet or cold, he generally came and rapped very gently at our kitchen door, and asked if Edward might come down stairs for an hour or so. Mrs. Mungo was not always in the humour to be bothered, and when she said so poor Fitz would smile in the mildest manner, and declare it was of no consequence, as the boy would amuse himself with a book. I always looked upon Fitz as a pattern lodger, for though his earnings were very small, he never let a Saturday pass without paying his rent. I have thought now and then when he stayed at home on a Sunday that his best coat might have gone to raise the money, but what was that to the satisfaction of having done your duty to your landlord? The boy got weaker and weaker, and the father sadder and sadder, until it was quite evident that the child must die. I am sure I wished it over, for I was always afraid that Fitz would lose his situation from want of punctuality in his attendance at the theatre, for he would linger and linger by the bedside of the boy until he had barely time, by running as hard as he could, to reach the playhouse before the performance began, and it was quite amusing to see the rate at which he came home at night. I used to joke him about it, and tell him that when all other trades failed he might make a good thing of pedestrianism, and start as the Flying Prompter. He never made any answer, so I suppose he didn't see the joke.

Well, the boy died, and I really thought his father had given it up, and was going to die too; but, after the boy was buried (I was rather ashamed that such a shabby funeral should leave our house) he became more resigned, and, I am sorry to say got somewhat behind with his rent. It was not much when he came to my room one day and said, "Mr. Mungo, I want to give up the attic. I cannot live in it now my poor child is gone. Everything about it brings him back to me, and I feel so utterly alone that I cannot bear it." I was about to say "Nonsense!" or something of that sort, when he told me that which made me think he was right. "I have given up my situation at the theatre," said he, "and have accepted an engagement in the country; for I am sure if I had remained where I am I should do something—go mad, perhaps!" So I thought he had better go

"Well, Mr. Fitz," said I, "I wish you well with all my heart. There is a small matter of rent—how do you propose to pay that?"

"There is my only difficulty," he stammered out. "I will, if you will trust me so far, promise to remit the amount by instalments."

"Hum!" said I. "Mrs. Mungo, you know, is so particular; and as you have a box or two, she might think me wrong in giving up available security."

"The contents are valueless to you," he answered. Nothing but a few stage matters; for I have been compelled to pawn everything of value to pay for my poor child's funeral."

"Where are you going?" said I. He named the place; and, as it was not far from London, and I had an uncle there who had a great many acquaintances, I made this proposal at once:—"I believe you theatrical gentlemen, when in the country, have what is called 'benefits'?

"Sometimes only 'ticket-nights,'" said Fitz "that is when half the tickets which we sell goes to the manager."

"Well, it's much the same thing. Now, you must take a benefit; I will come down, and you shall pay my expenses by the coach, and I will take out the arrears half money, half tickets"

He shook me warmly by the hand, and said he was deeply grateful for my kindness.

Now am I a hard man or selfish? I rather think not!

Well, I went to his benefit, and a precious adventure I had. The theatre had been recently fitted up with gas, and the novelty of the thing (I don't think it was the acting) had crammed the house on Mr Fitzormond's ticket-night. About the middle of the performance something went wrong with one of the gas-burners, and two or three women set up the cry of "Fire!" That was enough. Everybody almost rushed to the doors, and the screams were dreadful. I saw it was no use trying to get out, so kept my seat in the boxes, the more especially as the manager came on the stage and assured us there was no danger. It was too late. The people couldn't hear, or wouldn't believe, and kept crowding to the doors. Two poor girls were thrown down and trampled upon, and several other persons were more or less injured. When the panic was somewhat over, and we were about to leave the theatre and see if we could get part of our money back, a man rushed upon the stage carrying a senseless boy in his arms.

"I tell you he is dead!" he exclaimed, "and you —— mountebanks are his murderers. George! George! He is dead! Crushed to death"

Poor Fitz knelt beside the lad, and began rubbing his temples.

"Keep away from him,——you!" said the man, "I tell you he is dead killed by some of you. But I'll have some sort of revenge, depend upon it." And then, uttering more oaths than I can remember, he threw the body of the boy across his shoulder, and fairly ran out of the theatre.

Mr. Fitz fainted away where he knelt, and I think my cousins would have followed suit, but I hurried them home.

I heard, in the morning, that Fitz was too ill to be seen, and, taking all things into account, I resolved to put up with the loss of the tickets and think no more about the matter. But that was not to be. In about a fortnight I received a play-bill from Fitz, announcing that the manager had resolved to give a free night for the benefit of the sufferers, and that any one injured on the former night might have a ticket by applying to Mr. Fitzormond, on the stage of the theatre, between the hours, &c., &c. Well, I had been injured. I had only seen half of that had paid to see, and as I had some family business with my uncle I resolved to kill two birds with one stone. Down I went, but did not get to the theatre until it was quite dusk, as it was late in December. I asked for Mr. Fitz, and stated my business to the hall-keeper. "You are past the time, Sir," said the man; the last applicant has been gone this half-hour; but Mr. Fitzormond is on the stage, and I dare say he won't mind attending to you. Keep straight on, Sir. It's rather dark, but you'll find two steps in a minute, and now turn to the right." I obeyed his instructions, and found myself on the stage of a theatre for the first time. I could scarcely see anything but a small table on one side, a chair, some writing paper, and a very dim candle. "Hallo: Mr. Fitz," said I. Nobody answered. I called again, and fancied that I heard a deep sigh from under the table. I then heard something move a very little, and looking still closer, saw poor Fitz apparently quite senseless. Confound the fellow' thought I, he's always fainting; for I suppose he can't have been lying here ever since the night of the accident! So I shook him pretty sharply, and at last he opened his eyes, and stared about him in the greatest alarm

"Where is he? Gracious heaven, where is he?" he asked in a voice that was scarcely audible.

"Where is who, Fitz, you old fool?" I answered, thinking to cheer him up.

"The boy—the boy that was killed on that dreadful night—the poor child that they laid down there, and whose father invoked that awful curse upon us all!"

I didn't like it, I can tell you. I thought he had gone mad, as he promised to do.

"Where is the boy?" he asked again.

"Why, dead and buried," said I.

"No such thing; dead he may be, but he is not in a grave. I have seen him, Mr. Mungo, there where you stand."

I don't mind owning it now, but I went as cold as ice.

"I was writing here at the table, only business matters, not thinking of my poor lost Edward, as I do sometimes, when I heard some one breathing near me. I looked up from my work, and saw, if ever I saw in my life, that poor dead lad, ashy pale, standing at the end of the table. I tried to speak to him, but my terror was too great, and I could only point to the place he had occupied on the stage. He nodded his head and said (I think), 'I have come——' I heard no more. You found me lying here; but as sure as you are a living man I have seen that dead boy again."

I thought I should have died, I was so frightened.

Fitz sat down on his chair and gave indications of going off again. I called "Murder!" and at last in despair seized a rope which hung at the side of the stage and, pulling with all my might, set a regular church bell in motion. Used as Fitz must have been to it, his tremor appeared to increase, and it was not until we had reached the open street that he appeared to understand a word I said to him. We both believed that I had seen a ghost.

Fitz never recovered the shock; and in less than a month he took to his bed and died. A week before the event occurred a pale-faced boy called at 1 is lodgings, and expressed a wish to see him.

"Tell him, will you?" said the lad, "that I am the boy that was *hurt* so much on the night of the alarm of fire at the theatre; but that I am quite well now, if he would like to see me."

Poor Fitz was delighted, and had the boy up to his bedside, and then learned that the boy had seen the invitation to apply for a free ticket for the theatre; but, arriving somewhat late, had been sent by the hall-keeper on to the stage, as I had been—with what result to our Front Attic you know now as well as I do.

L.

NOVEL OR STRANGE.

(From the *Comic Times*.)

A fine flock of partridges, consisting of six couple, male and female, together with a shoal of Isle of Wight grouse, were discovered by a shepherd, in Lincolnshire on Tuesday morning. He succeeded in catching five with one of Colt's six-hook revolving patentosters, which created some excitement when exposed for sale at Waddedy's Italian Warehouse and Baby Linen Establishment, in the Retail Jug Department, where they were disposed of in accordance with the new law for rice rice liability. Apart from its interest in an ethnological point of view, this is the first case under the new Act for selling game free of toutue duty.

The following conundrum, running the round of the clubs, is attributed to Sir Archibald Alison:—What is the difference between a drover goading on a pig, and a tragedy paid for beforehand? One is a pig in a poke, and the other a poke in a pig. There is fine and subtle humour in this.

So great is the difficulty of obtaining harvest labourers, that a legion of young barristers on circuit find it more profitable to reap in the fields than add die in the courts. A correspondent describes the sight of a number of them, in the fields at our Croydon, in their wigs and shirt-sleeves as very novel.

Paxton bothered Scott Russell the other day by asking him "When is the Crystal Palace like the 31st of February?" Russell couldn't tell at all. "Well, then," said Sir Joseph, "when it contains the ashes of the grate (great) "Not so bad, by Jove!" said Scott Russell of course reckoning to have his revenge before long, for being thus pulled on to the controversy.

Covent Garden will, it is said, open for its winter campaign, under the management of Mr. Bunn, on the 6th. The stalls will be one shilling; the pit half-a-crown; grand tier boxes five shillings; first tier, ten shillings; second tier, fifteen shillings; gallery, one guinea. Every visitor will be expected to bring his chair, six towels, and a knife, fork, and spoon: and when the play once begins there will be no vacation. The hour of opening the doors will change daily, according to the moon's age in last year's almanacks: a novel regulation —in imitation of "Mother Goose's Fairy Tales," which Mr Mark Lemon so pleasantly compiled for the Adelphi. The opening piece will be "Mr Herod's Shakspeare Pays: or, Hamlet's Two Gentlemen of Tyre: or, the Moor, the Merchant, the Measure, and the Much Ado of the Merry Wives upon Midsummer Night."

Mr Anderson is a rare instance of mental and physical energy. Not only does he display his magic every night at the Lyceum, but he has to play Rob Roy almost simultaneously at Drury Lane, look after his livery stables in Piccadilly, and conduct the Queen's private band at Osborne, Windsor, and Buckingham Palace. Of him it may truly be said:—

"O for, as summer's orbed fire,
Implentur veteris mémora ejus nomine Iesu,
Rara avis in terris, tribuantur mascula dicas.—SPHOR.

THE KERTCH SLIPPER. Amongst the number of curiosities which have reached Southampton from Kertch is a canvas, on which a slipper is half worked in Berlin wool. The pattern is very elegant one, consisting of the leaves and flowers of the convolvulus worked in red and green, with their various tints. The needlework is beautifully done. It was found by Mr. Caswell, a young officer of the *Tiger* steamer, in the window-sill of a deserted genteel residence in Kertch. The needle was threaded, but was not stuck into the canvas, as is usual when ladies lay aside their work temporarily. Most probably some fair Muscovite or Tartar was sitting at her window, engaged in working the slipper, when the terrible news of the approach of the Turks and their allies reached Kertch. The pattern of the slipper has been named the Kertch pattern in Southampton, and is already a favourite one among the ladies there.

ANTIQUARIAN RESEARCHES IN DENMARK.—The King is gone to Ringstad, the ancient capital of the kingdom, to be present at the opening of certain tumuli, containing, according to the popular legend, the graves of the first Kings of Denmark. The first that was opened was supposed to be that of King Canute Laward, but nothing of importance was found in it. The next tumulus opened was the grave of Canute VI., where was discovered a long box or coffin with a leaden cover, which was immediately opened in the presence of the King. There is no doubt that the remains were those of the above-named king, from various regal emblems and the size of the skeleton, for history records him to have been a very tall and powerful man. In the grave of King Waldemar I. a very interesting discovery was made. Under the head of the body, which was enveloped in a monk's cowl, was found a square leaden slab, but only confirming this as the grave of King Waldemar, but recording the principal acts of his life. On the same day the graves were opened of King Waldemar the Victorious, and his queens Sophia and Bengurda. Yesterday the graves of Queen Dagmar and Queen Regina (the latter the wife of Canute IV.) were to be opened. The King is still at Ringsted. He remained in the centre of the island of Seeland, on board the Copenhagen and Corsör Railroad.—*Letter from Copenhagen, Sept. 8*

The Emperor of the French, it is known, accompanied the Queen some miles out to sea on board the Royal yacht, and then transhipped to the steam frigate *Ariel*, which had been sent for him on purpose; but when on board the *Ariel*, he, instead of returning at once, caused the vessel to steam right round the Royal yacht, her crew crying "Vive la Reine!" and standing uncovered as she did so.

COUNTRY NEWS.

LANARKSHIRE COLLIERS' STRIKE. The colliers are still out on strike in Wishaw and Bellshill—Cambridge and Airdrie also sympathise. The advance asked is 1s a day. Meetings and processions with music are taking place daily.

THE RHYMNEY VIADUCT. The foundation-stone of the great Rhymney Viaduct has been laid, and the whole will occupy one year in completion. It is to be 750 feet in length, and will span the valley at a height of 120 feet. The whole is to consist of sixteen arches, each 45 feet in span, and to be built of stone and brick, to carry a double line of railway. This great undertaking is designed to take the Taff Vale Extension Railway over the Rhymney Valley to a junction with the line now in course of construction from Rhymney to Tredegar.

SCHOOL OF MINES IN CORNWALL.—The arrangements for the establishment of a School of Mines for Cornwall in connection with the Government Institution in Jermyn street have now been so far completed that the masters of the various departments have been appointed, and an influential meeting was held a few days since in Cornwall, at which an explanation was given of the steps which had been already taken. It was stated that £5000 have been subscribed by gentlemen in Cornwall, and that there has been secured for the establishment of the school, the Royal Institution having afforded the use of their rooms. The terms will be comprised in two years, for which each pupil will have to pay £20; and it is proposed that there shall be an examination of persons who offer themselves as students, when the most efficient candidate will be entitled to an exhibition of £15 for two years, which will reduce the expense of their attending the school. At the end of each year, also, the most advanced pupil, on examination, will be entitled to an exhibition of £50 to proceed to the Jermyn-street Institution.

EXTRAORDINARY ESCAPE. On Monday week a singular circumstance happened to a person while travelling by the 7 a.m. train from Hull to Sheffield. As the train was proceeding at a rapid rate between Riveton-park and Woodhouse junction, near to Aston colliery, a passenger, while leaning over the carriage-door, found it giving way. He grasped the door, in his effort to save himself, but it swung open, and he was thrown with great force upon the opposite embankment. When the train arrived at the Victoria station information of the accident was given to Mr. Ward, the manager, and he immediately proceeded with a carriage and engine to the spot. On arriving at the Woodhouse viaduct he met the man walking along the line. He was taken into the carriage, and it was found that he had sustained no injury beyond a severe shock and a few slight bruises on his hands, back, and head.

A NOVELTY UNDER THE GAME LAWS.—It is said that the first pointed out of persons who have taken out game certificates in the county of Leicester for the present year will exhibit the name of a lady who has taken to sporting in right earnest style. She has the honour to be a gamekeeper in the service of a venerable clergyman, and by her skill materially assists in filling the larder. The exact number of head of game which fell to her gun on the first two days are the same as the number of summers which have rolled over her head, namely, seven and a half brace of birds, a quartet of hares and the same number of rabbits.

MOTIVES FOR EMIGRATION.—On Thursday week the Sheriff of Galway, accompanied by an escort of police, proceeded to the Claddagh, and took possession of twenty-one houses, the property of Mr. Henry Grattan. The inmates were all put out, and six of the cabins levelled to the ground; but the parties evicted were admitted into the remaining fifteen as rent-takers. It is admitted by the local journals that as these poor creatures have never paid rent or other charges since Mr. Grattan became their landlord, no blame can be attributed to him for getting rid of them.

NEW FOREST.—Ten thousand acres of land in various parts of the New Forest are about to be planted. About seventy acres of the New Forest were sold last week by the Government, and fetched £23 10s. an acre. The land sold is on the outskirts of the forest, and is covered with furze. It has to be fenced by the purchasers.

CHARTIST MEETING AT ROCHDALE.—On Sunday last an open-air Chartist meeting, which was but thinly attended, was held in the Butts, Rochdale. After the adoption of a resolution in favour of the People's Charter, the proceedings were brought to a close by a collection, when the liberal sum of 3s. 6d. was subscribed.

FIERCELY OPPOSITION TO EMIGRATION.—The Roman Catholic Church in Ireland, through the voice of her clergy and in the columns of the press devoted to her interest, is just now straining every nerve to stay the tide of emigration to the United States. The *Tuam Herald*, which most obviously reflects the opinions of Dr. M'Hale, is instructed to announce a progressive increase in the counter current of home emigration, and alleges that not a week passes without witnessing the return of some few of the Celtic population. The numbers so daily are small, but great stress is laid on the influence they exert over the minds of their friends by the dismal accounts they are said to furnish of the state of social and religious life in the States.

REVENUES OF THE DUCHY OF LANCASTER.—In the year ended the 29th of September, 1854, the income of the Duchy of Lancaster amounted to £42,266, and the expenditure to £15,967; leaving a balance of £26,299. The rents and arrears received during the year amounted to £29,912, and the casual revenue to £614s. The salaries and allowances of the principal officers of the duchy and the law officers of the County Palatine amounted to £7 18s, the clerks to £1,000, and retired allowances to £1047, the donations and charities to £1427, the pensions and annuities to £7084, labourers' wages, payments to the Commissioners of Woods, the expenses of parliamentary counsel, land tax, and other miscellaneous charges to £4326; and the payments made out of this revenue to the Queen's privy purse to £18,000.

A DOMESTIC BADGER. A fisherman named Abrahams, who lives on English New Water, below the Whitadder mouth, on the Tweed, succeeded last spring in capturing a young badger, which he has domesticated to such a degree that it follows him like a dog. It may be seen daily waiting on the nets of the station on every tide they are hauled for any small flounders that may be dragged ashore, and which he devours greedily. Last Friday evening, however, he disappeared, and although diligent search upon foot was made, he was nowhere to be found. Saturday came, but Tom had not turned up, and it was concluded he was gone to join his tribe in the Cowsmuir Rough, where he was originally caught. But imagine the astonishment of the fisherman upon his entering his own house at Hornchiffe on the Saturday night when the first salute he got was from Tom, who jumped up on his breast, and pushed upon him as playfully as a dog—looking as much as to say, "I'm home before you." It appears that about midnight on Friday the wife of Abrahams was awoke by a noise of scratching at the window, and upon opening which she found the missing badger impatient to be admitted. To reach Hornchiffe, which is about four miles distance from the fishery, the animal must have swam across the Tweed and threaded its way through the fields.—*Berwick Advertiser*.

THE TITLE OF ESQUIRE.—A curious case was tried before the Brighton Bench the other day. Mr. Walter Goodyer Barker, a surgeon, resident in Bath-street, Brighton, and the Town-hall, and using most violent language, threatened to thrash him—calling him a liar and a scoundrel—Mr French's alleged offence being the insertion of Mr. Barker's name as "W. G. Barker, Esquire," and not "W. G. Barker, Esq." in the list of persons attending the Worthing Exhibition. Mr Barker was summoned to find sureties to keep the peace. In excuse the defendant said "He cared not for the title of Esquire, or even Mr; he thought the plain W. G. Barker was very much preferable; but he thought he should be supported by all the sound-thinking and sensible persons in saying that the same title should apply to all men of a gentleman. He did object to William Hugh Dennet, Esq., to William Foard Tribe, Esq., to W. Fribe, Esq., to Richard Edmunds, Esq., to William Harris, Esq., and Alfred Sharpe, Esq., and not to Mr. Barker." He was a gentleman, and that it was of any importance in the town where he was known, and his character was above suspicion; but in the county, and by persons residing at a distance, he would not be considered to be universally a gentleman of a gentleman. To explain, he should shortly have to canvass for a vacant surgeonship at the Worthing Dispensary, and what would be the inference of the gentry in the county? Why, that he had done some wrong or unworthy act, whereby he had lost his social status." Mr. Barker, however, was ordered to find sureties, and to pay £1 8s. 6d. costs.

THE CHARGE OF ATTEMPTED POISONING AT BATH.—On Saturday morning the young man, Thomas Tutton, who is suspected of having administered repeated doses of arsenic to his father, Mr. Charles Tutton, an auctioneer, and a member of the Bath Town council, was brought up for his first examination upon the charge of attempted murder. A large crowd followed the prisoner to the county magistrates' office, where the examination was taken. The prisoner, who is about twenty-four years of age, and known in Bath for his "fast" habits and not being placed at the bar he manifested no concern for his position, but appeared to take the proceeding with the greatest coolness. He took copious notes of the evidence. Mr Charles Harris, the surgeon who attended Mr. Tutton, proved that the illness of his patient had been occasioned by arsenic.—James Ryan, a detective officer of the Dublin police, stated that between four and five o'clock on Wednesday, the 8th instant, the prisoner went to the detective office. Lower [illegible] Dublin. Witness was then present at the time, but was [illegible] prisoner was handed to him by Mr. Superintendent [illegible] and found his description in it. When [illegible] "Is your name Tutton?" he replied, "Yes, Thomas." He then [illegible] his father was dead. Witness [illegible] believed not. "Oh, well," [illegible] and I get the other sold, I'll [illegible]—After a [illegible] in private [illegible] to enquire the [illegible] examination. Until to-day, the [illegible]

NOTES OF THE WEEK.

THE one note of the week is a note of admiration, appended to the grand news from Sebastopol. That fractional part of the population still left in town has no other topic. And it was worth while being in London, even while all one's friends were toiling on the Jura, being eaten by flies in South Germany, drinking beer by the gallon in Munich, and following the coveys in her Majesty's provinces, to see London on the night of the news. One of the journalists, in his enthusiasm, frankly quoted the line, "Now universal England getteth drunk," but this indiscreet assent to Mr. Hall's proposition on the national habit was not to be taken literally. There was no drunkenness, that I saw, though to deny that gentle and simple (to adopt an old-fashioned classification), having satisfied themselves that this was not another case of a Tartar humbug, did unceiniously rush together upon the best fluids at hand, and join in a hearty health to the Allied Generals. The streets presented a curious sight. The large newspaper *affiches* intimated to the world that Sebastopol was taken; but this satisfied nobody. The struggle to get hold of the wet sheet, out of which some quarter column of hugely instructive information had been unceremoniously cast in order to insert the dozen and a half of unsociable lines in which the fall of the Great Bear's Den was told, was like the charge into a practicable breach. The man who achieved it was like the valiant person in the "Pilgrim's Progress," who cried, "Set down my name, Sir!" and "rushed at the door upon the armed men." And when he came out, panting and pushing, and forced his way to a resting-post, the swarming round him, and the entreaties to "to read out" would make a good sketch for one of our social artists—I dare say the thing has been done. Then the bells began to crash and "fire," and there were rumours of illuminations, and I mention what I heard several times that night—the people were eager that their Queen should speedily hear of the triumph. "Won't it be good news at Balmoral?" was the frequent remark, and it showed that the masses are convinced that *la bonne petite Reine* wrote sincerely when she told the wounded that "her heart was with her brave soldiers."

With what feverish anxiety details are waited for! Not only the melancholy list which may be expected early, and which will tell us of the price we have paid for the success, but the description of the tremendous days preceding the fall of the place. Such a horrible tempest of fire as the Allies opened at last has never been launched by human agency upon a city or stronghold. Prince Gortschakoff describes it as a *feu d'enfer*, and seen from his point of view, the visitation must have been hideous. Of the terrific assault we are still more anxious to hear. Nor will the agitation in the public mind subside until we learn that the Allies have taken possession, without casualty, and have no damage to apprehend from the guns of Star Fort. But until the detailed news arrives we talk conjecturally but not with less excitement on that account.

Small matters are all swept away in the great flood, nor are many of them much worth saving for a moment. It appears that an antipodean squib has sold us all, the unfaithful colonists having been making sport of their mother country. We learned that Sir Charles Hotham had dismissed "a Government contractor" for making irreverent comment on the Government beer, and for having walked out of the room in an unseemly manner. It is now stated that there is no such officer as a Government contractor, and that the story was a figment, into which two colonial grievances, a certain dismissal, and the substitution of beer for champagne, were dovetailed, ingeniously enough. It is lucky that Parliament was not sitting as Mr. Scott or Mr. Adderley might have questioned Sir William Molesworth on the subject, and then a beer despatch would have been produced.

A sea-serpent has been caught in America, and the story is so very minute, even to the size of the cords and the fact that the harpoon was a "patent" one, that no right-minded person will refuse to declare it an utter falsehood, even in spite of the statement that when it was dragged on shore, and opened its frightful red chasm of a mouth, several ladies instantly fainted, thinking, with Mr. Pickwick's friend, Mrs. Cluppins, that upon some occasions "anybody as called herself a lady" would feel it a duty to faint. However, it is alleged that the creature is kept alive and sound, and it would be a good plan to bring it over. Let the parties first intrusted with it be directed to "abscond" with it in the most public manner; then let advertisements be issued offering a reward to any one who will put salt upon its tail; let the sloping serpent be captured, with hue and cry, and ultimately brought into a policecourt to wriggle before Mr. Jardine or Mr. A'Beckett. The police report is a capital advertisement, and, this gained, the parties need only begin to puff in the regular way, and say that the whaler who harpooned the creature has an aged father frozen in an iceberg somewhere in the Northern Ocean, and that all the profits of the exhibition will go towards thawing him out. So "humanity," as well as "curiosity," dictate an early visit, &c., &c.

Poor Feargus O'Connor has been carried to his grave, not in the most decorous manner. The whole demonstration was a mistake, without reference to any political question. O'Connor had, however, many better qualities than those will readily believe who were accustomed to connect him with mere empty bawling and brawling. And his "flow of language" was something marvellous in its unhesitating rapidity. I last saw him, poor fellow, when his eccentricities began to take a decided form, and the House of Commons became to be embarrassed to know how to deal with him. He would go and insert his large person between members of the Ministry on the Treasury bench, throw a great arm round one, and pat the other on the back. I think it was Lord John Russell whom I once saw "encouraged" in this manner; and, if so, his disgust must have been awful. In the Speaker's temporary absence poor O'Connor would pop into his chair, and look round him majestically. His strange interruptions would sometimes put even Mr. Disraeli out of countenance. One day I heard the Speaker read a letter from a police magistrate, announcing that he had committed Mr. O'Connor for seven days for disturbing a theatrical audience. After this he was soon intrusted to the humane and conscientious guardianship of Dr. Tuke; and there is no reason to doubt, despite the restless petulance of some relatives of the afflicted man, that the conclusion of his life was as tranquil as his temperament would permit. He was an unwise, but not an insincere, man; and, as was the case with many stronger men, his brain proved unequal to the excitement of a stormy transition period of general politics.

Though, in the glare and flare of the great news from Sebastopol, there is not much to attract the notice of that ubiquitous personage the "general reader," to such small doings as those of the Woods and Forests, it is to be hoped that the public will find both time and energy to defeat the project for cutting St. James's-park in two, and for utterly ruining it, in consequence, as a place of public recreation. Who is the Vandal Snob that has ordered this thing to be done? and who is the functionary responsible for it? Certain it is that the public ought not to permit such a stupid and unnecessary interference with one of the most beautiful gardens in London; and it is to be hoped that it will not—however high may be the position of those who may have planned it.

The number of persons attacked by cholera at Madrid from the commencement of May to the end of August was 2958, of whom 1733 died.

For some time past agents of the Spanish Government have been making purchases at Hamburg and in the North of Germany of horses for the supply of the cavalry.

In a village near Vienna exceeding benefit is said to have occurred in cholera cases from the use o sorrel.

CHESS.

TO CORRESPONDENTS.

15. Q B to K B 4th (ch)	P to Q 3rd	19. Q takes Q P	P to Q 4th
16. Q to Q Kt 3rd	K Kt to Q 4th	20. Q to K R 5th (ch)	K to Q Kt 3rd
17. Q B to K Kt 3rd	B to K B sq	21. Q to K 5th (ch)	K to Q Kt 2nd
18. K R to R 5th	P to Q R 3rd	22. K to K 2nd	Q to K B 4th
19. Q to Q B 5th	K Kt to K 6th (ch) (d)	23. B to K B 2nd (ch)	K to Q Kt 1th
20. K to Kt sq (e)	P to K 4th	24. Q to Q B 7th	Q to Q B 5th (ch)
21. R takes K P (f)	R takes Kt	25. K to Q sq	P to Q Kt 5th (l)
22. R takes K Kt (g)	R to K B 3rd (h)	26. B to K sq	B to Q Kt 4th
23. R to K B 3rd	P to Q Kt 3rd	27. Q to K 7th	Q to Q 5th (c.)
24. Q to Q 6th	Q to K R sq	28. K to B sq	Q to Q K 8th (ch)
25. R takes R	Q takes R	29. K to Q 2nd	Q takes Q R P
		30. K to Q B 7th (ch)	K to Q R 5th

And Black resigned in a few more moves.

(a) The "Chess-player's Companion" recommends—6. P to K B 4th, which is stronger, we believe, than the move in the text.

(b) The [illegible] game.

(c) Right enough.

(d) This is better [illegible] than taking the Bishop with the Queen, but that line of play would have been always open to White.

(e) [illegible] had taken the Kt, White would have gained two pieces in return.

(f) Looking into the position, it will be found that Black has no [illegible] for his Queen, and that, by paying the Pawn off, White shut out the Bishop, which prevented [illegible] big Ann, and thus left her open to capture. By this clever and unlooked-for device of taking the Pawn with his Rook, Mr. Brown, however, now contrives to entrance her, since, if White take her, he loses her own Queen by the double check of Rook and Bishop. The situation at this crisis, and the various consequent [illegible] of interest and instruction.

Taking the Rook would obviously have been [illegible] play for Black, for his opponent would have taken off the bishop [illegible] and [illegible] captured the Queen.

(g) The only sure thing of action. If [illegible] have taken the Rook it is plain would have been ruinous, and if he had taken the Bishop and exchanged Queens, the game, though in his favour, would probably have ended as a drawn battle. For example—

22.	R takes B	24 takes Kt (ch) P takes Q
23. R takes R	Q takes R	25. P takes Q, &c., &c.

(h) White has a good game; but it requires delicate hand-play so long as he is [illegible] in danger from the adverse Queen and Bishop.

(i) To save his K P, and take the adverse Bishop out of action.

(l) The only safe move, as extricating [illegible] the position.

CHESS ENIGMAS.

No. 609. By HERR C. BAYER.

A DESTRUCTIVE STORM ON THE MEXICAN COAST.—A terrific gale visited the port of Mazatlan (Mexico) on the 1st of June last. Six vessels—English, French, American, and Peruvian—lay off shore that evening, and about ten o'clock at night a slight undulation of the sea gave indication of impending calamity. During the continuance of the storm [illegible] were either totally lost or much damaged. Thirty persons were drowned, and about four hundred thousand dollars worth of property destroyed. The Mexicans along shore, and even the officers, appropriated all the floating property they could lay hands on

Cholera has somewhat diminished at Magdeburg, but it continues to spread at Halle and other places in Prussian Saxony, and carries off many victims at Stettin, Elbing, Dantzic, Breslau, and other eastern districts

DR EASTON'S ACCOUNT OF THE HANGO AFFAIR.

The friends of Mr. Easton, the surgeon captured at Hango [illegible] first instance, supposed to have been killed by the Russians, [illegible] from him the following account of the occurrences at Hango. He writes, in a private letter, dated "Wladimar, [illegible]

I left St. Petersburg on the afternoon of Saturday, the 14th July, I think, escorted by a gendarme officer and two of his men, and travelled along the [illegible] but most uninteresting road from St. Petersburg to Moscow, reaching the latter place on Tuesday afternoon, and leaving it at seven p.m. We [illegible] Wednesday about noon next day, after a [illegible] Here am I painted in the midst of Russia. The Governor [illegible] his lady speaks English most admirably, and uses it to promote my comfort and happiness by every means possible. In truth, I am overwhelming indebted to Lady Annenkoff for her [illegible] kindness, taking from me all the sting. I have good quarters and kindness from all I meet. What can I desire more except liberty! Wladimar is a very beautiful town, situated on a small river called the Khasma, which waters the plain above which the town stands. It is choke full of picturesque churches, very old and very noisy when their bells are clinking, which is pretty frequently. I send you an account of what came under my knowledge at Hango. I see from the *St. Petersburg Journal* very erroneous accounts have been published.

June 4 or 5 (I am not quite sure of the date) the *Cossack* anchored off Hango for the purpose of setting at liberty seven Finnish merchant captains taken prisoners in the Gulf of Finland. On this service a cutter with eleven men, under the command of Lieutenant Geneste, accompanied by Mr. Sullivan, was ordered to proceed on shore, hoisting a flag of truce (white flag). I, hearing a boat was to be sent to the shore to land the prisoners, thought I might as well take advantage of the chance of a walk, however short. The stewards were sent in the boat to purchase, if allowed, milk, eggs &c. Being a medical man, I of course paid no attention to any of the arrangements connected with the boat, so that I did not know there were any arms in her; nor did I think it necessary to pay any attention as to flags, except that I sometimes called out to let the flag of truce be well seen

The boat, bearing the white flag in her bows lashed to a boarding-pike, was pulled under the telegraph station, the Finnish captain, Lundstrom, I think, directing where to land. Inside the point of land on which the telegraph is placed we found a small harbour with a wooden pier, which we went alongside of. Lieutenant Geneste then gave orders to the sailors not to leave the boat, but to put on the pier the luggage belonging to the prisoners. Geneste, Sullivan, myself, the three stewards, and the prisoners, landed on the pier, one of the stewards taking the white flag with him

We had only taken a few steps when from all sides a fire was opened on us. I saw for the first time soldiers, and, at a hurried glance, I thought about 100 of them had surrounded us. The first I saw fall was Lundstrom, next one of the stewards. I immediately jumped into the water to get to the boat, but saw she had drifted a little from the landing-place, with several of the sailors rowing to get in her. Seeing no other means of escape, I got under the pier, thinking I not discovered. I might manage to get off to the ship at night. I found that one of the stewards, wounded, and one of the sailors, unwounded, also one of the Finnish captains, had likewise taken shelter [illegible] pier. The firing seems to be over in an instant, there being no resistance on our side, not [illegible] like fire d

After a short time, all being quiet, the Finnish captain left the pier, and shortly after returned with men from the village, when of course we became prisoners. We were placed in waggons and taken to Ekenas, where to my great delight I found Geneste and Sullivan, with three of our men unwounded, and three others wounded. While under the pier, I of course did not know the fate of the others, but, from the firing, thought all except the two with me had fallen. We were very kindly treated when prisoners, and everything was done for the wounded that could possibly be done.

ROBERT T. EASTON, Surgeon R N

ENGLISH TRUSTWORTHINESS.—General Simpson's order of the day, wherein he severely reprimands the conduct of some officers as well as men for running to plunder on the field of battle on the Tchernaya, appears to have produced a very favourable effect in Paris. A correspondent of the *Independance Belge* says:—"English journals make known Geneva. Simpson's order of the day, wherein he stigmatises energetically the conduct of some officers and army followers, who took part in the battle of the 16th, far having stopped the dead after the combat, and for pursuing, at a low price, articles taken on the field of battle. However much these revelations are to be regretted, they do not only not affect the honourable character of morality, but a degree of frankness, which reflect the highest honour on the British Commander, and ought to ensure religious trust in his words when circumstances permit him to praise his soldiers."

ATTACK ON THE RUSSIAN FORT AT FREDERICKSHAMN.

THE Illustration of this spirited incident in the cruise of the Baltic fleets, from Mr. Carmichael's sketch, has been unavoidably deferred. It represents the successful attack on a Russian fort at Frederickshamn, a fortress situated on the north-west coast of the Gulf of Finland, midway between Wiborg and Helsingfors. This expedition was commanded by Captain Yelverton, of the *Arrogant*, an officer who has gained for himself a well-merited reputation, on account of his intrepidity and cool daring and dexterity. The particulars of the affair are as follows:—The *Arrogant*, *Magicienne*, *Cossack*, and gun-boat *Ruby*, having joined company at Hogland, proceeded on the 20th ult. to Frederickshamn, off which place they anchored the same evening. Captain Vansittart then proceeded in the *Magicienne's* cutter to sound, and approached to within 1600 yards of a six-gun fort, which, very likely, reflect the highest honour on the British Commander, and ought to ensure religious trust in his words when circumstances permit him to praise his soldiers."

ADMIRAL DUNDAS SURVEYING SVEABORG PREVIOUS TO THE BOMBARDMENT.

IT will be seen by reference to the published accounts that on the 2nd ult. Admiral Dundas proceeded over to Sveaborg in the *Merlin*, to reconnoitre and lay down buoys. In this visit four infernal machines burst before the steamer: these, it was thought, were fired from the shore. On the 4th the fleet prepared to weigh, with mortar-vessels and gun-boats, with the intention of proceeding to Sveaborg, but the weather promising unfavourable, with the sea rising, the order was countermanded. On the 5th, however, the fleet weighed and stood from Nargen, and with the vessels and gun-boats, anchored among the small islands off Sveaborg, about 7000 yards distant. All that some boats were sent in to sweep for infernal machines—a precaution rendered necessary by [illegible] especially the incident which Mr. Carmichael has [illegible] represented.

THE BOMBARDMENT OF SVEABORG.

WE this week engrave Mr. Carmichael's large view of the Bombardment, sketched by him from a rock opposite Sveaborg. The incident illustrated is the burning of the sixty gun-boat sheds—a [illegible] Many of the sheds had row-boats in them, [illegible] as were also the Government rope-walk, [illegible] main-guard and signal station. The Sketch was taken when the fire was at its greatest height, which was about three p.m., on Friday, the 10th of August, four weeks before the final bombardment of Sebastopol. The burning of the sheds continued all that afternoon, and formed a grand panorama during the night of Friday.

LITERATURE.

THE LOUVRE; or, Biography of a Museum. By [illegible] St. John. Chapman and Hall.

It was suggested to Mr. St. John, a few months back, that a volume—historical and descriptive on the Louvre would be acceptable to [illegible] as well as general readers, at the present moment of art agitation in Paris; and the suggestion was immediately acted upon and carried out "with as much rapidity as possible consistent with due respect for an indulgent public." The strictly biographical portion of the work extends to only about eighty pages, in which is comprised a very interesting history of the fortunes of the Louvre, or "Don't Wolves" its foundation as a hunting seat by Childebert I., in the beginning of the sixth century: its re-edification as a palace, under Francis I., Henry II., and subsequent Sovereigns; its appropriation to the purposes of a public Museum at the period of the first French Revolution; and subsequently the vicissitudes which have attended the formation and arrangements of the various collections comprised in it, down to the time of the third Revolution in 1848. From this point the author becomes less [illegible] critical, and, [illegible] rather than merely historical, and, fortified with the practical [illegible] M. Jeanron, who was appointed Director of the Louvre in 1848, favours us with a variety of observations upon the nature of the contents of the Museum, the principles and objects with which they have been collected, and the treatment due to works of this nature. It is freely admitted by the author that th bulk of this material has been obtained from M. Jeanron Mr. St. John, in short, is but the medium of communicating the ideas of that gentleman to the public. Reading these ideas Mr. St. John has not having made any attempt to "convert," or, to use a term in physiology, to "assimilate" the matters thus obtained—we cannot help thinking that it would have been more satisfactory if these revelations had been given more obviously as proceeding from the mouth of the real author, the alternate reference to M. Jeanron (now in the first, now in the third person) as the authority, and continuation of the theme by Mr. St. John, as if discoursing on his "own hook," has an awkward effect. It is only on careful perusal, from internal evidence, that the transition is constantly occurring, and not always properly rendered, and the gallicisms which crowd every page, that we discover that the bulk of the volumes has been compiled from communications, verbal or written, from M. Jeanron. Having referred to Gallicisms, we must remark that the style of translating the author's materials has been most abominably performed literal, servile, crude, and sometimes resulting in blunders which are usually (or judiciously, as the reader's humour may be) provoking. Thus we are told that "the moulder entrusted with the care of reproducing admirable types of ancient sculpture" had a "fixed appointment" [anglice, *salary*], and yet in the same page of such object sold. A devotee of the name of Sigalon used never to copy," but was accustomed to station himself [*Qy. to take a station?*] in sustained attention for whole hours before a single picture." *Apropos* of the technicalities of the art, "the *subjectiles* [canvas, wood, &c.] on which colours are *couched* [anglice, *laid*] have various influences" [rather are subject to various influences]; and the *bad hands* which has been taken to wishing to counteract them in many cases has introduced a fatal *laissez aller* in the operations of cleaning and *enlivening* [Qy. reviving or restoring?]. Again, "to add and to take away are two *infinities* [acts of sandiege], or rather they are one and the same. It is by such means that are obtained all these *chiaroscuris* of the first and last, and these shiny *brilliancies* [lights?] all these spotty and shiny *patterns* [patches?] all these dull and uncertain localities [this we do not understand at all] which are a fact the true friends of art, in the vestiges which remain of so many fine things that have been so stupidly scraped, [illegible] [*Qy. scraped?*] compromise, in having interfered with or spoiled] without counting [*Et sans compter*] the pictures which perish completely."

It will be seen that the above few examples (which we will not multiply for examples sakes) have been taken from the chapters on "Picture Cleaning and Restoration," chapters which, spite the clumsy language in which they have been produced, contain a great deal of sound technical and critical information, upon the authority of a man well entitled to give his opinion upon such subjects. M Jeanron has from his earliest initiation in art deplored—and, as far as he has had opportunity, put a wholesale mutilation of works of art, whether by cleaning, restoring, or alteration of their shape and form—the wholesale and reckless manner under the restored monarchy of France, more particularly in the reign of Louis Philippe, but which M. Jeanron, on coming into office, resolutely put a stop to. Mr. St. John, sw[illegible] of the importance of this subject, quotes at length the opinions of the author on this head, and had several hours' conversation with him on several occasions, when that gentleman explained at length his views. "I took very simple notes," says Mr St. John, "which he afterwards checked and completed; so that I may set forth his opinions, which, however, he has entirely prevailed upon me to adopt."

Mr. St. John declares that the opinions of the distinguished French artists are "quite *conform*" (a gallicism adopted out of compliment to his interlocutor, perhaps) to the impressions of his own mind on the subject; and we have no hesitation in adding that they are also in accordance with strong convictions which we have long entertained. We only wish that our arbiters of taste in England, the custodians of all we hold valuable in art, could but sense two grains of the sound and which give so lively an idea of the familiar life of an Asiatic despot.

A LONDONER'S WALK TO THE LAND'S END. By WALTER WHITE.

Mr. White has shown us in this pleasant volume that a tourist may gather both information and entertainment, and may impart them to others, without seeking them beyond the bounds of his own country. He has taken as the motto to his book the words of Lucretius: "Turpe est in patrii vivere, et patriam ignorare." While we rush abroad in all directions, and range over the world, "from China to Peru," in search of new scenes and new objects of curiosity, we do not think how much there is that is both new and curious within the shores of our own island—how many grand and beautiful aspects of nature—how many striking remnants of ancient times—how many works of art and industry—how many peculiarities of character and manners, which we have never seen, and have never thought of exploring, simply because they are easily within our reach! The author of this book has judged better. He is a man who, in his leisure occupations in London, and has spent a month's holidays in rambling over a part of his own country, with how much pleasure and profit his book very satisfactorily shows. He bent his steps towards the West End, and has pretty much pursued the same of the most interesting portions of England, particularly the county of Cornwall, which, in the present age for foreign travel, is a more fresh and unhackneyed field than most parts, at least, of the continent of Europe.

Mr. White is an intelligent tourist. He observes acutely, and describes agreeably in a plain, natural, unaffected style. His topics, of course, are the objects which come in his way; but they are well chosen, so as to furnish either information. We shall give a couple of specimens of his manner. Here is a Cornish wrestling match:

> A little excitement was apparent in the village: expectant loungers hung about, heads projected from open windows, a stall covered with lollipops and nuts stood at the door of each of the two taverns, between which a lusty messenger came and went. It was one of the loungers told me, "wrestling day;" the sport had begun the day before; but, having been interrupted by a fierce dispute was to be resumed at two o'clock, if not possible, settled. I had frequently heard of Cornish wrestling as a fine manly exercise, and took advantage of the opportunity to see for myself. There was an hour to wait, which I found none too long for a stroll round the church, and a peep at the rival parties in the taverns, where they sat in noisy talk, drinking bad beer and worse cider, and, as I thought, in anything but the quietest mood supposed to precede a fine manly exercise." At the first notes of the drum and clarionet I walked up to the field where the ring was formed on the smooth turf, and where each tavern had an improvised tap, with casks of ale, bottles of spirits, and pipes and tobacco, all in readiness. A considerable number of spectators were already seated on the forms round the ring, some of them none the better for drink, and a few lying in drunken sleep in the ring, all the worse. The latter, as also, some among the throng of foul and brutal speech, were, I incline to believe, not natives, but immigrant navvies from the railway works in the neighbourhood. Ere long, up came the music, followed by the "wrestlers" and their friends; and their arrival was the signal for so vehement a debate among the umpires, that it seemed likely to result in a continuation of yesterday's quarrel. While it was going on, two Devonshire men got into the ring to wrestle by way of pastime; and true to the old Devonshire practice, they kicked each other's shins so vigorously with their thick-soled shoes, that the blows could be heard above all the noisy altercation. After being at length restored, the sleeping drunkards were dragged to one side, the amateurs left off their playful bruisings, and proclamation was made: "All standers come into the ring!" signifying that [illegible] was thrown the day before. About a dozen men obeyed [illegible], forming a group on opposite sides of the circle, and two having been selected—one from each group—they proceeded deliberately to undress. Kicking of shins not being recognised in Cornish wrestling, they pulled off shoes and stockings, and garment after garment, even to the shirt; and I was beginning to sum up that gladiators had come again, when off flew the shirts, and, with the exception of brief drawers round the loins, each man stood in a state of nudity. To me this absence of restraint was something unaccustomed; but to the others only the familiar prelude to a wrestling-match. A party of well-dressed women standing near me on the bank, under a cloud of gay parasols, looked on with perfect composure. But soon each wrestler had put on a large loose jacket, tying with strong tapes down the front; and then bending forwards, with hands on knees, they slowly came together, each fixing a keen look on the other's face. Both were about the middle height, and of [illegible] one was somewhat the fleshier, however, with his shock head of hair, while the other, seemed to me as he stooped no unapt resemblance to a grisly bear. Now they turned this way, now that; now a few paces to the right, now to the left, still with the same fixed stare; and at last one, stretching out a hand, gripped the shoulder of his opponent's jacket, and was in turn seized by the elbow. Another moment, and the other two hands were fast; and, keeping their legs as far as possible out of reach, they wheeled round and round, a convulsive pull or wrenching now and then an effort for a fall; the two umpires keeping a jealous watch on their movements. Not for long: at last one did a knee bend, or an arm slacken; and when a leg was suddenly advanced, it was as suddenly withdrawn. So the contest went on for about half an hour. The grisly bear became impatient, and growled a few words, which, unless for himself, sounded like ill-temper. No retort; but a moment later the quiet one, with a sudden jerk of his leg, and a twist of the body to the left, threw the other off his balance, and down went the bear, his shoulder indenting the turf. A burst of acclamation followed, interrupted by shouts from the disappointed: "Ha! a fair fall!" "a fair fall!" was the cry all round the ring; whereupon the vanquished gave up his jacket—equivalent to striking the flag—and acknowledged himself beaten. The same acclamations, and lively appeals to the bear-leader, I had seen a score times in the course of my life.

The following particulars respecting the mining population are interesting

> The intelligent gleaming in their eyes, and their general expression, denote a habit of thinking for themselves, as you will find by their shrewd remarks, if you get into talk with them. In daily conflict with rude circumstances, their natural resources are developed and multiplied. Their ingenuity is manifest in the numerous improvements they have made in their tools and machinery. They will pierce a shaft in two or three different directions; one party working from the surface, another from one of the uppermost galleries, and a third from the deepest working: and when complete, the several portions of the shaft shall meet in a true perpendicular. Their rates are great. According to Dr. Barham, one-half of the miners die of consumption between the ages of thirty-five and fifty. Sometimes killed every year by falling from the ladders in the mine or descent; and numbers maimed by the machinery, which in the county explodes three hundred tons of gunpowder annually. In Glamorgan the deaths by violence are one in five. In Union Mines, in the same parish, one of the levels could only be worked when the wind was south or south-east; but the instant a change occurred at the surface the men had to fly for their lives, to escape a deadly gas that then issued from the fissures of the rock. The evil was at length cured by a communication with the shaft. The temperature at the bottom of the United Mines was recently found to be 90 degrees; and in the miners had to work. A stream of water at 98 degrees ran through the same level; and an attempt was made to cut gate the heat by sending in at a few yards' distance a fall of cold water, which lowered the temperature near it fourteen degrees. The men, who worked naked, would rush from the end of the level, stand for a minute or two under the cold torrent, and then back to their labour again. To climb 300 fathoms of ladders after such exhaustion must be terrible. But in Fowey Consols, the United, and Devonshire Mines, "man-machines" have been introduced; platforms attached to rods which rise or fall twelve feet at every stroke of the engine, and carry the men up or down without any exertion on their part but that of stepping from one platform to another as they meet. The descent 1760 feet requires twenty-five minutes. Saved from the fatigue of climbing, the men can work below for eight hours at a spell, instead of six hours, as before; and they will [illegible] long distance underground to go up by the machine. When [illegible] distance

THE ILLUSTRATED LONDON NEWS

No. 762.—VOL. XXVII.] SATURDAY, SEPTEMBER 22, 1855. [WITH A SUPPLEMENT, FIVEPENCE.

THE NEXT MOVE.

THE people of England and France hungered and thirsted after Sebastopol. There were not wanting statesmen and publicists in either country who would have baulked the public appetite if they could have done so; nor were there wanting others who saw so much of the difficulty of the enterprise as to be blind to the possibility of its success. But the public instinct proved itself superior to the fears of the timid and the reasonings of the wrong-headed and wrong-hearted. It never despaired or even doubted of the ultimate victory, for it felt that possession of Sebastopol was the point of honour; and that the defeat of the Allies, and the relinquishment of the enterprise, would not only involve present humiliation, but future loss of prestige, power, and place in the world's opinion. The heroic sentiment of the people pervaded the mind or every British, French, and Sardinian soldier in the Crimea. The brave men who were exposed to all the actual horrors of the war, to misery and discomfort in every shape, to fatigue in the trenches, to cold and exposure to the elements, to disease in its most fearful forms, and to the harassing sorties by day and night of an infuriated enemy, never gave way to despondency or discouragement. If at any time the shadow of such feelings passed over their minds, it arose, not from their own sufferings, but from the rumours which occasionally reached the Camp that there were men at home, and in high places, who in their ignorant impatience exaggerated difficulties, depreciated successes, and were ever more inclined to carp and cavil at inevitable mistakes than to render honour to the heroism which shows itself in waiting and in suffering as usefully, if not as brilliantly, as in acts of daring and in victories achieved at the cannon's mouth, or the point of the bayonet.

Though, up to the time at which we write, Europe owes to the electric telegraph alone the knowledge which it has acquired of the immortal achievements of the 8th and 9th of September, it knows sufficient to be able to estimate at their proper value the actual and proximate results of the victory. The organs of Russia may pretend that the evacuation of Sebastopol by Prince Gortschakoff will not only not weaken, but actually strengthen his position in the Crimea; the bribed and Russianised press of Germany may echo the silly boast, or otherwise attempt to argue away the victory of the Allies till they almost persuade themselves that victory is defeat, and glory disgrace; but the nations of Europe know as well as Prince Gortschakoff and the Czar Alexander themselves, that in the capture of Sebastopol is involved the destruction or surrender of the Russian army in the Crimea. How this result is to be attained, it is not for the journalist to state; but on this as on other occasions he can make himself the oracle of the public heart, and, sharing its confidence and enthusiasm, as well as its instinctive sense of the inevitable, can reason from the past to the future, and predict the impending and still greater triumph, without pretending to know the successive steps by which it will accomplished.

There is only one part of Europe where the news of the fall of Sebastopol has not been received with acclamations of delight, and that is within the gloomy circle of the Russian frontiers. Even in Spain and Portugal—once great enough to interfere in European politics, but now sunk to the level to which the peace-at-all-price party would reduce this country, if their absurd doctrines of non-intervention could be made the rule of our conduct—even in these apathetic and third-rate States the capture of the Malakoff and the evacuation of Sebastopol have excited the admiration and cordial good wishes of the people. Throughout the rest of Europe the feeling has been more intense, and the Central and Southern States of Germany and Italy, though overshadowed by large armies and despotic Sovereigns, having a natural sympathy with the system of government of which the Czar is not only the representative but the support, heave with expectation, and long as ardently for the next move in the mighty game as the Allied Powers themselves; and pray as fervently as Englishmen and Frenchmen that each blow struck against Russia may be more stunning than its predecessor, until, rendered powerless for future aggression, the Barbarian Empire may be brought within the pale of Civilisation, and made to conform to its laws and responsibilities, and to its code of international honour.

We are not likely to know, at least for the present, how the

BEFORE SEBASTOPOL.—FORGE OF THE LEFT SIEGE TRAIN, SKETCHED BY M. A. GOODALL.—(SEE NEXT PAGE.)

news of the fall of the great Crimean stronghold has been received in Russia. The Czar himself knows what to think of it, and so, no doubt, do Prince Menschikoff, Count Nesselrode, and the other magnates and dignitaries who surround his person and share his councils. But what of the people? Do they believe, with the scribes of Brussels and Vienna, that the abandonment of Sebastopol is a great strategical movement? that it strengthens Prince Gortschakoff's position?—and that it prepares the way for the final and ignominious discomfiture of the Allies? Do they think the telegraphic wires will next convey to them the pleasing intelligence that, after a due administration of the stick to the unwilling, and of *rakí* to the willing, soldiers of Holy Russia, Marshal Pelissier and General Simpson have been driven into the Black Sea? Perhaps they do; for the enormous lying, which is the rule of the present, as it was of the late, Czar, sticks at no invention that can keep the ignorant people in good humour for a day, and at no falsehood, however gross and clumsy, which can pander to the fanaticism, or feed the vanity of bigots and barbarians. But if such delusions exist they are not likely to be of long continuance. The truth can only be hidden for a time, and when the Russians learn, as sooner or later they will, that their once powerful fleet is rotting under the waves of the Black Sea, instead of riding triumphantly over them; that the Allies have possession of something better and more valuable than a "blood-stained ruin" in Sebastopol; that Prince Gortschakoff and General Liprandi are out-manœuvred on every side; that they have been starved into surrender, or thoroughly beaten in fair fight in the open field; and that the Crimea is virtually wrested from the Russian Empire, they will begin to suspect, what the rest of the world already knows, that an Imperial ukase may be nothing better than a monstrous invention, and that their Czar, though the head of a religion, can lie to serve the purposes of the moment as glibly as a Viennese diplomatist. Nor are the events in the Crimea the only chinks by which the rays of light will penetrate into the minds of the Russians. Whatever may be believed at Moscow, Novogorod, or Tobolsk, the people of St. Petersburg must be aware that the presence of the British and French fleets in the Baltic is an insult and a humiliation which the Czar has been unable to avenge. Even if those fleets had not prevented the growth of a northern Sebastopol by the destruction of Bomarsund; if they had not ravaged Sveaborg, shut up the Russian navies ingloriously behind the walls of Cronstadt, and menaced from day to day the safety, if not the existence, of the capital, the Russians of all classes in the Baltic, and many other provinces, know to their cost that the power of France and Great Britain has not been exerted in vain. They know it by their ruined commerce; by the hardships of a failing revenue and an augmented taxation; by the terrors of forced loans and insatiable conscriptions; by gloom, anxiety, and distress; and by the knowledge that all this has to be endured without a single advantage to compensate for it, or a single victory either in Europe or in Asia to shed a transitory gleam of glory on the darkness of their misfortune. There is a certain limit of degradation which no nation, however barbarous, will suffer its rulers to overpass without calling them to account. The world does not yet know what that limit is in Russia. But unless the fortunes of the Czar mend with the coming winter, or unless by tardy concession he sue for the peace which he formerly spurned, it is likely that he may have an account to settle with his own subjects before the genial breezes of the next spring shall open the waters of the Baltic to a fleet that shall inflict upon Cronstadt the fate of Sebastopol.

SIEGE TRAIN BEFORE SEBASTOPOL.

THE picturesque scene upon the preceding page has been engraved from one of the most effective Sketches in which Mr. Goodall has depicted the "Progress of the Siege." Here he has represented, with remarkable breadth, the Forge of the Left Siege Train, Third Division. Still, this is a scene of comparatively still life of the Camp, much of which is to be seen here. "There are intervals in the day," says the *Times* Correspondent, in one of his vivid letters descriptive of the bombardment, "when you might suppose that 'villanous saltpetre' had no more to do with a modern siege than an ancient one, and that all this demonstration of a state of conflict was merely an amicable suit upon an extensive scale. There are times at night when angry and sudden explosions spring up as if by some unaccountable impulse or conjuration, and continue with an impetuosity which seems as if it intended to finish the whole business in a moment. There are times when the red fusees turn and tumble the air like hot coals belched out of a volcano, and dance successive hornpipes upon nothing; then the chatter of small-arms breaks upon the ear in distant imitation of the hearty artillery, like a little dog yelping in gratuitous rivalry of a big one. The fighting is done by jerks and starts, and the combatants, like Homer's heroes, stand at ease the best part of the time, and take it coolly, meaning deadly mischief all the while."

THE RECENT ATTEMPT TO ASSASSINATE THE FRENCH EMPEROR.—Before proceeding to his box in the theatre, the Emperor dispatched a messenger to Dr. Conneau, at Villeneuve-l'Etang, desiring him to allow no other road to communicate with the Empress till he himself should return. This was done. On his return he spoke to her of the representation at the Italian Theatre, and of indifferent things, and she passed the night in ignorance. Next morning the Emperor entered the Empress's apartments early, and, after an hour's conversation, got up, and was going away, when all at once turning round suddenly, with the door still in its hand, he said, "I had almost forgotten to tell you of last night's incident! Some one either really did fire a pistol at your ladies' carriage, or let off a squib close to it. At all events there was a detonation, and poor Madame de Malart's fright was something too amusing she persists in it that she was fired at. I maintain it was only a squib; but, however, I assure you she was very comical in her alarm." The Empress entered into the joke, laughed; and, whatever she may learn hereafter, the effects of the shock are over.—*From a Correspondent of the Manchester Guardian.*

SECRET TREATY BETWEEN THE ALLIES AND DOMINICA.—England and France are not so fully occupied by Russia but they can find time to watch Brother Jonathan, and keep control of the gates of the Pacific trade. A reliable correspondent in Madrid assures us that a private treaty has been made by France, England, and Spain with the Dominican Government, in which the latter, for a certain consideration, has pledged itself to the following conditions, viz.:—To welcome from the United States, of any class or colour, and to encouraged to hold lands or take up their residence in St. Domingo. No land for mining purposes, factories, or coal depôts, shall be sold, leased, or ceded, either to private companies or to the American Government, without the prior consent of the French and British Governments. Now let us examine the meaning of these conditions:—The island of St. Domingo covers the free passage of our trade by the Caribbean Sea and the Isthmus of Darien, the Cuba covers the Gulf of Mexico and the use of the Tehuantepec transit. It is a cardinal object with England and France to keep to themselves the command of those great gates of communication between the various coasts of the American Union, and to prevent us from controlling the West Indies market. This explains the promptitude with which those Powers sent their order to St. Domingo to cancel the treaty with the United States, and which they effected without the least remonstrance from our Cabinet. The tame acquiescence of our Government in this outrage encouraged them to follow up their advantage by a triple treaty with Spain for the general protection of negro and European interests in the Antilles. This compact with the Dominican Republic takes away from the United States the only chance open to them for a commercial foothold therein, and the Allies may now take their own turn to hand over Cuba and Porto Rico to Sambo and Satan—the rest of the West Indies is theirs already.—*New York Herald.*

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday.

"AFTER a feast comes a famine," saith the adage. The great, grand, and all-important intelligence of last week is succeeded by a total dearth of news this. We have not yet recovered our breath from the wonder with which the fact of our success—long expected, yet seeming to come so suddenly at last—has filled us, and a flat calm has succeeded to all the excitement.

In the absence of any fresh intelligence, we must relate to our readers some of the doings of last week, in honour of the taking of Sebastopol the Impregnable. The "Te Deum" at Notre Dame was the grand event of the day. The Imperial cortége was composed precisely as it had been for the departure of the Queen. In the first carriage, drawn by six horses, came the Prince Jerome, in the uniform of a General of Division; in the second, with eight horses, appeared the Emperor alone (the Prince Napoleon was absent on his Norman excursion, and the Empress rarely appears in public at present). The Cent-Gardes, the Guides, and the Cuirassiers escorted the procession, which arrived at half-past twelve before Notre Dame, where were already assembled the members of the various *corps diplomatique*, the *corps d'état*, and other high functionaries On the Emperor's entrance, he proceeded to the throne, elevated for the occasion, in the church, and knelt on the *prie-dieu* placed in front of it, after which the ceremony commenced. Among the list of persons most noted on the occasion were Abd-el-Kader and the old General Despeaux, who counts sixty-five years of service, and is, we believe, the oldest General in Europe. In the speech of the Archbishop of Paris to the Emperor, he made allusion to the position of the Empress. In the version of the discourse published in the *Moniteur* this paragraph is left out, though it appears in the other journals. The absence of the representatives of Wurtemberg, Sweden Denmark, Belgium, and Bavaria from the ceremony has been considerably commented on. The first of these abstained from appearing in consequence of the relationship of his Sovereign to the Imperial family of Russia. The Ministers of Sweden, Denmark, and Belgium acted consistently with the neutral position they have continued to maintain from the commencement of the war; and the presence of the representative of Bavaria, was simply prevented by his being in the country, at too great a distance to return to Paris in time for the solemnity. All day, not only the principal, but many of the most insignificant streets were paraded with innumerable national and fancy flags, and at night a brilliant illumination took place.

All politics and all opinions gave way before the general feeling on this occasion. Among the most splendid of the private illuminations, was that displayed by the hotel of M. Thiers, in the Place St. Georges. Nor were the populace behind-hand in the universal demonstration; not only the fronts, but in some places the backs of the houses inhabited by the members of the working class, were lighted up. In one street, the rue de Lappe, a mere alley, occupied principally by tinkers and sellers of old iron, the inhabitants subscribed a sum of sixteen pounds to make a really splendid illumination, and such was the demand for lamplons that, after the morning, none could be procured.

All the theatres gave, on the occasion, gratis representations. At the Grand Opéra was performed a cantate, composed by M. Auber; at the Opéra Comique, one by M. Adolphe Adam; and at the Théâtre Français were recited verses written by the manager, M. Arsène Houssaye, whose literary reputation stands too high to make it necessary to recall the fact to our readers.

As may be supposed the arguments *pro* and *con.* the establishment of peace, as a consequence of our late successes, run high, and occupy a very large portion of public and private attention.

It seems quite decided that the newly-established and magnificent body of Cent-Gardes is to be abolished, and the members composing it to return to the active army, some with their former grades, others in the rank of maréchaux des logis chefs. Doubtless there are good reasons to be advanced for this decision; but it really seems a subject to be regretted that, after the difficulties that have been encountered, and the sums of money expended in the organisation, so fine, and, for the purpose required, so efficient, a body of men should, within a few months of its establishment, be dissolved.

The intended visit of the Emperor to Boulogne has been deferred; but the preparations for his reception there continuing to advance, it is supposed the excursion will shortly take place.

The extraordinary warmth of the weather, which more resembles June than late in September, and the accompanying dryness, continue unabated. The consequence is an unusual supply of fine late fruits—peaches, especially, which are of peculiar excellence and abundance; plums are however, an exception to the rule, and apples are extremely scarce. We fear that, as a general rule, the hopes conceived of the harvest will be far from being fulfilled. In some places the grain is good, but in many others, in the north of France especially, the crops are extremely thin and of poor quality.

The question some time since agitated, of establishing a grand almonry of the Crown, is again brought on the *tapis*, and seems likely to be carried.

The Odéon has produced a new piece from the pen of Mdme. George Sand, "Maître Favilla," which seems likely to be very successful. The plot is extremely simple; and, indeed, the interest of the piece turns almost entirely on the drawing and developments of the characters, which is done with a hand at once delicate and masterly. The Odéon has also accepted, and is about shortly to produce, an historical drama in five acts, entitled "Une Intrigue au Louvre," written by M. Charles Edmond. The period is the reign of Louis XIII., and describes the struggles of Lunes and Concini. "Aimer et Mourir," at the Vaudeville—another historical piece, by M. Michel Masson—has excited some attention, but is of mediocre merit.

RUMOURS OF NEGOTIATION.

The German papers are full of rumours relating to an alleged proposal to renew negotiations with Russia. The *Frankfort Post Gazette* is in formed by a letter dated Vienna, Sept. 14, that "a fresh attempt is to be made to re-establish peace. A fresh note will be sent to Russia, through the medium of Austria. In this note the demands of the Allied Powers will be once more explicitly stated, and the proposition will be made for reopening negotiations on this basis. Should Russia not accept this proposition, the military convention between Austria and the Western Powers will be immediately ratified. Respecting the demands of the Western Powers, the assurance has been given that they are still moderate to an eminent degree. The original programme has been retained; nor has a single point been added that is not the natural consequence of the military advantages obtained. Among these consequences is an indemnity for war expenses, which will doubtless figure as the most important feature of the new negotiations. A fresh treaty is spoken of as having been concluded between France and England on the one part, and Turkey on the other. Its object is to invest the Western Powers with the right of keeping garrisons in various parts of Turkey. The points specified are Varna, Adrianople, Constantinople, and Gallipoli. Varna and Sinope would be used as maritime stations by the Western Powers."

The *Corriere Italiano* of Vienna, a paper often quoted as semi-official, says:—"The course to be followed by the Allies in the Crimea after the taking of Sebastopol will depend on the attitude of the States of Central Europe. A more energetic policy on the part of our Cabinet, we are firmly persuaded, is the only one capable of accelerating the conclusion of a peace so ardently desired by all Europe." "A more energetic policy" on the part of Austria will have very little weight with the Western Powers if the energy is to be exercised on behalf of Russia.

THE BALTIC FLEET.

The flying squadron in the Gulf of Bothnia, under the orders of Rear-Admiral Baynes, according to the latest accounts, was ably performing the service allotted to it, harassing the enemy in every possible manner, penetrating the narrow creeks and channels in that locality, capturing every small craft that ventured afloat, and destroying every place that it could reach. The *Hawke*, steam blockship, had made a diversion against the fortifications of Riga, dismantled a few guns of the enemy, and killed and wounded some fifteen Russians, who showed some opposition by sending out fifteen of their gun-boats, which fired on the *Hawke*, but without causing any further casualty than lodging a few shot in her hull and wounding one of her men in the arm, which has rendered amputation of the limb necessary. The blockade of the enemy's ports is most efficiently preserved by our various cruisers, and the effect thereof is severely felt by all classes of subjects of the Emperor of All the Russias, causing great discontent among them. The advantages the Allies have gained during the present campaign, although not equal to what was expected by the public at home, are sufficiently important to warrant the assurance that, in 1856, with the means and appliances which will then be furnished, the Czar will find that his strongholds in the Baltic, as elsewhere, will, one by one, be wrested from him

H.M.S. *Hawke* arrived at Ferö Sound on the 1st inst., where she remained at anchor for a week, and then left to rejoin the main body of the fleet at Nargen.

It was recently stated that a large supply of rockets had reached the Allied squadrons from France, and that their extensive range and destructive powers were greater than any hitherto used. Experiments have been made with them, which prove they are inefficient for the especial object for which they were manufactured, viz., the demolition of the town of Revel and other places in the Baltic. They were said to be capable of being thrown, with good effect, a distance of 7000 yards, which is equivalent to 3½ nautical miles, and were, moreover, furnished with a shell of a considerable weight, calculated to explode at a given period of time. Their range, however, has been found not to exceed 4000 yards, and the period of their explosion is very uncertain. Further active operations, except on a minor scale, will not be undertaken during the present season, which is now very far advanced.

THE WAR IN ASIA.

Letters from Trebizond on the 30th ult. state that General Muravieff was on the 22nd still in his intrenched camp before Kars. He had only one field battery and some mountain guns; his siege train had not left Gumri, and it was doubtful whether he would not content himself with observing the place and keeping up a blockade. Recent despatches announce, however, that, notwithstanding his vigilance, provisions have been thrown into Kars. Russian accounts from Tiflis state that new troops have arrived there "from Orenburg," and the army of the Caucasus is asserted to be at this moment in a high state of efficiency—so much so, in fact, that an expedition to Batoum is talked of, and it is said that Prince Bebutoff has reinforced the corps at Achaltzik and ordered it to march thither.

The *Invalide Russe* says:—"General Muravieff's expedition and attack, on the 7th instant, on the Turkish intrenched camp was a failure, but Kars is still surrounded. General Koukolefski was killed, and Colonel Jalgrene wounded

RUSSIAN AGENCY IN GREECE.

The Governments of France and England are anxiously watching events in Athens. King Otho, under the influence of his ambitious wife, is still favouring Russian interests. The Government, in its present distracted state, is unable to take requisite steps to prevent revolt and brigandage, which are the means used by Russia to throw the kingdom into confusion.

Letters from Greece, dated the 1st inst., give a bad account of the state of Thessaly and Albania, where Russian agents are described as swarming, and as doing their utmost to promote the disturbances from which those unfortunate provinces suffer. They encourage and foster the banditti, of whose crimes every arrival brings intelligence.

The following letter from Vienna, of the 14th instant, will show that prompt means were taken to bring the Neapolitan Government to a sense of its situation:—

On the 9th of September, Mr. Elliot, who acts provisionally for Lord Westmoreland, presented a despatch to the Vienna Cabinet, containing a statement of all the complaints England has to make against the Neapolitan Government. The despatch is said to state that England would have been glad to see Naples, remaining within the limits of a strict neutrality, spare the British Government and its allies the difficulty, painful for any, under actual circumstances, of turning aside her attention and her forces from the task on hand. England, adds the despatch, does not yet give up the hope that a serious warning will bring back the Neapolitan Government to that prudence which it stands in need of now more than ever

Another letter, of the same date, in the *Cologne Gazette*, says that, on the 27th August, the Austrian Government addressed a despatch to the Government of Naples, supporting in an energetic manner the demands of the Western Powers. It points out the consequences that may ensue if Naples preserves in the policy she has hitherto followed, and adds, that Austria will (if the Neapolitan Government does not give satisfaction to France and England) be compelled to abandon Naples to its fate.

THE RUSSIAN ORDER OF THE DAY.

The Emperor of Russia has addressed his army on the subject of the fall of Sebastopol; but he gives little or no indication of the probable effect of the event upon the future Imperial policy. The Imperial circular is remarkable chiefly for the frankness—so unusual in Russian documents—with which it intimates the greatness of the overthrow. The following is the text of the Order of the Day, as it appears in the *Journal de St Petersbourg*:—

The defence of Sebastopol, which has lasted so long, and which is perhaps unexampled in military annals, has drawn upon it the attention not only of Russia, but of all Europe. From the very commencement it placed its defenders in the same rank as the most illustrious heroes of our country

In the course of eleven months the garrison of Sebastopol has disputed with a powerful enemy every inch of the ground which surrounds the town, and each of its enterprises has been distinguished by the most brilliant bravery. The obstinate bombardment, four times renewed, and the fire of which has been justly styled "infernal," shook the walls of our fortifications, but could not shake or diminish the zeal and perseverance in the their defenders They beat the enemy or died with indomitable courage—with a self-denial worthy of the soldiers of Christ—without a thought of surrendering

Regretting from my heart the loss of so many generous warriors, who offered their lives as a sacrifice to their country, and sank long with resignation to the will of the Most High, whom it has not pleased to crown their acts with complete success. I feel it a sacred duty, on this occasion, to express in my name, as well as in that of all Russia, to the brave garrison of Sebastopol, the warmest gratitude for its unexampled labours, for the blood it has shed in the defence, for nearly a year, of those fortifications which it erected in a few days.

But there are impossibilities even for heroes. On the 8th of this month, after six desperate assaults, which were repulsed, the enemy succeeded in getting possession of the important Kornilof Bastion (Malakoff), and the Commander-in-Chief of the army in the Crimea, desirous of sparing the precious blood of his companions, who, under the circumstances, would only have shed it uselessly, decided upon passing over to the north side of the fortress, leaving only blood-stained ruins to the besieging enemy.

Those tried heroes, the objects of the general esteem of their comrades, will doubtless give, in re-entering actually into the ranks of the army, new proofs of their warlike virtues. With them, and like them, all my troops, animated with the same unbounded confidence in Providence, with the same ardent love for me and my country, will always and everywhere fight the enemies that attempt to touch our sacred soil, the honour and the territorial integrity of our country; and the name of Sebastopol, which has acquired immortal glory by so much suffering, and the names of its defenders, will live eternally in the hearts of all the Russians, with the names of the heroes who immortalized themselves on the fields of battle of Pultowa and Borodino.

ALEXANDER

St. Petersburg, Sept. 11, 1855.

SPEECH OF THE KING OF HOLLAND.

The Legislative Session was opened by the King in person, on Monday, at the Hague. His Majesty's speech was as follows:—

Gentlemen,—It is with real satisfaction that I am able to announce to you on the present occasion that our relations with other Powers are distinguished by sentiments of amity and good-will. In the midst of the war in which several friendly States are still engaged, we continue to maintain a system of strict neutrality, which is more closely observed by us, is appreciated by the belligerent Powers. The land and sea forces continue to merit our approbation by discipline and zeal in the accomplishment of their duties. The extension of the material of the navy, now become urgent, is the object of my particular solicitude. The high interest inspired by our colonies and possessions in other parts of the world makes it a great pleasure to be able to inform you that peace and order preside there; that the sanitary condition of the Indian Netherlands has in general much improved during the last few months, and that the state of the crop is favourable. The steps that we have been long taking to obtain from the Empire of Japan a modification of the system of exclusion followed by that empire, have not been without result. The privileges accorded by the Japanese Government to other

nations are equally guaranteed to us. The State Commission charged to inquire into the situation of the slaves in our possessions beyond sea, has already made its report. I refer myself that its labours will result in the presentation of the draught of a bill on that interesting subject. The end I have always ardently pursued has been to make the moral development of the nation progress in unison with its material prosperity, by encouraging instruction and the arts and sciences, as well as undertakings of industry and public utility, and as much as possible to protect them. Though the influence of the war has been sensibly felt by our commerce and navigation, these important branches are yet, however, in a satisfactory position. The produce of the taxes answers liberally to our expectations. The favourable situation of the State finances enables me to continue the redemption of the debt. I propose to give you an early opportunity of examining draughts of bills that will be laid before you in virtue of the 5th additional article of the fundamental law. These draughts and other legislative subjects will afford us a vast field for witnessing, during the present session, your zeal in the important task intrusted to you.

Gentlemen,—The country has its eyes fixed on you. It expects, from your agreement in common, fruits of a nature to consolidate order and prosperity. Let us do our best that this hope may not be deceived. Above all, let us show that we know how to appreciate the numerous blessings vouchsafed by the Almighty to our beloved country. We cannot be too grateful for their abundance. We declare the Session of the States-General to be opened.

KING BOMBA GIVING WAY.

We are glad to learn that M. Mazza, the Director of the Secret Police at Naples, whose recent outrages on humanity and justice have excited the remonstrances of foreign States and the general disgust of Europe, has been dismissed from his office, partly by the advice of the Neapolitan Ministers, and partly, it is said, in satisfaction of the just demands for redress preferred by the British Government. It will be remembered that this personage had the insolence to convey a threatening message to Prince Satriano, because a gentleman connected with the British Legation at Naples, and therefore obnoxious to the suspicions of the police, had paid that nobleman a visit in his box at the theatre. The same official had recently revived the practice of the bastinado in Naples, and had even threatened to subject men serving in the King's troops to the extravagant persecutions of the police. There seems to have been a touch of madness in the absurdities of which this wretched instrument of a contemptible tyrant has been guilty, and his paltry acts of cruelty and brutality have done more to shake the security of King Bomba's throne than all the police agents in Naples can do to protect it. Within the last few days, however, the information that a squadron of British and French men-of-war was on its way to the Bay of Naples, the imperative remonstrances received from London, Paris, and even Vienna, and possibly the defeat of the Russian army at Sebastopol, appear to have convinced this infatuated Monarch that he was likely to be the victim of a hopeless cause; and, instead of sacrificing himself to the emergency, he has thought proper to dismiss M. Mazza, the subordinate agent of his tyrannies.

THE OVERLAND MAIL.

The steamer *Bombay* arrived at Trieste on Saturday afternoon, with advices from Bombay to August, and from Calcutta to August 9. The most important intelligence is that relating to the Santhal rebellion, which seems to be breaking down. The insurgents are withdrawing to their fastnesses, making occasional raids in small parties upon villages far away from the places in which the troops are located, and are reported to be building stockades in the jungles north of the More River, behind which they have retreated.

There has been an occurrence in the Goorukpore district which may possibly lead to a disruption of our friendly relations with Katmandoo. The Nepaulese crossed the frontier in pursuit of some thieves, whom they apprehended, and suspended the body of one of them, whom they put to death, on the boundary pillar. For this violation of the British territory the resident at Katmandoo has been instructed to demand immediate satisfaction, and to insist upon the most ample apology for the insult.

On the Peshawur frontier there has been a little plundering, and troops were ordered out to chastise the marauders. Jowahir Singh remains at Murree in the sulks; his dispute with his uncle, the Maharajah Goolab Singh, will be amicably settled. Mr. Lawrence will be the first Lieutenant-Governor of the Punjaub, in which proconsulate it is said and believed that Sedoze will be included. All is tranquil in Pegu, and the mission to Ava, which is on a very splendid scale, was to leave Rangoon on the 1st of this month, and was expected to reach its destination about the 20th.

AMERICA.

The mail steamer *Pacific*, which left New York on the 5th inst., arrived at Liverpool on Saturday. The only item of general political interest contained in the American papers brought by the *Pacific* is an account of a new secret society called "the Chiarons," or more properly "the Templars," and believed to comprise at the present time from 1000 to 6000 voters in the city and county of New York. According to the *New York Daily Times*, "certain leading members of the Know-Nothing order have projected the establishment of a new order. Jewish from them, and seek to break them down just as together they have striven hitherto to break down other political parties. 'The Templars' was the name given to the new organisation. Professing to belong to the American order, its object was to control it—to shape its policy, dictate its measures, and designate its candidates. It has succeeded very well in all these efforts thus far, as most of the professed Know Nothing nominations are, in fact, the selections of the Templars."

The *New York Herald* learns, from an authentic source, that contracts have been made for the introduction this year into the island of Cuba of large numbers of African slaves. One party alone has contracted for the supply of seven thousand. Portuguese agents are now in New York making arrangements.

Letters from Norfolk and Portsmouth state that the yellow fever had assumed a milder form in those cities. A sufficient number of physicians and nurses had arrived from Charleston, Savannah, and New Orleans to take proper charge of the sick, and a rapid improvement in the public health was anticipated.

A large portion of the cotton made last season in Louisiana is still lying on the banks of the rivers, waiting for navigation. On Red River alone 200,000 bales are detained. In the meantime, planters are deprived of flour, coffee, &c., unless they pay for these articles to cover land carriage, at the rate of one bale of cotton for two barrels of flour. This is particularly the case above Shreveport.

Thomas Ramsay Meagher has been, by special order of the Supreme Court of this State, sitting at Albany, admitted an attorney and counsellor in all the courts of New York.

ODESSA.

ODESSA. A GLOOMY PICTURE.—The winding up of the affairs of houses of commerce, warehouses, and shops goes on without interruption. Doors are closed in succession, and the inhabitants emigrate. Merchandise becomes scarcer by degrees, and begins to decay day fall, for the want of that part of the richer population which is forced to remain here, and who have been accustomed to a luxury equal to that of the capital. In a word, the greatest ruin and desolation exists. The authorities, however, pretend to perceive nothing of this, and endeavour to assume an air of comfort and security which must be very far from their feelings. The last affair on the Tchernaya caused the greatest consternation here, and the bombardment of Sveaborg produced a complete panic. Odessa may well fear the same fate, for no one here has been the dupe of the fable circulated here, that we have repulsed a landing of the enemy. It is not our earthworks and our few batteries of wretched masonry, and armed with 32 or 36 guns, which could prevent the Allies from taking our town, which is open on every point. General Luders and Governor Strogonoff, although putting on an appearance of feeling perfectly secure, have warned us to hold ourselves in readiness to evacuate the town at the first moment. It is impossible, however, to suppose that they can expect that a population of from 15,000 to 20,000 souls, and composed for the most part of the heterogeneous and foreign elements of Holy Russia, can encamp themselves in the real desert fields surrounds Odessa. Will you believe that there are still here some very respectable English merchants who have been refused permission to leave, on the pretext that they pay to the Crown the duty for exercising the profession of a merchant, and that it was an engagement from which they cannot be released. Since the last disaster in the Crimea, by which, in the opinion of well-informed persons, we had 10,000 men put *hors de combat*, and eight Generals killed, or since dead of their wounds, workmen have been busily employed in erecting batteries on several points of the shore round our roadstead. I, however, think that this is more a pretended than a real defence, for we have not guns enough to arm all these works, or artillerymen enough to serve them. At Nicolaieff things are going on more seriously; from 30,000 to 35,000 men, most part of the reserve, labour actively in throwing up fortifications and intrenchments, and as the Allied fleets do not disturb them at present everything goes on well. It is really colossal, and also very imprudent, the agglomeration which has taken place at Nicolaieff of warlike stores of all kinds and provisions, a flotilla of boats, established at Wormesenok, brings all the provisions which are brought to that place from the interior of the country; and another flotilla on the Dnieper brings to the same point the military stores drawn from the fortresses of Bredronsk and Kief. It is only, therefore, from Kherson that the carriage conveyance of the most indispensable necessaries to Sebastopol, Simferopol, and to the Taurida, convey the provisions into the Crimea. When we see all this, and think of Kertch, we feel what a dangerous game we play."—*Letter from Odessa, in the Constitutionnel.*

TOWN AND TABLE TALK ON LITERATURE, ART, &c.

BENEDETTO PISTRUCCI is no more! Who has not heard of Pistrucci? It was Pistrucci who made (with the exception of the shillings and sixpences) all the coins of King George III. since the Peace of 1815, and the six principal coins of King George IV. He was the great man at the Mint between Pingo and Wyon, and was certainly a master in his art. The collector of English medals has few finer things to show than the Coronation medal of George IV., which the then Master of the Mint very properly entrusted to Benedetto. There was a great outcry at the time at the selection of a foreigner; but we doubt very much if there was anyone then in England at all equal to Pistrucci in the mysterious art of die-sinking. The result at least justified the choice. Die-sinkers for the coin in England have lived in a state of warfare with one another. The great Simon, in the reign of King Charles II., was at strife with the Dutch brothers, the celebrated Roettiers; his famous Petition Crown (perhaps the finest coin in the world) originating in his controversy at the Mint. The Roettiers afterwards quarrelled with Rawlins. Rawlins succeeded to more than one feud; Croker, an Irishman, employed at the Mint in the reign of Queen Anne, had his disturbances; his successors were not without theirs: and, in our own time, the quarrel between the late Mr. Wyon and now the late Mr. Pistrucci was in the realms of Art a matter of public and unhappy notoriety.

The man who made the coronation medal of George IV., and all the fine dragon sovereigns of that monarch, was, we believe, first brought into notice at the Mint when Mr. Pole was Master. Pole thought more than favourably of his abilities, and Pistrucci was at once employed on a medal (*the* medal) designed to commemorate, what was then a recent event, the battle of Waterloo. Great things were expected from this medal. It was to excel—so we were assured—whatever "insolent Greece or haughty Rome "had struck and "sown" to commemorate their greatest victories both by land and wave. What Simon had done for the great victories over the Dutch achieved by Blake against Van Tromp and De Ruyter was to sink into insignificance when compared with Pistrucci's medal for the victory achieved by Wellington over Napoleon. The Master and the Moneyers of the Mint were plagued with early applications for proof impressions of the glorious medal. Collectors reserved central circles in their cabinets for examples of the coming wonder. Years passed by, and nothing was heard of it. The old King died, and still nothing certain was heard about it. George the Fourth died, and collectors were still impatient. William the Fourth died, and Mr. Hamilton assured us that it was in hand -would be a glorious work and one well worth waiting for. Then came the Mint Commission of 1848, and it was not forthcoming. Why? The artist had given—so he informed the Commission ten long years, and those with long days, to this very Medal. But it was still unfinished. He had been ill-used, but proposed to call on the Master of the Mint on the 1st of January, 1849, to place in his hands the two matrices of the long-expected medal. The 1st of January came, but no medal. The Great Captain whose victory it was designed to commemorate died, and yet no medal and now forty years after the event Pistrucci himself dies, and the medal is unpublished and unknown to the Master of the Mint. If the commemoration of Waterloo had depended on Mr. Pistrucci's medal, it had been forgotten as much as Bosworth-field or Bunker's-hill. On Sunday last this eminent engraver ceased to exist. He died at Englefield-green, in the seventy-third year of his age—a duration of life to which, in conversation among his friends, he had no idea of reaching. The fumes of the refinery at the Mint had shortened his days, so he was wont to allege, within the Scriptural threescore and ten. From the sulphuric acid of that plague-spot he had been subject (and from no other cause) to very severe headaches, and to a continuous difficulty in breathing. Sulphuric acid tainted his tongue in the morning and at night; yet he lived, we see, into his seventy-third year, and has left a name to be honourably remembered in the art he practised with a skill very rare indeed among modern die-sinkers. We sincerely trust that he has left the Waterloo medal in a finished state; and, if so, that his friends will add to his well-earned reputation by giving it to the world at once.

We were present the other night at a table where the will of John Gibson Lockhart, the biographer of Sir Walter Scott, and editor of the *Quarterly Review*, was the subject of conversation. We have seen no account of it in print. It is dated at Milton Lockhart, in Scotland, the 23rd of September, 1854, with a codicil made at Abbotsford, referring chiefly to other testamentary papers, which his executors—his brother, William Lockhart, M.P., and his son-in-law, Mr. Hope Scott, Q.C.—cannot find. He desires to be buried "in the simplest possible way where I die." He died at Abbotsford, and was buried in the adjoining Abbey at Dryburgh. His pictures of Sir Walter Scott he leaves "to be added to the collection at Abbotsford." He possessed the original of Sir Walter in his woodman's dress, by G. S. Newton, R.A., of which Mr. Murray, of Albemarle-street, has an excellent duplicate. He desires at the same time that "any objects which his daughter specially connects with her mother may go to Abbotsford." He leaves a picture or a book, in some instances both, to his friends Mr. Ferguson, Lady Gifford, Lord Mahon, Lady Eastlake, Lord Robertson, Mrs. Wilson (of Wandsworth-common), the Misses Alexander, Mr. Murray (of Albemarle-street), Mr. Christie, and Mr. Llewelyn Wynne. His two pecuniary bequests are remarkable. To Mr. Christie he leaves £100, "for a purpose which he understands," and to Mr. Llewelyn Wynne a like sum "for a purpose which he can comprehend." We will not pry into the intentions of the dead; but these bequests have doubtless something to do with the duel in which Mr. Christie was engaged with John Scott, and in which Scott was killed. Mr. Christie was involved in the duel by the thoughtless anger of Scott, to whom he was unknown, and with whom he was acting solely as Mr. Lockhart's friend.

It is the fashion to think that Lockhart was a thin-souled, salmon-blooded being. But this was not the case His friendship, it is true, was rather fervid than active; but his heart, to those who knew him well, beat with warm and generous emotions. It was not everybody, to use the words of his will, who could "understand" or "comprehend" him.

We have received from a son of Sir Charles Barry the following letter relating to a piece of gossip in our Town and Table Talk of last week:—

(To the Editor of the ILLUSTRATED LONDON NEWS.)

4, Robert-street, Adelphi, Sept. 17, 1855.

SIR,—Noticing a paragraph in your impression of Saturday last stating that Sir Charles Barry is the rumoured author and projector of the proposed "inroad" on St. James's-park, you will perhaps allow me to state, on behalf of my father, that there is not the slightest foundation for the report, as he is not, nor has he ever been, in any way connected with it. It seems, I think, pretty clear that the responsibility of the act must rest with higher powers than his; and you will much oblige me and many by correcting this misstatement at your earliest convenience.

I am, Sir, your obedient servant, GODFREY W. BARRY.

We really trust that the work will be abandoned, and that no one, not even a district surveyor, will be found willing to father the disgraceful design.

In the State Paper Office are still deposited the manuscript of Milton's "Treatise on Christian Doctrine," and a letter addressed by him to Bradshaw in favour of Andrew Marvell, dated February 21st, 1652-53. As the interest attaching to these documents is wholly literary, not political, a Correspondent suggests that they should be removed to the British Museum, where they would be much more easy of access. To illustrate this our Correspondent says—"I beg to recount the difficulties which I experienced lately in obtaining a sight of the Milton manuscripts. It has been supposed by some of the poet's biographers that the letter to Bradshaw is in Milton's own handwriting—a circumstance which would prove that he could not have been totally blind at the date of the letter in Feb., 1652-53, although Du Moulin had in the year previous upbraided him with his blindness. The existing evidence seemed to indicate that Milton was totally blind in 1652; and I thought it also improbable that the poet should mis-spell the names of his friends Marvell and Weckerlyn in the letter alluded to as published by Todd. To see the document was, therefore, the only way to settle the point. I applied at the State Paper Office in Duke-street, Westminster, and was informed that it was necessary to have an order from the Home Secretary. I accordingly addressed an application to Sir George Grey, stating my object, and mentioning the name of a nobleman who permitted me to use it in reference to the application. Three days elapsed and no answer came. I then wrote a second note, recapitulating the circumstances of the case, and stating my anxiety to return to the North. Another day passed without an answer. On mentioning the circumstance to a friend, he said, 'As your application has no reference to politics, you are not likely to get an answer; go to the Home-office, and inquire personally into the matter.' Following this advice, I went to Downing street, and was informed that such applications were addressed to the Master of the Rolls, but that I might consult Mr. Waddington, the Under Secretary, on the subject. Mr. Waddington confirmed the statement as to the necessity of receiving the sanction of the Master of the Rolls; but, in consideration of my anxiety to leave town, he politely gave me an introduction to the Master. Thus fortified, I set off for Chancery-lane. The Master of the Rolls had gone to the country, and the time of his return was uncertain! 'Is there no person with authority to open such letters in the Master's absence?' 'You had better apply at the Secretary's office, No. 3.' The Secretary's office was shut; it was open only from eleven to one o'clock, and it was then past one. So much trouble and solicitation about a small matter seemed more than enough; but I had some curiosity to pursue it to the end. At eleven o'clock next morning I presented myself at the Secretary's office. There was a gentleman who opened such letters in the Master's absence. I was directed to him, and was told that he only opened the letters when Sir Francis Palgrave was not in town. To Sir Francis I was next sent, and there I was at last successful. With his well-known courtesy, Sir Francis instantly gave the order, and I repaired once more to the State Paper Office. My object was gained, but at the cost of how much unnecessary delay and trouble! Had the documents been in the Museum, a few minutes would have sufficed for the purpose. The letter, as I conjectured, was not in Milton's handwriting. It is in a fine current hand of the time, quite unlike that of the poet, nor does it resemble any one of the three hands employed on "The Treatise on Christian Doctrine. The letter fills a page of foolscap folio, and the seal used is that of Milton, bearing his arms, the spread eagle. Perhaps it is some excuse for the incivility of Sir George Grey, that my application was made towards the close of the Parliamentary Session. Nothing could exceed the politeness of the official gentlemen whom I had occasion to consult; but it is obvious that the Milton MSS. are not in the 'right place.'"

We are assured by Mr. Gambart that the celebrated picture of the "Horse Fair," by Rosa Bonheur, was sold by Mr. Gambart the very first day it was publicly exhibited in London, and that the purchaser has not had, nor has now, any intention of parting with it.

The best sight of the week has been the exhibition of Crimean photographs, made by Mr. Roger Fenton, during five months' hard labour, in the present year, as a photographer at the seat of war. The collection fills the gallery and screens of the Old Society of Painters in Water-Colours and fills them well. The portraits are admirable. Here are unmistakable likenesses of Pelissier and Simpson, of Raglan and Bosquet, of Russell, the Correspondent of the *Times*—indeed of all in any way pre-eminently distinguished. Sir Colin Campbell, we think, excepted. Then the landscapes are very noteworthy. Observe, as you enter, on the right, that inimitable view of the shipping in the harbour of Sebastopol that crowded basin: what a notion it gives of confusion—how it reminds one of Clarkson Stanfield! One may now see the south side of Sebastopol (thanks to Mr Fenton) without a journey to the Crimea itself.

THE HEAD OF CHRISTENDOM IN DANGER.—The Pope has had another very narrow escape of his life. It appears that his Holiness, having set out for a drive, dismounted from his carriage near the Ponte Molle, for the purpose of taking a walk according to his usual custom. His guards were some distance behind him, and his Holiness was advancing alone, when a carriage advanced towards him at full speed, the driver having lost control over the horses. His Holiness called to the driver in vain, but, fortunately possessing much presence of mind, he took refuge on a part of the footway which was somewhat higher than the rest. The guards, seeing the danger, the horses of which were severely hurt. The driver and the occupant of the carriage were apprehended. His Holiness, though he suffered a very severe fright, fortunately sustained no personal injury.

M. SOYER'S CAMP AND BIVOUAC KITCHEN.

M. SOYER writes in high spirits from "before Sebastopol," where he is exercising his art in providing comforts for our brave army. On the afternoon of the 27th of August M. Soyer opened his Camp and Bivouac Kitchen on the parade-ground of the Guards and Highlanders' Camp, First Division, in the presence of General Simpson, Marshal Pelissier, his Grace the Duke of Newcastle, the Right Honourable Lord Rokeby, General Le Marmora, Lord Adolphus Vane, Colonels Drummond, Steele, Dundas, Carleton, St. George, Munro, and Colonel Hardinge, Commandant of Balaclava. Admiral Freemantle, Commissary-General Sir George Maclean, Captains Moorsom, Kennedy, Colville, and Heath, and nearly 1000 distinguished naval and military officers, comprising the elite of the Allied armies. Dr. Hall, Inspector-General of Hospitals, besides numerous other medical gentlemen and clergy, were present.

The scene was greatly enlivened by two military bands playing the whole of the time, amidst the roar of cannon and explosion of shells from Sebastopol and the trenches. The weather was most propitious, and as almost all appeared in full uniform, it gave a most lively appearance to the scene. The accompanying view has been sketched by our Artist, Mr. E. A. Goodall.

Everything being prepared for the great banquet from the soldiers' ordinary rations—

Seven of my camp-stoves (writes M. Soyer) were placed in the open air on the esplanade in front of the Guards and Highlanders, containing the various specimens of food, recipes for which were distributed throughout the Camp. The stoves are now in daily use by the Guards and Coldstream Company, where men from other regiments are sent to learn the simple process of camp cookery. By the time the other cooking apparatus arrives the whole of the army will be able to cook under my new system, which is now recognised by all who witnessed it to be expeditious, clean, and economical, especially in the consumption of fuel. I inclose you copies of the opinions expressed by Generals Simpson and Pelissier upon the subject; and I assure you it is with unfeigned pleasure I acknowledge that the Government has in every instance afforded me the utmost facility in carrying out my views.

I am happy to add that all the hospitals in the Bosphorus are in a most satisfactory condition in the culinary department.—With the highest consideration, I have the honour to be your most obedient servant, A. SOYER

P.S.—In returning my most sincere thanks to General Simpson for the lively interest he has taken in promoting my views, I beg also to incorporate all the authorities of the various departments.

A. S.

First Division—Esplanade in front of the Guards and Highlanders—Camp before Sebastopol

I had the pleasure, on the 27th August, 1855, of visiting Monsieur Soyer's culinary establishment, and I was much pleased with everything I saw there. I was especially struck with the economy in the saving of time and the consumption of fuel introduced in the administration of the army. The cooking apparatus seemed well understood. I tasted every preparation, and all, I must say, I found of most excellent flavour, and at the same time very nutritive.

(Signed) General A. PELISSIER.

Camp before Sebastopol, 31st Aug. 1855.

I had much pleasure in visiting Monsieur Soyer's Field Kitchen last Monday, the 27th instant. I there saw several excellent soups made from ration meat, compressed vegetables, and other things within reach of the soldiers' means, and cooked with very little fuel. I consider that Monsieur Soyer is taking great pains in devoting his time and great talents to the good of our military service, especially in the field; and I wish him every success.

(Signed) JAMES SIMPSON,
General Commanding

MONS. SOYER. LORD ROKEBY. GEN. PELISSIER

PLAN OF THE ATTACK ON THE MALAKOFF.

NEWS OF THE FALL OF SEBASTOPOL.—SHOWER OF PARACHUTE ROCKETS AND BONFIRE, IN WOOLWICH MARSHES.

FALL OF SEBASTOPOL.—DEMONSTRATION AT WOOLWICH.

On the evening of Wednesday week, Lord Panmure, accompanied by Mr. F. Peel, M.P.; Mr. Monsell, M.P.; Sir Hew Dalrymple Ross, Captain Ross, and Mr. B. Howes, paid a visit of inspection to the Royal Arsenal, at Woolwich. They were received in the evening by the gentlemen connected with the various departments, and were conducted over the workshops and principal places of interest in this vast national establishment. The band of the Royal Artillery performed in the inclosure, and the principal entrance to the yard was decorated with a handsome star in gas, with the letter "V" at either side. The workshops were also ornamented with flags and coloured lamps, and in every department the greatest activity was observable among the *employés*.

After the party had inspected the workshops, they proceeded to the Ordnance marshes, about a mile distant from the town, where it was announced that a display of fireworks would take place in celebration of the recent success of the Allies. The night was extremely favourable for the exhibition, there being no moon visible, and the effect of the rockets and other fireworks was extremely beautiful. The band of the Royal Artillery performed from time to time on the field, and there could not have been less than 20,000 persons present.

The rocket practice included the exhibition of Captain Boxer's newly-invented parachute rockets, which appear to answer their purpose admirably. They are discharged from coehorn mortars, and the peculiarity of the invention is, that after the rocket has attained a sufficient height, it bursts and leaves floating in the air a bright white light, by the aid of which objects beneath, such as earthworks, &c., can be plainly visible to a besieging force, while the smoke caused by the discharge effectually shields the latter from observation. The bright light emitted by the rockets remains floating in the air for three or four minutes, and in cases where two or three are discharged at the same moment, a great body of light can be thrown upon a given space.

The display of fireworks concluded with the simultaneous discharge of a hundred coehorns, and the ignition of a monster bonfire, composed pitch barrels, old timber, and other inflammable matter, placed upon the butt, at the extreme end of the practising ground. The flames from this object cast a lurid glare upon the marsh for miles round, and continued to burn for several hours.

FIRING THE PARK GUNS.

A CONSIDERABLE amount of vituperation is ever and anon dealt out upon the expensive practice of firing salutes, the annual cost of which to the country is by no means an insignificant item. The grumblers, however, would surely not extend their anathema to the firing of the guns in the Park and the Tower—such as boomed to the metropolis on Tuesday week the glorious news of the capture of the Malakoff and the fall of Sebastopol. Rarely has the joyful note of victory been welcomed with greater enthusiasm than was this notification of the glorious result of the protracted siege of the Russian stronghold. "The Tower guns" were formerly fired

NEWS OF THE FALL OF SEBASTOPOL.—FIRING THE PARK GUNS.

from the Wharf facing the Thames; but they are now discharged from the new Saluting Battery opposite Tower-hill.

"The Park guns" are named from their being fired in St. James's-park—in that portion between the foot of the York Column and the Parade-ground. On Tuesday week, the ground was kept by a few Guards, and the guns being placed as shown in the illustration, they were fired in succession by an artilleryman.

CALENDAR FOR THE WEEK.

SUNDAY, Sept. 23.—16th Sunday after Trinity.
MONDAY, 24.—Autumn Quarter commences.
TUESDAY, 25.—Parson died, 1808. Mrs. Hemans died, 1835.
WEDNESDAY, 26.—St. Cyprian.
THURSDAY, 27.—Great Fire at Constantinople, 1729.
FRIDAY, 28.—Sheriffs of London sworn in.
SATURDAY, 29.—Michaelmas-day.

TIMES OF HIGH WATER AT LONDON-BRIDGE,

LIST OF ENGRAVINGS
IN THIS WEEK'S "ILLUSTRATED LONDON NEWS."

Scenes and Incidents connected with the Siege of Sebastopol:
Forge of the Left Siege Train ... ... page 345
M. Soyer's Camp and Bivouac Kitchen in the Crimea 348
Plan of the Attack on the Malakoff 348
Capture of the Malakoff Tower (Two-Page Cut) 352-353
Assault of the Malakoff Tower (Page Cut) 360
News of the fall of Sebastopol: Firing the Park Guns 349
Shower of Parachute Rockets, and Bonfire, in Woolwich Marshes ... 349
Portrait of his Royal Highness Prince Frederick William Charles, Prince of Prussia 356
The Portsmouth Sailors' Home 356
Ascent of Mont Blanc without Guides—Night Encampment on the Snow... 356
The "Iona" new Steamer 357
Sunfish caught off Cork Harbour 357
Removal of a Tree by Barron's Machine in the Royal Botanic Society's Garden, Regent's Park 357
Engravings from Paintings in the Great Exhibition, Paris:
The Passage of the Ford (by Decamps) 361
The Watering Place (by Rosa Bonheur) 364
The Dogs in the Forest (by Diaz) 364
A Landscape in Touraine (by K. Girardet) 365
The Cavern (by Celestin Nanteuil) 368
The Strolling Musician (by Baron) 368

SEBASTOPOL NUMBER.

WE have great pleasure in announcing to our readers, that next week, SATURDAY, SEPT. 29, we shall present them with a splendid SHEET GRATIS, containing a variety of authentic Drawings of the Capture and Destruction of Sebastopol. The Two Sheets, price 2d. only.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, SEPTEMBER 22, 1855.

FRANCE has sung her national "Te Deum" with befittingsplendour and solemnity, in acknowledgment of the glorious success of the Allies. England has waited for no example from her Government, but has sent up her cry of exultation and thankfulness in every province and town throughout the kingdom. The present generation has witnessed no such spectacle of an excitement, as fervid as was honourable, and the sciolist statesmen who doubted or affected to doubt that the heart of the country was in the war, must now be silenced for very shame. London, that first received the news, burst at once into enthusiasm, and as the tidings flew over the counties, it is scarcely a figure of speech to say that the electric spark kindled where it touched, and the Royal joy-fire in the north proclaimed that the Sovereign's heart in this, as in other matters, beat with the hearts of her lieges. That blaze at Balmoral is among the noblest beacons ever lighted by a monarch, and a poet might, uncensured, declare that the flame was caught from the altar of liberty.

As yet, the universal shout has drowned most single utterances and it would, indeed, be premature for any one man to present himself as the exponent of the public joy. But if an exception may be made, none could be more fitting than in the case of the Premier of England, who has had an opportunity of expressing his satisfaction at the glorious tidings, and has spoken eloquently and assuringly. The chief of the Government, under whose Administration this conquest has been wrought out may well be permitted to congratulate the country upon it, and the man who was called to office by the voice of the people, because he was believed to be actively antagonistic to Russia, and vigorous in prosecuting the war, is entitled to appeal to the nation, whether he has fallen short of fulfilling their hopes. We have never either over-rated Lord Palmerston's abilities, or placed undue trust in his patriotism, but it would be absurd to suppose that one of the shrewdest men of his day has not fully comprehended his position in regard to the country and the war question; or, having convinced himself that he must be a War Minister or nothing, has not lent himself with all his might to the working out the national will. He who has done this deserves his reward, and, "amid all the joy and uproar" of victory, Englishmen will not be disposed to ask, too critically, how much share the noble Viscount has had in bringing about the actual and crowning success. It is something that, unlike his predecessors, he has done nothing to hinder it; something that he is manifestly delighted at the triumph as any other Englishman; and something more—most of all, indeed—that he sees in the fall of Sebastopol only means to an end. In Lord Palmerston's Melbourne speech, he uttered the sentiments which must be those of every honest and practical man throughout the country. He declared that, splendid as is the blow just delivered, it will be of no avail unless we continue to strike, until that solid guarantee against future aggression by Russia, which she refused to the mild solicitations of the negotiators, has been wrenched from her by the strong hand. The Crimea must cease to be Russian—a formal cession confirming what has already been virtually accomplished by the sword. This we have a right to consider as the first article in any treaty of peace. Lord Palmerston will have no difficulty in seeing his way to this territorial re-arrangement, and assuredly it is not with the Power that tore Poland to pieces that England will stand upon ceremonial when forcing her to disgorge the spoils of Turkey.

It is not in the week that contains the 20th of September that an Englishman can write other than kindly of a hero of the Alma. One other address, besides the Premier's, has been delivered, and again it is impossible to object to the orator. The gallant Sir George Brown—whose chivalry and daring so endear him to his men, that, in the hour of battle, especially when they fling their stocks away, they fully forgive him certain martinet follies—has been feasted by his fellow-townsmen in Elgin, and has uttered his opinions on the campaign and its prospects. The brave old soldier has spoken out what was in him, and it would be hard to ask him to follow some of his propositions to a logical inference. He exults, with the rest of us, in the fall of Sebastopol, and hopes that it will lead to something decisive, for that hitherto we have been fighting "with one arm tied." All must sympathise with the veteran Scot's anxiety to close with his foe, and when the final struggle comes, if the Russians dare another day of carnage, may Sir George Brown be remembered by his fellow-soldiers. We have not the heart, this Alma week (and recollecting how he sprang up from the bloody field, and showed his "following" that he was ready for another dash at the enemy's ranks), to ask him why he repudiates so indignantly the services done to him and to the army by thinkers and writers at home; or why, when he brings the most damning charges of incapacity and mismanagement against the late War Department, he will not see an ally in the civilians who exposed and denounced those who were crippling the soldiers and delaying the grand work. "Why, Sir," to adopt Sir George's capital club style, "Why, Sir, these writing fellows, egad, they were picking off your worst enemies"—and that is all the remonstrance we shall make to Sir George Brown, so near the day—

Ille dies,
Qui primus Alma rast adored.

While we write, the despatches which will allot the glories of the ninth of September are still expected. They will, of course, be perused with intense interest. But nothing which they can contain will tend either to damp the enthusiastic feeling of the nation towards our army as a whole, or to induce us to assent to the view of those who seek to lessen the gratitude of the country by treating the fall of Sebastopol as a French victory. Our allies did nobly, as they have done throughout the war; but the Allied army is "one and indivisible;" and the crowning glory equally irradiates all the standards that advanced in the cause of liberty and humanity.

AMONGST the latest news from Paris is a statement that the Government has resolved to prevent the joint-stock company called *Crédit Mobilier* from issuing obligations beyond 120,000 of 500 francs each, equivalent to £2,400,000. The company had announced an emission of 240,000, or £4,800,000. The Government has stopped the half. The measure is described as a financial *coup d'état*; the company is said to have assumed proportions dangerous to public credit and menacing to the State, and the Emperor will probably appoint a governor to preside over it as in the case with the Bank of France. Such a circumstance imparts at this moment great interest to the company and the financial condition of Paris, particularly as the proceedings there have had some influence over the conduct of the Bank of England. The two countries are now so closely united that whatever takes place in one necessarily affects the other, and hence the present and the future condition of the Money-market in Paris now engages much attention.

According to the laws of France no joint-stock companies can be established without the sanction of the Government; and the *Société Générale du Crédit Mobilier* received the Imperial sanction on Nov. 18, 1852. It is not yet, therefore, quite three years old. It was started by the Messrs. Pereire, Fould, Mallet, and other well-known bankers and capitalists of Paris, who still remain at its head, and was supposed to be personally favoured by the Emperor. One of the Messrs. Foulds was in the Ministry; and the project, if not a pet of Louis Napoleon, was warmly patronised by him. Its capital is 60,000,000 francs (£2,400,000), in 120,000 shares of 500 francs each. The shares are payable to bearer, and the whole capital is paid up. It was expressly started to deal in all kinds of public securities, but especially the securities of companies such as railway companies, constituted to carry on great public works. By advancing money on such securities in pawn, it promotes the undertakings and favours speculation in them. It makes loans on all kinds of public funds; on the deposit of shares, and undertakes to raise funds for carrying on public works. Besides being an immense pawnbroker for securities, and a great undertaker, at secondhand, of useful enterprises, it is a great banker, takes money on deposit, opens accounts current, and transacts for companies especially all the business of a banker. It is authorised by law to issue bonds or obligations of its own to ten times the amount of its capital; and, having fully used the privilege, has in circulation bonds to the amount of 600,000,000 fr., or £24,000,000, or more than the circulation of the Bank of England. Its affairs are administered by a council of fifteen, and an executive committee of five members, who divide amongst them a share of the profits, over and above their dividends as shareholders, and have thus a strong motive to increase the business and the temporary profits of the company. A meeting of 200 principal shareholders takes place in April to consider the affairs of the company, which, besides any control exercised by the public press and the Government, is the only restraint on the operations of the company. Its accounts (made up to the end of the year) are annually published, and it has paid large dividends. In 1853 the shareholders received about, 13½ per cent on their paid-up capital, and in 1854 near 12 per cent. In the present year the company promises a much greater dividend, and though it is not yet due, offers to allow it to those shareholders who subscribe to the new bonds. With such dividends, and from the great prospects the company held out in the first instance, its 500-franc shares then rose to a great premium. The first subscribers had secured to them a certain proportion of the shares, to be subsequently issued, and the 500-franc shares first issued rose, in 1852, to the sum of 1785 francs. Shares issued subsequently have been almost as high; they have been as low as 430 francs; and are now somewhere about 1500 francs, or threefold their original value. They have fallen 80 francs within the last two days. That the public should be eager to share such advantages, and become subscribers to the company, is to be expected: they prefer the company's paper even to the paper of the State; and it is said that the disappointment of the Government at the trifling rise of the Rentes after the news of the success at Sebastopol, has not been without influence in causing it to limit to one-half the additional loan which the company is now desirous of raising.

Prolific as London has latterly been in banking companies, Paris—in which we may count about fourteen new banking companies started since the Revolution, and mostly since 1852, and in which, before, there were not more than two—has been proportionably more prolific; and successful as some of our joint-stock banks have latterly been, their success is surpassed by that of the *Crédit Mobilier*. To have acquired so much power in less than three years as to become an object of jealousy to the Government, to be enabled to borrow on its bonds ten times as much as its own capital, and now to propose to double its loan—to which, as the price of its shares shows, the moneyed world in France is eager to subscribe—is an astonishing success. It launched its bark into the rushing flood of prosperity which returning security, increasing railways, and comparatively free trade have conferred on France since 1852, and has been carried to the topmost height. It contributed much to swell the tide, and has excited a flow of speculation for many years unparalleled. The business it has accumulated or fostered—for which all the amount of capital we have referred to, and all the deposits of its customers is insufficient—is quite extraordinary. It has excited enterprise in others, and been enterprising itself. Numerous companies, as those of all the omnibuses of Paris, formerly eleven, have been absorbed by it, and numerous others have been formed under its auspices, or owe their success to its support. None succeed without it, and to have the promise of its countenance is sufficient to raise the price of the shares of a railway or any other company in the market. It has undertaken to make railways for Austria. Unfortunately such a rush of prosperity is never of long duration, and the present want of money, the offer to pay dividends out of capital to be subscribed—a professed lender to be obliged to borrow—is such a palpable intimation of exhausted strength that suspicion and alarm begin to prevail lest the great Company should turn into a bubble, and tumble as fast as it has risen.

For some time its proceedings have caused uneasiness to the thoughtful moneyed classes of our metropolis. A fortnight ago the Bank of England raised its minimum rate of discount ½ per cent, which was perfectly warranted by the condition of our own Money Market, all the peculiarities of which were as well known a fortnight ago as they were last week. Last week, however, the Bank again raised its rate, and to raise it two weeks consecutively is unexampled. It is supposed, therefore, that the announced loan by the *Crédit Mobilier*, the action of the French Government in respect to it, and a great decline of bullion in the Bank of France, all of which have become known to the public within a few days, were known to the Bank Directors at the beginning of last week, and led them to increase their minimum rate of discount a second time. Almost every kind of French security has begun to decline, and amongst the moneyed classes there is an apprehension that disaster involving great losses, panic, and insolvency—impends over Paris, and against it they are taking precautions. The rise in the rate of discount here, accompanied by a considerable rise throughout the Continent, necessary as it is, can but contribute to accelerate the catastrophe, if one there is to be.

THE COURT.

The arrival of his Royal Highness Prince Frederick William of Prussia at Balmoral, on Friday se'nnight, on a visit to her Majesty and the Prince Consort, has created considerable interest during the past week. This young Prince, who is in direct succession to the Crown of Prussia, will, it is understood, be the future Consort of the Princess Royal of England.

On the following day the Queen and the Prince, accompanied by his Royal Highness Prince Frederick William of Prussia, and attended by Lady Churchill and General the Hon. C. Grey, visited the Camp of the Forbes Highlanders, on the Banks of the Dee. The Royal party were received upon their arrival by Sir Charles Forbes, and the men of the clan exhibited some Highland games. In the afternoon his Royal Highness the Prince, with Prince William Frederick and Lord Granville, went to Abergeldie woods, which were driven for deer.

On Sunday the Prince Consort, with his Royal Highness the Prince Frederick William of Prussia, and the ladies and gentlemen of the household, attended Divine service at the parish church of Crathie. The Rev. A. Anderson officiated.

The Queen and the Prince, with the youthful members of the Royal family, are enjoying the pleasures of their Highland home daily. The weather has been very fine, and the Royal party take daily walks and drives in the vicinity of Balmoral. The Prince has enjoyed the sport of deer stalking, almost daily, and several fine stags have already fallen to his unerring aim.

On Thursday se'nnight, her Majesty the Queen and his Royal Highness the Prince, accompanied by their Royal Highnesses the Prince of Wales, the Princess Royal, Princess Helena, Princess Louisa, and Prince Alfred, honoured the Highland Gathering in the Castle of Braemar, with their presence. The Royal suite consisted of Lady Churchill, the Hon. Beatrice Byng, Earl Granville, General the Hon. C. Grey, Colonel the Hon. C. Phipps, and Mr. Gibbs. The approaches to the Castle were lined by the Farquharson Highlanders, under James Farquharson, Esq., of Inverauld, and the Forbes Highlanders from Don side, under Sir Charles Forbes. Her Majesty and their Royal Highnesses were received upon their arrival by Mr. and Mrs. Farquharson, and the junior branches of their family. The games then proceeded. They consisted of tossing the caber, putting the stone, throwing the hammer, foot-racing, and real dancing. Her Majesty remained upon the ground about two hours, when the Royal party returned to Balmoral Castle.

Viscountess Canning has succeeded Lady Churchill as Lady in Waiting to her Majesty.

The Court will return to the South, viâ the Great Northern Railway, on the 13th of October.

THE PRINCE NAPOLEON.—His Imperial Highness Prince Napoleon left town Tuesday morning for Woolwich, where the Prince embarked at noon, in the French Government steam-yacht *Ariel*, on his return to France. During the brief stay of his Imperial Highness in London he has remained at the residence of the French Embassy. His visit to the metropolis was unpremeditated, and arose simply from the greater convenience of railway transit from Southampton to Woolwich, which latter garrison the Prince was anxious to inspect, while on a trip which may be correctly described as a "yachting excursion." His Imperial Highness, during his absence from France, has preserved a strict *incognito*, travelling under the title of Count de Meudon.

His Royal Highness the Duke of Cambridge has arrived at Gordon Castle, N.B., on a visit to the Duke and Duchess of Richmond. A large party have been honoured with invitations to meet his Royal Highness.

Their Royal Highnesses the Hereditary Grand Duke and Grand Duchess of Mecklenburg-Strelitz have taken their departure from this country for Germany.

His Excellency the Danish Minister and Madame d'Oxholme have returned to Wilton-crescent from Denmark, where his Excellency has been *en congé* for some time past.

Lord and Lady John Russell left town on Monday, on a visit to the Duke and Duchess of Bedford, at Woburn Abbey.

GERMAN EMIGRATION TO THE PRINCIPALITIES.—The *German Journal* of Frankfort states from Vienna that the Hospodar of Wallachia has requested Austria to exercise her influence with Wurtemberg, and other German States, to induce them to allow 50,000 German families to emigrate to Wallachia. The Government of that province engages to grant them land from the property of the religious foundations, and to exempt them from taxes for ten years.

LATEST INTELLIGENCE.

ENTRANCE OF THE ALLIES INTO SEBASTOPOL.

Accounts from the Crimea to the 14th have been received by way of Varna. On the 11th some small detachments of French troops entered Sebastopol: they found the streets full of ruins, and barricades erected in different parts. On the 12th the rest of the troops began to enter. Barricades and intrenchments extended almost up to the cathedral and the great square: but became less numerous beyond the latter point. In the night of the 11th several small vessels of the Allied fleets attempted to enter the port by the side of the old Quarantine Fort, and the obstacles at the entrance of the port were about to be removed, to admit of the entrance of the large vessels.

REPORTED RETREAT OF THE RUSSIANS

BERLIN, Sept. 20.—The following appears in the *New Prussian Gazette*, a Russian organ

The *Frankfort Post* and the *North German Gazette* have stated that Prince Gortschakoff has received a despatch from Warsaw, announcing that the Russian corps at Bagtchiserai had commenced a retrograde movement on Perekop. We can affirm in the most positive manner that the news is entirely false.

INAUGURATION OF THE KING OF PORTUGAL.

LISBON, Sept. 16.—The solemn inauguration of the reign of Dom Pedro V. took place this morning at the Cortes. His Majesty declared his adhesion to the policy of the former Cabinet, and confirmed the Ministers in their portfolios. On this occasion, for the first time, use was made of the electric telegraph in Portugal. The accession of the King was received with enthusiasm by the people. The English vessels of war *Sanspareil*, *Neptune*, and *Rosamond* arrived just in time to salute the new King

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS
TAKEN DURING THE WEEK ENDING THURSDAY, SEPT. 20

Month and Day.	Corrected Readings of Barometer at 9 A.M.	Thermometer. Highest Reading	Thermometer. Lowest Reading	Mean Temperature of the Day.	Degree of Temperature from Average.	Degree of Humidity.	Direction of Wind.	Rain in Inches.

Total							N W	0·30

Note.—The sign — denotes below the Average; the sign + above the average. The numbers in the seventh column are calculated from Dalton that the saturation of the air is represented by 100.

The reading of the barometer has varied but little during the week, the lowest reading being 29·91 inches on the 14th, and the highest 30.11 inches on the 20th. The mean for the week, at the height of eighty two feet above the level of the sea, was 29.99 inches

The mean temperature of the week was 57·1°—being 1° above the average

The range of temperature during the week was 31°10—being the difference between the lowest reading, 42·9 . on the 15th; and the highest, 74°, on the 19th.

The mean daily range of temperature during the week was 16·8°.

Rain fell during the week to the depth of nearly four-tenths of an inch.

The weather during the week, with the exception of the 14th and 17th, was fine, and the sky partially clear.

Lewisham, 21st September, 1855. JAMES GLAISHER.

HEALTH OF LONDON.—During the week ending last Saturday the births of 1260 boys and 1205 girls, in all 2465 children, were registered in the metropolitan districts, exceeding the average of the ten preceding years by 171. The number of deaths was 1033; of whom 523 were males, and 510 females, and differ by 13 from the mortality in the week ending Sept. 8. The number is 208 the average number. Diarrhœa continues to decrease: the number of deaths from it this week being 98, and the numbers in the four preceding weeks, 147, 176, 184, and 205, respectively. To cholera only 4 deaths are attributed, 2 of which are those of infants; to scarlatina, 38 deaths are attributed, one of which was that of a female who reached the advanced age of 103 years. She was the wife of a pensioned soldier, and was born at Amsterdam; she had good health during her life, and retained her faculties to the last: the cause of her death was "diarrhœa senectus."

CUMBUS CAB CASE.—Mr. Edward Manning, secretary to the Friend of the Clergy Society, in St. Martin's place, was summoned at Worship-street Police-court on Saturday, for having refused to pay the sum of 6d., being the remainder of the fare due to William Grange, a cabman. When the case was called on, the complainant, after looking very hard at the defendant, exclaimed, "Please your worship, I have nothing to say against that gentleman, for I never saw him before in my life." He then explained that he had driven a gentleman, on the 6th of the present month, to the Eastern Counties Railway. The gentleman had refused to pay him his lawful fare, but gave him his name and address, which he wrote on a piece of paper. It was, "Mr. Edward Manning, Friend of the Clergy Society, Basinghall-street." "There," said he, "now you may summon me if you like," and he immediately bolted off. He (complainant) had gone to Basinghall-street, where he was informed that Mr. Manning and all the Friends of the Clergy gentlemen had moved to St. Martin's place; so, of course, he went there and served the summons upon Mr. Manning. The defendant said it was evident that some one had made an unwarrantable use of his name, and had subjected him to great annoyance, for he had come up from Kingston, where he had left some important business, on purpose to attend at this Court. Mr D'Eyncourt said it was certainly a very peculiar case, and both parties had suffered from an impudent and fraudulent hoax. It only remained for him to discharge the summons

At the Central Criminal Court on Tuesday a true bill was found against Messrs. Strahan, Paul, and Bates. The trial is postponed, however, till next session, at the request of counsel for the prisoners.

MURDER OF A WIFE BY HER HUSBAND.—A shocking murder was committed on Tuesday morning, in Parliament-court, Artillery-lane, Bishopsgate-street, by one Lord London, a weaver, but lately working in the docks On Monday night, London and his wife went to a raffle and a wake at a public-house near home, where there was a violent quarrel between them, ending in blows, the husband being jealous of another man. Next morning he made a thrust at her throat with a knife, wounding her severely. She made for the door to escape, but the wound was so deep that she sank exhausted on the stairs, and died almost immediately. There are six or seven children, but none very young. The murderer gave himself up to a policeman, by whom he was conveyed to the station house, where he made a full confession of his crime. He has been committed for trial.

STATE OF THE THAMES.

The condition of the river was brought before the Lord Mayor on Tuesday, by Mr. Frederick Smith. Mr. Smith read a petition to his Lordship, signed by every firm and person of note in the City, and said:—"In 1848 it was resolved by the Government that the Thames should cease to be the main sewer of the metropolis, and yet nothing was done. Year by year, since 1848, the Thames has continued to increase in pollution, till it has attained such a height of impurity as to induce Mr Faraday to lay aside his proverbial caution, and utter a prophecy the most portentous as to the danger to be apprehended—danger altogether irrespective of the reappearance of the Asiatic cholera, which, as it hovers about, and carries on its ravages in Spain, Portugal, Italy, Austria, and Russia, reminds us in England that we have not the slightest warrant for trusting to a single year's exemption from the devastation; and which, if added to the condition of things indicated by Mr. Faraday, presents a field of contemplation to the mind at which the stoutest heart must sicken, if not quail.

The Lord Mayor said he was much gratified and flattered by being presented with a document signed by the most influential men in the kingdom, representing the interests of the metropolis of the empire. In a few days he intended to call together a number of scientific men, preparatory to the public meeting which will take place, for the purpose of receiving their suggestions as to the best mode of proceeding for the sanitary advantage of London.

THE CHOLERA IN ASIA MINOR.—Letters from Constantinople of the 6th of September announce an outbreak of cholera in Asia Minor, extending over the fertile districts of Samsoon, Safra, Djanik, and all the villages in the back country, including Marzavan and Yuzgat, as far as Tocat, in one direction, and Erzeroum in the other. Murrain among cattle is also raging at Samsoon, Sinope, Alatcham, Aladjan, Kopuj, Cavak, and Trebizond. The contractors for the Allied forces are suffering heavy losses from the disease, and particularly in the oxen destined for the French, which are not so strong as those purchased for British account.

THE BRITISH ASSOCIATION.

The British Association for the Advancement of Science opened its twenty-fifth meeting on Wednesday week, at Glasgow. About mid-day, a business meeting was held in the Merchants'-hall, the Earl of Harrowby in the chair, when the minutes of the Liverpool meeting were read and approved, and Colonel Sabine presented the annual report of the Council, also unanimously adopted. The statement of the accounts, submitted by Mr. Ninnis, showed receipts amounting to £3886 10s. 8d., and payments amounting to £1568 9s. 8d.; leaving a balance of £317 1s. 8d. In the evening there was a public meeting for the purpose of hearing the inaugural address of the President, the Duke of Argyll. Among the visitors were the Duke of Cambridge, the Duke of Hamilton, the Earls of Eglinton, Elgin, and Harrowby, Lord Wrottesley, and Prince Bonaparte The address of the President was descriptive of the great advances made in science since the British Association visited Glasgow fifteen years ago—a complete theme on which the Duke dilated with graceful eloquence for a considerable time.

The business of the Sections opened on Friday, when several interesting papers were read; among others, by Sir David Brewster, on the "solar spectrum;" by Dr. Shaw, on Arctic explorations; by Dr. Dickie, on the effects of winter upon vegetation at Aberdeen; and by Professor George Wilson, of Edinburgh, on the changes of artificial sea water in marine vivariums, where living plants and animals had been kept in full vigour for periods respectively of ten and six months. On analysis, it appeared that whereas magnesia, sulphuric acid, potassium, sodium, and chlorine were the only substances originally present in solution in the artificial sea-water, lime, phosphoric acid, silica, iodine, and iron now occurred in it. The success of Mr Gosse's artificial sea-water was shown to be complete. The first *conversazione* was held on Thursday evening, at the M'Lellan Rooms

On Friday some interesting papers were read in the Sections. Mr Whitehouse read one on "Experimental Observations upon an Electric Cable," maintaining that, for commercial purposes, a submarine telegraphic cable between England and America, similar to those at present in use would be quite sufficient. Professor W. Thomson expressed some doubts at the results arrived at by Mr. Whitehouse.

Professor Nichol read a paper entitled "Remarks on the Chronology of the formations in the Moon, with a Notice concerning the Great Breadalbane Reflector in the Glasgow Observatory." By this instrument the aspects of the Moon are seen to be apparently as confused and chaotic as these appearances of the Earth, which, in the infancy of the science of geology, were generally attributed to sudden convulsions. In fact, we may presume that the present position of the Moon exhibits a much further back epoch than the period in the history of the Earth, before the upheaving powers had thrown up the masses of crystalline rocks Baron Liebig read a paper on a new form of Cyanuric acid. In the course of some experiments on the fulminate of mercury, he observed that that compound, when kept boiling in water, changed its colours, and lost its fulminating properties. On examining the change which had taken place, he discovered a new acid, which had exactly the composition of cyanuric acid. Salts were produced remarkable for their beauty, and for the distinctness of their crystalline forms. Dr. Daubeny laid on the table some fine Weights, for chemical purposes, made from the new metal formed from clay, viz., aluminium. A paper was read by Professor Nichol, and Julius Oppert read a paper on "The Geographical and Historical Results of the French Scientific Expedition to Babylon." Professor Rinzius, of Stockholm, gave a verbal description of the Lotis, Selaria, and Aphos ornata. He combated the phrenological view that high skulls betokened high intellect. There had been many eminent men among the Poles and Hollanders, who belonged to the broad-headed class. Some might be admitted, on the whole, that the larger proportion of great men had the elongated skull.

Professor Ramsay described a new process by Mr. Robert Macpherson for producing lithographs by photographic process. He takes a common lithographic stone, and pours on it a solution of bitumen in sulphuric ether. In a few seconds the ether evaporates, leaving a very delicate and thin coating of bitumen, the stone exhibiting a surface like a plate prepared for etching. He then takes a negative obtained by the collodion or calotype process, and places it on the stone, which he places in the full light of the sun. Within a moderate time the negative communicates an impression to the bitumen very faintly visible. The negative is removed and the bitumen placed in a bath of sulphuret of carbon, which dissolves the whole of the bitumen not acted on by the light, and there remains a photographic picture represented accurately on the stone in the undissolved bitumen. The stone may then be placed in the hands of a lithographic printer and printed from.

Professor Thompson read a paper "On Peristaltic Induction of Electric Currents in Submarine Telegraph Wires." The object of this paper was to call the problem of mutual peristaltic induction as contained in the paper brought before the section, but the author confined himself in the meeting to mentioning some of the results. Among others he mentioned, as being of practical importance, that the experiments which have been made on the transmission of currents backwards and forwards by the different wires of a multiple cable do not indicate correctly the degree of retardation that is to be expected when signals are to be transmitted through the same amount of wire laid out in a cable of the full length. He said that expectation as to the working of a submarine telegraph between Britain and America, founded on such experiments, may prove fallacious; and, to avoid the chance of prodigious losses in such an undertaking, the author suggested that the working of the Varna and Balaclava wire should be examined Immense economy may be practised in attending to these indications of theory in all submarine cables constructed in future for like purposes; and the failure of great undertakings can alone be *insured* by using them in a preliminary estimate.

In the Chemical Section, on Monday, a paper was read "On some Points connected with Agriculture," by J. B. Lawes, Esq., F.R.S., and Dr. Gilbert. The paper indicated the character of exhaustion by corn cropping, and the action of manure on different crops. Baron Liebig replied to Dr. Gilbert, the discussion of which he regarded as refuted the views which he recently published in this controversy. The Marquis of Tweeddale gave the result of his own experience as a practical agriculturist. By treating the soil and the surviving of the land, he thought they had no use for chemical experiments. Dr. Daubeny supported the principles laid down by Baron Liebig. Professor Anderson having also addressed the section, Dr. Gilbert replied. Dr. Hadow read a paper, entitled "Report on the Influence of the Solar Radiations on the Growth of Plants, under Different Atmospheric Conditions." Dr. Hadow also read an elaborate communication on Silurian Fossils, Lyon Playfair, Dr Pearson, Professor Penny, Professor Graham, and Dr. Normandy. Professors Graham and Maclaggan, whilst admitting that there were numerous cases of adulteration, were afraid that some of which he regretted made on the subject. All adulterations, they contended, were not necessarily pernicious, and caution should be used not too much to alarm the public mind.

In the Geological Department Sir R. I. Murchison made an interesting communication on the relations of the crystaline rocks of the North Highlands to the old red sandstone of that region, and on the recent discoveries of fossils by Mr. Charles Peach. He (Sir R. I. Murchison) then communicated papers by Mr. J. W. Salter, "On the Discovery of Organic Remains in the Rocks of the Longwynds, Shropshire," and from Richard Banks, Esq., "On the recent Discovery of Ichthyolites and Crustacea, in the Tilestones of Kingston, Herefordshire." Mr. W. K. Symmonds communicated the Discovery of a new Fish in the Upper Ludlow Rock of Ludlow, which had been found by Hugh Lightbody, Esq. In stating the progress of this discovery he had no doubt the time would come when they would find fishes in the Upper Silurian

PAPER FOR PAPER PULP.—In the Botanical Section, the Chevalier Claussen read a paper on Papyrus Bonapartes and other plants which can furnish fibre for paper pulp. Referring to the want of material expressed by paper-makers, M. Claussen said that what they declared was a cheap substitute for rags, with a strong fibre, easily bleached, and of which an unlimited supply may be obtained. Paper-makers regard rags containing 60 per cent of vegetable fibre, and which is unbleached, as useless; but, by boiling these rags in caustic alkali, the animal fibre is dissolved, and the vegetable fibre is available for the manufacture of white paper pulp. Sunn, or hemp, the inner bark of *crotolaria juncea*, produced a paper pulp, of inferior quality, bleached with difficulty. Agave, *phormium tenax*, and banana or plaintain fibre (Manilla hemp) are not only expensive, but it is nearly impossible to bleach them. The banana leaves contain 40 per cent of fibre. Flax would be suitable to replace rags in paper, but the high price and scarcity of it, caused partly by the war, and partly by the injudicious way in which it is cultivated, prevents that. Six tons of flax straw are required to produce one ton of flax fibre; and by the present mode of treatment all the woody part, or stems, are lost By the Chevalier's process the bulk of the flax straw is lessened by partial cleaning before rotting, whereby about 50 to 60 per cent of shoves, a valuable cattle food, is saved, and the cost of the fibre reduced. The flax pulp thus produces nearly from 12 to 15 per cent of paper pulp. Hemp produces 25 per cent of paper pulp. Nettles produce 25 per cent of a very beautiful andgeasly-bleached fibre. Palm-leaves contain 35 to 40 per cent fibre, but are not easily bleached. The *Bromeliaceæ* contain from 25 to 40 per cent fibre. *Bonapartia juncoides* contain 35 per cent of the most beautiful vegetable fibre known, which could be used for all kinds of manufactures in which flax, cotton, silk, or wool is employed. This plant exists in very large quantities in Australia, and it is most desirable that some of our large manufacturers would import a quantity of it. The plant wants no other preparation than cutting, drying, and compressing like hay. The bleaching and finishing of it may be done here. Ferns, equisetum, the inner bark of the lime-tree, althea, stalks of beans, peas, hops, buckwheat, potatoes, heather, broom, and many other plants contain 10 to 15 and 20 per cent of fibre, but in most of them there are obvious difficulties preventing their economical use. The straws of the cereals cannot be manufactured into paper pulp, unless cut before they are ripe, as the joints or knots of the stalks are so hardened by ripening as to resist bleaching agents. Many grasses contain from 30 to 50 per cent of fibre, not very strong, but easily bleached. Ground reeds and canes contain about an equal amount. The wood of the *coniferæ* gives a large proportion of fibre suitable for paper pulp; but the cost of preparing would be about three times that of preparing rags. As some of these (said M. Claussen) would entirely satisfy on all points the wants of the paper-maker, I continued my researches, and at last remembered the *papyrus* (the plant of which the ancients made their paper), which I examined, and found to contain about 40 per cent of strong fibre, excellent for paper, and very easily bleached. The only point which was not entirely satisfactory was relative to the supply of it. I directed, therefore, my attention to plants growing in this country, and found, to my great satisfaction, that the common rushes (*juncus effusus*, and others) contain 40 per cent of fibre, quite equal, if not superior, to the papyrus fibre, and a perfect substitute for rags in the manufacture of paper, and that one ton of rushes contains more fibre than two tons of flax straw.

In the Statistical Section, on Monday last, Lieutenant-General Charles W. Pasley, K.C.B., read a paper "On the Expediency and Practicability of Simplifying and Improving our National Measures, Weights, and Money;" and a paper by Theodore W. Rathbone, Esq., "On Decimal Accounts and Coinage," was next read, in that gentleman's absence, by Edward Cheshire, Esq. Wm. Newmarch, Esq., in rising to express his [illegible] the paper just read, said [illegible] was no necessity whatever for all classes to adopt decimal weights, or measures, or coinage. [illegible] opposed to it entirely. P. L. Simmonds, Esq., [illegible] a paper on "The Progress of the Growth and Commercial Importance of Canada." Mr. [illegible] read a paper on "The Social Condition of Villages and Rural Districts in the United States." Mr. [illegible] read a paper on "The Condition of Labourers in Norway." The Agricultural Labourers of England and Wales, their Inferiority in the Social Scale, and the Causes which have produced their Improvement."

MEETING OF GENERAL COMMITTEE.—On Monday afternoon the general committee met in the Merchants' hall, his grace the Duke of Argyll in the chair. Deputations appeared from Cheltenham and Brighton, and documents were read by the secretary from Manchester, Dublin, and Leeds, soliciting the presence of the British Association at these places next year A lengthened conversation ensued between the members of the Cheltenham and Brighton deputations on their relative claims on the presence of the Association. Eventually a division of the committee took place, which resulted in the selection of Cheltenham by a narrow majority. The following office-bearers were then elected for the year:—President: G. R. Daubeney, Esq M.D., F.R.S.—Vice Presidents: Earl of Ducie, F.G.S.; the Bishop of Gloucester, Sir Roderick I. Murchison, F.R.S , B. Baker, Esq.; the Rev F.Clow. Secretaries: Captain Robertson, M.A.; R. Beamitt, Esq , F.R.S.; W. Hugall, Esq., Treasurer: James Webster, Esq.; James Agg Gardener, Esq. The meeting then closed.

CHURCH, UNIVERSITIES, &c.

APPOINTMENTS. *Rectories.*—The Rev. Hibbert Wanklyn to Fleetmarston, near Aylesbury; Rev. William Thomas Beckett to Ingoldisthorpe, in Norfolk; Rev. Charles Ferai Farrer to Hockering St. John, in Suffolk; Rev. W. Blackley to Staunton-upon-Hine Heath, near Shawbury, Shropshire. *Vicarages:* The Rev. Henry John Hotham to St. Michael's, Cambridge; Rev. W. Blackley to Staunton-upon-Hine Heath, Salop; Rev. F. M. Smyth to Rathmel, near Giggleswick; Rev. A. Pyne, to Horning, near North Walsham; Rev. J. T. Brown to Cookham, near Maidenhead. *Incumbencies:* The Rev. J. Newsham to Mountsorrel, near Loughborough; Rev. F. A. Bartlett to St. Olave Marygate, York.

WILLS AND BEQUESTS.—The will of the Most Noble George Duke of Manchester was proved in London under £45,000 personalty. Thomas Nodson, Esq., of Ryehank, Salop, 45,000. Edward G. M. Dale, Esq., of Upham, £10,000. The Rev. J. P. Bigman, M.A., Rector of Fakenham, £6000. Joseph Rawlings, Esq., of Temple Grove, Middlesex, £6000. Henry Dever, Esq., of Brighton, has left a sum of £3000 in charities, viz.—£2000 to the Philanthropic Society, Redhill; £3000 to the Norfolk and Norwich Hospital; £1000 to the Norwich Diocesan Church Building Society; £1000 to the Lunatic Hospital, Norwich; and to the Societies for Propagating Christian Knowledge and the Gospel in Foreign Parts, £1000 each. Chambers Hall, Esq., of Westminster, has bequeathed to St. Mary's Hospital, Paddington, £2000, and to the Salisbury Infirmary, £500.

PRINCE NAPOLEON RELATED TO QUEEN VICTORIA.—It is no less remarkable than true that his Imperial Highness Prince Napoleon, now on a welcome visit to these countries, is a Prince of the blood royal of England, and a cousin of her present Majesty. The fact is easily perceivable in the following genealogical sketch:

George II.
Frederick Prince of Wales.

George III. — Augusta—William Duke of Brunswick

Edward Duke of Kent. — Princess of Brunswick—Frederick King of Wurtemberg.

Queen Victoria, born May 24, 1819.

Frederica Princess of Wurtemberg—Jerome Bonaparte King of Westphalia.

Prince Napoleon, born September 9, 1822.

PRICE OF CORN IN FRANCE.—*La Presse*, in its weekly bulletin, says:—"The continued rise in the price of corn and the reports sent in to several Councils General respecting the general result of the harvest are exciting public attention in a high degree. Speculation has for the last six weeks been producing a rise of more than 30 fr. on a sack of flour, and we have to pay at this moment from 110 to 112 fr. for 157 kilo., for which we gave at the beginning of August from 80 to 82 fr. Nor wheat is still scarce in the markets, seeing that the want of hands retards the threshing, and the old wheat is nearly all disposed of The present dearness of corn has already induced many capitalists to look out for supplies abroad. Large orders have been sent to the United States, where the corn-harvest has been very abundant.

AN AUSTRALIAN VENTURE.—In 1852 a gentleman sent from Scotland, among others, a package of goods worth £28, to Melbourne, fondly hoping to make a good return. During the summer of 1855 he received an account sale of his goods, amounting to £4 odd, the £28 worth of goods having realised £11 10s., and having been subject to charges amounting to £7 odd. On applying for the balance of his remittance, he was told that he would have to find that outward freight and charges were still to be deducted, and that, instead of receiving any money, he was indebted in those items

RUSSIAN DISTRESS IN THE CRIMEA.—Although the changed attitude of Austria has enabled the Government to send large troops to the seat of war in the South, the reinforcements can throw no decidedly superior weight into the scale so as to impede the operations of the Allies. The Russian troops reached the southern seat of war in a most wearied and exhausted state, and the government has to march directly the battalions take the field. The effective, too, of these battalions is hardly 76 per cent of the normal strength. In the Crimea this proportion is considerably reduced. The greater part of them have such fine tubers to the root. The price has already risen from 1.3 copecks per okka (1280 lbs.) to 3 copecks. In a word, vegetation has been paralysed this year. In spots where it completely exhausted its resources, the hay crop is only enough to supply a scanty feed. The price of corn is rising fast in Simpheropol. Everyone here, who had the means, used to leave for Eupatoria or Theodosia at this season of the year, but now that there is no corn to yield hay, there is none to spare.—*Letter from St. Petersburg*, Sept 6. in the "*Cologne Gazette*."

AUSTRIAN FRIENDSHIP. The *Austrian Gazette*, in giving insertion to certain extracts from some of the London journals, appends the following expressions in regard to England:—"England has been unsuccessful in making the Austrian army her mercenaries; and as the idea of a pacific solution has already commenced in France, the policy of England, alarmed thereat, holds up the revolutionary torch in order to spread hatred and discord and to finish the work which was for a time checked in 1848. England may decree la reis to Piedmont. Austria will be as little moved thereby as by the hollow phrases of the English journals. Austria, like the whole world, knows the value of British faith and England's friendship, and that she is ever ready to let slip her mad dogs upon those who refuse to hunt for her."

THE FALL OF SEBASTOPOL.—CAPT

OF THE MALAKOFF TOWER.—(SEE PAGE 354.)

THE FALL OF SEBASTOPOL.

WE have received the following letter from our own Correspondent in the Crimea, which, however, only brings down the narrative of events before Sebastopol to noon on the 8th of September, the hour at which the French and English storming columns were in the very act of rushing to the assault against the city, which, during three previous days had been devastated by the terrific fire brought to bear against it by the Allies.—

(From our Artist and Special Correspondent.)

CAMP BEFORE SEBASTOPOL, Sept. 8, Six A.M., 1855.

AT a quarter past five on the morning of the 6th, as the sun had just risen in a pure sky, the whole of the batteries from Kamiesch to the Dockyard Creek were opened by the French with a vivacity and precision almost unparalleled since the commencement of the siege. Salvo after salvo was poured upon the astonished enemy before he began to answer, and many minutes elapsed before the great works which front those of the French opened a well-fed cannonade, which for a few hours equalled that which opposed it. As the time stole on, however, a marked diminution was noticeable in the vigour of the Russian batteries; and, although from the lines forming the first, the second, and even the third defences of Sebastopol, guns were continually discharged, the artillery had not the rapidity or precision of its first discharges. For many hours the bombardment was confined to that portion of the town in which it was supposed that the French had discovered troops and stores, gathered together as if in a comparatively safe place. However, about noon, the French right near Inkerman opened with several new batteries, whilst many of those in our trenches broke forth and joined in the general roar. The Russians were observed at the early outbreak of the fire to muster in considerable numbers on the northern side, and, whilst a large staff was visible manning our lines, a number of companies was observed marching down to the bridge of rafts and crossing into the town. Large working parties at the same time crossed from the south to the north side, having doubtless been interrupted in their labours by the violence of our efforts. Had it not been for a gun at distant intervals fired from embrasures in the Redan, one might have supposed that the work was completely empty. The day continued to wear on, and the usual aspect of the embrasures from Inkerman to the Dockyard Creek seemed to be little altered from that which had been daily visible for a week past. An occasional shot from Chapman's and Gordon's, now and then a shell from the mortar batteries entering into the Malakoff and Redan, announced their presence in those works by clouds of red dust and white smoke, darting in columns into the air, and then sailing slowly to leeward. The batteries on the Russian side of Inkerman seemed not particularly hard upon us; and whilst the fire was still kept up in salvos on the western, the eastern portion of our redoubts was comparatively silent. In no previous bombardment, however, did the French exhibit such determined good will as in the attack on the Russian right, the effect on the ear being like a gigantic roulade on a prodigious instrument; and the guns on the right no sooner emitting their brilliant flashes and dazzling clouds of smoke, than the fire ran along the line down to the sea-shore, in perfect time, and with the same speed almost as if a gunpowder train had been fired from one end to the other.

It was very soon discovered that the Russians were replying with shot to our attacks and seemed inclined to spare their shells; and this, not unfairly, led to the supposition that they were becoming sparing of their hollow ammunition. The Redan, although comparatively idle, showed that it was not silenced, and at intervals sent shots into our advanced trenches and Chapman's Battery. A bold spectator was seen for a moment on the parapet of the work, and then observed to run along the side, skipping from embrasure to embrasure. Finally he jumped back into the work apparently unheeded and unhurt. It is generally believed that the Redan and Malakoff are cincmated with heavy beams of wood similar to those which were found in the Mamelon Vert, and the defenders placed into places of safety when they find the fire against them too heavy to bear.

Towards the afternoon the English attacks began to take a more decisive part in the bombardment; and the French unmasked several new batteries, which played with great effect upon the works of Careening Bay, the Little Redan, and the Malakoff. Clouds of smoke and dust enveloped that portion of the Russian defences; in the midst of which the French vigorously pushed the parallel connecting the heads of their saps against the Mamelon Vert and the Malakoff. Still, the batteries which had been built to damage the shipping appeared to be silent; and a general opinion gained ground that they had been rendered useless by the alteration of the position of the ships, which lay quiescent as usual in a line from Fort Nicholas to Fort Paul. Our artillery had been deprived early in the day of one chance at these ships by the dismounting of an 8-inch pounder in our right attack.

Towards evening the fire became more dense on the right, and almost rivalled in vivacity that which the French kept up at intervals on the left. The Quarries Battery, with its eight cohorns, its mortars, and 32-pounders, made the Malakoff earthworks fly about in clouds. The embrasures of the guns directed against it were damaged, and rents were made in the magazine. Only here the thickness of the old tower, converted into a receptacle for powder saved the redoubt from a perilous explosion. The casualties in this as well as in the other works were slighter than they had ever been known, and we had to deplore the loss of one officer only—Captain Anderson, acting engineer of the 31st, who was killed in an early part of the day.

The shades of evening fell upon the scene. The French works on the left had ceased firing, and took a necessary respite after the hard work of the day. The right continued their efforts, and the Quarries' Battery, as well as others on the Inkerman right, commenced a well-directed blaze of rockets the former against the Karabelnaia suburb, the latter against the shipping in the harbour. The fire was kindled in a short time, in that portion of the town immediately situated behind the Barrack, near Fort Nicholas, but a far more important one was lighted in one of the two-deckers belonging to the enemy. It lay in the line of ships stretching across the harbour, broadside on to the Malakoff, in the vicinity of Fort Paul. In the grey of the evening a slight flame alone marked the spot where the fire had taken hold of the vessel; but as darkness closed upon the earth, it became more intense, and evidently baffled the endeavours of the Russians to extinguish it. The flames were not long in covering the whole of the upper decks, and licked the spars and rigging with forked and flashing tongues. The stately masts reared their white forms above the blazing mass as the ropes and shrouds peeled and crackled away, and continued to stand long after the lower yards had fallen, and thrown up in their fall volumes of smoke and sparks. A few shots indistinctly heard were supposed to be the mortars on deck exploding from the heat, but no explosion marked the presence of a powder magazine; and it was supposed, with reason, that the Russians had flooded it. The fire grew fiercer and the night darker every moment. Black clouds scudded swiftly from the westward, and the smoke, issuing from the guns which roared along the lines, joined with the dark vapours of the sky, spread a baleful curtain over the scene. In the midst of the obscurity the blazing ship cast a lurid glare over Fort Paul, which came into light behind it, tinged with streaks of red the masts of the ships which surrounded it, and threw its quivering rays upon the edges of Fort Nicholas and Fort Alexander. The Battery of Gordon was relieved in darkness upon the burning ship, and the clouds of smoke which issued from its guns formed great banks of darkness more black than those which overhung the Malakoff and the Redan. In the same moment the whole of the north forts saluted upon the works opposed to it, and was answered immediately by the Russians. The air was filled with flashes and minute specks of revolving shells, whilst the enemy were observed to cast into the works of our allies those *bouquets* of grenades which are so dangerous to the soldier, although harmless to fortifications and heavy guns. Presently the mainmast of the two-decker fell in through the deck beneath it. A broad glare accompanied the fall. Then the mizenmast disappeared, and the foremast dropped in; had till it appeared to overhang the water; the bowsprit held to the last, and was seen licked by the flames, which issued from every port-hole. Then the glory of the scene began to fade. The bright red flickered; the smoke was thinner; and soon the Russians had nothing left upon their waters but the black and smoking wreck of what once had seemed a large and noble vessel. The name of that ship was the *Santa Maria*.

The bombardment lasted the whole night without interruption, and day broke almost on the same scene as had been enacted the previous day. The fire, however, had only been kept up at a moderate speed. At half-past five, the 6th, it broke out afresh, not merely on the French left, which continued to bear off the prize for quickness and precision, but throughout the English lines in the centre, and the French right. It slackened at intervals, then increased in density, and slackened again, as the guns became heated and required a pause. Stronger breezes from the westward drove the smoke in heavy columns on the Russians, and at certain times enveloped the town in masses of vapour. The hulk of the *Santa Maria* lay like a log upon the water, near Fort St. Paul, and the remainder of the shipping appeared in the morning light huddled up in close proximity to each other, where they had been moved on the previous night to escape the dangerous vicinity of the fire. The Russians soon, however, went to work, and replaced their ships in position, hauling in a new two-decker to fill the space vacated by the loss of her consort. The Russians, whose vigour had appeared impaired during the previous day were singularly inactive on this the second of the bombardment. Still they kept up at certain moments a return of a few shots. The Redan continued to fire at intervals from guns at the extremities of its western and eastern faces, and from other works along their line. Their efforts were most marked on the left attack, and the Malakoff hardly gave a sign of life. Our sea-service mortars fired at intervals on the ships without doing any damage, and the Russians continued to stream to and fro from north to south along their bridge of rafts, unmindful of the fire of the Allies. In the evening their works showed evidence of the violence which they endured, and the batteries became more and more ragged every hour. The third line of defence opposed to the French left seemed, it is true, to keep up an undiminished fire, but the efforts of the Russians were utterly unavailing to create a pause in the activity of our bombardment. The day passed in this wise without any serious loss to the Allies, and as it closed, a large fire in the Karabelnaia suburb became visible to the columns of flame and smoke which it raised.

The Allies continued the work of the previous thirty-six hours by an unceasing fire which lasted during the night, and the echoes of the hills were again broken at dawn on the 7th by the same salvo commencing on the French left and gradually spreading to the centre and right. Crowds of spectators, attracted by the hope of an assault, lined the heights at every available point to obtain a glimpse of the expected action, but the Generals were evidently satisfied that the terrible fire they had kept up for so many hours had been sufficiently prolonged. At half past eight there was a pause, and, as if by enchantment, there was a cessation of explosions from end to end of our lines. The stream of spectators slowly disappeared from the heights, and every thing seemed as still as if no hostile forces were busy in dealing destruction against each other. The ships of the Allies were pitching in the bay of Sebastopol, whilst the sailors hung their hammocks to air in the rigging. The steamers lay blowing off their steam at anchor, and the stillness of the hour was not broken by the Russians, who, no doubt, were pleased enough at their momentary respite. It was, however, but a pause of an hour. The French left burst again at half past nine into its accustomed *roulades*. The English centre recommenced its fire, and Inkerman joined in the chorus which deafened every one by its roar. Volumes of smoke and streams of fire belched from the iron mouths of the guns, as the deadly missiles were hurled, to become the messengers of death and destruction. The mortars gave out their rumbling and cavernous noise, as they sent high into the air their large and hollow projectiles—the circular curl of their smoke still hovering over the places, long after the deadly shell had done its work, and burst in the enemy's trenches. In the midst of the din two tremendous explosions took place on the left of a slope, and covered with their volume of sound the roar of 400 pieces of artillery. Two fire-balls, or *fougasses*, had been sprung in the advanced parallel, close to the Malakoff and Little Redan, and formed craters ready to be crowned with parapets and form part of works nearer than ever to the enemy. A grand cheer was given by our men as the explosions took place, and then the spectators again turned their attention to the continuation of the bombardment. The day was spent in alternate pauses and outbreaks of fire similar to that just described, and the works of the Russians seemed at last to have received such a shaking as I had never before witnessed. The embrasures of the Redan and Malakoff, and of the batteries towards Careening Bay, seemed to have lost all shape, and appeared like jagged mounds of earth, in which one could scarcely conceive the defenders to be safe. Still, in the deep angles of some of the batteries a few shots were fired; these, however, were hourly less frequent, and the Russians began to fire more constantly than they had ever done before from their batteries on the northern shore. The Black Battery, which had long been the terror of the defenders of the Quarries, was so mauled and cut up as to be no longer formidable. Its guns were dismounted, and the heaps marked the places where distant shells had exploded. In the midst of all this, however, the church, a large building in the form of a temple, and numerous other buildings, purposely spared, hitherto remained apparently untouched, and preserved the fairness of their proportions. At four o'clock a shell from our mortars again successfully struck a two-decker anchored near Fort Nicholas, and in a short time volumes of smoke issued from her. She was in too dangerous proximity to the rest of the fleet to be left in her position, and she was speedily taken in tow by a steamer which hauled her into a berth near the Karabelnaia. There she continued to burn invisible to us until darkness came on and showed us the flames rising from her hull, and consigning her like the *Santa Maria* to destruction. At six o'clock another gun-shell salvo along the whole line again covered the Russian works with projectiles and smoke; and, as it did so, a shell from a mortar struck the deck of the *Constantine* 120, and, covered her with dust and smoke. The earth upon her deck saved her probably from the fate of her consorts, for the smoke and dust cleared off in a few minutes, exhibiting the sailors busy in the rigging, whilst an active man was seen hoisting the Imperial flag in token of defiance on the jib-boom.

During the day great activity was visible amongst the staff of the various Generals: it seemed as if a vague anxiety and secret preoccupation prevailed throughout the camps. Officers rode about in all directions, and soldiers were to be seen in groups commenting upon the probabilities of an approaching assault. The reserves of artillery had arrived on the two previous days, were especially surrounded and complimented by all the soldiers on their luck in having probably to distinguish themselves. At noon a large force of sandbags was moved from the position of Inkerman to take place of French troops who probably were sent elsewhere; and in the English camps all the field hospitals were emptied of their sick and wounded, in anticipation of an event which all expect. To-morrow is anxiously looked for, to end our suspense, and show whether Sebastopol is to be ours. The fall of the Malakoff were not taken after this bombardment, it is difficult, to suppose that Sebastopol can fall this autumn.

The piece of intelligence, hitherto omitted, I have to subjoin. Omer Pacha set turned to the Crimea on the 5th inst., and has been in communication with the Allied Generals. I cannot say whether his stay be intended to be a permanent or not. It has been blowing a gale all day from the northward and westward, veering this evening to the north-east, and a very hard gale.

THE TAKING OF THE MALAKOFF.

A French letter from Constantinople of the 11th, gives the following particulars relating to the taking of the Malakoff:—"On the night of the 7th all the necessary arrangements were taken by General Pelissier with admirable precision. On the 8th, at midday, our assaulting columns issued from their posts, and marched on against the enemy to the cry of 'Vive l'Empereur,' with an impetuosity beyond all description, and in spite of a terrible fire in front, and a flanking fire from the Little Redan, the ditch was soon passed, and in an hour of a murderous struggle the French flag floated on the tower, and was hailed with one electric shout of triumph by the whole army. Batteries were instantly placed in position, and we are established in the Malakoff in as solid a manner as if we had held the place for a long time past. Our battery poured down its assaulting column

COUNTRY NEWS.

RIOTS IN NOTTINGHAM.—Large crowds of persons have been assembling during the past week in Bridlesmith-gate, a public thoroughfare, and also in the market-place, to witness some demonstrations in consequence of the fall of Sebastopol. On Friday night the crowd in this locality consisted of several thousand persons; and, a breach of the peace being apprehended, the police constables were sent to disperse them. A number of the most lawless went to the end of the Market-place and broke the windows of Mr. Annibal, baker. It was then evident what was their intention. They afterwards proceeded up Derby-road, and attacked the shop of a baker named Saunders, breaking his windows. From this place they went to another baker, named Daykin, committing a serious outrage at his shop. The mob then proceeded to New Radford, a manufacturing village, which adjoins the town. Here they committed several depredations at the shops of Mr. Harrison, Mr. Creswell, Mr. Pelethorpe, Mr. Revel, &c. At this place they were met with a check, from a number of civilians, who, having armed themselves with staves, drove them away when they were about to perpetrate further violence upon a baker's premises. Superintendent Martin, of the county constabulary, and a body of police, were sent to disperse the mob and prevent further depredations; and this they succeeded in doing. On Saturday night, in consequence of a request from the mayor and magistrates, the inhabitants of Bridlesmith gate took in their flags and banners, in order that the mob might not again assemble in that locality. The mayor issued orders on Saturday evening for a body of special constables to hold themselves in readiness. The town-police were also strengthened, and every means adopted to stop any further outbreak. The county authorities have also equally vigilant special constables being sworn in, and an extra number of the constabulary being engaged. The town was, however, perfectly quiet.

A DESERTED VILLAGE.—A local paper states that in the fertile parish of Castleton, containing 80,000 acres, with a population of only 2130, there is not sufficient grain raised to support the few inhabitants. The land, with trifling exceptions, belongs to the Duke of Buccleuch, and the farms are large

SMUGGLING AT SOUTHAMPTON.—At midnight on the 14th inst. a French vessel entered Southampton Water. The revenue officers obtained at Hook, at the entrance of the Water, boarded her, and found her in ballast. Soon after leaving her, they heard a firing from the Custom-house patrol, on duty on shore, and having gone in the direction of the alarm, they picked up three bales of tobacco, of 40 lb each in the water close to the Hamble-spit, near the Revenue Station. It appears that the patrol saw a boat approaching the shore, suspected smuggling, he sounded the alarm, when the men in the boat threw a cargo of tobacco, in bales, overboard. The rest of the tobacco drifted away with the tide, and upwards of 100 bales were picked up by the Conservative men on the Calshot Station, at the opposite side of Southampton Water. There is no doubt that the tobacco was brought in the French vessel, and that the boat with the smuggled cargo left her before the revenue cutter's men boarded her.

A CHILD POISONED BY MISTAKE.—The wife of an Irish hop-picker, employed at Yalding, in Kent, and named M'Carthy, sent her little girl to a chandler's shop in the neighbourhood for some Godfrey's cordial, to give to an infant. The girl misheard Godfrey's, according to her own statement, but was supplied with laudanum, and half a teaspoonful was given to the infant, a boy four months old. The mother did not discover it for three or four hours. Restoratives were administered, but the child died next morning.

THE "SIX POOR TRAVELLERS."—The *Maidstone Journal* publishes the scheme approved of by the Court of Chancery for the regulation and management of Watt's Charity, at Rochester, which has of late obtained some notoriety from the first Christmas Story of Mr. Charles Dickens. The provisions relating to the poor travellers are as follow:—"The trustees, as heretofore, to provide every night, suitable and convenient lodgings for six poor travellers, to appoint a master and matron at a salary not to exceed £25 per annum each. The house shall be open every evening for the reception of six poor travellers, or way-faring men not belonging to any parish or neighbourhood. Application for admission shall be made to the master before the hour of six o'clock in the evening; and, in selecting the persons to be admitted, one shall be taken that, under all circumstances, the same person be not admitted for more than one night, and in no case for more than two consecutive nights. Every poor traveller admitted to the house shall have supper for the night in place by himself. A supper to be provided in the common room every evening at seven o'clock for the poor travellers, each of whom shall depart from the house after breakfast on the morning, and shall on his departure receive from the master the sum of 4d." The first meeting of the new trustees was held on Monday last, when it was agreed, amongst other things, that supper to be provided for the poor travellers, is to consist of half a pound of boiled round of beef, one pound of bread, and half a pint of porter each

CONSIDERATE BENEVOLENCE. The Queen has signified her intention of granting a life-pension of £40 per annum to the widow of William Haigh, who lost his life while endeavouring to lubricate the axle of one of the carriages during the Royal journey to Scotland on the 6th instant. The unfortunate man was an old servant of the Great Northern Railway Company, and had attended the Royal progresses on this line on several former occasions

LONGEVITY. There is a lady residing at Folkestone who has attained the age of 101 years. She has the possession of all her faculties, and her recollection of past events is remarkable, among which are many incidents of the last war. She has lived under five reigns, having been born in the time of George II.

ROBBERY AT RAILWAY STATIONS.—On Monday morning early the booking office at the London and North-Western Railway station, Huddersfield, was entered by thieves, and a robbery of cash effected to the amount of £50. The cash consisted of two £5 Bank of England notes, and the remainder in gold and silver. The safe was left locked as it bears no marks of having been tampered with by any instrument. As the safe there are two keys, both have been left in draw-ers in the same room as the safe, but those drawers presented no appearance of having been interfered with, and are both of them fitted with Chubb's locks. It is the opinion of old detectives that the robbery has been effected by some one who had made himself master of the ins and outs of the premises, and the habits of the clerks and servants connected with the office. A similar robbery was effected during the same night at the Leeds Northern station. The safe was opened, and £250 abstracted, the robbers getting clear off with their booty.

SUPPLY OF WATER TO GLASGOW.—During the last week, from Monday to Saturday, the Glasgow Water Company have supplied to Glasgow 87,750,000 gallons, being on an average 14,280,000 gallons per day. Adding to this the daily supply furnished to the south side of the river by the Govan Water Company, and making allowance for waste, the supply of water amounts to 17,280,000 gallons per day, for a population of 400,000, being upwards of 40 gallons per day for each inhabitant.

WILTSHIRE ARCHÆOLOGICAL SOCIETY.—The members of this large and influential society have just concluded their annual gathering. Among those who attended were the Marquis of Lansdowne (patron of the society), Mr. Sotheron, M.P., Mr. Heneage, M.P., Captain Gladstone, M.P., Mr. J. Neeld, M.P., Mr. G. P. Scrope, M.P., Mr. Bruton, &c. The Rev. J. Wilkinson, of Broughton-Gifford, read an important paper on "Parochial Histories." He suggested that committees of parish histories should be formed in towns, who should divide the work between them; and generally in every parish the clergyman could call in what coadjutors he pleased. All reports of several parishes would be in answer to certain heads of inquiry, and the whole would have to be revised and consolidated by competent editors. To this scheme of parochial history the Bishop of Salisbury had given his warm approval, and had addressed much encouragement to it. Mr. Wilkinson invited the promoters of the scheme to his palace; and he hoped that it would embrace Dorset as well as Wilts. With that view his Lordship had already secured the co-operation of all the rural deans and archdeaconry. The whole of Scotland had been treated in a similar manner, the work occupying from 1831 to 1834, and comprising fifteen imperial octavo volumes. On the last day the members were entertained by the Marquis of Lansdowne, at his Lordship's seat at Bowood. After the luncheon the noble Marquis proposed "The Health of the Queen and her Army and Navy, with that of the Emperor of the French and his Army and Navy"—a toast which was received with enthusiastic applause.

FIVE HUNDRED HUSBANDS WANTED.—Last week, at the Halifax Borough Court, John Thomas, a sawyer, was charged by Mr. Jennings, relieving officer, with having left his wife and family chargeable to the union. The relief given had been after the rate of 7s. 6d. per week. The officer pressed for a conviction on the ground that there were no fewer than 500 deserted wives within the Bradford union, with 1017 children, involving an annual expenditure in relief of nearly £520,000.

THE LORD MAYOR OF LONDON AT CONGLETON. On Friday week, the 14th, the Lord Mayor, Sir F. G Moon, Bart., being on a private visit to his friend, Mr. Thomas Johnson, Bank House, partook of the ancient municipal fare of "cakes and sack," to which his Lordship had been invited by the burgesses of the ancient borough of Congleton. The guests included the Mayor of the borough, Mr. Godfrey Heath, Town Clerk of Stockport, the Mayor of Macclesfield, and the Sheriff of Chester. Previous to the entertainment, a congratulatory address from the Mayor, Aldermen, and Burgesses of Congleton, was presented to the Lord Mayor in the Council-chamber, to which his Lordship replied. The company then adjourned to the luncheon, which was served in excellent style in the Assembly-room. On the Chairman's table lay the gold and silver maces of the borough, and here was placed the large china Corporation bowl of "sack," which was served to the company in a pair of silver flagons. On each plate was placed a "count cake," of triangular shape, with a raisin in each corner; and among the other delicacies was the famous Congleton gingerbread. The healths of her Majesty, the Emperor of the French, and the Allied Armies and Navies having been drunk, the High Steward, Mr. Randle Wilbraham, proposed "The Health of the Lord Mayor," congratulating his Lordship upon his splendid year of of office, and felicitously referring to his Lordship's visit to Congleton, "Veni inter ignes *Luna* minores." The toast was drunk with great applause; and "the High Steward" and several other healths having been drunk, the party broke up

THE FIRST NEWS REWARDED.—The Queen has sent a check of £50 to Mr. Middleton, stationmaster, at Banchory, of the Deeside Railway, as a reward for his exertions in "expressing" the news of the fall of Sebastopol to Balmoral on Tuesday evening. The following is a copy of the letter sent by Colonel Phipps:—"Balmoral, Sept. 12. Sir, I have received the commands of her Majesty the Queen to forward to you the accompanying check for £50, in commemoration of your having been the fortunate person to convey to her Majesty the glorious news of the fall of Sebastopol. I am, Sir, your obedient servant, C. B. PHIPPS. Mr. Middleton, Banchory."

THE ROEBUCK TESTIMONIAL.—The testimonial proposed to be given by the men of Sheffield to Mr Roebuck, M.P., progresses satisfactorily. The list of local subscribers contains the names of persons of diverse in their political views as are to be found in the subscription list of the Patriotic Fund. The reason is obvious. It is felt that Mr. Roebuck's character and services belong less to party than to the country, and that this is pre-eminently the case in regard to the Sebastopol Inquiry. Last week a list of subscribers includes the names of Lord Palmerston and Mr. John Parkington. The following passages from their letters show the grounds on which these political chiefs concur in paying honour to a gentleman who has been so often opposed to both of them:—"Downing street, September 1.—I am desired to inform you that, although Lord Palmerston has on many occasions stated in unreserved terms the high appreciation he entertained of the manner in which Mr. Roebuck, at the great personal risk to his health, if not danger to his life, and having, as a member of that Committee, set by his side through the whole inquiry, illustrate the single-hearted and patriotic spirit in which he fulfilled the duties of a difficult position. On these grounds I beg to add my name to the list of subscribers. I have the honour to be, Sir, your most obedient servant, JOHN S. PARKINGTON. The Master Cutler."

NATIONAL SPORTS.

As cricket and boating come to an end, racing seems to wax more lively. Next week is remarkably rife in fixtures. Lincoln occupies Monday and Tuesday; while Pain's Lane is fixed for Monday, Walsall for Wednesday, Northallerton for Thursday and Friday, and Monmouth and Chesterfield for the same days. The great Interest of the week is, however, concentrated on the Newmarket First October, which commences on Tuesday. The list on that day comprehends the Four-Year-Old Triennial, in which King Tom may perhaps appear after a nineteen months' interval, and Surplice, Rhombus, Star of Surrey, Boer, and Baalbec, being also among the likely starters. Spindle (6 lb. extra) is the principal name in the Hopeful Stakes, and the elegant Polmoodlie is the only good public runner in the Buckenham Stakes. Two matches and the second Duke Michael Stakes are also fixed for the same day. But The Professor Hazel, Notary, and Claret are not the elements of a very strong field. The Eastern Counties Handicap is a leading feature of Wednesday. Mary Copp, Alepoo, Fly-by-Night, and Alastor are also in the Two-Year-Old Triennial, and Habena is in the St. Leger, with only Hazel, Beatka, Vandal, &c., against her. The Thursday's list is not very strong. Rifleman, Habena, Cavalier, Chalice, and Dirk Hatteric are the leading names in the Three-Year-Old Triennial; and the racing-like Bird-in-Hand seems to have no opponent of any calibre against him in the Rutland Stakes.

So far, the settling on the St. Leger has not been satisfactory. The dashing style in which Rifleman confirmed his York running with Fandango in the Don Stakes, after forty-eight hours of quiet, proves pretty conclusively that he would have won the St. Leger if the steel had not been taken out of him by the severe work he did on the penultimate day of the morning previous. There were 41 to 1 against him on Friday of a second "Acrobat riot," when he returned to scale amidst a significant silence, and nothing but the determined manner in which Mr Osbaldeston (who is more than seventy-one) collared and dared the first man who spoke of "robbery" to use the words, together with the fact that Rifleman's trainer, Mr. Stirling Crawfurd, has engaged Fobert as his trainer, and the price, 1800 guineas, which he gave for a yearling, brother to Lord of the Isles, at Doncaster, is said to be the largest on record. In fact, the prices which have been given during the last fifteen months for yearlings have been perfectly outrageous. Two of the thousand guinea yearlings, Voivode and Mario, are said not to be worth so many pence. Lord of the Isles himself only cost 440 guineas, and till within very lately this price was thought immense.

The United All-England will pitch their wickets in Scotland next week, and will meet 22 at Edinburgh, on Monday, and another 22 at Glasgow, on Thursday. The All-England, on the contrary, confine their course to England. On Monday they will be opposed at Trentham to 18 of the 3rd Staffordshire Rifles, who are to have the assistance of four professionals; and on Thursday they play a match at Stockton-on-Tees.

The yacht season is all but ended. On Monday the London Model Yacht Club have a third-class match; and on Saturday the Royal London Yacht Club take their closing trip. A match will also be rowed on the latter day, at five p.m., for £15 a side, from Ditton to Kingston, between Hands and Harrington and the two Smiths, while on Tuesday Cann and Pocock row a £20 a side match from Charlton to the Tunnel Pier.

The Knaresborough bench have voted three and three on the curious game case, which we lately mentioned. The gamekeepers' defence was that they were ordered to preserve the land adjoining their master's property, on which they were discovered netting partridges late on an August evening. They also added, and proved, in extenuation that it had been their constant practice to net the coveys as soon as they were "jugged," in order that they might carry them into the interior of Lord Harewood's preserves. We should most certainly have sided with the convicting trio of magistrates in not sanctioning this novel "law of removal," which might give rise to the greatest abuses.

MANCHESTER RACES.—THURSDAY.

Post Office Hotel Stakes.—Bourgeois, 1. Biron, 2.
Chesterfield Handicap.—Pyrus, 1. First Fly, 2.
Wilton Handicap.—Gamekid, 1. Catherine Parr, 2.
Trafford Handicap.—Persia, 1. Henrietta, 2.
Selling Stakes.—Elastic, 1. Red Robin, 2.

LEICESTER RACES.—THURSDAY.

Innkeeper's Plate.—Gay, 1.
Scurry Handicap.—Pope Joan, 1. Usurer, 2.
Queen's Plate.—Jack Leeming, 1.
Handicap Sweepstakes.—Rhombus, 1.

ASCENT OF MONTE ROSA; AND OF MONT BLANC, WITHOUT GUIDES.

WE abridge the following very interesting description of these mountain scents from two letters received from the Rev. Christopher Charles Smyth, one of the Curates of St. Nicholas, Great Yarmouth. The first letter is dated St. Gervaise, August 10; and, after describing his journey to Switzerland, the writer proceeds:—

"Our party had consisted all along of my brother and myself, a Yorkshire clergyman and a pupil of his, who is a botanist, and withal a photographer. Monte Rosa and the valley of Zermatt has been visited; and you will, perhaps, be surprised to hear that I have again made the ascent of that splendid mountain, and this time we succeeded, by another route, in reaching the *highest* point, that which we attained last year being only a part of the same ridge, and twenty-two feet below the summit. This is the first time it has been reached, and it was supposed to be inaccessible. The first few hours over deep snow was only fatiguing, not dangerous; crevasses there were, and most beautiful ones, but they were easily avoided. But at last, about 1000 feet from the summit, the ascent began in real earnest. It was one of those beautiful days which are almost too hot in the valleys for walking, but on the mountain summits are always accompanied with very severe cold, and occasionally wind. The snow drifted about in all directions. Steps had to be cut in the ice, sloping at an angle of from 35 to 40 degrees. Then one of our party began to feel the rarefaction of the air: his spirits rapidly evaporated with the heat of his body. The long and the short of it was, he was getting very cold, so we got him on to a sheltered rock, and took off his boots and rubbed his feet and hands with snow, and saved him a frost-bite. And now came a ridge of rocks very narrow at the top, with precipices on each side. Along this we had to advance with caution, for nearly an hour and a half, waiting for a lull of the wind, for fear of being blown over. It was delightfully exciting; the stones accidentally or purposely dislodged by one's feet rolled thundering down on either side. A friend, who had ascended Mont Blanc in 1854, assured that there was no difficulty in the latter to be compared with this. The view on either side was magnificent, but to our pent only could we stop to look at it with hands and feet grasping the rocks, or the ice, as it might be. At last the summit was gained, hitherto untrodden by foot of man. I was the first to reach it, as the guide (one guide had given up long before) from courtesy allowed me to pass him. The others followed one by one, till the little peak seemed crowded with our party of eight persons (Rev. C. Hudson of Orkington, near Ripon; Mr. Birbeck of Leeds, who we ended Mont Blanc in 1854; Mr. Stephenson, my brother, and myself, with three guides). Now we had time to enjoy the prospect to the full. In the foreground was the eastern point of the mountain, gained by us last year. The wintry blast had carried away our flagstaff and "shirt," though the heap of stones remained. A vast panorama stretched around us on all sides. Monte Viso, at the head of the valleys of the Waldenses, was perhaps the most distant object discernible, about eighty or ninety miles away, though the maritime Alps seemed visible far beyond. Mont Blanc (forty-five miles distant) towering high above all the rest, appeared very rugged and inaccessible from this side. I will only add, that some hundreds of mountain peaks, for the most part covered with snow, and lakes, and valleys, and glaciers, completed this beautiful, I might say overwhelming, panorama. We are now in the neighbourhood of Mont Blanc. Its snowy cap looks most inviting; but it is not our intention, to conform to the Chamounix regulations, which raise the expenses of the ascent to £24 each, so probably we shall return to England content with 15,280 feet instead of 15,740."

The second letter is dated Chamounix, Aug. 16th, and proceeds thus:—"We left the neighbourhood of Monte Rosa to pass some 11,000 feet high, which brought us into the Italian valleys. The 15th we passed at Chatillon, in the Val d'Aoste, which takes its rise at Cormayeur, at the very foot of Mont Blanc. As we approached it, and a bend in the valley brought to our sight successive peaks of this splendid range, rising one above another, till the snowy summit of 'White Mountain' appeared above all, an irresistible desire seized me to scale the ragged heights, and plant our flag upon them. At the same time, we had each of us strong objections to paying £24 at the very least for what we could doubtless do for £3 each. Monte Rosa had not cost us as much, and that was only 400 feet lower, so we determined to try by ourselves. We were on an equality with the best Cormayeur guide, for Mont Blanc has never been ascended from that side. We then determined upon trying the same way. Porters were engaged to carry our tent and provisions, blankets, &c., for a bivouac on the snow. These they carried up to the snow, after which we became our own porters. Clouds, however, began to lower on the mountains, and thick mists closed in and impeded our steps. The glacier was much broken up and crevassed. We were tied together, and I took the lead; many an apparently impassable crevasse was crossed by some narrow snow bridge, or had to be doubled. After a time it began to snow, so we began to pitch our tent and to spread our blankets. There were no signs of life but in our little bustling party of six: all around was cold and still as death, except when some occasional crack resounding all along the ice told of the onward progress of the glacier, or some dull, deep, and distant thunder, marked the fall of an avalanche over the rocky precipice. Our boots being hung, all wet, from the roof of our tent, and additional clothing for the night put on for warmth's sake, we soon wrapped ourselves up in a blanket, and slept as well as we could on snow at a height of twelve thousand feet. Next morning we set off in the fog. With great perseverance we gained the third point of Mont Blanc, called Mont Blanc du Tacul; but were compelled to retrace our steps to our tent, and, after a sixteen hours' walk, home over the ice toil of the morning. We then determined upon making another trial from St Gervaise. Our party consisted of our two selves, the Rev. C. Hudson (who, indeed, organised the expedition), Messrs. Kennedy, Jones, Stephenson, and C. Toad. We took no guides; but persons experienced in glaciers should find little difficulty in the last five hours of Mont Blanc, unless they were out of condition and found the labour too great. We were all in that category myself excepted that guides were as much a hindrance to us as a help. Most Englishmen will beat them in a long walk. This night's encampment was pleasanter than the last, as the rocks are warmer; besides that we provided ourselves with charcoal for a fire, straw for a bed, and flour, milk, and eggs for a hasty pudding. We passed a very comfortable night in the midst of avalanches, which thundered about us in all directions. Our bivouac was close to a ruined hut without a roof, with walls about four feet high, which, sixty years ago, De Saussure, the philosopher, built for his scientific observations. He found the cabin full of snow and ice; with our axes we chopped and shovelled it away: and an architect of our party employed two or three of us in building a roof of large flat stones, and in the first corner we got all night. Before we got upon it to prevent its being blown off, as the wind was severe. We started at daybreak and reached the Dôme du Goûté, one of the summits, in three hours and a half. Here we were left to carry our own knapsacks and provisions for five hours more, to the real summit. The difficulties alluded to by Albert Smith were successively vanquished, and that I am able to say without violent sickness or hemorrhage. The dreadful Mur de la Côté, to which he had to cling for his life, and down which, had he slipped, he would have been dashed from one icy crag to another, till the mangled remains were stationed in the horrid depths of the glacier—what would he say if we were to tell his audiences that we had ventured to descend this dreadful part by an ordinary glissade? The most adventurous part of our journey now commenced. We wished, instead of returning to St. Gervaise, to descend the mountain on the Chamounix side. To us, of course, it was quite new ground; yet, in one place alone did we experience any difficulty; it was in crossing from one glacier to another below the Grands Mulets, where people take up their night's quarters in the ascent from Chamounix. We had to overcome crevasses extending in all directions, which broke up the glacier crag was heaped upon crag—we had to cross by all sorts of narrow ledges of ice—over snow bridges of doubtful strength. Steps had to be continually cut with our axes. At length the worst was gained. The short twilight over night found us following the narrow goat track which passes through the pine woods in the neighbourhood of Chamounix. At length we fairly left the track, and in a moment were down to sleep under the trees; but about midnight, we retraced our steps to a châlet, where we slept for some hours, and one hour more brought us to Chamounix."

PRINCE FREDERICK WILLIAM OF PRUSSIA.

LINES SUGGESTED BY THE ARRIVAL OF PRINCE FREDERICK WILLIAM OF PRUSSIA.

'Mid this great rush of crowned success
That sweeps the land with onward pace,
From triumph's peal—from victory's press—
Pause we a little space:
Better is Truth than princely sway;
Where Love shall move, let Kings give way!

For what are trophies unto him
Who casts at Beauty's feet his throne—
The jewels of whose crown are dim
To those he makes his own;
Who plucks the rose from England's stem—
The pearl from England's diadem?

Though realm with kindred realm may mate;
Though war cement the plighted word;
Love's tender link draws State to State
As surely as the sword.
In youth and youth's devotion lie
The nobler part of chivalry.

His step has passed our palace gates!
High hopes, glad visions, rise anew;
And sacred is the bond that waits
The beautiful and true:
Where Faith, and Love, and Honour meet,
Let empires bow before their feet!

E. L. HERVEY.

PRINCE FREDERICK WILLIAM NICHOLAS CHARLES of Prussia, born on the 18th of October, 1831, Major "à la suite" of the 1st Regiment of Foot Guards, Chef and "Colonel Propriétaire" of other regiments in the

Prussian Army, is the eldest son and heir of Prince Frederick William, commonly called Prince of Prussia, who is brother of the King of Prussia and next heir to the throne. This young Prince, the future Monarch of Prussia, has so far not distinguished himself by any individuality of

HIS ROYAL HIGHNESS PRINCE FREDERICK WILLIAM CHARLES, PRINCE OF PRUSSIA.

character. He is devoted to his profession as a soldier, and is unpronounced in politics, being supposed to adopt unconditionally the views of his illustrious father, who is regarded as distinctly opposed to the present pro-Russian policy of Prussia. The Prince, whose manners are gracious and conciliatory, is very popular with army and people, and is the great favourite of his uncle, the King.

His Royal Highness arrived at Aberdeen on Friday (last week), and proceeded by the Dundee Railway, on a visit to Balmoral. He was received at Banchory by his Royal Highness Prince Albert, who had posted thirty miles, accompanied by General the Hon. C. Grey. Their Royal Highnesses proceeded up Deeside, for Balmoral, where they arrived at seven o'clock. The Queen, attended by the Ladies and Gentlemen of the Household, received Prince Frederick William upon his arrival. His Royal Highness is attended by Col. Heintze. On Saturday the Queen and Prince, accompanied by Prince Frederick William of Prussia, and attended by Lady Churchill and General the Hon. C. Grey, visited the Camp of the Forbes Highlanders, on the banks of the Dee. The Royal party were received upon their arrival by Sir Charles Forbes; and the men of the clan exhibited some Highland games. In the afternoon his Royal Highness the Prince, with Prince Frederick William and Lord Granville, went to Abergeldie Woods, which were driven for deer.

THE SAILORS' HOME, PORTSMOUTH.

THE fourth annual meeting of the subscribers and friends of this institution for providing a respectable home for the Seamen belonging to the Royal Navy and Mercantile Marine, when paid off from their ships or discharged from hospital was held at Portsmouth, on Thursday week—the Mayor in the chair. Several able addresses were delivered, from which, and the Report presented by the Directors, we extract the following details of the operations. In reference to the Home answering the end for which it was designed, the sums deposited in the hands of the Superintendent for security are instanced. The first year the amount was £640 10s. 2d., but this had gradually increased to £2041 9s. 8d.; and this year it had reached £3411 10s. 9½d. This money, the Directors remarked, instead of being squandered, was sent or taken by the men to their relatives, thus causing comfort, and easing the poor's rates. The following is the number of boarders:—

		1854.	1855.
Boarders	...	418	910
Casual meals	...	3170	4,258
Casual beds	...	8215	17,018
Shipwrecked men	...	66	92
Casual inmates, sleeping on mats		-	1808

Public meetings have been held at Brighton, Bath, and Cheltenham, with the view of raising funds for increasing the means of accommodation. His Royal Highness Prince Albert, jointly with the Queen, has presented £300 towards the additions already in progress, and promised to give £200 more if a sufficient sum could be raised to render the house in Manover-street (purchased last year) available for the purposes of the institution. The measures adopted to carry out these objects have realised a considerable addition to the funds, and certainly adequate to the object in view, but sufficient to justify the Directors in making some additions, by the purchase of another house in Hanover-street, at a cost of £450. The additions long since contemplated had also been proceeded with. A range of a double set of dormitories has been built, the committee-room enlarged, and the kitchen heightened. When this building is completed the establishment will contain 123 cabins and 63 open beds. But as the experience of last year convinces the Directors that even this accommodation will be quite insufficient on the return of the Baltic fleet, steps have been taken to secure a store in Hawke-street, with the intention of furnishing it with cabins and beds.

Grateful recognition was made of the handsome contributions made by several friends of the institution. It was stated that, on the arrival of the transport *Perseverance* at this port to be docked, and the crew not having a hulk to go to, the Captain called them together and asked them if they would like to go to the Home, telling them that he would pay their expenses out of their wages. On the ship being again ready for sea, the Captain called on the Superintendent and thanked him for the care and attention the men had received, and that he had recommended the institution to the notice of the company during the twenty-eight days they had been there. The company had forwarded a donation of twenty-five guineas. Some misconceptions as to the institution were corrected. Some had thought that the comforts afforded to men caused them to break their leave in order to enjoy themselves; but the officers at the Home always used their strongest efforts to induce the seamen to go to their ships. Another misconception was, that it was a *local* charity; but this was not the case, it being entirely intended for those coming from a distance and who have not friends or relatives in the port. Hence the Home is entitled to support from every parish in the kingdom. The subscription list was £3817, but the Admiralty grant was not nearly sufficient—the expenses being £713. This was accounted for by the fact, that during the greater part of the summer the house was little used—the fleets being away, whilst rates and taxes had still to be paid, the staff kept up, responsible servants retained, &c. The Directors did not, however, despond, and made grateful mention of the generosity of Mr. and Mrs. Dixon, of Standstead-park, who had become yearly subscribers of £10 each. It was stated that 1808 men had preferred sleeping on the floors of the Home to going back to their old haunts.

THE PORTSMOUTH SAILORS' HOME.

THE RUSSIAN ARMY.—The correspondent of the *Augsburg Gazette*, who writes from the Russian frontier, and treats of military affairs, estimates that at the beginning of the present month Prince Gortschakoff had at his disposal 130,000 regular infantry and 13,000 cavalry, besides a further force of 36,000 men, composed of the levy *en masse*, the Tcherномorsa and other corps of rifles, the Sappers, crews of the ships, the Greek volunteer battalions, &c., making in all an army of 179,000 men. From this total, however, are to be deducted the men lost at the Tchernaya, and by ordinary siege casualties during the month of August, and the sick. The Russian losses would probably be compensated by the addition of the Grenadiers, who, according to this correspondent, stood in readiness at Perekop, and are not included in the foregoing enumeration. The results just stated being obtained by conjectural estimation of the strength of the several divisions, appear to be too hypothetical for practical purposes.

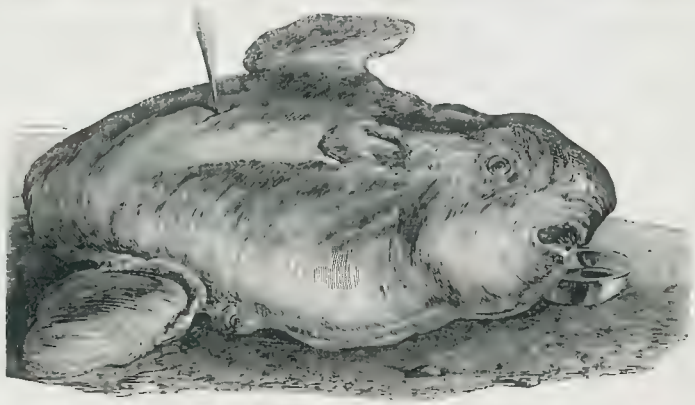
ASCENT OF MONT BLANC WITHOUT GUIDES.—NIGHT ENCAMPMENT ON THE SNOW.—FROM A PHOTOGRAPH.—(SEE PRECEDING PAGE.)

"THE IOWA," NEW STEAMER. (SEE NEXT PAGE.)

CAPTURE OF A SUNFISH OFF CORK HARBOUR.

On Friday week one of these valuable fish was towed into Cork Harbour by Mr. Cooper Penrose's schooner yacht, the *Harlequin*, having been harpooned about ten miles off the Roche's Tower Lighthouse, by a party that had been out in the yacht. The fish was seen basking on the surface of the water, *sunning* itself, as is its wont—hence the popular name Sunfish, in this country—and was struck with a harpoon, which entered it "midships," and put a period to its existence. The animal—which cannot be spoken of as a marine beauty, is of an oval shape, the length being about eight feet, and the "breadth of beam," exclusive of a fin about two feet long, projecting on each side, about five; its weight is nearly a ton. In the accompanying Sketch the harpoon remains in the fish in the place where it was first struck. This fish is, however, a small specimen of its tribe, some of which have been found to measure nearly three yards in extreme length, and are of great commercial value, the liver yielding as much as £40 worth of oil.

Sunfish are common on the north-west coast of Ireland, but they are stated to be seldom taken off Cork Harbour.



SUNFISH CAUGHT OFF CORK HARBOUR.

NEW MODE OF TRANS-
PLANTING TREES.

On Saturday afternoon the members of the Council and the Fellows of the Royal Botanic Society were invited by their indefatigable secretary, Mr. J. C. Sowerby, to witness the transplantation of some trees in their Garden in the Regent's-park, by the agency of Barron's machine; the main object being to carry as much of the root as possible.

This machine is a kind of timber-carriage. Four large wheels support two trussed timbers, or bearers, between which the tree is lifted by a screw and chains, and carried away upright. The operation commences by marking out a square of the size intended to be lifted; the earth is then dug away in a circle round this space, to a sufficient depth to enable the workmen to cut a tunnel under the tree, below the great mass of its roots; other roots that may be met with are preserved and tied back as far as may be convenient. The tunnel being cut, a set of planks is laid in it, extending a little beyond the openings; and across each of its projecting ends is placed a strong plank, which is forced under the side of the mass, partly cut away to receive it, another plank is forced into each of the other sides, so as to form a square frame to support the whole weight. These planks are stopped

REMOVAL OF A TREE BY BARRON'S MACHINE, IN THE ROYAL BOTANIC SOCIETY'S GARDEN, REGENT'S-PARK.

in close to the soil by mats, to prevent the earth from being loosened. More or less of the earth is now cut away beneath the frame, according to the nature of the soil, or the number of descending roots. The ball, as it is called, although it is square, being ready, chains are fixed round the ends of the central planks, and the hole partly filled in, one end of the wheels of the carriage is then placed on each side on thick planks to prevent their sinking into the loose earth, and at such a distance apart that they may receive the two bearers, and be joined together with the tree between the bearers. The frame will extend to the frame of planks are alternately hooked on to a screw supported by the bearers, and by turning these rods, the mass is lifted. Other chains are so fixed as to support the weight, while the screw is shifted from one end to the other; and, to steady the tree, side ropes are also held by men to keep the whole upright. While the tree is being raised, the hole is filled up level, and planks are laid across for the wheels to travel over. A team of horses is yoked to the machine, and these transport the tree to the site. The hole for the reception of the tree is dug with two sides shelving to the middle for the passage of the wheels, and a trench along it, to receive the middle planks of the frame, and to give room for removing them when the tree is lowered into its place. Care is taken to prevent the wind from moving the tree, and water is given as it may be required.

During the operation on Saturday, in consequence of a large number of strong but not very thick roots, which descended into the still clay almost perpendicularly, not having been cut, it was found impossible to lift an ash tree which it was proposed to transplant; but these roots having been dug out, the tree was, on Monday, carried to its destined locality, and dropped into the hole prepared for it, by the aid of twelve horses, without the slightest check. The mass of earth moved is nine feet six inches by nine feet, two feet thick at the sides, and about three feet six inches thick in the middle: weighing upwards of ten tons, besides the tree and carriage, some four or five tons more.

THE NEW STEAMER "IONA."

THE steamer *Iona* is the latest built craft of the kind on the Clyde, and was placed by the proprietors at the disposal of the members of the British Association during their recent meeting at Glasgow.

The *Iona* is 225 feet keel and fore rake, and 232 feet over all, 21 feet beam within the paddle-boxes, and 9 feet 6 inches in depth. Her extreme tonnage is 324 tons; but, after deducting 151 tons, which is the space allotted for her engine-room, her net measurement becomes registered at 173 tons. She has two oscillating engines, of 45 inches in diameter, and 4 feet stroke. The diameter of her paddle wheels, which are on the feathering principle, is 19 feet, the length of the floats 7 feet, their breadth 2 feet 11 inches, and their number 14 in each wheel.

The tested speed of the *Iona* has left nothing to cavil with, namely, by the time which she took to run betwixt the Cloch and Cumbrae Lights, and this she performed downwards in 47 minutes 48 seconds, and upwards, against the tide, in 49 minutes, or, on an average, at the rate of well nigh twenty miles per hour; which, if not equal to the American speed, cannot be far off it. In this performance the motion of the *Iona* did not appear to be very different from that of ordinary steamers. Beyond the circumstance that the paddles were a little busy that she came near with something like the rapidity of a railway train, she really did not appear to be making any out-of-the-way effort. Her engines worked so smoothly and true, her feathering paddles revolved so uniformly and exact, and her whole performance, in a word, was so nicely calculated and determined, and there was nothing to direct the attention to the rapidity of her locomotion beyond what has been stated.

The *Iona*, indeed, is well worthy of being noted as a great stride in Clyde shipbuilding, and although it would be absurd to say that she can rival the American steamers in accommodation, it may almost be asserted that she can do so in speed, taking the data given by Dr. Lardner as the proof. In respect to cabin accommodation, the Americans will not stand superior to almost every other nation in consequence of the rivers they have. These admit of vessels being built of even 450 feet long and forty feet broad, while the dimensions of the *Iona*, though little more than half these, may be said to be even too great always for the little, narrow, crooked and shallow Clyde. The American steamers have cabins three tiers deep, the Iona has only one deck; but with good economy, ingenuity, and liberality, much has been made of that. She has a main saloon, 36 feet long and 9 feet broad; a ladies' cabin, 16 feet long; and a saloon, 20 feet long; and these are fitted up in the costliest, and, at the same time, chastest manner—the whole doing the greatest credit to her builders and engineers, Messrs. J. and G. Thomson. She is to be employed in the trade between Glasgow and Ardrishaig, as part of the fleet of steamers extending from this city to Inverness, and which formerly, under the able management of Messrs Burns, and now under that of Messrs. David Hutcheson and Co., has even tempted Royalty to take advantage of its arrangements, thus enabling these gentlemen to claim for it the name of "The Royal Route."

THE BANGO MASSACRE.—Dr. Easton, surgeon, R.N., and Mr. Sullivan, Master's-Assistant, who were captured in the Cossack's boat at Bango, were exchanged at Odessa on the 13th inst.

A SEBASTIAN-PAUL-AND-BATES CASE. The Court of Assizes of Strasbourg has been for several days occupied with a case which may fairly vie with those of Strahan and Paul, for the magnitude of the defalcations, and the skill with which the culprit contrived for nearly ten years to carry on his depredations undetected. The defendant, whose name is not given by the legal papers, but designated under the initial of H., seems to have been bred by his father to three fraudulent practices by whom he drew rein down upon hundreds. H. was a usury in the little town of Fiaguenau, and had taken up the business from his father's hands. The firm was, at his taking it, in debt to an amount which would appear trifling in England, but which is looked upon as a fortune in the country parts of France, being 70,000 fr. (£2800), and did not enjoy a high reputation. H., however, then about twenty-five, was a young man of a "serious" turn, put in a semblance of great piety and severity, frequented the churches, and, in a word appeared so excellent a Christian, and at the same time so steady and skilful, that his credit country men thought they could do no better than place their money in his hands. How far he has justified their confidence the sequel will show. The evidence showed that in 1846, within a year of his having set up business, he committed a forgery, of which such success that nearly any of his clients escaped censure. He had not even the excuse of distress, for, as we have above stated, the religious and austere character he had contrived to establish had brought him a large connection, and consequently a large business. Among the holders of which affluence in the Crimea he availed himself to procure him of 17,000 francs committed to his care, by means of a power of attorney. An old widow, seventy-six years of age, could neither read or write, was persuaded by the [illegible] Given [illegible] [illegible] [illegible] of 25,000 francs. But it would be tedious to enumerate the isolated cases of such glaring which H. committed. Suffice it to say that, both by the [illegible] [illegible] witnesses, it was proved that he had committed one hundred and forty-seven forgeries, in less also, to address to the tribunal, had various cases of swindling, he had been guilty of twenty-one "*tours de confiance*," i.e., appropriating money left to him in trust. It is impossible to know the exact number of persons whom he has ruined by his fraud. The amount of theft is from 300,000 francs, though there is no doubt they reached a much higher sum. The blindness of his townspeople, while he was thus daily plundering, seems unaccountable; but the confidence was so complete in him, that for a member of the town-council, and married a young woman belonging to one of the best and wealthiest families in the town, whose dowry was swallowed up in the wreck which followed soon after the marriage. Some bank-notes purloined began to circulate last December, when he immediately took to flight. He was arrested in Paris on his way stopping to a relative for a "loan" of 60,000 francs, with which he doubtless would have made his escape to America. There were 173 counts in the indictment, on all of which he was found guilty, and condemned to hard labour for life in one of the bagnios. Curiously is felt by legal men here as to what will be the penalty in the case of a most fraudulent bankrupt case about to be tried in London, which bears so much analogy to that of M. H.—*Letter from Paris.*

CAPTURE OF A NOTORIOUS THIEF.—Through the activity of Mr. Heddington, a detective officer on the Midland Railway, a notorious thief, named William Attey, has just been captured, after having committed innumerable depredations throughout England, particularly on the different lines of railway. Some of his exploits have been made known to the public, but what is generally unknown is the course of investigation. The following cases will show the manner in which he carried on his proceedings.—On the 28th of August, a young woman named Anne Gough, looked herself in the Worcester Railway station for Bromsgrove. While waiting for the train a man (Attey), in the uniform of the Great Northern Railway Company, came up to her and asked her if he could assist her with her box. She had none when she was going, and he replied, "Very well, I will put it in the right van," and took it away, as she supposed, for that purpose. He returned shortly afterwards, and said, "It's all right, you have been quick enough, you and your box will be in time." On arriving at Bromsgrove both box and man were missing. Information of the loss was received by Mr. Heddington on the following day, but he was unable to obtain any clue to the thief until a month after the Worcester Railway ascertained that Attey had employed a man at the London and North-Western station at Birmingham, to carry a box to a lodging-house keeper in that town. At the lodging-house Attey proceeded that he had lost the key of the box, and asked him for a hammer to break it open, which he did. He then purchased another box, in which he packed all the articles the other contained. On the following day he left the lodging-house, taking the latter box and connects with him, and leaving the one he had stolen behind. From Birmingham Mr. Heddington traced him to Cumberfields, about five miles from Rugby, but was too late to secure him, as he had decamped thence after stealing an sovereigns and a silver watch from a relation who had just buried his wife. He was afterwards traced to Shelton, Staffordshire, and thence to Nuneaton, Tamworth, and other places. He was eventually secured at Walverton, where he had obtained a situation as a railway engine-driver. He was apprehended in bed, and on Mr. Heddington telling him the nature of the charges against him, he got possession of a knife, and threw it at him (it was taken also), and attempted to run from him. Mr. Heddington threw him on the bed, and, with the assistance of a constable, took the knife from him. On the 7th of September he took lodgings at Worcester for himself and wife, and from that date up to the 12th [illegible] [illegible] [illegible]

AMUSEMENTS, &c.

THEATRE ROYAL HAYMARKET, Monday, 24th September, and during the Week.—The New Comedy of THE MAN OF MANY FRIENDS: characters by Mr Buckstone, Mr Compton, Miss Reynolds, Mr Swanborough, and the Company. Seneca Perez Nena, will be introduced SPANISH DANCERS will appear in Two New Ballets: Miss Blanche Fane, on Monday, Tuesday, in COUNT FAVOLA, and on Thursday, Friday, and Saturday, in THE SULTAN

LYCEUM THEATRE.—All the Fashion left London town to be found within the Lyceum, the most thronged, most successful, and most popular Lyceum Entertainment. Professor ANDERSON, the Great Wizard of the North, EVERY EVENING, Doors at 7, and New ENTERTAINMENT of Magic and Mystery, in Twelve Acts; with Changes of Decorations, Dressing MAGIC and MYSTERY in all the varied forms. Also a Comic Pantomime, a Drama, a Farce, and a magnificent Spectacle. The Illustrations of SPIRIT RAPPING are the most exciting and mysterious proofs of science ever given within the walls of a theatre. Doors open each evening at Half-past Seven, commence at Eight. Private Boxes, £1 11s. 6d. and £1 1s., to be obtained at the Box-office, or at the principal libraries. Stalls, 6s. Dress Circles, 3s. Upper Boxes, 2s. Pit 1s. Gallery 6d. The Box-office opens daily, from Eleven till Five o'clock. Free admission (by Mr. Charleston, Jun. Grand Pandemonium Ball every evening, on Saturday, September 29, at Two o'clock. Doors open at Half-past One

GREAT NATIONAL STANDARD THEATRE, Shoreditch.—Proprietor and Manager, Mr JAMES ANDERSON.—Every Evening Mr J. W. WALLACK will perform every evening, with the most powerful company in England. Prices as usual: Private Boxes, £2 2s. to £1 1s.; Stalls, 3s.; Dress Circle, 2s.; Upper Boxes, 1s.; Pit, 6d.; Gallery, 3d. Commence at Seven. Doors open at Six.

DR. KAHN'S GRAND ANATOMICAL MUSEUM, now open for the Season, at 5, Leicester-square, contains the whole of the Models and Preparations which have been exhibited during the last Twenty Years in Paris, Vienna, Berlin, and other Continental Cities, and which have excited the wonder and admiration of thousands of visitors. Admission, 1s. Catalogue, 6d. Open from Ten till Ten. Lectures every Evening at Eight, and Three on Wednesday, Thursday, and Saturday Afternoons at Three. Dr. KAHN, 5, Leicester-square, and 3, Coventry-street

THE LION-SLAYER at HOME, 232, Piccadilly. Mr. GORDON CUMMING DESCRIBES Every Night, at Eight, what he SAW and DID in SOUTH AFRICA. Natural Entertainments every Saturday at 3 o'clock. Admission, 1s. Stalls, 2s. 6d. Doors open during the day from Ten to Six.

ROYAL GALLERY of ILLUSTRATION, 14, Regent-street, next the Quadrant.—Open from Ten o'clock in the morning till Ten at night. Admission to the Exhibition of Models, 1s. Lectures every Evening at Eight o'clock, and at Three on Wednesday, Thursday, and Saturday afternoons. Admission to the Lecture-room, 1s. and 2s. Descriptive Catalogue, 6d.

THE EXHIBITION of the PHOTOGRAPHIC [illegible] Pall-mall East, from Ten o'clock in the morning till Seven in the evening. Admission, 1s. Catalogue, 6d.

ROYAL POLYTECHNIC.—On view daily, the Original Diving Bell, with which Mr. [illegible] Lectures every Evening at Eight, and Three on Wednesday, Thursday, and Saturday afternoons. Admission to the Lecture-room, 1s. and 2s. Descriptive Catalogue, 6d.

THE COLONIAL FIBRE COMPANY. Capital £100,000: in 5000 Shares of £20 each. With power to increase the amount. Deposit, £1 per share.

[illegible] Colonial possessions, for various Textile purposes, Ropes, Twine, and Paper.

The Court of Directors and general measures of the Company, are in progress of arrangement, and will be duly announced.

GRAND TRUNK RAILWAY COMPANY OF CANADA Notice is hereby given that a CALL of £1 15s. per Share, [illegible] JANUARY, FEBRUARY, and MARCH, 1856. And that a FURTHER CALL of £1 15s. per Share will be made payable on the 1st day of OCTOBER, 1855.

At the same time will also be due and payable, on the 1st October, 1855, [illegible] Certificates, bearing a low Coupon, payable in London or Canada, and guaranteed by the Government of the Provinces of Canada.

The first Call of £1 15s. per Share, and the Certificates for Interest, may be paid in London to the Company's Bankers, the London and Westminster Bank, Lothbury; or in Canada to the Company's Agents, the Bank of Montreal.

Interest at the rate of six per cent. per annum will be allowed on all moneys received in advance of calls, and will be paid half-yearly, at the London and Westminster Bank, on the 1st January and 1st July.

By order of the Board,
WILLIAM HENRY SMITH, Secretary.
Offices of the Company, 62, Threadneedle-street, London.
18th Sept., 1855.

AUSTRALIAN JOINT-STOCK BANK, Sydney, Melbourne.—LETTERS OF CREDIT and DRAFTS are GRANTED on the above Bank by Messrs. HALWOOD, ARNOLD, and CO., 7, Lothbury, London, the Agents of the Bank. They also issue Drafts on the Bank of New South Wales at the current rate of exchange.

By order of the Court of Directors,
JAMES MACKILLOP, Secretary.

BANK NOTES.—The Full Value given in Cash for DIAMONDS, PEARLS, OLD GOLD and SILVER, GOLD and SILVER LACE, and ENGLISH and FOREIGN COINS, at SELIM LEVY and CO.'s old-established Bullion Office, 3, Broad-street-buildings, City. Parties waited upon at their residences, or the money sent by Post. Watches purchased or exchanged. Valuations for Probate or Family Arrangements. Bullion purchased. Money lent thereon. Diamonds purchased or exchanged. Gold and Silver Plate purchased. Jewellery purchased or exchanged. Gold and Silver Coins purchased

FALL OF SEBASTOPOL—THE ASSAULT ON THE MALAKOFF TOWER.—DRAWN BY GUSTAVE DORE.—(SEE PAGE 354.)

SATURDAY, SEPTEMBER 22, 1855.

THE PASSAGE OF THE FORD, BY DECAMPS.

Le Passage du gué, par Decamps.

THE FRENCH SCHOOL OF PAINTING.

THE Universal Exposition in Paris, and especially that beautiful and attractive portion of it "La Salle des Beaux Arts" (an attraction wanting to our own Universal Exhibition in 1851), has naturally excited the attention of the public to the subject of the Fine Arts among our neighbours and allies. We this week present to our readers a Supplement containing engravings of some of the choicest productions of the modern French School of Painting:—"The Passage of the Ford," by Decamps; "The Watering-Place," by Rosa Bonheur—whose "Horse Fair," recently exhibited in London, has made her name so famous in this country; "Dogs in the Forest," by Diaz. "A Landscape in Touraine," by Girardet; "The Cavern," by Nanteuil; and "The Strolling Musician," by Baron.

A few words in reference to the French School of Painting; and a short account of the several artists whose works we have selected for illustration, will not be out of place on this occasion. The history of the progress of Sculpture and Architecture, in France has often been narrated; but very little has hitherto been written with respect to Painting. The work entitled "Archives of French Art," by M. Leon de Laborde, has, it is true, revealed certain important facts with reference to the origin and early progress of Painting in France; while the work of M. Dassaux, "French Artists Abroad," gives a tolerable idea of the influence which French artists have exercised upon the various schools of Europe, from Matthieu D'Arras, down to Horace Vernet, or in other words, from the fourteenth century to the present time. But a complete History of French Painting, in all its branches and under all its phases, has not yet appeared.

In the consideration of this important question, we shall first of all confine ourselves to the two following subjects:—1st, What are the peculiarities of the French School? and, 2nd, From what time does its existence date, and what periods may be distinguished in the course of its development?

That France has produced great painters is a fact that has never been contested; but it has often been remarked, even at the present day, that French paintings in general are destitute of originality. Watelet expressed an opinion, which has since been accepted by many critics, that the history of French art presents little more than a succession of able productions differently influenced by the tastes of different epochs, but still at bottom more or less in conformity with the views of foreign masters. After an impartial examination of these works, however, we shall find that the French school possesses as much as any other school its individual elements and original tendencies, and that the illustrious line of painters who have succeeded each other in France—notwithstanding the secret affinities which their works may bear to those of other masters—has every sense of the word a national and legitimate one

In the Fine Arts, as in philosophy, there are two distinct and opposite schools. The one attempts to idealise everything by drawing from the gross material form the beautiful soul latent within it: the object of this school being not so much to pander to the senses and flatter the imagination, as to expand the intellect and excite the finer emotions. The other school copies nature; its principal object is to reproduce the real—to express actual life, which is for it the *ne plus ultra* of the beautiful. Highly spiritual in philosophy, in poetry, and in eloquence, France has always been equally so in the fine arts. All great painters, from Jean Cousin to Prudhon, from Watteau to Granet, have occupied themselves with translating into colours some poetical idea hitherto expressed only in words.

French painting has undergone great changes; but, in yielding to the influence of the Italian and other schools, it has never altogether lost sight of its own peculiar mission. In spite of the internal similarity which exists between French and Italian Art, we observed that the former has always borne the stamp of the national taste. Thus the landscapes of Poussin and Claude Lorraine have the same time that they resemble, in some points, those of Domenichino and Caracci, possess an animation and an expression not always to be found in those masters. Because there happen to be among French painters disciples of the Dutch and Flemish schools, shall we on that account call these copyists? Even the very imitations which have given an original whole, a new creation, amply repaid the little hints they may have borrowed? French painters, in choosing their subjects and models from among the familiar objects of domestic life, were not content with following out to the letter the instructions of foreign schools. They too have humanised, if we may so express it, their finishing lessons from Nature. The French school neither possesses the ultra-ideal tendencies of the Italian, nor the ultra-real tendencies of the Dutch school; neither does it possess the mystical character of the German, nor the faïs seignon, of the Spanish school; but it has availed itself more or less of all these various and adverse elements. Painting in France is as little technical as it is possible to be. Hence it is that pictures belonging to the French school are so peculiarly adapted to the intelligence of the world at large. The power of understanding and appreciating at first sight a work of Michael Angelo, or Albert Durer, or Rembrandt, or Murillo, is of itself a gift. Whereas no person of ordinary capabilities can possibly fail to understand a picture of Poussin, of Le Sueur, or of any other French painter, so entirely do they coincide with the more general feelings and sympathies of humanity.

It is, perhaps, on account of this very circumstance that the Art of no other country has undergone more vicissitudes and changes than that of France. Commencing by borrowing, under exalted patronage, from the schools of Italy, French Art afterwards ministered as a vehicle of luxurious enjoyment to the tastes and predilections of each successive age. Sebastian Bourdon, Leb.un, and Jouvenet, were types of the artificial heroism and grandeur of the age of the Fourteenth Louis; the effeminate Watteau and the more than questionable Boucher were exemplars of the dissolute and immoral age of Louis XV.; the severe and classic David—the artist of the Revolution, and of the Empire—set the public taste and the genius of the country again in the direction of the higher walks of art; and with his followers, Gerard, Gericault, Granet, the Vernets, Paul Delaroche, &c., laid the foundation of a Historic School, which for a time nearly engrossed attention to the exclusion of all other styles. In fine, thirty years of peace and peaceful occupation, favourable to repose, and the calmer enjoyments of Nature and of Life, have had their effect in reintroducing a natural or *genre* style, from the less objectionable characteristics of the age of Du Barry and Pompadour.

Such is a hasty, but we think fair, review of the peculiar characteristics of Art in France during the last century. It will be gathered from the statements made that this Art has hardly yet had time to settle down and mature itself into a definite shape and complexion. This remains to be done; and we shall watch with great interest the progress of the aspiring men upon whose works the future of Art in France, and by example, much of the Art of Europe will depend.

What French Art has most to fear from, however, is the extravagant adulation of injudicious critics, who, instead of labouring to restrain the excesses of affectation, to eradicate mannerism, and to enforce the necessity of study and a constant striving after pure and exalted models, write as if French Art, so changeable in its character, so unstable in its predilections, had always been perfect, and, indeed, within the degree, and with but one exception, the highest rank amongst all the schools of Europe. Mons. Cousin, Professor of Eclectic Philosophy in France, writes thus:—

"All kinds of beauty resolve themselves into beauty spiritual and beauty moral. The arts are only worthy of their name, inasmuch as they express the idea concealed beneath the material form, and address themselves through the medium of the senses to the soul. It is in expression that the different arts find the measure of their relative value, and the most expressive of the arts ought assuredly to be placed in the first rank. We bow with respectful admiration before the Florentine and Roman school, so justly celebrated both for its ideality and its resemblance to life; but, that school alone excepted, we do not hesitate to assert that the French school is equal, if not superior to all others. Le Sueur and Poussin are not inferior to either Murillo, or Rubens, or Vandyke, or Rembrandt, or Correggio, or even Titian himself. If they fall short with respect to their colouring, they certainly make amends in their expression."

This passage, coming from the pen of a man with the prestige and authority enjoyed by M. Cousin, is curious, at least, as a specimen of the prevailing tone of Art-criticism and the principles of Art-education in France.

M. DECAMPS.

M. Decampe, one of the most celebrated of French contemporary painters, was born at Paris in the year 1803. He exhibited in 1827 his pictures of the "Soldier of the Vizier's Body-guard," and the "Chasse aux Vanneaux." But it was not until after the Revolution of July that his genius began to display itself in all its splendour. In the year 1831 his "View in the Levant," his "Children Frightened by a Dog," and his famous "Night Patrol of Cadzi-bey Chief of the Police at Smyrna," were produced, and created a profound sensation among his brother artists. The last-mentioned picture, which called to mind the chef d'œuvre of Rembrandt (the "Night Patrol") is one of the finest works of M. Decampe. It was much sought after by the public, and gave rise to warm discussions among critics and connoisseurs.

M. Decampe is represented in the present Great Exhibition by some three-score pieces, in different styles. The majority of his productions are in the genre school, in its various classes; landscapes, animals, interiors, and fanciful subjects. Nevertheless, like many of his fellows, his ambition has been to distinguish himself in the historical school, in which, indeed, he has produced some works of considerable merit. His picture of "Joseph Sold by his Brethren," painted in 1838, was remarkable for the bold device by which the canvas was divided by the outline of the high back of the dromedary. His "Eliezer and Rebecca," in 1847, on the other hand, was distinguished by the beauty and sparkling character of the landscape of the scene. The story of "Samson," in nine pictures, was a most ambitious work, the merit of which may be judged by those who visit the Great Exhibition. There is certainly a great deal of originality and vigour in many of the pieces; but there is also an obvious straining after effect, and a prevailing theatrical aspect in the characters and groupings which detracts from their merit. The "Battle of the Cimbri," also in the Great Exhibition, is, upon the whole, a more complete and artistic performance, but still not such as to make us regret that M. Decamps did not exclusively devote his talent to this more ambitious department of art. In the ever diversified field of nature—of everyday life, in all climes and under all circumstances, M. Decamps is always happy; and, though he does not condescend to resort to the extravagant mannerism by which younger competitors seek to attract attention, he is by no means deficient in that amount of originality of treatment which distinguishes the inventor from the mere copyist. This originality of treatment, and his fervent fancy, are perhaps most conspicuously shown in Oriental subjects, which are favourites with him, and which he produces in endless variety. The East, until recently, was little known to French art; and M. Decampe was one of the first to attempt to present it in its true character, and under its true atmosphere. Marilhat perhaps divided with him the merit of this achievement, which substituted the simple, glowing truth for the extravagant and absurd creations of the poet and romance writer. Until they revealed the truth, art and the art-loving population of France were almost strangers to the peculiar caste of feature, and the characteristic expression of the Eastern physiognomy, to Oriental scenery and costume, and, above all, to the Oriental sky, with its glittering high lights, and its broad deep shadows. And with what exquisite facility does he enliven his scenes with the various species of animal creation appropriate to them: here the elephant and the tiger of the jungle; here the camel of the desert and the caravanseral; in more civilised regions, the patient ass, with his burthen on his back. Of his Oriental pieces, we engrave one, and a very spirited specimen, representing a detachment of Turkish Irregular Cavalry crossing a ford. The figures are full of vigorous life; the drawing is accurate, and the disposition of the tints and of light and shade shows the artist to be as successful as a colourist as a draughtsman.

A contemporary French critic sums up the merits of this artist in no excessive strain of compliment. He says:—"The majority of his compositions do not pretend to intellectual or moral purpose; but those which consist of the most ordinary materials acquire a special significance and value from the picturesque character which the artist imprints upon them. It is only to be regretted that, in endeavouring to give relief to objects, under strong contrasts of light and shade, he too often falls into a laboured method of execution, which smothers the spontaneity and detracts from the freshness of the expression. His talent and vigour, however, are undeniable. He is imitating the granular surface of an old wall, or the details of brick-work. The mannered aim at "effect," and mannered treatment of the minutiæ of surface detail, here complained of, are faults too common in our day; but in the case of M. Decamps they are associated with a great amount of superior merit, which almost merges them into the shade.

CHARLES GIRARDET.

M. Charles, or Karl, Girardet belongs to a family of Swiss engravers He was born at Neufchatel, in 1813, and went to Paris at an early age to study painting under Mr. Leon Cogniet. In the year 1834 he returned to his native country to take sketches, and afterwards travelled in many parts of Germany and Italy. One of his longest excursions, from Paris to Turkey, through Switzerland, Lombardy, and Croatia, was performed on foot. He brought away sketches with him of the most interesting places and incidents in his route, and thus satisfied to the utmost the craving of his artistic talents.

Among his principal works are his "Assembly of Protestants Surprised by Catholic Soldiers"—a characteristic scene of the seventeenth century, ordered by the municipality of Neufchatel, and of which Frederic William of Prussia purchased the duplicate; "Going to Market," "Gaucher de Chatillon Deploring the Entry of the Faubourg de Miniet," "The Mosque of Said, at Cairo," &c.

From the time of his return from Egypt in 1843 up to the Revolution of February, 1848, M. Girardet occupied himself almost exclusively with executing paintings for Louis Philippe. These consisted of pictures of the "Presentation of the Ambassador of Morocco, and of the Ambassadors of Tunis and Persia;" the "Dance of the Iowas Savages before the King at the Tuileries;" besides several other works which were interrupted by the Revolution, and which are not yet completed. In 1847 M. Girardet was sent to Spain, to paint pictures of the marriage ceremony of the Queen of Spain and the Duke de Montpensier for the Galleries of Versailles. These are likewise incomplete.

Since the downfal of his patron M. Girardet has done little else than illustrate publications and make sketches.

ROSA BONHEUR.

Mademoiselle Rosa Bonheur was born at Bordeaux. Her father, a painter of talent, was her first and, indeed, her only tutor. She has chiefly confined her attention hitherto to the study of animals; and, although young, has made herself a wide reputation. One of the great merits of Mdlle. Bonheur is the correctness of her drawing, and the general air of truthfulness which pervades all her compositions. Her first picture, representing "Rabbits Eating Carrots," was exhibited in 1840; and her next, a "Flock of Sheep Driven along a Road, during a Storm," obtained for her a gold medal and an increase of reputation. She exhibited in 1846 her picture of the "Oxen of Cautal," purchased in England; and in 1848 a "Scene of Husbandry," which gained a first medal, and which is now deposited in the Luxembourg. Her last work—the famous picture of the "Horse Market"—was exhibited in Paris in 1852, and obtained for her the title of honorary member of the Royal Academy of Fine Arts at Amsterdam. Since that period it has been exhibited in London, and attracted an admiration highly deserved.

But although Rosa Bonheur's fame has reached its highest point in that elaborate masterpiece the "Horse Fair," we should conceive but an imperfect notion of the resources of her talent from an examination of that work alone. Animal and landscape nature in all their varieties are her chosen themes; and of the innumerable subjects which engage her active and appreciating fancy each evidences some touch of truth, some innate grace peculiarly its own. Look, for instance, at the charming "Watering-place" in the present sheet, in the realisation of which Claude, Cuyp, Paul Potter, and her own contemporaries might each have lent inspiration. How full of animal beauty is that noble cow which has hastily rushed to the placid brook to snatch a draught of water: her whole frame, down to the very curl of the tail, speaks of healthy vigour; and the expression of her face shows that she has still a thought for the fare for the rough little progeny, who has galloped after her in spite of the exertions of the boy who holds him.

HENRI BARON.

M. Baron was born at Besançon, in 1817. He received some instructions from Gigoux; but he is, nevertheless, considered as a self-educated artist. His picture of the "Witches of Macbeth," completed at the age of twenty, is a noble instance of the early development of his talents. Among his most admired productions are his "Geese of Father Philippe" ("Oies du Père Philippe"), his "Andrea del Sarto,' his "Child Sold by Pirates," his "Spring in Tuscany," his "Nuptials of Gamache," his "Skaters," and his "Painter at Work."

CELESTIN NANTEUIL.

Nanteuil is an artist of admirable powers, and enjoys a high reputation for the peculiar poetic character which he infuses into his subjects. The singular picture before us is a fair specimen of his talent. It is intended to illustrate a passage in Le Sage's magnificent story. The passage occurs in the commencement of the fourth chapter (book first). Gil Blas describes his introduction to the Robbers' Cave in the following terms:—

I was led into a cave where I saw a quantity of bottles and earthern pots which, I was informed, were filled with excellent wine. I then traversed several inner chambers, in some of which were pieces of cloth and silk and woollen stuffs, and in others a quantity of money and other treasure. I afterwards followed the cavalier into a large saloon lighted by three copper lustres, and adjoining a corridor to the other apartments.

In the commencement of the fifth chapter occurs the following description, which will explain the occupation of the group to the right of the picture

I entered philosophically on my new duties. I served up their repast, and announced it to them. They ate *con amore*, and I, standing behind them, poured out their wine, and did the duties of a waiter.

The cavern which M. Nanteuil has chosen for his illustration, is one of those half-natural, half-artificial vaults which are so numerous in the Peninsula. They were constructed by the Christians after being driven to the mountains by the victorious Moors, and served them as dwellings till the overthrow of their enemies. The caves have since that time given shelter to numberless hordes of banditti

M. DIAZ.

M. Diaz is a *genre* painter of no mean order and of varied resources. His little cabinet pictures, after the Dutch style, are so many studies—very often simply abstractions—embodying forms and incidents of every-day life, under circumstances of interest and beauty. The fancy is at play in all he does, and fancy it is which adds attractiveness to materials often common-place. His studies of females and of children, cupids, &c., are very delicate and graceful in treatment, and replete with expression; and in that, perhaps, lies his forte. But he is also successful in Oriental and romantic subjects; and even in the animal school—a school which French art, until comparatively recently, hardly condescended to notice—he shows an able hand and an observant eye. The group of Dogs in a Forest, engraved elsewhere, is a specimen of his life-like and tasteful pencil in this department.

M. Diaz, also, inspired by a natural ambition, has paid his addresses to the genius of historic art, and in honour of the Universal Exhibition, contributes a work of considerable dimensions, entitled "Les Derniers Larmes." This strange production, which has been much criticised, consists of a group of female figures, larger than life, who, overwhelmed with grief, are, as it were, darting towards the skies. These figures are vigorously painted, somewhat reminding us of Prudhon. The usual brilliancy of the artist's colouring in this case gives place to a monotonous and doubtful tone, as if it had been painted by the light of the moon.

MUSIC.

THE season of the ROYAL OPERA, DRURY LANE we observe, is positively to terminate on Saturday the 29th—this day week. The season has been successful, and deservedly so; for the management of the theatre has been judicious and satisfactory. It has shown that the best operas of the day may be so performed as not only to please a popular audience, but likewise to gratify a critical taste, on such moderate terms of admission as to render them generally accessible; and further, that this may be accomplished by the help of a good working company of English performers without the addition of a single costly exotic. The star-system, so long the ruin of our theatres, has been thrown aside, and the result of the experiment has been such, we trust, as to warrant its continuance. Nor have the English composers been forgotten; some of the best works of Bishop, Barnett, Balfe, and Wallace, have been produced, and have formed a large portion of the attractions of the season. For this judicious course of management we are indebted to Mr. Tully, the able and experienced musical director, to whom also we owe the efficiency of the orchestra and chorus—those most important accessories of the musical stage. Mr. Tully's benefit is announced for Wednesday next, and its success, we trust, will show the sense entertained by the musical public of his talents and exertions. On this occasion a new opera, called "Faust and Marguerite," composed by Mr. Tully, is to be performed for the first time.

THE THEATRES.

The winter theatres, re-opening under their dominant managements, give a new character entirely to our critiques. Shakspearian plays and starring performers, male and female, succeed to the vaudeville, the melodrama, and the exceptional efforts of working companies, doing their best with pieces suited to their average talent, and eschewing high art, both dramatic and histrionic. All this is now changed. Thus, at SADLER'S WELLS, this week, we have to record the performance of "Virginius" on Monday, and that of "The Tempest" on Thursday, the latter having been deferred from the previous Saturday, for which it had been originally underlined. Such revivals, however, present little novelty, except the appearance of Mr. Marston in *Dentatus*, and of Mr. Barrett in *Caliban*; the former being a capital and classic representative of the character, and the latter but a tolerably good substitute for Mr. George Bennett, and lacking the poetic instinct of his predecessor. At the SURREY, too, the legitimate drama is for awhile in the ascendant, and we have to report favourably of the revival of "Henry IV." Mr. Creswick performs *Hotspur* with vigour and brilliancy. Some novelty has been added in the shape of an American comedian, Mr. J. H. M'Vicker, who, in a comedy written on purpose, aims at a kind of coarse Sam Slick humour. The name of the piece is "Sam Patch," a long affair, very tame in its incidents, and extravagantly acted. Last week we reported the appearance of Mr. Anderson at the STRAND. We have now to add that of Mrs. J. W. Wallack, who on Monday made her début in *Ion*. She supported the part with her usual refinement and dignity, infusing the fine poetry of the dialogue with a musical cadence that could not fail of charming even the rudest ear. The house was exceedingly full.

CAMBRIDGE.—Miss Heraud's engagement at this theatre during the last week has, with the reproduction there of the new play "Wife or No Wife," been the occasion of long critical notices in the local newspapers. The *Cambridge Chronicle* remarks on Miss Heraud that "her acting is chaste, expressive, and telling; she never *overdoes* her part, nor leaves anything undone. In every character we have seen her it is palpable that she has a thorough appreciation of it. Her *poses* are graceful, her action natural and unaffected, though sometimes small, faultless; while her face is classical and beaming with intelligence." Of the play, the *Cambridge Chronicle* remarks that it "abounds in incident, and the more pathetic and poetic parts are pleasantly relieved by humorous scenes, which do not outstep the modesty of nature;" adding, that "a young lady who can interpret character and passion as Miss Heraud did, when she pierced the motives of the unprincipled *Pierrepoint*, and tottered from the presence of her husband's father, may fairly aspire to a very high position in the difficult profession she has chosen."

FRENCH CONGRATULATIONS ON THE LATE VICTORY.—As soon as the news of the taking of Sebastopol was confirmed, the members of the Circle of Ste.-Foi in Grande (Gironde) went in a body, preceded by music, and accompanied by the local authorities, to congratulate Mme. Duchayland, the sister of Marshal Pelissier, who lives in that town, and presented her with a splendid nosegay on the occasion. The *Memorial des Pyrénées* states that on the reception of the despatch of Marshal Pelissier, which attributes in a great measure to General Bosquet the honour of the day of the 8th, a number of persons waited on Mdme. Bosquet, the General's mother, who resides at Pau, to compliment her, and congratulate her on her son having, although wounded in the arm, escaped the greater danger. The following despatch was sent by the Minister of War to the Prefect:—"Inform Mdme. Bosquet that her son the General is going well, and that he hopes by the next mail to write to his mother with the hand of his contused arm. This good news, dated the 11th, is sent to me by Marshal Pelissier."

A FRENCH STAMPEDE.—The *Courrier de la Vienne* states that at the last fair at Bellac, an extraordinary panic suddenly took possession of all the oxen, which, with the rapidity of a flash of lightning, overturned the barriers and took to flight in all directions, knocking down every person in their way. The fair, which a few moments before was covered with numerous beasts standing perfectly quiet, suddenly assumed somewhat the appearance of a field of battle, people wounded and unfortunately some killed, lying about in all directions. The number of the former is said to be from sixty to seventy, and of the latter three or four

NOTES OF THE WEEK.

THE copeck-a-liners in St. Petersburg are not half alive. One is eager to read an account of the illuminations and other exulting demonstrations which must have been got up in celebration of the Russian successes at Sebastopol. *Le Nord*, the Russian organ in Belgium, boldly declares that the loss of the place is really an event on which Prince Gortschakoff is to be congratulated; the defence gave him a good deal of trouble, and kept his army in a disadvantageous position; now that he is released from his embarrassment, he can proceed at once to sweep the invaders into the sea that has been waiting for them so long. If this is the St. Petersburg view of the case, and the Czar does not think, with one of the Parisian poets, that "Victory has torn up thy will, O Peter!" he ought, in consistency, to celebrate his gain, and may have done so. Perhaps *Le Nord* will be equally delighted when Russia is compelled to evacuate the Crimea, and will remark that now that the wretched *presqu'île*, which really never formed a part of Holy Russia, has been severed, the remainder of the empire will be all the more vigorous for the excision. Long may such topics of consolation be afforded to the Cossack organs.

The Russians wits and wags are very fiard upon us, very severe indeed. In the absence of Lemprière, I forget the name of the classic individual who wrote such a scorchingly sarcastic poem against his enemies, that as soon as they had read it they went home and hanged themselves. But evidently his triumph is in the minds of the *Charivarites* of St. Petersburg. They are terribly bitter upon the British fleet, which they ridicule as "useful only upon dry land," though really ships are almost as serviceable there as at the bottom of the sea. And they have a picture of "Mrs. Victoria rushing away to the mountains of the north, for fear of hearing bad news." Our caricaturists have not exactly spared the late or the present Czar, and of course all retaliation is fair. But I hope that a picture of "Mrs. Victoria," and her husband and children, as they appeared while a certain bonfire was blazing near Balmoral on the night of Monday the 10th, will be permitted to find its way into Russia. From the re-kindling the old light in the Chersonese, of classic renown, to the firing that Balmoral bonfire, Russian scribes will not find many subjects for jokes in their own annals, unless they fall into the doctrine of the courtiers of Louis XIV. when disasters came thick and fast. These gentlemen asserted that their King's generals were the best in the world, their defeats made such frequent and capital subjects for epigrams.

I trust that while we are triumphing in the Crimea we are not about to be invaded by a domestic foe. But it was always just matter of complaint with our medieval kings that, while they were fighting on the Continent, the Scots took the opportunity of invading England in the most unprincipled manner. "The eagle England being in prey," writes Shakspeare, "there cometh the weazel Scot, and sucks her princely eggs"! Something, I fear, is going to happen, for we have just insulted Scotland in a most shameful manner, and the more so, because a Scotsman has just helped us to our splendid victory. There is a new Post-office in Glasgow, and "a rumour is said to be current (the phraseology is guarded, as beseems a great occasion) that in the Royal arms to be displayed there English symbols are to take the precedence." This is too bad, when the arms should be, as every child knows—Quarterly, four grand quarters, arms should be, as every child knows—Quarterly, four grand quarters, 1st and 4th sol, a lion rampant, Mars, for Scotland within a double tressure of fleurs de lis, Mars: and the crest should be an Imperial crown, surmounted with the lion of Scotland, sejant, crowned imperial. Could not Parliament be called together to meet the emergency, before we have the Glasgow bailies thundering at the gates of York?

Puffing has done its worst in regard to the little united black girls, of whom I have at other times made mention, and I shall not either promote "curiosity," or aid the cause of "humanity," by saying that England has produced its own marvel of the same kind. In Herne, the parent of Herne Bay, is the proof.—Herne, where *Te Deum* was first chanted in the proof.—Herne, where *Te Deum* was first chanted in the Royal arms to be displayed there. English symbols are to take the precedence." This is too bad, when the arms should be, as every child knows—Quarterly, four grand quarters, 1st and 4th sol, a lion rampant, Mars, for Scotland within a double tressure of fleurs de lis, Mars: and the crest should be an Imperial crown, surmounted with the lion of Scotland, sejant, crowned imperial. Could not Parliament be called together to meet the emergency, before we have the Glasgow bailies thundering at the gates of York?

Puffing has done its worst in regard to the little united black girls, of whom I have at other times made mention, and I shall not either promote "curiosity," or aid the cause of "humanity," by saying that England has produced its own marvel of the same kind. In Herne, the parent of Herne Bay, is

CHESS.

TO CORRESPONDENTS.

C W, SETTER.—The last note of all to the game between Messrs Stanley and Staunton, in our January No., would be more explicit thus: "If White take the Rook, then follows 11. K Kt 4th, and Kt to Kt 5th, &c."

E W W.—If the moves and positions could be found by the laws now in use to play correctly at sight, as if no table or board had been made use of, the game would have been considered one of the most extraordinary ever played, and since subjected to rigid analysis, examined critically with the most searching ordeal. How could you possibly overlook the fact, admitted on such overnight as you surmise, that Black could mate with his Queen at K R 6th, the adverse Queen being at Q 8 8th, would capture her?

AMATEUR.—The final result of the games between Signor Dubois and Mr. de Rivière gives, we understand, the majority to the former; but we are ignorant of the number of games played, or to what proportion Signor D. was victor. At any rate, however, the whole story will be set to rights in a few days: we shall very soon be enabled to answer your query definitively.

D T, F R S, Nairn and others.—There is no chance of solution as being printed the ensuing week; as they are sent to Tuesday those received later will be reported the week following.

M de H, Paris.—The collection is, no doubt, interesting. Let us have it, by all means.

DERLYON.—In solution 969, the Black Pawn should read Black K's K B 5th, not 4th.

G. W. HOWARD KNIGHT, C. M. Jr., CHELTENHAM.—Your Problems shall be duly examined and reported on.

R. F. F., H. N.—The solutions we gave of Problem No. 602 is perfectly correct. If Black take the Queen, as you suggest, he must evidently be mated the very next move.

V. H. G.—The copy of Lucena, formerly belonging to Horwitz, was purchased, as you surmise for the British Museum.

M. H.—However wide a space at least equal to it is meant, and appear we think, to Soon when the latter was in his zenith, and set to him La Bourdonnais would give the Pawn and move, and Two. We thank you for calling our attention to the game, which is truly admirable.

M. T. F.—We beg, with all possible courtesy, to decline the pleasure of examining your friend's very ponderous essay on *A New Method of Recording the Moves in Chess Games*, on the first place, because under no conceivable circumstances could space be found for it in our Journal; and secondly, because we think there is anything beyond a dogged, fanciful, and fanatical enthusiasm which could induce any one to undertake the task of "Dundas's Letters," of which we have an especial horror, in the shape of an article on Chess Notation.

SOLUTIONS OF PROBLEM No. 603, by Ludovich, M. P., Sir T. M., Rev. H. L., J. T. B., J. T. C., Blackheath, G. W., M. G., P. J., Glasgow, F. de L., Hyde-park, P. P. N., Charlemagne, are correct.

SOLUTION OF PROBLEM No. 604, by Ludovich, Mus. Nosso, Publicolo, S. T. V., Calcrag-Rurus, Excelsior, Mingle, Phiz, Delta, Rex Napoleon, Nalakeheff, are correct.

SOLUTION OF ENIGMAS, by Derwent, Sigma, Onyx, D. D., J. B., Dr. J., Gregory, G. M. W., Omicron (F. R.), Excelsior, are correct. All others are wrong

SOLUTION OF PROBLEM No. 604.

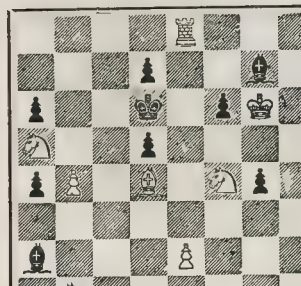
WHITE.	BLACK.	WHITE.	BLACK
1. Q to K Kt 3rd (ch)	K to Q 4th	3. Q to her 6th (ch)	Q takes Q
2. R to Q Kt 6th	K takes P (a)	4 R mates	
(a) 2.	Q to K R 6th	4. Q Mates.	
3. Kt takes Q	Anything		

There are many other variations for Black, but none which will delay the mate.

PROBLEM No. 605.

By HERR C. BAYER, of Vienna.

BLACK.



WHITE.

White to play, and mate in five moves.

CHESS IN THE METROPOLIS.

The following well-fought game was played some years ago between Mr TAUNTON and Mr. STANLEY, the Chess Champion of the United States—the former giving the odds of the Pawn and two moves.

(Remove White's K B Pawn from the board.)

BLACK (Mr. Stanley).	WHITE (Mr. Staunton).	BLACK (Mr. Stanley).	WHITE (Mr. Staunton).
1 P to K 4th		27. B to Q B 4th (e)	K to Q 3rd
2 P to Q 4th	P to K 3rd	28. P to K B 3rd	Kt to Q B 3rd
3. K to Q 2nd	P to Q B 4th	29. P to K Kt 4th	Kt to K 3rd
4. P to K 5th	P to K Kt 3rd	30. It takes B	K takes B
5. Q to K Kt 4th (a)	K Kt to K 2nd	31. P to K B 4th	Kt to Q 3rd
6. K Kt to K B 3rd	Q B P takes P	32. P takes P (ch)	Kt takes P
7. P to K 4th	Q Kt to Q R 3rd	33. R to Q sq	B to Q B sq (ch)
8. P to K R 5th	Q Kt takes K P	34. K to Kt 2nd	Kt to Q B 3rd
9. Q takes Q P (b)	B to K Kt 2nd	35. Kt to Q Kt 6th	R to K B sq
10. Kt takes Kt	Q to Q R 4th (ch)	36. Kt to Q B 4th (ch)	K to Q R 4th
11. B to Q 2nd	Q takes Kt (ch)	37. P to Q R 3rd	K to Q 4th
12. Q takes Q	B takes Q	38. R to Q 3rd	R to K B 5th
13. R P takes P	P takes P	39. B to K Kt 2nd	P to K Kt 4th
14. R takes R (ch)	B takes R	40. Kt to Q 2nd	Kt to K 4th
15. Q B to Q B 3rd	B takes B (ch)	41. P to Q R 4th	Kt to Q 6th (ch)
16. Kt takes B	P to Q 4th	42. K to Q B 3rd	Kt to K 8th (f)
17. Kt to Q Kt 5th	Kt to Q 2nd	43. It to Kt sq	Kt to Q 7th (ch)
18. P to Q B 4th	P to Q B 3rd	44. K to Kt 2nd	Kt to K 6th
19. Kt to Q B 3rd	P to Q 5th	45. P to Q R 5th	R to K R 7th
20. Kt to Q B 4th	K to Q B 2nd	46. K to Q B sq	K to Q B 3rd
21. Castles	P to Q Kt 4th	47. P to Q Kt 4th	K to Q Kt 4th
22 P takes P	P takes P (c)	48. Kt to K 4th	R to Q B 7th (ch)
23. R takes Q Kt P	P to K 4th	49. K to Kt sq	K takes Q Kt P
24. P to K B 3rd	B to K Kt 4th	50. P to K 6th	K to Q B 7th
25. R to K sq	R to Q B sq	51. Kt takes P	R to Kt 7th (ch)
26. B to Q B 6th (d)	R to Q R sq	52. K to B sq	R to Q K 7th

And Black shortly after surrendered

(a) Good, but not so good as P to K R 4th.

(b) This classic and the defence in this opening exhibit many novel and brilliant variations, and well deserve consideration.

(c) White gave up a Pawn here, with the intention of afterwards playing his Rook to Q B 4th, to win either the Bishop or Knight. Why this plan of action was abandoned the following moves will explain:—

23	R to Q R 4th	25. P to Q Kt 4th	R to K B 4th
24 B to K R 6th	R to Q sq	26. P to K Kt 4th	

And the Bishop escapes.

(d) If he had taken the K Pawn with his Rook, White would have lost a piece.

(e) Had he taken the K Pawn with his Rook, White would have replied with Kt to Q B 3rd, winning the exchange at least.

(f) A termination, though far less interesting than that in the game of Sept 8, is very pleasing and instructive.

CONSULTATION GAME

Between M. ST. AMANT, on the one side, against MM. DEVINEH, WUILLEMENT, RENOUT, and DELECTORE, allied.

BLACK (The Coalition).	WHITE (M. St. Amant).	BLACK. (The Coalition).	WHITE (M. St. Amant).
1 P to K 4th	P to K 4th	21. P to Q B 4th	P to Q 4th (k)
2 P to K B 4th (a)	P takes P	22. K Kt to Q 4th (l)	P takes Q B P
3 K B to Q B 4th	Q Kt to Q B 3rd	(m)	
4 Kt to K B 3rd	K Kt to K B 3rd	23. B takes Q B P	K Kt to K 4th
5 Castles	K B to K Kt 5th (b)	24. B P takes Kt P (n)	Q Kt takes P
6 Kt takes Q P (c)	Castles	(o)	
7 Q Kt to Q B 3rd	K B to Q B 4th	25. B to Q Kt 5th (o)	Kt takes Q
8 Q B to Q Kt 3rd	P to Q R 4th	26. B takes Q	K R takes B
9. K B to Q Kt 3rd	K Kt to Kt 5th	27. K R to K B 3rd	Kt to K 4th (p)
10 Q B to K B 4th	P to Q 3rd	28. K to K B 4th	Q R to Q sq (q)
11 P to K Kt 3rd	K Kt to K B 3rd	29. K to K B 5th	R to Q 6th
12 Q B to K 3rd	P to Q B 3rd	30. B takes B (r)	Kt takes B
13 P to K B 4th	Q Kt to K Kt 3rd	31. B takes Q K P	Q R to Q 7th
14 Q to Q 3rd (d)	Q R to K sq	32. B takes Q B P	Kt takes P (ch)
15 P to Q B 4th	K Kt to K R 4th	33. K to B sq	Q R takes P
16 Q Kt to K 2nd	Q to K sq	34. K Kt takes K Kt P	K R to Q B sq
		35. K Kt to K B 5th	K R to Q B 7th
17. P to K Kt 4th (f)	K Kt to K B 3rd	36. K Kt to K R 6th	K to B sq
18 Q Kt to K Kt 3rd	P to Q Kt 3rd (g)	(ch)	
19. P to K Kt 5th	K Kt to Q 2nd (h)	37. K Kt to Kt 4th	P to K 5th
20. K Kt takes Q B P (i)	B to Q R 3rd	38. R to Q sq	B to Q 6th (s)

And, after two or three more moves, Black abandoned the game (t).

NOTES BY M. ST. AMANT.

a) This move, though classed among Irregular Openings, is a very good opening, and a premature variation of the Scotch Gambit. It has, however, been always underrated by the high school.

(*b*) Very badly played, though the adversaries did not know how to profit by it.

(*c*) They should have advanced the King's Pawn. The Kt would have been compelled to retreat, because the Queen's Pawn could not have been advantageously thrown forward on the Bishop.

(*d*) We should have preferred playing the Queen to K B 3rd. Now that the K B's Pawn of Black is advanced, the attack must be made boldly by the Pawns on the King's side.

(*e*) A good move, which totally prevents the adversary from developing their forces on this wing.

(*f*) Boldly played. But it would have been more efficacious if the Queen had been at K B 3rd.

(*g*) Played with the intention of placing the Bishop at Q R 3rd; having al in view the offering of the Q B Pawn to be taken—the capture of which, as we shall see, being full of danger.

(*h*) As the Kt has no other square than this, where he intercepts the defence of the Q B Pawn, Black may have thought that they forced the Pawn, and that it was a fault not to be seen in their position. They did not suppose it was in reality a calculation so dangerous for themselves.

(*i*) This apparent success will cost them dear.

(*k*) This extraordinary move decides the game. It is played with the hand of a master, and profoundly combined. This little Pawn, unsupported, advances in pursuit of three Pieces or Pawns, and none of them dare take it.

(*l*) This seems the best move they have.

(*m*) All these moves are forced.

(*n*) White reaps the fruit of his brilliant combination. He is now about to regain his Piece with all the advantage of attack and a fine position.

(*o*) We see nothing better for them to play.

(*p*) White might have taken the Kt Pawn without injuring his game, which is a very fine one. He would, perhaps, have done well to assure himself at once of this material advantage.

(*q*) Feeble.

(*r*) Black a little demoralised, make moves of desperation

(*s*) This Bishop cannot be taken, as mate would immediately follow

(*t*) This game, without having the merit of a remarkable for the fine combination in the middle which gives the victory to White in a way most unexpected.

CHESS ENIGMAS.

No. 942.—By W. C. C.

White: K at K 3rd, Q at Q Kt 2nd, R at K 8th, Bs at K R 5th and Q R sq, Pa at K R 4th, Q 6th, and Q B 5th.

Black: K at K B 3rd, Bs at K R 2nd and K 2nd, B at K Kt 2nd, Kt at Q R 6th; Ps at K R 3rd, K B 2nd, Q 2nd and 7th, and Q Kt 4th.

White to play, and mate in four moves.

No. 943.—By L'ANONYME DE LILLY

White: K at Q B 2nd, Q at Q Kt 2nd, Kt at K 2nd, Ps at K B 2nd and 4th.

Black: K at K Kt 5th, Kt at Q 8 sq, and Q R sq, Bat Q R 4th, Kt at Q Kt 6th, Ps at K B 4th, K 5th, Q 7th, Q B 4th, and Q R 5th.

White to play, and make a drawn game.

OBITUARY OF EMINENT PERSONS.

GENERAL SIR GEORGE THOMAS NAPIER, K.C.B.

THIS gallant and worthy actor of the house of Napier, so famous in our warlike annals, was the second son of the Hon. Charles Napier by his second wife, the Lady Sarah, fourth daughter of Charles, second Duke of Richmond. He was born in Whitehall, 10th June, 1784; and, very early in life, entered the British Army as a Cornet of Dragoons, and soon after exchanged into the Line. From that time his career was one of continual activity and usefulness. He served in the Peninsula in the 52nd Light Infantry. He was Aide-de-Camp to Sir John Moore when that lamented General fell at Corunna. Besides that campaign, Napier was at Talavera, Busaco, where he was wounded, and in many of the Light Division encounters up to the siege of Ciudad Rodrigo, where he was wounded and obliged to come home. He returned to the Peninsula, however, before the conclusion of the war, and shared in the glories of Orthes and Toulouse; at the latter he commanded the 71st Regiment. After the peace he went into the Guards, and then into a regiment of the Line, and subsequently retiring, remained on half-pay, until, as a Major-General, he was appointed Governor of the Cape of Good Hope, 1837. In 1838, he was created a K.C.B. Sir George Napier, as Military Governor of the Cape, displayed great energy and promptness in preparing and sending a successful expedition to relieve Captain Smith, who was besieged by the Boers at Port Natal, and on the result of being rendered, after an obstinate defence. As a civil governor he enforced the abolition of slavery, introduced and nourished with surprising success a new system of district and other schools, made municipal government general, formed a road commission, and commenced several great public works for opening the country to trade and commerce; improved the management of the revenue, paid off the Colonial debt, and abolished internal taxes, relying solely on duties; and, more than all this, he kept the Colony free from Kafir wars for nearly seven years. On his return from the Cape he passed most of his time on the Continent living chiefly at Nice; and being there in 1849, he was, by the late King of Sardinia, Charles Albert, offered the command of the Sardinian army, but refused it, not liking to do battle except for his own country. When the premature armistice followed the battle of Chillianwallah occurred, George Napier was offered the command in India, but refused it, thinking, in common with the people of England, that the place of right belonged to his brother, Sir Charles. When the Russian war broke out he tendered his services as a lieutenant-general, but they were declined, and he thenceforward continued in private life, till his death, which, to the sincere grief of all who knew him, took place at Geneva on the 15th instant. Sir George was twice married: first, on the 22nd October, 1813, to Margaret, daughter of John Craig, Esq., which lady died in 1819. He married, secondly, in 1839, Frances Dorothea, eldest daughter of R. W. Blencowe, Esq., and widow of William Peers Williams Freeman, Esq., of Fowley Court, Oxon. By Sir George had issue three sons, all of rank and distinction in the British Army, and two daughters. Of these, the survivors are Lieutenant-Colonel G. T. Conolly Napier, C.B., Lieutenant-Colonel W. J. Craig Napier, and Mrs. Bunbury. The frank, high-minded, and honourable character, the warm-hearted and benevolent disposition of Sir George Napier secured for him through his well-spent life the earnest esteem and affection of his family and of hosts of friends, and made him everywhere popular with all.

DR. GILLY.

DR. GILLY, one of the Canons of Durham Cathedral, and Vicar of Norham-on-the-Tweed, died at his residence in the city of Durham last week, in the 67th year of his age. Possessed of liberal and enlightened views, which deeply interested him by all classes, more especially by the peasantry of North Northumberland. Dr. Gilly was the first person who sought to ameliorate the condition of the agricultural labourers in North Northumberland, by calling the attention of Parliament and the general public to the then miserable state of the cottage dwellings generally found upon the estates in this district; and his benevolent suggestions have since been carried out with much spirit by the Duke of Northumberland and other large landholders. Dr. Gilly was also favourably known as the biographer of Felix Neff, the apostolic pastor of the French Vaudois, and as a writer of several works on the Waldenses, a people to whom he was zealously attached, and to whose claims on the sympathy of the English Protestants he was the first to draw attention. He was the means of raising a handsome subscription on their behalf, by which a college and library at La Tour, in Piedmont, was founded and maintained. Up to the time of his last illness, Dr. Gilly was engaged raising money for the extension of education among the community.

CAPTAIN CHARLES ACTON BROKE, ROYAL ENGINEERS

THIS officer was the third and youngest son of the late Admiral Sir Philip Broke, Bart., of Broke-hall, Suffolk, who fought the famous action, when in command of H.M. frigate *Shannon*, against the American frigate *Chesapeake*, in 1812. Captain Broke entered the Royal Engineers in 1836; and, after serving in various parts of the world, was quartered for many years in the Mediterranean, and latterly in the island of Zante. From one end of that sea to the other he was well known to all her Majesty's ships, merchantmen, and yachts, as "Signal Broke;" the name, inheriting from his father an active love of the sea, and living at the highest point of the citadel of Zante, at an elevation of 700 feet above the sea, he challenged all vessels passing the island from his signal posts, and often extracted from them interesting and important news for the use of the garrison. Nor less was he distinguished for his unbounded hospitality to the residents and visitors, and for his charity to the poor, of the island. During the last three winters, when, owing to the continuous failure of the currant crops, the destitution in Zante became awfully great, Captain Broke supported forty or fifty starving families residing in the town, or in the village under the walls of the Castle. He was obliged to return home in July last on account of ill-health: he lingered in Ayrshire for a few weeks, and died of decline on the 7th inst., bitterly regretted. He married, in 1849, Anna Maria, third daughter of the late John Hamilton, Esq., of Sundrum, Ayrshire, by whom he has left issue one son and three daughters.

FORCED WIT IN RUSSIA.—The *Augsburg Gazette* has the following from St. Petersburg, under date of August 28:—"The fine weather is coming to a close, and all the efforts of musicians and pyrotechnists can scarcely induce the gaiety public of this city to visit Vauxhall and the Villa Borghese. Instead of these out-door amusements, the autumn has produced a plant in the field of political journalism from which we will pluck a few buds as specimens of Muscovite humour. It is a satire, having for its title 'Extracts from Journals, published in the year 1851, in the Aleutian Islands, composed by Tatarinoff.' In it the English and French are made sport of. Thus we find under the head of 'Trade Notices,' the following:—'To be sold, 15,000 Sardinians, dressed up in French taste, with English spice, after the Turkish mode.' In the toy-shop of Charley Napier are to be disposed of 'real English floating batteries—good for use on dry land.' As experienced grave-digger, of whom no complaint had been made in the course of a thirty years' practice, 'offers his services to the Allied armies on the most reasonable terms.' The other extracts are in a similar strain. The novelty of such a treatment of political matters here affords great merriment to the public."

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

The Queen has presented the Rev. Dr. Hale with a valuable diamond ring. This clergyman had the honour of twice preaching before her Majesty and the Royal Family at St. Cloud, during their late visit to France.

The King of Prussia was to arrive at Nordhausen on the 17th, and to be present at the manœuvres of troops in the province. He was then to proceed to Frankfort-on-the-Maine, and afterwards to Stolhenfels. At the beginning of October, his Majesty is to go to Cologne to lay the first stone of the bridge over the Rhine, and will finally return to Berlin by way of Westphalia.

The Emperor and the Empress of Austria are enjoying the first few weeks of autumn in their summer residence at Ischl. Prior to their arrival at that place, the Emperor spent three days hunting chamois at the beautiful seat of the Archduke John. The Imperial family will return from Ischl to Schonbrunn at the beginning of next month.

The King of the Netherlands has conferred the honour of Knighthood (order of the Netherlands Lion) on the Rev. Dr. Gehle, minister of the Dutch Reformed Church, Austin-friars, and Chaplain to the King of the Netherlands.

The King of the Belgians has offered a prize of 3000 francs to the author of the best history of the reign of the Archduke Albert and Isabella.

It is now stated that the Emperor Alexander has given up the idea of visiting Moscow and Warsaw.

The Duchess of Orleans, accompanied by the Count de Paris and the Duke de Chartres, arrived at Frankfort on the 11th.

Prince Napoleon arrived in Paris on Monday, on his return from the excursion to the coast of England.

The King of Sweden has returned to Stockholm from his visit to Norway. It had been reported that the King was to have an interview with the King of Denmark in the south of Sweden, but none took place, his Danish Majesty having simply made an excursion *incognito* in Sweden.

The Prince of Prussia has completely recovered from his indisposition, and has left Cologne to join his family.

The Grand Duke Michael arrived at Revel on the 24th ult.

The departure of the King of Sardinia for Paris is not to take place before the beginning of October.

The Archduke Charles William, the new Governor of the Tyrol, will make his entry into Inspruck on the 26th inst.

Last week two Russian Generals passed through Rome *en route* for Naples, and found time to visit the Ilons, and to spend money in the studios also—the war contributions, apparently, not having as yet exhausted their finances.

The Pacha of Egypt, accompanied by the French Consul, left Alexandria on the 9th of September, on board a war steamer, for Marseilles, *en route* to Paris and London.

Count Vilain XIV., the well-known Belgian diplomatist, has arrived at Turn, in order to deliver, in the name of his Sovereign, the insigma of the Grand Cordon of the Order of Leopold to King Victor Emmanuel and to the Prince de Carignan.

General Zanini, formerly Minister of War during the short-lived constitutional *régime* in Austria, has died of cholera in Vienna.

The Duke di Bivona, who was lately insulted by the Neapolitan police, has arrived in Paris with his family.

Baron de Bourqueney is expected in Paris from Vienna for a few days.

The Duchess of Genoa has sent 1000 f. to the committee for the Piedmontese army in the Crimea.

The burgesses of Portsmouth have called a meeting for the purpose of presenting a piece of plate to Sir Charles Napier, late Commander in Chief of the Baltic fleet. The committee have confined the subscription to one shilling for each person.

The great memorial in front of the Ducal castle at Brunswick is to cost 20,000 thalers. Rietschel of Dresden and Howald of Brunswick are engaged in the work, and expect to complete it in three years.

M. Meyerbeer, who has been rather seriously ill since his return to Paris, has now quite recovered. He intends leaving Paris towards the end of the present month.

The Right Rev. W. Vaughan, D.D., was elevated to the titular see of Plymouth, on Monday morning, at the church of the Holy Apostles, Clifton. Cardinal Wiseman officiated at the consecration.

Mdlle. Rachel has been most enthusiastically received by crowded audiences in New York.

Mr. Charles Braham has been engaged at the Italian Opera, Lisbon, as first tenor.

The Society of German Historians and Antiquaries will meet this month at Ulm.

A letter from Tripoli, dated the 29th of August, says:—"All Europe will be delighted to hear of the safe arrival from Timbuctoo of Dr. Barth. He has passed five years in accomplishing this dangerous journey."

A colossal statue of the celebrated archeologist Count Carlo Castiglione has been inaugurated in the court of the Palazzo Beers, at Milan.

The pension granted to Miss Browne, the blind poetess, by the Queen, at the instance of Lady Peel, is not £50 a year, as has been reported—it is only £40.

The Paris Exhibition will remain open till the 25th November.

The Crystal Palace in New York has been rented to the American Institute, who will hold their next annual Fair in it.

The Exhibition at Norwich has closed. Thirty pictures have been sold, the joint price amounting to £235. The prizes at the Art-Union amounted to £26.

An intense sensation was produced in Baden, that metropolis of German gaming-houses at the news of the fall of Sebastopol. The Russian gamblers there had wagered large odds against the capture of the Malakoff.

The Cologne Choral Society, consisting of seventy members, whose concerts were so eminently successful in London last year, are about to give twelve concerts in Paris.

M. Mario and Mdme. Grisi are expected in Paris in the course of the ensuing week. Mdme. Viardot is also immediately expected.

The Brighton Society of Arts has succeeded in forming a gallery of the works of modern artists, which was opened for exhibition on Monday.

The Municipal Council of Orleans, on the proposition of the Mayor of the place, has voted unanimously the creation of an alimentary society to give food to the poor at cost price.

A railway between Bologne and Calais is in contemplation, and all the preliminary surveys have been completed.

The thirty-fifth Exhibition of Works of Art at the Royal Manchester Institution was opened last week. The collection contains 477 oil paintings, 150 water-colour drawings, and 23 pieces of sculpture.

Berlin is said to be one large hospital for every shade and variety of gastric affection, from the mildest form of diarrhœa up to the most virulent cholera.

In consequence of the great improvement which has taken place in the aspect of the iron trade, the ironmasters of South Wales have determined to raise the wages of their workmen 10 per cent.

The subscriptions in New York for the relief of the yellow fever sufferers in Virginia amount to upwards of 62,000 dollars.

The Danish Landsthing has adopted by a great majority, after a first reading, the proposition relative to the carrying out the Constitution of August 28.

The Lord Mayor of London was entertained at a splendid luncheon by the Corporation of the borough of Congleton on Friday week, and an address was presented at a special meeting of the Town-council.

The New York Commissioners of Emigration have resolved to send back to Europe such emigrant paupers as will probably become a charge upon the country.

The number of visitors to Kensington Gardens on Sunday last was 48,018. The band played from four till six.

The *Scientific American* expresses the opinion that railroad trains will yet be run 100 miles an hour.

A waterspout of a destructive character occurred near Massiling, in Germany, on the 5th instant. Bridges, mills, and houses were destroyed. From seventy to eighty persons are missing, and forty persons have already been found drowned.

The nutmeg has been found growing wild, it is said, on the banks of the Corumnee river, California. The trees grow to a considerable height, and bushels may be gathered.

The Count de Nieuwerkerke, Director of the French Imperia Museums, has purchased at Laon (Aisne) a cross of an altar of the twelfth century, of which the sisters of St. Vincent de Paul were the possessors. The sum given for it was 5000 francs, and this chef-d'œuvre will be placed in the Louvre.

THE ILLUSTRATED LONDON NEWS

No. 763.—VOL. XXVII.] SATURDAY, SEPTEMBER 29, 1855. [WITH A SUPPLEMENT, FIVEPENCE.

MORE WORK IN THE BLACK SEA.

It will be seen from the letter of our active and intelligent Correspondent in the Crimea, who was the first to communicate to the British public a detailed account of the glorious triumph of the 8th of September, that he considers the great question of preponderance in the Black Sea to have been finally and irrevocably decided by the capture of the Malakoff, the evacuation of Sebastopol, and the destruction of the Russian fleet. This opinion is a very general one, in Great Britain, in France, and throughout the Continent of Europe; yet it does not seem as if it were one in which the Emperor of Russia participated. Neither do the well-informed diplomatists of Vienna consider the Third Point, which was the stumbling-block of the Conferences, to have been cleared from the way by the destruction of the fleet in the harbour of Sebastopol, or the work of the Allies to be so near completion, as, in the first outburst of enthusiasm, it was proclaimed to be. And while we share to the fullest extent, the confident opinion of the European public, that the naval power of Russia in the Black Sea is virtually destroyed by the splendid victory of the 8th instant—we are no less thoroughly convinced that not one, but many blows have yet to be struck, before the Great Boa Constrictor be "finally and irrevocably disposed of," and before the Allies can say to themselves with a safe conscience that their work is done.

The first object to be accomplished, if Prince Gortschakoff do not surrender, will be the destruction or capture of the northern forts of Sebastopol, and the defeat of the Russian army, now in strong position on the Mackenzie ridge and the heights of the Tchernaya. Prince Gortschakoff will show himself to be a man of real and high military genius if, without surrendering, he can manage to rescue his forces in the Crimea from the toils and snares that surround him. In every attack which he has ventured to make or receive he has been defeated. Alma, Inkerman, Tchernaya, Sebastopol, all tell the same tale;—victory and glory for the Allies;—defeat and humiliation for the Russians. In the next battle, come when it will and its hour and place are in the dictation of Generals Pelissier and Simpson—the result will be the same. The reward of the Allies will be possession of the entire peninsula of the Crimea. No well-informed person out of Russia—not even Prince Gortschakoff—can seriously doubt this consummation; and we believe that there are very few within its boundaries who know anything of what is passing in the world's arena who are not of the same opinion. The Czar Alexander, the Grand Duke Constantine, Count Nesselrode, and all who surround the Imperial person and contribute by their advice to govern the actions and the policy of the Russian Government, must know that the next great victory of the Allies will seal the doom of the Crimea. They must also know enough, by this time, of the resources, the courage, and the genius of the Powers opposed to them, to indulge but faint hopes of being able to realise the once proud boast of Menschikoff, of driving them ignominiously into the sea. They must know, in fact, that, as regards the Crimea, the great game is nearly played out, and that it is utterly impossible that Russia can win it, except, indeed, on the supposition that the Allied Generals should commit some huge and fatuous blunder, of which Prince Gortschakoff might have sense and means to take advantage. But no one will do the Allied commanders so gratuitous and malicious an injustice. If their game to impatient observers in Great Britain and France have appeared slow, events have proved that it was sure. Every move was well calculated, every slight reverse was turned to account, and every victory was made the prelude of a triumph still greater. So it will continue to be, till the whole Crimea is conquered, and Prince Gortschakoff's army is either annihilated or forced to capitulate.

But will all this settle the Third Point? and will not the preponderance of Russia in the Black Sea, destroyed in Sebastopol, be revived beyond the limits of the Crimea? It has not escaped the knowledge of the Western Powers that Sebastopol was but one of the Russian war-harbours in the Euxine—the most formidable to the independence and security of the Ottoman Empire, because the nearest to the Bosphorus—but by no means the only port and citadel which the Czars might use for purposes of aggression; to shelter new armaments; to inflict, when opportunity offered, new surprises upon Turkey and on Europe; and new murders and massacres, as treacherous and cowardly as that of Sinope. At no great distance eastward from Odessa—which, had our Ministry for the time had their hearts in their work, they would have ordered to be levelled with the ground—exist the towns of Kherson and Nicolaieff; the one upon the Dnieper, the other upon the Bug, and both having easy communication with the Black Sea. When the Third Point was under discussion in Vienna, it was represented to the Ministers of Great Britain and France that it would be inadvisable to consent too hastily to any proposition or limiting the naval power of Russia to the number of ships of war then actually afloat in the Black Sea; inasmuch as the vessels then confined in the harbour of Sebastopol, and supposed to be the whole naval force of Russia, might turn out to be only a portion of her armaments, and that a fleet as large, or still larger, might be concealed in the harbours of Kherson or Nicolaieff—two places of which the Western Powers knew absolutely nothing beyond the mere fact of their existence as shown

RUSSIAN FRIGATE ON FIRE IN SEBASTOPOL HARBOUR. SKETCHED BY O. W. BARRY. (SEE PAGE 372.)

by the map. It was also represented to them as a hint which might be of service, that in Russian official documents there appeared only two fortified places, which were marked of the first rank and strength, or in commercial and maritime phraseology, as A 1; and that these were Cronstadt and Kherson; and that Sebastopol, strong as it was known to be, ranked as a fortified place and harbour of the second class only. We now learn that almost immediately after receiving intelligence of the destruction of his fleet in the harbour of Sebastopol, the Czar, who had previously resolved to visit Warsaw, altered his plans, and went to Moscow, and dispatched his brother, the Grand Duke Constantine, Lord High Admiral of the Russian Navy, to Nicolaieff. It is owing to the energy of this Prince that Cronstadt has been so greatly strengthened; and that it has become, if not actually impregnable, the most formidable fortress in the world. It is thus evident that Nicolaieff is considered in danger. The able Correspondent of the *Times* at Vienna states that it is not doubted in that capital "that a considerable part of the Russian fleet is safe and sound in the Bug, which is extremely broad and without islands at its embouchure. The Ingul falls into the Bug at Nicolaieff, and the last-mentioned river is so deep that men-of-war can be moored close to the Admiralty." The same writer also states that "40,000 Russian militiamen are assembled in the neighbourhood of Nicolaieff and Kherson, and that an Odessa correspondent observes that the Russian Government showed its wisdom when, twenty-seven years ago, it made Nicolaieff the *principal dépôt and dockyard for the Russian fleet*."

Russia will not, we may be sure, relinquish her naval supremacy in the Euxine—the dearest dream of her ambition for more than a century—without a far more desperate struggle than that which approaches its close in the Crimea. It may, therefore, be considered certain that our magnificent fleet in the Euxine has plenty of work before it. The Czar will not, he says, sue for peace upon a single defeat. It is the business of the Allies to try what a second will accomplish; and if that should prove inoperative in bringing him to the peaceful frame of mind which would give peace to Europe, to try the effect of a third. Had Odessa not been spared, it is probable that the task to be accomplished at Nicolaieff and Kherson would have been easier of accomplishment than it is now likely to be; but, easy or difficult, we are confident that the resources of the Allies are equal to undertake it. If they do undertake it, we are equally confident that they will add a new victory to their arms, and a new name to their banners. The gallant French—and we do not grudge it to them—have carried off all, or nearly all, the glory of the day at Sebastopol. Let the English outshine that glory, or at least equal it before Nicolaieff and Kherson, and the naval power of Russia will receive its *coup de grâce*. If the Czar will not yield upon pure compulsion, the only means left to the Allies is to try whether he will yield from pure exhaustion. They have, and can have, no wish to carry on the war for purposes of vengeance. What they require is, security in the first place, and possibly indemnification in the second. If the taking of Sebastopol will not work to peaceful ends, the taking of Nicolaieff and Kherson must be made to help it. The game of courtesy and forbearance has been played too long, and the Western Powers cannot consent to the same terms of peace at the present moment which they might have accepted in April. For these, and a thousand other reasons, we anticipate not only issue of battle between the opposing forces in the field, in which Englishmen will expect their generals to wipe off the discredit which befel our arms at the Redan, but a naval attack on the principal Black Sea dépôt of the enemy.

THE MALAKOFF AND REDAN COMPARED.—Mainly owing to the fire of our English batteries during the three previous days of the Lornardment—for the Mamelon had remained all but silent throughout that period—the French on the forenoon of the 8th found every gun but one in the Malakoff silenced. Their advanced sap, too, had brought them to within some forty yards of their point of attack, and during their rapid dash in column, over this narrow space, they were exposed only to the grape-shot of that one gun. Once on the face of the parapet, they were safe from a second discharge, and had been only to contend against the faint and brief resistance of a body of trench guards, who had already been taken by surprise. A rapid and well-sustained fire of musketry soon expelled these, and the reserves who were hurried up by the enemy had equally little chance against the swarming columns of our allies, whom good generalship kept pouring in to the support of the first storming as fast as human legs could scramble up the broad parapet, and jump inside the redoubt. Such a contest was merely a question of numbers; and, having made excellent arrangements to secure their superiority in this respect, the French commanders had no cause to doubt the result. Widely different, however, was the case on our side. Differently constructed—as I shall presently describe—and stretching over a long line, in hourly points exposed to so close and direct a fire as that which bore upon the Malakoff, the Redan had replied to our batteries with considerable vigour throughout the entire bombardment: and at noon of the 8th still commanded above fifty embrasures, or unmasked guns. Instead, too, of forty yards of open space, the nearest point from our most advanced parallel to the ditch of the Redan measured 220, and this, also, every where exposed to the fire of twelve or fourteen gun-embrasures. I have several times crossed this fatal spot since the capture of the place, and each time with increased wonder how a single man of our whole stormers could have escaped the tornado of grape and canister which such an armament could and did, send forth. Scarcely a foot of surface is there which a gun did not sweep; and when I add that the enemy had time to fire three rounds from every piece, from the first issue of our men from the shelter of our own parapet, till their arrival at the broad ditch where so many have since found a grave, I am disposed to think that most of your readers will share in my surprise.—*Daily News Correspondent.*

THE FRENCH REPULSE AT THE CENTRAL BASTION.—The Piedmontese were formed for the assault on the Flagstaff Battery, when some one amongst the French in the Central Bastion—one of those unhappy individuals upon whom the god Pan so often seizes at moments when great destinies or great interests are at stake, and makes him the instrument of ruin and disorder—shouted out, "Nous sommes tournés!" In an instant all was confusion: the whole force wheeled about and bolted boldly, flinging themselves across the parapet, vastly quicker than on the previous occasion, and ran back for dear life towards the trenches, under showers of grape from the flanking batteries in the bastion, and from the lunette on the left. On seeing this General de Salles became quite wild with rage, rushed out, and threw himself in the path of the fugitives, crying "Canaille, vous allez déshonorer la France! arrêtez! arrêtez." and, addressing himself to the officers, "Messieurs, est ce que vous laissez fuir vos soldats comme cela? En avant! en avant! Vive l'Empereur!" He seized hold of some of the men, whirled them to the right about, and inflicted upon them some of that compendious vituperation of which only the French language is capable. There was one little corporal—heaven only knows how he contrived to trot under his musket, evidently not long in the ranks, and fitter to be by his mother's side than amidst the horrors of a bloody fight, who, in an evil hour for him, attracted the General's notice by his desperate efforts to reach some place of shelter. The latter rushed towards him, tore one of his cotton epaulets off his shoulder, and shouted in his ear, "Comment! vous n'êtes pas Français, drôle!" He repeated the question in the original, and had not had time to get a French blood roused in him to repel it; his face flushed up, and constantly repeating, "Je ne suis pas Français!" ran back, mounted the top parapet, whirled his musket about his head as a fury of excitement, and at last fell into the ditch riddled with balls. The result of General de Salles' exertions, however, were favourable; the column was rallied again, and went forward once more; but this time there was no longer the same élan. They bore up for awhile gallantly, under such a storm of grape as many who were there, and have seen many a bloody day, declared they never saw equalled. It they could not win, the poor fellows—like our own at the Redan—never at least how to fly, and died manfully, bravely, by the hundred. At last they were all withdrawn to the trenches, and the general sent for instructions to General Pelissier as to whether he should renew the attack or not. He received a reply in the negative. The Malakoff was conceived to be the key of the whole position, and it remained to be seen whether the Russians were of the same opinion, and would abandon the other forts.—*Letter from the Daily News Correspondent.*

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday.

THE report of the new attack on the person of the Emperor by a Cent-Garde, has, of course, been the great excitement of the moment. Innumerable details were given of the event; some statements declared that a pistol was the instrument employed, others a poinard, by which his Majesty had been severely wounded in the arm. It appears that an agent of police was one of the first, if not the first, of the persons heard to mention the subject. The report has, however, been positively denied by the official sources; *non pariens plus*; and let us hope that the alarm and excitement to which it has given rise may have led to no more serious results.

The new document relative to the Imperial family attracts considerable attention. Various high functions and important places are to be bestowed on the new Princes. Imperial Majesty considering that to none can be better confided the care of the present dynasty than to those who are personally interested in its preservation. It is believed that in carrying out of the proposed measure will not be long delayed.

So much difficulty has been found in accomplishing the desire of the Prince President of the Exhibition, that the artists, fabricators, designers, and workmen in general, employed in the execution of the various products displayed, should be made known and recompensed, as well as the exhibitors, who wish, for the most part, to monopolise both credit and reward, that it is reported, and on good authority, that the Prince Napoleon contemplates announcing that no recompense will be given to those exhibitors who neglect or refuse to make known the names of the artists or *ouvriers* to whose skill are owing the works by them displayed.

The Exposition, instead of closing, as was originally intended, on the 30th of October, will be kept open until the 20th of November, during which period the articles therein contained will be exposed for sale. The Building will then be closed for the rest of the month, during which period various works of decoration, including the erection of a magnificent throne, will be executed in the interior, and it will then be reopened for a grand *solennité* in commemoration of the 2nd December. We give the above details, not as facts, be it remembered, but as forming the programme of a project which may, or may not, be carried out. The Prince Napoleon has accepted the invitation to a grand banquet offered him by the Organisation Committee of the Exhibition, and conveyed by Mr. Crampton, one of the English Exhibitors. He has himself named the 15th October as the day on which the banquet is to take place.

A report that the maternal hopes of the Empress have been disappointed is going about, but we trust it is unfounded.

The question of the scarcity of grain continues to excite the utmost and most constant uneasiness, and the anxious attention of the highest authorities. The Prince Napoleon, whose northern tour has been abridged expressly to enable him to enter more seriously into the necessities of the position and the means of ameliorating it, has in contemplation more than one project for accomplishing an object of such vital importance. Not only in the provinces, but in the poorer and more populous parts of the capital, meetings and other demonstrations exist among the labouring classes, indicative of the feelings of discontent and anxiety this state of suffering produces, and everywhere present inconvenience and anticipated distress, fill the minds of the people with uneasiness and alarm.

It is reported, we know not with what correctness, that the Emperor proposes conferring on the Maréchal Pelissier the title of Duc de Sebastopol.

Abd-el-Kader has had a special interview with the Emperor, in which he represented to his Majesty the inconveniences to which his family are exposed, owing to the late earthquake at Broussa having destroyed their habitation, which, in itself, was wholly unsuited to their position, and far otherwise to what was the intention of the French Government. The Emir requested, and obtained from the Emperor, the permission to change his residence to Damascus. His health, though still delicate, is considerably improved.

At the Exhibition the Gallery of Domestic Economy, devoted exclusively to articles whose utility and cheapness are calculated to bring them within the reach and render them of daily value and importance to the poorer classes, is completed. Some of the articles have been already allotted to them; but others, more especially in the clothing department, are really marvels of cheapness, combined with goodness of quality, and cannot fail to prove precious acquisitions, not only to the class for which they are more especially designed, but to the *bourgeoisie*, to whose notice they may worthily be recommended.

The "Maitre Favilla" of Mdme. George Sand continues not only to maintain its place, but to increase in public favour. At the Théâtre Français the return of Mdme. Arnould Plessy—the Mdlle. Plessy so well and favourably known some years since at the St. James's Theatre in London—has created a great sensation, which the ripened talent of the fair and gifted *comédienne* keeps alive by each new representation. Her first appearance in "Tartufe" displayed a shade of timidity, which, however, soon wore off, and enabled her to prove her remarkable tact and talent, which were, however, yet more apparent in the succeeding piece, "La Ligne Droite." A little comedy, "L'Amour et son Train," by a young writer, also presented at the Français, is full of sprightliness and gaiety. At the Ambigu, the "Tour de Londres" draws and gratifies all the amateurs of horrors who frequent that resort of ghosts, murderers, and such garish guests.

AMERICA.

The steam-ship *Canada*, which left New York on the 11th inst., arrived at Liverpool on Sunday.

The know Nothings had completed their nominations for State officers, and adopted a platform.

The Washington correspondent of the *New York Herald* says that Mr. Buchanan, Minister at London, will not return home on the 1st of October, certain complications with reference to Central American affairs rendering it necessary for him to prolong his term of service.

The news from Nicaragua is interesting. On the 28th ult. Colonel Walker landed at San Juan del Sud, with a small party, whereupon the natives, with the exception of the captain of the port and a few others, immediately evacuated the place, taking their mules with them. They were, however, induced to return and assist the California passengers in their transit across the Isthmus. A bloody battle was fought on the 19th, between the Castillon party, under Munos and Alvarez, and a body of Chamorro's adherents, under Guardiola. As regards numbers, the armies were nearly equally matched, the former comprising 900 and the latter 800 men. The battle lasted seven hours, and about 500 were killed on both sides. Guardiola was badly beaten, and fled to the mountains; while Munos was reported among the slain. Colonel Walker was menaced by a strong force of the Chamorro party, posted at Rivas, only fifteen miles from San Juan. His position was liable to attack as soon as the knowledge of his landing reached Boska, the Commander at Rivas. Colonel Kinney's affairs appear to be in a highly prosperous condition. He was very popular at Greytown, and his Commissioner to the Supreme Government had received marked attentions from the President.

By way of San Francisco we have an account of the journey of the crew of the Russian frigate *Diana*, after shipwreck, from Jeddo (Japan) to Petropaulovski. They had bargained for a passage with the captain of the American ship *Young America*, from Woosung, but as that officer had no protection against a French schooner and frigate, which he afterwards perceived near the Bay of Jeddo, he landed them again. The *Young America* was afterwards boarded by a French officer, but the Russians had made a lucky escape and got away.

In the Argentine Republic peace prevailed. President Urquiza had opened the session of Congress at Parana. The exploration of the Bermejo River has been prosecuted with satisfaction.

From Paraguay we learn that the difficulties with Brazil had been amicably settled. Uruguay was disquieted by financial disorders.

In Bolivia, General Cordova had been elected President.

DEFEAT OF THE RUSSIANS AT EUPATORIA.

The following was received in town on Thursday evening:—

HAMBURG, Sept. 27.

The following despatch has been received here, dated

"ST. PETERSBURG, Sept 26.

"Under date the 23rd instant, Prince Gortschakoff reports that the Allies had landed 20,000 men at Eupatoria, and that they had now a force of 30,000 men on his flank.

"On the 22nd they attacked the Russian infantry, who retreated to the heights over Rusta."

THE WAR IN ASIA

Some fatality appears to attend the management of affairs at Constantinople. The latest accounts inform us that Omer Pasha has left the Turkish capital for Asia Minor, but without the troops he was to have taken with him. The Anglo-Turkish Contingent remains at Constantinople, and the Turkish army remains in the Crimea, while the Russian army, under General Mouravieff, hastens hence not at all clear that the Turks will be able to hold out much longer without assistance. The following letter from Erzeroum, dated August 18, is the latest authentic intelligence from the seat of war in Asia:—

"On the 16th instant a detachment of Turkish cavalry left the city in quest of forage. The Russians, placed in the advanced posts fell on them in the rear, and the Turkish cavalry, hemmed in by the valley of the river, the Turks retreated without [illegible] their attention.

General Mouravieff maintains his position . . . Comrow, and has divided his army into four corps, occupying the four points opposite to the four salients of Kars.

Four battery cannons which were directed from Alexandropol to Kars, and abandoned on the road on account of the mud, have been recovered and taken to the Russian camp.

The present disposition of the forces of General Mouravieff leads us to suppose that he intends to attack Kars in such a manner as to draw off the attention of the garrison from the point in dispute, and make a grand attack on it afterwards.

In Kars, although some anxiety is manifested, yet a disposition is tolerably prevalent to meet the enemy boldly. General Williams and his Staff are in great activity. There is no doubt about this; for if military discipline were in the slightest degree relaxed, and the martial impulse allowed to cool, Kars would fall.

Kars, however, is in a good position, being left entire to its own resources. The evacuation [illegible] of Kars would be, perhaps, [illegible] much consequence, but the loss of the [illegible] pieces of all calibres, and that of the ammunition, would be a great fatality.

THE BALTIC FLEET

The French squadron in the Baltic is gradually increasing as the winter approaches. The *Austerlitz* left some time ago; the *Mavis* and *Soare* steam-transports, and the *Dragonne* line-of-battle ship, left on the 14th; the mortar-vessels on the 15th. There were, consequently, only the *Tourville*, the *d'Assas*, and a few gun-boats left of Admiral Penaud's squadron. The *Cornouille* left on the 17th, bringing home all the hospital dressers whose engagement with the Government expires at the end of this month. The *Russell*, *Hastings*, *Hawke*, and *Pembroke*, were to follow immediately.

The *Nile*, Captain Mundy, and the *Bulldog*, Captain Gordon, have succeeded in burning and sinking sixteen or seventeen schooners and coasters in a creek in Biorko Sound. The fishermen came down to protect the vessels; but, after exchanging a few shot with our boats, left the vessels to their fate. The *Conyon*, Captain Crawford, has also been active in capturing the vessels of the enemy, having burnt and sunk twenty-one in one day off the island of Oesel. Most of these were attempting to run cargoes of salt from the coast of Sweden.

THE ALLIED SQUADRONS IN THE WHITE SEA.

The French Minister of the Marine and Colonies has received despatches, dated the 23rd ult., from the *Cleopatre*, *Peiral*, and *Cocyte*, now cruising in the White Sea, under the command of Captain Guibert. The blockade of the Russian ports in that sea has been enforced with the greatest activity, and the French and British squadrons have destroyed a large number of boats, with which the enemy had hoped to carry on their commercial business with impunity, by coasting along in them during heavy fogs. Except fishing-boats, which have been left unmolested from a feeling of humanity, the Russian flag has entirely disappeared from the White Sea.

THE EMPEROR OF RUSSIA'S JOURNEY.

The most conflicting statements have been in circulation as to the destination and the objects of the journey just undertaken by the Czar; perhaps he himself does not know very well what he means to do. A letter from St Petersburg, of the 15th, says:—"The Emperor's journey is still a mystery. At present we do not know the route he will take. The probability is that, after having visited Moscow, he will return by Nicolaieff, Bobrousk, Brzesc, and Riga, to St. Petersburg. It is said that the keel of a vessel of 131 guns will be laid on the stocks whilst he is at Nicolaieff. Some say he will be at Warsaw on the 27th; but the truth is that nothing positive is known, and especially in reference to what has put the public in commotion a rumour that the Czar was determined to go to the Crimea. General Siroguonoff, Governor-General of Little Russia, who had come hither from Odessa, is gone back to that city again. General Lüders is gone to Moscow."

The Muscovite or war party affirms that the journey of the Emperor is merely a military tour of inspection, from which it is impossible to draw the slightest inference favourable to peace, as an event more or less at hand. The only diplomatist accompanying him is M. Tolstoi, the head of the Imperial Nobility Chancery. On the other hand it is contended that this journey must have been dictated by special objects, as is proved by the rapidity with which it was decided on. It is further alleged that the members of the Russian diplomatic corps were to assemble at Warsaw, and that the Baron de Budberg was on the point of leaving that place when he received counter orders. And as to Count Benkendorff, the Russian diplomatist instead of going to Warsaw, he has left that place for Odessa, where he is to attach himself to the suite of the Emperor. It is said at Berlin that this journey of the Emperor has been induced by a complete change in the plan of the Russian campaign. It is certain, at all events, that Gortschakoff, who was stationed in White Russia, has received orders to concentrate in the south, on the Danube.

The latest notice regarding the Imperial movements is contained in a despatch from Odessa, which states that the Grand Duke Constantine was at Nicolaieff on the 20th, and that he and the Czar were expected at Odessa in a few days.

DR. ARTHUR HILL HASSALL is a candidate for the appointment of Health Officer for the City of London.

MR. DISRAELI AT AYLESBURY.—The annual meeting of the Royal Bucks Agricultural Society was held at Aylesbury on Wednesday. Mr. Disraeli was one of the guests, and he did not make any political use of the occasion, his speech being simply a dissertation upon agriculture, societies in general.

A TESTIMONIAL to Mr. Samuel Courtauld, in recognition of his services in the memorable Braintree church rate contest, was presented on Tuesday at that town.

ROLVENDEN, KENT.—On the arrival of the news of the fall of Sebastopol in the rural village of Rolvenden, on Tuesday afternoon, the inhabitants, on their return home from the hop-gardens, collected all the fowlingpieces they could get together, and fired repeated *feux-de-joye*, amidst cheers for the Queen and Army, a merry peal of bells, and a shower of rockets.

RAILWAY ROBBERY.—In the notice of the robbery at the Huddersfield Railway Station, in the ILLUSTRATED LONDON NEWS of last week, the locks were erroneously stated to be "Chubb's Patent;" whereas, on examination, they have proved to be merely locks of a common and insecure description.

A GOOD SAMARITAN.—Close to the railway, half-way between the Col de Balaclava and Kadikoi, Mrs. Seacole, formerly of Kingston and several other parts of the world, such as Panama and Chagres, has pitched her abode—an iron store-house, with wooden sheds and out-going tributaries, and here she does more than a little in a manner of men with extraordinary success. She is always in attendance near the battle-field to aid the wounded, and has earned many a poor fellow's blessing.—*Letter from the Camp.*

THE MUNICIPALITY of Leipsic has voted 2000 thalers (7500*l.*) for celebrating the jubilee of the establishment of religious peace at Augsburg in 1555.

The *Hull Tuesday Reporter*, one of the recently established penny newspapers, expired suddenly a few days ago, after entailing some loss upon the proprietors.

A boy aged fourteen has committed suicide in Birmingham Gaol by hanging himself. He was a mischievous unruly inmate, and had been threatened with punishment.

Miss Burdett Coutts is passing the season in the south of France, and is likely to remain absent from England some months.

CAPTURE OF SEBASTOPOL.

NAMES OF THE KILLED AND WOUNDED.

War Department, Sept. 26

Lord Panmure has this day received two despatches and their enclosures, of which the following are copies, addressed to his Lordship by General Simpson:—

Before Sebastopol, Sept. 11.

My Lord,—I have but little to add to the despatch I had the honour to send you yesterday by Major Curzon.

Every effort is being made to take possession of the vast quantity of war-like stores left by the enemy in the town. I am unable at present to give your Lordship any details.

I transmit the medical report of Dr. Hall.

I rejoice to see by it that many of the wounds are not serious a nature as those received on the 18th of June.

I have, &c.,

JAMES SIMPSON, General Commanding.

The Lord Panmure, &c. &c.

Camp before Sebastopol, Sept. 9, 1855.

Sir,—I have the honour to inclose a return of casualties in the attack on the Redan yesterday: and I have much satisfaction in being able to state that nearly the whole of the wounded were brought in, in the course of the afternoon and early part of the night, accommodated in other huts or regimental lines in the vicinity of the hospital in Camp, and their injuries promptly and properly attended to by the medical officers. Those men who fell wounded too near to the enemy's works to admit of their removal were brought in early this morning, as well as such wounded Russians as had been left in the Redan by their countrymen.

The list of casualties, though numerous, is not of so serious a character as that of the 18th June, and I hope many of the wounded will soon be restored to the ranks.

The ambulance conveyance, under Captain Pigott's orders, was efficiently conducted, and I have much pleasure in bearing testimony to the care and steady conduct of the drivers in the execution of their duties.

Of the able attendance of the medical officers, both staff and regimental, as well as of those gentlemen who had volunteered their services from the civil hospitals at Smyrna and Renkioi, and from the general hospital at Scutari, I cannot speak too highly; and I beg to bring under your notice Dr. Alexander, Deputy Inspector General of Hospitals; Dr. A. Gordon, Staff-Surgeon, first class; and Dr Monat, Staff-Surgeon, first class, for their able professional and zealous exertions in providing for the comfort of the wounded, the steadiness with which they performed their duties, and the latter in the general hospital in Camp.

I have, &c. J. HALL, Inspector-General of Hospitals.

General Simpson, Commanding in Chief

[illegible] KILLED AND WOUNDED ON THE 7TH SEPTEMBER.

Capt. D.E.B. Buckley, 1st Battal on Scots Fusilier Guards. Royal Artillery: Gunner J. Walker. 3rd Battalion Grenadier Guards: Private B. NON-COMMISSIONED OFFICERS AND PRIVATES MISSING ON THE 8TH SEPT

7th Foot: Sergeants W. Frazier, J. Stocks. Privates J. Davis, T. Bradley, T. Foster, W. Taylor (4), I. Kinch, F. Mannamare, R. Kendall, J. Bradley, J. Walker, W. Donovan, J. Bird, J. Stafford. 7 Whitwood, J. Barrett, W. Fields, W. Hardman, S. Highfield, H. Mayo, G. Jones, J. Hurlin, J. Lawless, J. Wright, J. Bradley, J. Kelly, slightly. Private W. Brown, T. M'Quaid, J. Hall, severely. Lance-Corporal J. Clanchfield, J. Cooke, P. Hoy, L. Kennedy, J. Ivers, J. M'Walsh, severely. Private T. Gaw, J. Stone, P. Brophy, T. Osborn, J. Hughes, J. Johnson, J. Armstrong, M. Mahon, J. Mears, M. Boyle, M. Drew, J. Weir, L. Ashworth, B. Adams, M. Lawless, W. Evans, B. Smyre, C. Parsons, J. M'Sweeney, J. Garvey, J. Lawless, T. Walsh, J. Lyons, T. Quigley, J. Boyle, J. Dwyer, C. Campbell, J. Walsh, M. O'Grady, severely. Colour-Sergeants W. Parsons, J. [illegible] Sergeant W. White, J. Ivers, slightly. Corporals H. Tierney, J. Russlett, P. Cook, J. Gaffney, H. Hughes, severely. Corporal J. Johnson, slightly. Drummer J. Mahoney, severely. Privates J. Mc'Dermott, T. Johnston, J. Young, P. Lennon, T. Saunders, J. Jordon, W. Wheran, W. Cleary, M. Lenry, J. Leggy, J. Beckhard, J. Stephenson, P. Sullivan, Lamb, W. Carter, M. Flynn, J. O'Sullivan, J. Hearn, R. Sunnett, S. Bowen, P. O'Leary, J. Hennessy, J. Flanagan, J. Geary, C. Sullivan, J. Reed, T. Hennessy, J. Hare, P. Brennan, W. Sterling, G. Bridges, J. Kennedy, J. Strong, W. Mahoney, W. Brenghton, J. Parker, J. Hopkins, M. Dillon, J. Geary, severely.

2nd: Colour-Sergeant J. Young, slightly. Sergeants J. Hayter, severely; J. Bowman, slightly. Colour-Sergeant J. Jennings, severely. W. Smith, severely. W. Neale, W. Owens, J. Sloane, slightly. Corporals T. Lenagee, W. Smith, severely. T. Hall, slightly. Private W. Hind, slightly. Lance-Corporal G. Stroud, slightly. Private W. Hind, severely. M'Sharry, G. Fox, E. Rumsey, J. Hoey, H. Short, J. Hanson, J. Tarrant, W. Gilbert, M. Higgins, P. Lynn, J. Ivon, J. Newman, severely.

W. Lamb, J. Everett, J. Neill, R. Buchanan, J. Dark [illegible] R. Dickson, J. Rennet, [illegible] N. Hewell, [illegible] Middleton, J. Dwyer, J. Kirby, [illegible]

Sergeant J. Woolhugh, severely. Private P. Walker [illegible]

2nd Battalion Rifle Brigade: Sergeant-Major J. Waller, severely. Colour-Sergeant M. Steele, severely. Sergeants D. Cook, W. Whitlow, W. James, J. Seaford, severely. Corporals H. Curlew, J. Wren, J. Wandesforde, W. Hayes, W. Harris, J. Newton, slightly. Buglers J. Bradley, J. Kelly, slightly. Private W. Brown, T. M'Quaid, J. Hall, severely. Lance-Corporal J. Clanchfield, J. Cooke, P. Hoy, L. Kennedy, J. Ivers, J. M'Walsh, severely. Private T. Gaw, J. Stone, P. Brophy, T. Osborn, J. Hughes, J. Johnson, J. Armstrong, M. Mahon, J. Mears, M. Boyle, M. Drew, J. Weir, L. Ashworth, B. Adams, M. Lawless, W. Evans, B. Smyre, C. Parsons, J. M'Sweeney, J. Garvey, J. Lawless, T. Walsh, J. Lyons, T. Quigley, J. Boyle, J. Dwyer, C. Campbell, J. Walsh, M. O'Grady, severely. Colour-Sergeants W. Parsons, J. [illegible] Sergeant W. White, J. Ivers, slightly. Corporals H. Tierney, J. Russlett, P. Cook, J. Gaffney, H. Hughes, severely. Corporal J. Johnson, slightly. Drummer J. Mahoney, severely. Privates J. Mc'Dermott, T. Johnston, J. Young, P. Lennon, T. Saunders, J. Jordon, W. Wheran, W. Cleary, M. Lenry, J. Leggy, J. Beckhard, J. Stephenson, P. Sullivan, Lamb, W. Carter, M. Flynn, J. O'Sullivan, J. Hearn, R. Sunnett, S. Bowen, P. O'Leary, J. Hennessy, J. Flanagan, J. Geary, C. Sullivan, J. Reed, T. Hennessy, J. Hare, P. Brennan, W. Sterling, G. Bridges, J. Kennedy, J. Strong, W. Mahoney, W. Brenghton, J. Parker, J. Hopkins, M. Dillon, J. Geary, severely.

Admiralty, Sept. 28.

A despatch, of which the following is a copy, has been received from Rear-Admiral Stanley Lyons, Hart., C.B., Commander-in-Chief of her Majesty's ships and vessels in the Mediterranean and Black Sea:—

Royal Albert, off Sebastopol, Sept. 15.

Sir,—The Lords Commissioners of the Admiralty will have been already informed by my letters from Kertch of last June, and by my recent telegraphic messages from Constantinople, of the success which attended our arms in that part of the world, leaving the Allies undisputed masters of the Sea of Azoff, as well as of the Black Sea; that they had blown up and abandoned their last holds on the coast of Circassia; and that, after a gallant defence against an overwhelming force, they had defended Kinburn, and thus evacuate the south side of the harbour of Sebastopol, on which are situated the naval and military arsenals, the public buildings, and the town.

2. I have now to request you to inform their Lordships that the enemy has not succeeded in his endeavours to destroy all the forts on the south side. Fort Paul, it is true, is literally blown to atoms, and Fort Alexander is very much damaged; but the Quarantine Fort has not suffered considerably by the explosion of the magazine, the sea-face remaining perfect, and most of the guns being fit for use, few of these being even spiked. At Fort Nicholas the preparations for blowing it up had not been completed; and, though the flames have made some havock in the interior, the stonework appears to be unmured, and the principal part of the defences remain perfect and uninjured.

3. The five docks and the adjoining basins are magnificent, and, together with the steam machinery for filling them from the Tchernaya and for pumping them out, are in excellent order; and the resources of all kinds still remaining after the enormous expenditure during the siege, showed very plainly the importance the enemy attached to having a large depôt at the threshold of the Bosphorus.

4. The bottom of the splendid harbour is now encumbered with more than fifty sunken vessels, including eighteen sail-of-the-line and several frigates and steamers, whose menacing attitude but a short time ago materially contributed to bring on the war in which we are now engaged.

(Signed) EDMUND LYONS.

THE FALL OF SEBASTOPOL.—The glorious event was celebrated with great éclat in the village of Smisby, near Ashby-de-la-Zouch, on the 20th inst., the anniversary of the battle of Inkerman. A capital dinner was provided for the festivity by Mr. W. R. Dick and Mr. R. M. Dunn; the tricolor and union-jack floated from the church pinnacles; a Sax-horn band was engaged for the occasion; one-and-twenty powerful cannons fired salutes during the day, and all the children in the village were regaled with buns and wine. The interior of the pavilion was tastefully decorated with choice flowers and evergreens, and banners; and the tea was served here to a very large company. Dancing was then commenced with great spirit; and the amusements concluded with balloon ascents and a display of fireworks. The pavilion was brilliantly illuminated. The adjoining field, it may be interesting to add, was the [illegible] selected as the scene of the encampment in Mr. Walter Scott in his romance of "Ivanhoe."

The French Government have ordered a large quantity of Hun [illegible] garian wines for their army in the Crimea.

Such is the scarcity of hop-pickers, and symptoms appearing of the plant being deteriorated, that the "crier" went round Maidstone, the other day, calling forth all disposed for such work, with a promise of good pay.

BURNING OF "THE SANTA MARIA" FRIGATE IN SEBASTOPOL HARBOUR.—SKETCHED BY J. A. CROWE.

BURNING RUSSIAN VESSELS IN SEBASTOPOL HARBOUR.

THE Engraving upon the front of this Number, and the two Illustrations upon the present page, show the destruction of two of the enemy's frigates, which were terrific episodes in the fall of the great Russian fortress. The details are as follow :—

About six o'clock on the evening of the 5th inst. one of the Russian frigates was set on fire. As the flames ran up the masts, a cloud of illuminated smoke rose to a great height, and hung over the harbour, as long as the vessel continued to burn.

The constant flashing from the guns and mortars of the batteries on shore, the shells revolving, and appearing like so many shooting stars, crossing each other in their flight, as they came from opposite sides, bursting as they neared the surface again, or showing out for an instant, in dark relief, the outlines of batteries into which they fell—rockets with their long tails of fire rushing through the sky—the continued roar of the cannonade, and a whole fleet as spectators, made up a scene that would be a fortune to a London panorama.

(For further details of this conflagration, see our Special Correspondent's letter, at page 386.)

Two days after, about two p.m. (on the 7th inst.), the Allies fired a second frigate; there was a very strong breeze at the time from the north-west, and the flames soon enveloped the vessel and spars. The masts fell during the course of the afternoon, the light from the smouldering hull being seen all through the night.

THE LATE M. BINEAU,

EX-MINISTER OF FINANCE, AND ORIGINATOR OF LOANS BY NATIONAL SUBSCRIPTION.

M. BINEAU was born in the year 1805, in the Department or Maine et Loire. At that time the Empire had commenced, under happy auspices. Peace and Concord were established in the interior of France, and in the exterior the genius of Napoleon conducted the *Grande Armée* against Austria. He who was destined to become one of the principal Ministers of the Napoleon dynasty heard in his cradle the songs of triumph composed in celebration of the victories of Austerlitz and Jena. A very different state of things existed when he was of an age to enter College. During the Restoration he went through a brilliant course of study, and entered the Ecole Polytechnique. For upwards of two years of unwearied assiduity he preserved a high rank in that institution which provided France with her best generals and statesmen. At the end of that term he joined a corps of Mining Engineers. Notwithstanding that he was continually occupied in rendering important services to the State in his official capacity, he found time to publish many excellent works. He devoted himself earnestly to the study of English railroads, and endeavoured by showing the progress which was being made in our country, to excite emulation in his In 1840 he was made Engineer-in-Chief. The following year the electors of the department of Maine et Loire made

BURNING OF "THE SANTA MARIA" FRIGATE IN SEBASTOPOL HARBOUR.—SKETCHED BY E. A. GOODALL.

THE LATE M. BINEAU, FRENCH MINISTER OF FINANCE.

him their representative in the Chambre des Députés, where he placed himself under M. Thiers, among the lenient opponents of the Guizot Ministry. He was re elected several times, and up to the Revolution of 1848 continued to occupy a seat in the Centre Gauche. In the Legislative Assembly he took a prominent part in the debates relative to railways, the navigation of the interior, and finance. His delivery, and his sound simple manner of "putting a case," commanded the respect even of his most obstinate opponents. Among the measures which he brought forward, and which the Government of Louis Philippe ill-advisedly adjourned to an indefinite time, may be mentioned that of *rente* reform, which M. Bineau at length put into practice himself.

During the Republic M. Bineau continued to have a voice in the councils of the nation. He was chosen a member of the Assemblée Constituante by upwards of a hundred and twenty thousand votes. He afterwards joined the Assemblée Legislative. He was one of the first to espouse the cause of the Prince-President, and obtained, in 1849, the post of Minister of Public Works. But political embarrassments, however, distracted the attention of France from the excellent measures which the new Minister was anxious to introduce. The 2nd of December, however, opened out for M. Bineau a brilliant career. He was named Minister of Finance in the January of 1852, and had the honour of carrying two important bills. The first, the reduction of *rentes*, passed on the 14th of May, 1852, saved the nation an annual sum of eighteen millions of francs. Two years afterwards—in the month of March, 1854—the Corps Legislatif voted a loan of 250 millions of francs to defray the expenses of the war in the East. M. Bineau, instead of applying to the Bank, as he was advised, opened a national subscription. The approval of the Emperor, aided by the ability of his Minister, surmounted all the difficulties exaggerated and imagined by the advocates of banking monopoly. The plan was crowned with the most brilliant success. Ninety thousand subscribers responded at once to the appeal of the Government, and the sums raised reached in a few days double the amount which was actually required for the prosecution of the war. By this unexpected success of an undertaking which the partisans of the old system had condemned as a dangerous adventure, M. Bineau suddenly found himself a distinguished man. But fatigue, anxiety, and responsibility, which wear out the soundest constitutions, at length had their effect on M. Bineau. He was compelled, by a serious illness, to retire from the Ministry, and to decline an appointment as member of the Academy of Moral Science and politics, made by the Emperor out of respect for his talents. Death at length released him from the miseries of a sick room, depriving France of one of its most able Ministers and the Emperor Napoleon of one of his staunchest friends.

TESTIMONIAL PRESENTED TO C. W. C. HUTTON, ESQ.
(SEE NEXT PAGE.)

THE LATE MAJOR-GENERAL SIR JOHN CAMPBELL, BART.
FROM A FAMILY PAINTING.

On the 11th September his funeral was celebrated in the beautiful church of the Madeleine with great pomp. The Maréchal Vaillant (Minister of War), M. Baroche (President of the Conseil d'Etat), M. le Comte d'Argout (Governor of the Bank of France), M. Elie de Beaumont (Inspector-General of Mines), bore the pall; while a crowd of illustrious personages gathered around the coffin. In the midst of the public rejoicings for the fall of Sebastopol, a mournful procession wended its way to the Madeleine to pay respect to the memory of a man who, to use the words of his eulogist, "while furthering the interests of the Emperor, contributed also to the prosperity of his country, and seconded, as far as was in his power, the efforts of the Allied nations."

THE LATE MAJOR-GENERAL SIR J. CAMPBELL, BART

Major-General Sir John Campbell, Bart., whose Portrait we give above, fell heroically leading the attack on the Redan, on the 18th of June. He had held the command of the Fourth Division during the absence of Major-General Bentinck, and, on his return, gave it up, and was appointed to the command of a brigade in the expedition to Kertch and against Anapa. The evacuation of the latter place, rendering the proposed expedition for its reduction unnecessary, the brigade and Sir John Campbell were recalled to the head-quarters before Sebastopol, and he arrived on Saturday, the 16th June. It was proposed to form a second Highland Brigade, and give him the command; but, in the mean time the attack on the Malakoff and Redan was decided upon for the following

H.M. FLOATING BATTERY "GLATTON."—FROM A PHOTOGRAPH BY T. SCOTT ARCHER.—(SEE NEXT PAGE.)

Monday, the 18th June, and the command of part of the British attack was offered to, and gladly accepted by, Sir John Campbell.

At that eventful morning the Russian party, with its reserve and support, was ready in the Quarries, under its command, anxiously but with vigilant hope awaiting the concerted signal for attack. It was given. In an instant, with their gallant General at their front, the troops, consisting of two companies of the 1st battalion Rifle Brigade and the 57th Regiment, broke cover in chivalrous style, and, with loud cheers, rushed up the natural glacis towards the Redan. No sooner were they half way across it than the fire from the Redan and the Malakoff opened, and a murderous shower of grape and canister poured on them like a heavy storm of hail. They had believed the Malakoff was already in possession of the French, and did not expect this murderous reception, but they advanced undismayed by the cruel decimation of their numbers, until they found themselves checked by the ditches, or chevaux de-frise, erected in great strength on the outside of the ditch of the Redan, and which defied their attempts at destruction. Three times the devoted band was beaten back by the galling fire three times it re-formed and dashed forward; but at last it was obliged to retire, and, falling back, make the best of its way to the protection of the Quarries.

A few paces from the front of the abattis were found the bodies of Sir John Campbell and Colonel Shadforth, close to each other, with the dead and a heap of killed and wounded, and Sir John Campbell was buried on their cartridge hill, close to the quarters he had occupied all the winter. We quote the following *precis* of Sir John Campbell's connected services from a memoir which appeared in a late number of the *Naval and Military Gazette*:—

At the opening of the present war this lamented officer was appointed Brigadier-General on the Staff, and from this moment he embarked for the scene of action was ever at his post. After thirty-six years' service, through the arduous campaign of Burmah, and the changes of climate incidental to foreign quarters—from the enervating shores of the Mediterranean and West Indies to the snowy regions of North America—through the dread trial of fever at Varna, the battle of Inkerman, and the bitterness of death in the last fearful struggle, he has gone down to his grave with no other honour on his breast than the Ava medal which he won in his boyhood, and which he but lately obtained.

Sir John Campbell entered the Army as an Ensign in the 38th Regiment, in 1821, and accompanied his father, Sir Archibald Campbell, G.C.B., to India the same year—Sir Archibald (then Colonel) Campbell assuming the command of the 38th at the Cape, on his way out. In 1824, Sir Archibald being selected to command the forces sent to Burmah, his son was placed on his Staff, and, though very young, his conduct during the Burmese war obtained such frequent notice in General Orders that he received the thanks of the Governor-General in Council. Remaining in the ceded provinces until 1830, he returned to England and joined the depôt of the 38th, but on his father's appointment to the government of New Brunswick, in 1841, he was again placed on the Staff. After this he served with his regiment in the Mediterranean, West Indies, and Nova Scotia, returning from the last-named place, in command of the 38th, in 1851. He became a Major-General by a late Brevet, and was placed on the list of pensions for good service.

Sir John Campbell was born in 1807, and succeeded to his father's title and estates in 1843. In 1844 he married Margaret, only child of Colonel Crow, R.E.I.C.S. The present Baronet, Archibald Ava, was born the 27th Jan., 1844. Colonel the Hon. A. A. Spencer, of the 44th Regiment, who has been reported in the list as "slightly wounded," is married to a sister of Sir John Campbell. Captain Goodrich, Aide-de-Camp to Sir John, "severely wounded," is the only son of another sister—the widow of the late Colonel Shadgrass, 38th Regiment.

TESTIMONIAL PRESENTED TO MR. CHARLES W. C. HUTTON.

A NUMBER of influential shareholders in the General Screw Steam Shipping Company have recently evinced their gratitude towards Mr. Charles W. C. Hutton, by the presentation of a testimonial, consisting of a Centre-piece and Salver in massive silver. Of the former we give an engraving, with a copy of the inscription —

Presented, with a Salver, to CHARLES W. C. HUTTON, Esq., by his fellow-shareholders, to testify their grateful appreciation of his untiring, talents, and successful efforts in re-establishing the financial condition of the General Screw Steam Shipping Company, and otherwise promoting its future prosperity May, 1855.

Greatly enhancing the value of this spontaneous compliment, the plate, at the request of their committee, was presented on behalf of the subscribers by Mr. Raikes Currie, M.P.; since which, at a general meeting of the proprietary, Mr. Hutton has been unanimously re-elected an Auditor of the Company.

H.M. STEAM FLOATING-BATTERY "GLATTON."

THE inapplicability of our large ships of war for the attack of the Russian stone fortresses, and strongly-fortified harbours, has led to the construction of a large number of floating-batteries, some forty in number, which are very shortly to be launched against our powerful enemy. These vessels are built from one model, and are pierced for ten or twelve guns; except two batteries, the *Glatton* and the *Trusty*, which are pierced for sixteen guns. We have engraved the *Glatton*, built by Messrs. Green, already afloat, and which, by the latest news, reached Gibraltar on the 10th inst., on her way to the Black Sea.

We agree with the writer of a paper in the *Artizan*, that these floating-batteries are "awkward, but formidable-looking things." Their dimensions are :—

	Feet.	Inches.
Length between the perpendiculars	172	6
Breadth extreme	43	8
Depth in hold	14	7
Draught	7	9
Tonnage	1469 tons	

The two decks (the lower one to be the fighting deck) are of 9-inch oak, resting on 10½ in. by 10½ in. beams, placed 1 ft. 9 in. apart from centre to centre, and supported in the middle by stanchions of iron hinged at the top, so as to be struck or hung up when in action. The frames, iron plates, and planking of the sides (the iron a solid mass 3 feet thick; the iron plates outside being 4 in. thick, planed on their edges, placed close together, and bolted to the woodwork with 1¼ in. bolts. The port-holes are 3ft. 4 in. by 2 ft. 10 in., and (says the *Artizan*) "look much larger than absolutely necessary, and too large for the aim of the enemy to give us that confidence we could wish: nor can we entertain the opinion that these decks are either shot or shell proof; and why such things as these should be completely equipped and rigged, we cannot, for the life of us, divine. The Admiralty is decidedly masting-mad."

The engines of these batteries are of 150-horse power, non-condensing, and have four tubular boilers with two furnaces in each; the boilers being of a cylindrical form, with flat ends, and capable of working up to a very high pressure. These batteries have been fitted with a screw, of 8 feet diameter, in the usual place; but other two, one on each side, will now be added to give more propelling power; the shallow draught and small area of the screw, in consequence of the necessarily small diameter, rendering this addition necessary: for, with a pressure of 60 lb. to the square inch, and the engines making 130 revolutions per minute, the speed attained was but a little over three knots per hour.

The *Glatton*, Captain Arthur Cumming, and the *Meteor*, 14, Captain F. B. Sevmour, left Plymouth on the 23rd. We gather from the letter of one of the crew of the *Glatton*, that, on her touching at Brest, some of our officers complained to the master shipwright there that they could not steer the battery, even when they were towed at 5½ knots. The shipwright replied that the French battery *Tonnant* was alike unmanageable, until two rudders were put, one on each quarter, when she steered perfectly well. After leaving Brest a leak was discovered in the *Glatton*, aft, near the shaft. The writer of the above letter says:—"It rises in about a bucket a minute; but that is nothing to those who sail in batteries." The addition of a rudder was tried—first the after leeboard was lashed up and down the after boat's davit, to act as a quarter rudder; and this not answering well, one of the gun davits was jilted by hooking it "into the stern-post like a swinging boom to a ship's side goose-neck fastened, pieces of board being nailed on to the end, and guys taken to the after cats' heads on each quarter. The ship always carried a starboard helm, so this, roused well on and belayed, had a wonderful effect." They had fine weather across the bay until the evening of the 29th, when the cables all parted, and the ship was in a heavy swell. The steam was got up immediately, and the fires were kept banked up; she rolled in the trough of the sea, until the steam was up, going whichever way she liked; but, when the steam was up, they managed to steam along pretty fair.

The award of persons competent to form an opinion upon the merits of these Batteries, does not appear to be in their favour. A well-informed writer in the *Hampshire Advertiser*, says of the *Glatton* and *Meteor*:—

They will neither sail, steam, stay, nor steer, with satisfaction or dependence; and as quarters for a healthy ship's company, they are certain hot-beds for fever, sickness, or suffocation. Men employed in the magazines of these ships, after working a short time, have been hauled up senseless. Ventilation is the only remedy that can do the crews any good, and this can only be obtained by the utter metamorphosis of the ships. They have no keels, and what is to prevent them from toppling over when they get their batteries on board, we cannot see.

The writer in the *Artizan* strongly protests "against masting such things as these batteries, as only offering targets to the enemy, and giving him the license to do a maximum of mischief in a minimum of time, by bringing it all down about the ears of those on board, and perhaps silencing the battery entirely, or fighting under the peril of setting fire to the wreck; not to mention the greater number of men which such a system of equipment requires; while their steam power and other assistance which they might have would surely be sufficient to carry them to the scene of their operations, and then leave them to their own power."

A few words may be added as to the name *Glatton*, which some of our contemporaries have oddly misprinted "Glutton." Towards the close of the last century, in 1795, nine Indiamen were purchased by the Government for war purposes, and one of these was named *Glatton* by her owner, probably from the place of the same name in Huntingdonshire. On July 16, 1796, her Majesty's ship *Glatton*, Captain Prilloge, of 1256 tons, 56 guns, carrying twenty-eight 68-pounders on her lower deck, unsuccessfully engaged, single handed, a squadron of French ships, with the loss of only two men wounded, the enemy losing 70 in killed and wounded, and a sunk frigate. The largest of the French frigates was 300 or 400 tons larger than the *Glatton*. "It is in memory of this exploit," says a correspondent of *Notes and Queries*, "that the Admiralty have called one of the new floating batteries the *Glatton*. May she be equally successful against the Russians."

CALENDAR FOR THE WEEK.

SUNDAY, Sept. 23 ... 17th Sunday after Trinity
MONDAY, Oct. 1—St. Remigius Archbishop of Rheims
TUESDAY, 2 ... London University opened, 1828
WEDNESDAY, 3 ... Cork St. Michael
THURSDAY, 4 ... New Police Act, 1839
FRIDAY, 5 ... Horace Walpole, Earl of Orford, born 1717
SATURDAY, 6—St. Faith ... Louis Philippe crowned, 1775.

SEBASTOPOL.

We have received, direct from Sebastopol, from our several CORRESPONDENTS and ARTISTS,

SPLENDID PICTURES
OF
THE STORMING AND BURNING
OF
SEBASTOPOL.

We are also informed by those gentlemen that by successive posts they will forward to us Drawings and Sketches of the INTERIOR and RUINS of SEBASTOPOL. These, as we receive them, will appear from week to week in the ILLUSTRATED LONDON NEWS. Price 5d., with a Supplement Gratis every week.

OFFICE, 198, STRAND, LONDON.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, SEPTEMBER 29, 1855.

IT is equally due to the gallant Englishmen whose lives have been wasted on the blood-stained Redan, and for whose want of success in their terrible task a cruelly untrue reason may be assigned, as it is to the nation which sent them forth to the struggle, that the history of that day's work should be well understood wherever the name of Sebastopol is named. We have before us the despatch of General Simpson, which was waited for so anxiously, and which so little rewarded the expectants; we have the communications of the Correspondent of this Journal, who outstripped every one of his colleagues, and supplied the first details which reached this country; and we have the letters of the gentlemen who furnish our contemporaries with information from the Crimea. After addressing ourselves to an examination and comparison of all these documents, we arrive at a conclusion which, painful as it may be, is a thousand times better than the suspicion that British soldiers failed in their duty, or that the flag of Britain received spot or stain.

As every line recording the deeds and sufferings of the victors of Sebastopol will be read with the most intense interest, it is not necessary to present here any general summary of the operation. Who in England cannot recount the story of the final day, from the first opening of that awful fire, to the yet more terrible spectacle of the flames raging and roaring over the lost city? Assuming, therefore, that we write upon points whose connection with the history of the day is well understood, let us ask the reader to place himself, not where our heroic officers are leading their men to the assault,—not where the overpowering forces of the Russians are bearing downwards and backwards the scant numbers of their assailants; but to the trench where sits, muffled in his cloak, an English Commander, who is fast losing the most splendid opportunity that has for forty years been afforded to a British General.

The signal rockets had not yet ascended from Chapman's attack, and General Simpson was possibly considering with what phrases he should mention in his despatch what men he had selected for the service. "I determined that the Second and Light Divisions should have the honour of the assault from the circumstance of their having defended the batteries and approaches against the Redan for so many months, and from the intimate knowledge they possessed of the ground." Such was the form into which he finally threw his recital. Was there nobody, even a that eleventh hour, to point out to the General that the attack about to be made, which had been previously attempted in an unhappy hour by Lord Raglan, was against a tremendously strong fortification, and one which could not only be defended by the best troops of Russia, but one which from its construction actually gave, on mathematical principles, an overmastering power to any defenders, and one which could only be confronted by almost preternatural valour in the assailants? Was there no one to remind him, next, that the very reason he assigned for selecting these particular divisions for this heroic achievement, was that which should have exempted them from it namely, the long and severe service, which had in great part sacrificed their original material, and substituted raw recruits for veteran soldiers? Did his eye never glance to his "reserve" those terrible Highlanders, who never failed in an onslaught while enough of them survived to raise the Highland cry—and did it not occur to him that to those indomitable soldiers, and not to unskilful and inexperienced recruits, should be committed the honour of England? It would seem not, for up flew the trenches as the Russian parapet up soared the signal rockets, and the British stormers rushed to their death.

Their intimate knowledge of the ground was the reason for their selection. In five minutes two hideous tests proved the rottenness of this excuse for a fatal blunder. Our own Correspondent says:—"The distance our men had to cover, when they issued from the advanced trenches, *was much greater* than all had expected. It measured 287 paces, along every inch of which they were assailed by a heavy fire of musketry." The *Times* Correspondent bears out this statement, remarking, also, upon the proximity to which the French had worked their attack, so that they almost sprang, at a bound, upon the enemy, while we had the fearful distance to traverse. But our men rushed on to the ditch, and their "intimate knowledge of the ground" was again shown. "It was not very wide," but they had not known how wide; their ladders were *too short*, and they were obliged to descend the fifteen feet and scramble up on the other side.

There is no need to dwell on the sad, yet glorious story. The Redan was gallantly and nobly won. Even these raw recruits, supported by some veteran comrades, and led by officers whose heroism has scarcely been equalled and never surpassed in history, seized the Redan. Crowds of Russians hurried up, and opened a merciless fire upon the English, who were slaughtered rapidly but did not think of flying, though amid the bewildering terrors of the fight, and with leaders with whose persons many of them have hardly had time to become acquainted, they did not make that one desperate charge which older soldiers would have dared and which might have saved the day. They fell on all sides; but a reinforcement—such as at that instant the French were hurrying up to their own stormers—would have secured the victory. Messenger after messenger was dispatched for help; each was wounded; but where was the eye that should have been upon the fray and rendered messengers needless? Where was the military instinct—where was the common sense, that should have told a General that 1500 men could not hold their own against the overwhelming thousands who had been brought against them? No supports were sent, or only a few "driblets," that straggled up, and added to the confusion and carnage. Finally, the noble Colonel Windham extricated himself from the *mêlée*, and miraculously escaped to demand succour. The answer of General Codrington was, "Do you think you really can do anything with such supports as I can afford?" Hastily taking what was thus reluctantly offered, Colonel Windham hurried to the aid of his men; but it was too late. The Russians had forced them from the Redan. They were slaughtered, crushed, mutilated; a few only escaping under cover of our fire. Thus the Redan was lost!

But Englishmen were wont never to be beaten, or never to know that they were so. Where was the reserve, to dash upon the exulting Russians, and regain the honours of the day? General Simpson did not send it, as "the trenches were, subsequently to this attack, *so crowded with troops*, that I was *unable to organise* a second assault." The Duke of Wellington declared that if 30,000 soldiers were placed in Hyde-park, he did not believe there were twenty officers in our army who could take them out of it. General Simpson evidently is not one of the possible twenty. By his own showing he could not clear his trenches for a necessary assault.

Is it necessary to state in terms the conclusion at which we, in common with all who read the despatches from the Crimea, must arrive? There is neither spot nor stain on the flag of England, and no breath of suspicion must tarnish the renown of her devoted soldiers. They went to their death,—fought gallantly, and died like heroes. The deeds of such gallant men as Colonel Windham make the hearts of Englishmen glow with pride and affection; and if they do not atone for the errors of such evidently incompetent men as General Simpson, they prove that if younger officers had but a chance, the honour of England need fear no stain. Of the Commander whose culpable blunder selected the untried ranks for the most perilous service; whose still more grievous error or negligence left them to be slaughtered, unaided, upon the lost Redan, and in its bloody ditch; and whose self-confessed unskilfulness forbade him to avenge their deaths and regain their conquest, what further shall we say? While we write we are compelled to call him

Commander-in-Chief of her Majesty's Army in the Crimea; but we trust the telegraphic wires will speedily convey a message to intrust the command to other hands.

A NATIONAL THANKSGIVING is to be offered up to-morrow in all the churches of the kingdom, for the signal success which, under the blessing of Almighty God, has befallen the arms of the Allies, in the just and necessary war which they have been reluctantly compelled to wage against the Emperor of Russia. Our country is not like France and Sardinia, in which there is but one form of Christianity. Amongst us all forms and kinds of dissent are not only tolerated, but stand upon a perfect equality before the law. It is, therefore, competent for any body of Christians, or others, amongst us to refuse to join in the solemn act of National Prayer and Thanksgiving in which the members of the Established Churches of England and Scotland will think their high duty and privilege, nay, really as pure Christians, but as true patriots, to participate. But we do not imagine that any sect amongst us will stand aloof on this occasion. The great mass in which the country is engaged is a war that appeals to no sectarianism; but is based upon the fundamental principle of all religion—the support of the inoffensive weak against the brutal attack of the rights of humanity against usurping spoliation . . and of the independence of letter spans. the Bread the mechanical as a Power that has broken all laws, divine and human, for the attainment of its selfish and unprincipled objects. One Protestant and two Roman Catholic countries are leagued with a Mahometan State, against a nation of Greek schism of the not on a doctrinal question of religion—but on a broad question of international right and justice. The British people with a unanimity never before witnessed either in war or in peace have supported, and will continue to support, the struggle, with all the energy and resources of the nation. In this Thanksgiving to the Great Disposer of Events for the success that has so far attended their efforts and those of their allies, they will forget for once the minor differences of religious opinion that continue to separate them, and join with fervent piety—each in their own form of worship—in the solemn Thanksgiving which the Queen has enjoined upon the Churches of England and Scotland, and recommended by her and their example to all other religious bodies within her realms. Thanksgivings have often been rendered to Heaven for success in a bad cause. No feeling of this kind will diminish the moral beauty of the spectacle which the country will exhibit to-morrow. The prayers which will then ascend to the Throne of Grace, will be prayers unsullied by any selfish consideration. Great Britain has no objects to serve in the war but those of Right, and can gain nothing by it but the triumph of Civilisation—and consequently of Peace. It is for Peace that they have taken up arms, and the people may hope—with the continued blessing of Heaven upon their arms—that Peace will in due time issue from the conflict, and be no more broken in the days of this generation.

CHURCH, UNIVERSITIES, &c.

APPOINTMENTS.—*Rectories:* The Rev. W. Hazel, to St. Peter's, Wallingford; the Rev. T. W. Goodlake, to Broughton Poggs-cum-Filkins, Oxfordshire; the Rev C. Lowndes, to Hartwell, with Little Hampden, Bucks.; the Rev. H. H. Woods, to Tidmarsh, Berkshire; the Rev. Joseph Baker, to Newchurch-near Tenbury. *Vicarages:* the Rev. J. H. Milne, to Thatcham, with Greenham and Midgham, Berkshire; the Rev. R. E. Hollinshed, to North Moreton, Berkshire; the Rev. H. L. Dodds, to Stretton Magna, near Leicester. *Incumbencies:* the Rev. J. Taylor, to St. John's-in-the-Vale, Keswick; the Rev. D. Thomas, to Penmachno, Carnarvonshire.

IRON CHURCHES.—To-morrow, the 30th inst., the Iron Church erected in the Vicarage grounds at Kensington will be opened by Archdeacon Sinclair. It is handsomely fitted up for the accommodation of 600 persons, and is the first sacred edifice of this material put up in the metropolis. The arrangements for its erection have been paid for by subscription to the contractors, Messrs. Hemming and Co. of the Clift Iron-works, Isle.

THE FRENCH LOSSES.—The *Moniteur* of Wednesday contains particulars of the French loss. Our allies have 5 Generals killed, 4 wounded, and 6 confused; 24 superior officers killed, 20 wounded, and 6 missing. 104 subaltern officers killed, 224 wounded, and 8 missing. 1439 sous officers and soldiers killed, 6239 wounded, and 1402 missing. Total Frenchmen, 7841.

PRUSSIA AND THE REPORTED NEGOTIATIONS.—The *New Prussian Gazette* states that it can announce with certainty that the statement made by the *Independance Belge*, as to the Cabinet of Berlin having demanded of the Western Powers to resume negotiations, is not true. The statement had previously been contradicted, but was on Monday repeated by the Belgian journal in the most absolute manner. The point is one on which the *New Prussian Gazette* is likely to be peculiarly well informed; but on Tuesday the *Independance* returns to the charge, to declare that its original statement was strictly accurate, and that whoever believes he may contradict it is misled.

THE NEW SEBASTOPOL.—Nicolaieff will be the main spot at which the commercial navigation of the Black Sea will continue to be concentrated, as at present it is. People began to see now that Sebastopol, on account of the difficulty of communication with the mainland, was by far too advanced a post for the maritime power of Russia, the defence of which becomes every difficult from the moment that the fleet is compelled to inactivity. It is reserved for the Emperor Alexander to give a fresh development to the Russian navy in the Black Sea. It is understood to be the intention of Government hereafter to build none but steam-ships of war, of all sizes, up to 131 guns, like the *Wellington*. A vessel of the description (war steamer) will be finished building at Nicolaieff this year. In addition to the nine of seventy-eight vessels of the same rate of gun—and flagship blockhouses for the defence of the coast are to be looked on for the future as an indispensable constituent of the navy.—*Letter from St. Petersburg.*

THE INTERIOR OF THE REDAN.—My first entry into the interior, on the morning after its abandonment, was made by a bridge of broken fascines and gabions laid hastily over the dead bodies that had just been gathered into the ditch for burial, which has since been done by levelling over them a portion of the parapet above. The ground was everywhere filled the work from end to end with the outer surface, and the thin covering of earth which now conceals them from view barely falls below the summit of the low bank in front. What first struck one in passing in (as one made by our sappers through the broad parapet was the unusual solidity and strength of this last, averaging thirty or thirty-five feet along its entire front. On such a solid mass of gabions, fascines, sandbags, and earth, I need hardly say that artillery of even the heaviest calibre could have no sensible effect: sixty-eight or ninety-eight pound shot might enter, but they could not penetrate. Compared with this massive structure of mud and wicker-work, the thickest of our own or the French works is as paper to a deal board. Then within, besides the great superiority of their mantlets, strong ropen curtains hung across the embrasures to shelter the gunners from the besiegers' fire. No embrasure that we ever provided for their artillerymen when not actually working the guns, in little retreats proof against any but the very heaviest sighters of shell. But these, again, are nothing when compared with the shot and shell proof chambers for the shelter of larger bodies of troops, which abound throughout the work. I dived into several of these half subterranean waiting-rooms, and found many of them fitted up with fireplaces, cooking conveniences, benches, and other small furniture, whilst in others of smaller dimensions and which had evidently been occupied by the officers, there were in addition bedsteads, chairs, tables, and in some even handsomely glazed cupboards, containing empty wine-bottles, and other tokens of their occupants' regard for creature comforts. On a shelf in one of them I lighted on a cheap Farringdon-street reprint of "Paul Clifford," and an old copy of the ILLUSTRATED LONDON NEWS.—In letter with sundry engravings of scenes from the siege.—*Daily News Correspondent.*

M. Maelzel, the maker of several hundred automata, lately expired at Vienna. His Panharmonicon, composed of an orchestra of 42 automaton musicians, who executed with perfect precision the overtures of "Don Giovanni," of "Mozart; of "Iphigénie en Aulide," of Gluck; and of the "Vestale," of Spontini; as well as a number of airs from various operas, was long exhibited in the principal cities of Europe.

LATEST INTELLIGENCE.

THE WAR IN THE CRIMEA.

It is report that the Allies had landed 20,000 men at Eupatoria and defeated the Russians is not confirmed, but the prevailing impression is that the Russians will make their way northward as soon as possible. A letter from Berlin of the 23rd says:—

Various circumstances at St. Petersburg seem to indicate that Prince Gortschakoff will soon evacuate the forts on the north side of Sebastopol. These forts, since the destruction of the Russian fleet and the naval establishments, are only strategic points. We are informed people say that if the Russian General should think it desirable to concentrate his forces in the interior of the Crimea, he will not leave in the rear the garrisons of the forts.

A letter from Vienna of the 22nd, in the *Independance* of Brussels, says:—

From the accounts which have been received here it would appear that the Allies are actively preparing for a campaign, and doubtless they have it in contemplation to force the Russian line of defence of Tschernker Kermean, or, in other words, to make a diversion against Bagtcheserai. This town, which contains 10,000 houses, and 16,000 inhabitants, is the station of the reserve in the Russian army which holds the platform of the Belbec.

The *Patrie* says:—

Since the hussars retreated in the north they have constantly sent us bombs and shell. It must not, in fact, be believed that we are actually out of the reach of the batteries situated on the edge of the northern roadstead and loose their projectiles, which at a greater distance, and at is therefore very easy for those on the south to reach the town. It is useful to add, that any offensive attempt on the part of the Russians is impossible.

THE WAR IN ASIA

A despatch from Vienna, Thursday, says:—"Kars is greatly straitened for provisions. The garrison is eating horseflesh."

A despatch from Trieste, Sept. 27, states that the Anglo-Turkish Contingent will go to Trebizond, and be placed under the command of Omer Pasha.

TREBIZOND, Sept. 6.—The Russians have abandoned the neighbourhood of Erzeroum, and are at Malagh-leiman.

THE BALTIC FLEET

A telegraphic despatch from Dantzic states that the *Bulldog* arrived there with the mails on Friday (yesterday), and that all the high-pressure block-ship had left for England.

THE OVERLAND MAIL.

The steamer *Calcutta* arrived at Trieste on Wednesday night with advices from Calcutta to the 24th August; Bombay, 29th; Shanghai, 2nd; Canton, 8th; Hong-Kong, 10th. The Santal rebellion continues, but the rebels are beginning to give way. 50,000 rebels are collected in Beerbloom. The bill for granting a charter to the Oriental Gas Company has passed a second reading. Lord Elphinstone has returned to Bombay. Lord Dalhousie remains at the Neilgherries. The parties of China hold under their control a coast line of 2000 miles in the ten districts of Hoonan and Oopack. The rebels are in great strength, and the trade of Canton is very restricted.

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS

TAKEN DURING THE WEEK ENDING THURSDAY, SEPT. 27.

Note.—The sign + denotes above the average and the sign — below the average. The numbers in the seventh column are calculated on the supposition that the saturation of the air is represented by 100.

The reading of the barometer has varied during the week from 29.43 inches on the 25th, to 29.82 inches on the 27th. The mean for the week, at the height of eighty-two feet above the level of the sea, was 30.21 inches.

The mean temperature of the week was 55°8—being 0°3 above the average of the corresponding week during thirty-eight years.

The range of temperature during the week was 32°3—being the difference between the highest reading of the thermometer, 77°3, on the 23rd; and the lowest, 29°8, on the 27th.

The mean daily range of temperature during the week was 23°0.

The weather during the week was fine and clear, the sky being almost wholly free from cloud. Fog was prevalent during the morning of the 27th.

Lewisham, 28th September, 1855. JAMES GLAISHER.

HEALTH OF LONDON.—During the week ending last Saturday the births of 1658 children were registered in London: of these, 841 were boys and 817 girls—exceeding their average of the ten preceding years by 148 and 149 respectively. The number of deaths during the week was 931 (viz., 468 males and 463 females)—a number which indicates a satisfactory condition of the public health, and a decrease of about 100 on each of the three previous weeks. To diseases of the zymotic class 239 deaths are attributed: of these 72 are due to diarrhœa, 59 to scarlatina, 16 to hooping-cough, and 11 to small-pox; to diseases of the tubercular class, 136—of these 115 are due to consumption; to diseases of the heart, 55; to diseases of the respiratory organs, 88; to diseases of the digestive organs, 53; to diseases of the brain, nerves, &c., 100—of these 34 were caused by convulsions, and 24 by apoplexy; and to violence, cold, privation, and intemperance, 25 deaths are referred.

THE SUNDAY BEER BILL AND THE DEFENCE ASSOCIATION.—A dinner was given on Wednesday night, at Highbury Barn, by the Licensed Victuallers' Metropolitan and Provincial Defence Association, to celebrate their first anniversary, and to commemorate the passing of the new Sunday Beer Bill. The large room of Highbury Barn was literally crowded with guests, many of whom were ladies in ball costume, a notice having been given that when the dinner was over the tables would be removed and dancing would commence. Between 600 and 700 persons sat down to dinner. There were, amongst others, the Hon. F. H. Berkeley, M.P., who occupied the chair; Mr. Cobbett, M.P., Mr. Brady, M.P., Mr. Wakley, M.P., Mr. W. Harvey, and a number of gentlemen forming deputations from various parts of the country. After the usual loyal toasts, Mr. Cobbett, M.P., in proposing the health of her Majesty's Ministers, who had given every facility for the passing of the Sunday Beer Bill, said the name of Lord Palmerston was, of course, particularly identified. Lord Palmerston was responsible for the present war, which was the work of; his predecessors, but he had shown spirit and consistency in carrying it on, and, he trusted, would conduct it to a termination which would be for the interest of England and Europe. The company was afterwards addressed by Mr. Wakley, the Hon. F. Berkeley, and other gentlemen.

ADMINISTRATIVE REFORM ASSOCIATION.—The committee of this association are actively engaged in making the necessary arrangements, through their agents, for the holding of sectional meetings in the city, metropolis, and the principal towns throughout the country, in furtherance of the objects of the association, previous to the expected reassembling of Parliament.

THE VICTORIA-PARK ENCROACHMENTS.—On Monday morning notices were posted round the eastern parts of London, convening a meeting in Bishop Bonner's-fields, Bethnal-green, on Sunday afternoon next (to-morrow), at two o'clock, for the purpose of considering the question relative to the threatened encroachments upon the ornamental portion of Victoria-park. A meeting was also called for Sunday last, and a great number of respectable inhabitants assembled in the inclosure of the Park, but the proceedings were interrupted by one of the constables. A demonstration is likewise to take place to-morrow, and a large body of police has been ordered to be in attendance.

SWEARING IN OF THE NEW SHERIFFS YESTERDAY.—At half-past one o'clock on Friday, a Special Court of Aldermen was held in the Common-hall of the Guildhall, at which the Lord Mayor presided, when Alderman Kennedy and Alderman Rose, the newly-elected Sheriffs for the City of London and Middlesex, were introduced, and took and subscribed the customary oaths; Mr. Stone, the senior Under-Sheriff, also taking the usual oaths for the due administration of his office. At the conclusion of the ceremony the Sheriffs were conducted to the Court of Aldermen, and invited to take their seats within the Bar. The Sheriffs, previously to being sworn in, entertained the Masters, Wardens, and Court of Assistants of the Clockmakers and Spectacle-makers' Company, as also a select circle of friends, to breakfast, at the Albion Tavern.

THE COURT.

Her Majesty and the Prince, with the youthful members of the Royal family, continue to enjoy excellent health amid the morning cares of their Highland home. His Royal Highness Prince Frederick William of Prussia remains the guest of the Queen, and accompanies her Majesty and the Prince in the field sports which the fine weather has enabled them to make almost daily in the vicinity of Balmoral.

On Tuesday se'nnight the Queen, with his Royal Highness Prince, her Royal Highness the Princess Royal, and his Royal Highness Prince Frederick William of Prussia, drove to Birkhall, and from thence to the Lynn of Dee. Her Majesty and their Royal Highnesses alighted at the Ponies at the Ford of Inchnabarnie, and rode to Balmoral.

On Wednesday her Majesty, accompanied by the Prince of Wales, and attended by Viscountess Canning, rode out on Deeside. His Royal Highness the Prince, and Prince Frederick William of Prussia, went to the hill for deer. Mr. and Mrs. Farquharson, of Invercauld, had the honour of dining with her Majesty.

On Thursday the Queen, accompanied by her Royal Highness the Princess Royal, and by his Royal Highness Prince Frederick William of Prussia, drove to Corriemulzie, and thence to the Lynn of Quoich, returning home by Invercauld, where her Majesty honoured Mrs. Farquharson with a visit. Lady Agnes Duff, with Lady Duff, received her Majesty at Corriemulzie. The Duke of Argyll arrived to relieve the Earl Granville as Minister in attendance.

On Friday her Majesty, with her Royal Highness the Princess Royal and his Royal Highness Prince Frederick William of Prussia, rode out on Deeside. His Royal Highness the Prince, and Prince Frederick William of Prussia, rode out on the neighbourhood of the Castle. Dr. Sutherland, the Queen's Physician, made daily inquiries into the sanitary condition of the Camp. The Queen, attended by the Princess Royal, Prince Frederick William of Prussia, and the Hon. Miss Cadogan, drove to Loch Muick, and thence to the Glassalt Shiel, where they were met by the Prince of Wales, the Princess Royal, and Prince Frederick William of Prussia, who had driven to Loch Muick and the Glassalt Shiel by another route. Her Majesty and the Royal party returned to Balmoral by the Glassalt Shiel and Loch Muick.

On Saturday her Majesty held a Privy Council at Balmoral. His Royal Highness the Prince, the Lord President of the Council, the Duke of Argyll, and Viscount Canning, were present. On the same day her Majesty received in audience by their Royal Highnesses the Prince and Princess Royal, Sir Frederick William of Prussia, drove on to the interior of the Queen's Cairn, and returned by the north side of the Loch Muick.

On Monday her Majesty, the Queen, with his Royal Highness the Prince, the Princess Royal, and Prince Frederick William of Prussia, rode out by the Glen Girnock, and returned to the Castle to luncheon. Her Majesty and their Royal Highnesses the Prince and Princess Royal, and Prince Frederick William of Prussia, drove to the Ain-a-Guaach, and rode thence on horseback to Loch Muick and the Glen Lui.

On Tuesday her Majesty held a Privy Council at Balmoral. His Royal Highness the Prince, the Lord President of the Council, the Duke of Argyll, and Viscount Canning, were present. On the same day her Majesty received in audience by their Royal Highnesses the Prince and Princess Royal, Sir Frederick William of Prussia, drove on to the interior of the Queen's Cairn, returning by the north side of the Loch Muick.

His Royal Highness the Duke of Cambridge has returned to town from visiting the Duke and Duchess of Richmond at Goodwood, Sussex.

Their Royal Highnesses the Duchess of Cambridge and the Princess Mary are about to leave Kew on a tour of visits in the provinces.

Their Royal Highnesses the Duchess d'Orleans, the Count de Paris, and the Duke de Chartres, have recently joined the ex Queen Amelie, and the members of the ex-Royal family of France, at Claremont, from Germany.

THE FALL OF SEBASTOPOL.

Upon the two ensuing pages we engrave three illustrations. 1. The retreat of the Russians from the burning town of Sebastopol; and, 2 and 3, the destruction of two of the most important forts. These incidents are minutely described in the letters of our Special Correspondent. We here give the details by the artists of the respective sketches:—

EVACUATION OF THE SOUTH SIDE OF SEBASTOPOL BY THE RUSSIANS.

At daylight on Sunday morning, Sept. 9, 1855, the Russians were seen to be in full retreat, crossing in a continued stream by their bridge to the north side; they had sunk their ships—the masts of which were sticking above water, one large line-of-battle ship had not quite gone down, but lay with her upper high out of the water. Before leaving, the Russians had set fire to the forts and buildings behind them, and the smoke had risen and formed into a dense mass of cloud over the harbour. The morning was calm, with a light air from S.E., which brought off with it a disagreeable smell from the burning town.

The Russians effected their passage across in the most orderly manner, Fort Constantine and the batteries on the north side firing from time to time. By about eight o'clock (a.m.) they appeared to have all got over, and soon after they removed the bridge. The smoke previously prevented our seeing the batteries of the Allies, but from the shot falling into the water it was evident that the enemy were not going over without serious interruption. It should be mentioned that they had not destroyed their steamers, some of which could be actively employed in assisting the retreat.

At about eleven o'clock a boat went over, and some men from her set fire to the poop of the two-decker (which was sunk near the south side), and it afterwards burnt right down to the water.

Throughout the day the whole presented a grand and constantly changing spectacle, which it was almost impossible to turn from for a moment. The weather being only partially cloudy, bursts of sunshine at times came out, lighting up some portions, leaving others indistinct and in shade, while the most striking and warm appearance, constant explosions taking place; one of the grandest of these being the blowing up of Fort St. Paul,—the masses of stone being thrown from it to a great distance across the harbour; this single explosion reducing in a moment the whole of the massive building to a heap of rubbish.

DESTRUCTION OF FORTS PAUL AND ALEXANDER.

On Saturday, 8th September, the assault was given at half-past twelve. The Russians opened fire from Fort Constantine, the batteries extending along the north shore, inside the Fort, the line-of-battle ships moored across the mouth of the harbour, and the steamers. At twenty minutes past one, the French flag was seen upon the redoubted Malakoff, where, amid showers of shot, shell, and Minie bullets, it continued to wave. Once it disappeared for a while, but some daring spirit planted it again, and the *Hannibal* confirmed the good news by a signal, "The French flag is on the Malakoff." We plainly saw the English charge into the Redan. Back they came in still unbroken wave. They rallied formed under a small hillock, charged again and again; at last, success rewarded their determined valour, and they established themselves in the Redan, almost at the same moment that saw our brave Allies in possession of the Malakoff. Fresh columns, to point, from hill to hill, flashed and roared the guns. The mortar-vessels in Streletzka Creek played on Forts Alexander and Nicholas, sometimes dropping a shell as far as the Russian ships. At four o'clock the sheers was observed on fire; the Russians were now clothed in flame, while, the burnt more lurid as night drew near. Around these fiery centres were seen the dark figures, like those of bright stars, the rapid discharges of musketry. Extending lower down, in the direction of the dockyard buildings, this fusillade appeared to be as rapidly returned, clearly proving that the Allies were in the town, and stoutly fighting to drive out the Russians. It was a fearful hand-to-hand struggle, mid flame and smoke and storm and darkness. When morning broke the large ships had disappeared; the Russians had sunk them as they lay. They were employed in bringing their wounded people across the bridge of boats; one or two steamers then came to destroy this bridge, leaving the great Fort Alexander in flames, with its two hundred guns. After this, the steamers, six in number, crossed over to the northern shore, ranged themselves inside Fort Constantine, and commenced the process of the guns, and those of the powerful batteries beside and beyond it, keeping their steam up. At ten o'clock, the telegraph informed the Admiral that the French were in the Malakoff, the English in the Redan, Garden Batteries and Dockyard buildings, and that the enemy was running away in the direction of Mackenzie's Farm.

A Russian officer of Engineers was taken prisoner at the Malakoff: he told his captors they need give themselves no further trouble, for as soon as the Malakoff was taken the Admiral had orders to force further opposition: he was right, the south side contained no live Russians; it was on fire, and frequent terrific explosions were seen and heard. At eleven o'clock a flag of truce appeared on the top of Fort Constantine, and a boat came out with a flag of truce at her bow. Two French boats pulled in to meet her; a parley was held, which lasted about eight minutes; the boats returned, and the white flag was hauled down.

During the whole of Saturday it was blowing a gale, with a very heavy sea on the Malakoff was taken the Admiral had all ready for going in—carpets up, things packed up and sent below—but it would have been madness to weigh in such weather. Few of the best steamers could have stemmed the wind and sea, and several ships must have been risked or lost on a dead lee shore. Even had they gone in they would not have effected any thing in saving the lives of the Allied troops; they might have injured the ships, which the Russians themselves sunk in the night time. The whole town is on fire, and every hour is marked by some tremendous explosion, shaking even our ships and spreading out its dark feathery masses, dotted with lighter patches from bursting shells into the lurid air.

SEBASTOPOL, SUNDAY MORNING, SEPTEMBER 9.—THE RUSSIANS RETREATING OVER THEIR BRIDGE—VESSEL

THE FALL OF SEBASTOPOL.

(Continued from Supplement, page 367.)

(From our Artist and Special Correspondent.)

BEFORE SEBASTOPOL, Sept. 15, 1855.

THE capture of the Malakoff, and failure of the attacks on the Redan and works of Careening Bay were not the only episodes of the day on which the Allies finally established a footing in the heart of the Russian defences. General Pelissier had combined his attack in such a manner as to prevent the enemy from concentrating heavy masses against any point of our approach. It had been previously concerted that, whilst the Black Batteries, Malakoff and Redan were assaulted at noon, storming columns should be moved against the Central Bastion and the Flagstaff Redoubt on the western side of Sebastopol. Had all these attacks been simultaneous, success would probably have crowned the efforts of the Allies on more than one point, and the French might have established a firm footing on the west, whilst we effected a lodgment on the Redan. The operations were not undertaken simultaneously, perhaps because the Commanders were unwilling to risk the loss of life consequent upon failure, had we been repulsed at all points. The Malakoff was therefore stormed first, and the attacks on other points undertaken after. The consequence was that time was given to the Russians to make preparations, which rendered their resistance effectual on all but the first point, spiritedly carried and maintained by the French.

My last letter was interrupted somewhat suddenly by the close of the mail, and I was unable to complete the narrative of all the incidents o the 8th. The failure of the French storm of the Central Bastion remains therefore to be recorded. The columns, concentrated in close proximity to the work, were formed at an early part of the day; but the signal to storm was not given till two o'clock in the afternoon. The enemy had an imposing force, concentrated in expectation of the attack, as the fierce bombardment, kept up for sixty-two hours on the left by the French, had led him to anticipate the most powerful assault there. In consequence of this 30,000 men were moved to that point, while the deficiencies on the proper left of the position were made good by draughing the 14th Division into the town. The storming parties of the French rushed firmly on to the assault, and effected a lodgment in the Central Bastion

AND THE TOWN AND FORTS IN FLAMES.—SKETCHED FROM H.M.S. "ST. JEAN D'ACRE," BY O. W. BRIERLY.

after a short and spirited combat. The Russians were either killed or driven out, and left the work in the hands of the stormers; but this success was momentary. Heavy masses were speedily advanced to the front, which engaged the assaulting party with all the advantage of freshness. The contest then assumed a close and deadly aspect, and the French, overpowered by a downpour of missiles of every description, were forced to draw back in the same way as our stormers had retired from the Redan. A short time elapsed, and the red forms of our allies were observed falling back over the parapets of the Central Bastion, jumping down into the ditch, and scrambling up the counterscarp. A momentary panic was then visible, in the midst of which the French General in command (whose name I regret to be unable to record) rallied his men in the most gallant manner, and led them a second time to the assault. This second effort was apparently as irresistible as the first, and the stormers again made their way into the body of the work, notwithstanding prodigious efforts on the part of the Russians. Another struggle in the bastion followed, and, fresh supports coming up to the enemy, the French again wavered, and, failing in ammunition, assailed by stones, cold grape, and pickaxes, they were finally forced out of the work, and the Russians left masters of the field. This was the only action fought on the western side of Sebastopol, the attack on the Flagstaff Bastion having been abandoned after the failure of that on the Central Redoubt.

One grand result compensated the Allies for the carnage which had marked the operations of the day. The Malakoff taken, gave us such a hold over the remainder of the town, that it was obvious the Russians could not remain there. The movements of the French Generals on this successful point were vigorous and decisive. They turned not only the first, but also the second line of the Russian defence, exposing the rear of the Redan to a sweeping fire, which was immediately opened from the Malakoff with the guns captured in the place, and those which had been dragged into the redoubt in rear of the stormers. At sunset every disposition had been made to maintain the advantages obtained, and a dropping fire from the Russians in the Karabelnaia suburb alone told where isolated contests showed the despairing energies of the besieged pitted against the persevering efforts of the besiegers. Gradually, as the gloom night spread its dark mantle over the town, a mournful silence suc-

SEBASTOPOL, SEPTEMBER 9.—THE BLOWING UP OF FORT PAUL.—(SEE PAGE 375.)

ceeded to the roar of battle, and songs of victory alone broke the stillness of the atmosphere as the wind moaned amongst the innumerable tents of the Allied Camps, and swiftly drove heavy lowering clouds over the dark grey of the sky. The crowds which had assembled on the hills, hovering round and swooping at times upon the wayworn soldiers who straggled from the field to give the details of the victory, gradually thinned and disappeared. A hum as of masses moving through Sebastopol was then heard, and presently portentous clouds of smoke were seen to issue from the houses which lay clustered along the sides of the harbour. From the base of the columns of smoke flames then began to issue, and as midnight came, glaring masses of flame burst out from the town and proclaimed the Russians vanquished and retreating. Undisturbed in their work of destruction, the enemy were allowed to proceed; and as the forked fire illuminated the horizon, spreading from house to house and obscuring the sky with dense masses of smoke and vapour, a few belated spectators witnessed the scene of a burning city destroyed by its defenders. The flames spread rapidly from street to street, and the stillness of the night, and the howling of the elements, was broken by a series of terrible explosions, which startled the echoes of the surrounding hills, shaking the ground for miles and casting up burning fragments from the earth high into the air as forts and redoubts were blown up. The ships of the Allies, wearing at their anchors, were illuminated by the glare which burst from the magazines of the works along the shore, as they were exploded in succession by the retreating Russians. Then the roar of the flames gained the ascendant over all other sounds, and whilst flitting forms were seen amongst the burning masses, the retreat commenced. Long before the columns of the Russians began to cross the bridge of rafts on their way to the north, the Redan had been occupied by the Highland brigade in charge of the trenches. Volunteers from several regiments entered the work shortly after midnight, and found it deserted of defenders. At dawn the masses of the enemy were still swiftly crossing the bridge and lining the hills of the Severnaia, whilst the *Vladimir* and other steamers covered the passage with their broadsides. With the exception of these the harbour was tenantless of any floating vessel, except boats. The stately three-deckers which had so proudly rested on the waters of Sebastopol were sunk, and their places only marked by the breaking of the waters over their white masts, as the waves were dashed along them by a north-east gale. Shortly after daybreak the last straggler of the Russian army had abandoned the south side, and the bridge of rafts was cut adrift and taken in tow by the steamers. The only souls in the town were convicts left to keep up the fire of the town, who did their work with unflagging energy; but who were not left undisturbed in their labours, as crowds of soldiers chiefly French—entered the town even before the Russians retreated; and, fearless of the explosions which took place at intervals, ransacked the houses, and either took the incendiaries prisoners or shot them when they met. Few sights can be conceived more grand than that of Sebastopol burning in the morning. The western side was in a mass of blaze, and flames were issuing from the largest buildings. The churches alone were spared, and the mushroom steeple of one, as well as the Athenian columns of another, and the pointed spires of a third, were fitfully thrown into light when the north-east wind wafted the smoke into the air, and removed the curtain of flames which at times covered the scene. Light, red, and yellow smokes were relieved by black ones of equal density, and at the base of all shone the flames which fed them. Fort Nicholas, the dockyard buildings, and the Naval Hospital were illuminated by the sheer hulk, which burnt with uncommon brilliancy; and the Karabelnaia suburb, which had been so thoroughly destroyed as to require no further efforts of the Russians, loomed duskily in the distance. Between the dockyard and the suburb, Fort Paul stood perfect in light, and all behind was in partial obscurity.

At an early hour I moved down through our trenches, ploughed up by the missiles of the Russians, and made my way towards the Great Redan Fatigue parties were bringing up the bodies of officers killed in the assault of the previous day; the men appearing dejected, as much perhaps by the humiliation of failure, as by the duty which they were then performing Still the scenes which met the eye as it wandered around were sufficient to make men elated. Trench after trench passed by as I made my slow progress to the front, filled my mind with wonder at the immensity of labour expended in making the approaches. The advanced parallels and covered ways leading to them were especially wonderful to contemplate; and the dangers of such close proximity to an enemy under so feeble cover, gave rise to a profound sentiment of gratitude to our brave soldiers who for months had occupied such perilous positions, and daily renewing efforts, which happily had received their final reward. The distance which our men had to cover when they issued from the advanced trenches to attack the Redan, was much greater than all had expected. It measured 287 paces, along every inch of which they were assailed by a heavy fire of musketry from parties, thrown out into the ditch, and from the embrasures on the flanking works of each side. A field piece pushed forward into the first embrasure on the left face of the Redan poured out grape on the advancing column, which was also swept by a raking fire of the same kind from large guns in the flanking defences. The ditch was about fifteen feet deep, and not very wide; the counterscarp about thirty-two feet high, but much cut up by shot and shell, so that when the ladder-party reached the Redan the soldiers were able to proceed without its assistance, jumping down and then scrambling up the opposite side, after killing the sharpshooters thrown out by the Russians. Many brave fellows had met their death on the counterscarp, where they still lay; but burying parties were already busy collecting the dead, both English and Russian, and consigning them to common graves. On looking down into the Redan, the wonder was how any of the stormers had escaped after the Russian supports came up to drive them out. Heavy traverses lay right across the rear of the work, forming with its sides a large triangle. In the traverses were embrasures, from which field-pieces poured in a terrific fire of grape; whilst the incessant musketry and the fall of heavy stones, cold shot, and implements, rendered the place untenable. Beyond the traverses, which were numerous and heavily armed, was a wide open space looking towards Sebastopol, where any number of men could deploy. To have held such a place would have required immense masses of men, which were not sent into the Redan, either because our movements were too slow, or because we were not prepared for the species of ground that was discovered there. Beneath the traverses, which were of enormous height and breadth, were subterranean recesses, formed by heavy beams, sized by numerous apertures, through which the Russians entered or emerged, and where it was impossible for them to receive any harm from hostile fire, however heavy it might be. Heaps of shot and shell the latter filled with powder, having the charge and fuse attached—filled an enormous magazine, and were heaped in corners ready for use, together with grape canisters. Quantities of cohorns lay about the works perfect for use. Beams of wood, pickaxes, hatchets, buckets, and other implements, were plentiful; and there were signs in the habitations below of permanent occupations by the same men. Shoemakers' and carpenters' tools, and quantities of chairs and tables, pictures rudely representing sacred subjects, occupied a portion of the space; whilst in one corner was the luxurious evidence of the commander of the work—fitted up with costly furniture—chairs, tables, bedstead, mirror, and articles of toilet. Having visited the Redan, I proceeded to the right, crossing the head of our sap, which was strewed with grape-shot, musket-balls, and fragments of uniforms, towards the Malakoff, from which the Redan is separated by a deep ravine. Following the advanced parallel down to the bottom of the ravine, a narrow road, invisible to the enemy, running through an old cemetery, took me into the French parallel, which wound up the opposite slope to the spacious front of the Malakoff. Here the ground was far more heavily ploughed up by shells than in front of the Redan. The surface was broken into innumerable craters, varying in depth from two to three feet—the missiles, which were fired in incredible numbers from the united guns of the Allies, alighting in a heavy loam into which they sank before they exploded. In respect of the ground the French obviously had a great advantage over us as they were enabled to proceed with great rapidity in this soft substance whilst our engineers toiled to raise mounds and sink trenches on a surface of solid stone. The French parallels were advanced under favour of this advantage to within thirty paces of the ditch of the Malakoff, whilst two shafts for mines were easily pushed forward close to the scarp. The craters formed by the bursting of these infernal engines lay open as I passed, and whilst one was the receptacle for dead Russians, the other was rapidly becoming filled with the bodies of the French slain. The numbers in both these extempore graves were already enormous, and yet they contained not a tithe of the mass which still encumbered the Malakoff, into which I speedily entered. A bridge of ladders, over which the French artillery had made its way into the work, led across the ditch and a sloping path, through an embrasure into the redoubt.

The Malakoff was vastly different in construction from the Redan. Not being open at the gorge, it formed an isolated work, to which access was difficult on every side. But it offered so many obstacles to an enemy attempting to force it, that had the Russians not been surprised the French would probably never have taken it. There were no less than three traverses in the redoubt, all of them excavated like those of the Redan, all bomb-proof, and capable of holding 2000 men. Each of the traverses commanded the other; and the passages from one traverse to the next were so small as to be easily defended by a small body of men. Once the enemy was vanquished in the body of the work, it was, however, an easy matter to keep it, for the assailants had cover and advantages not possessed by the assailing forces. When the French, therefore gained a speedy hold of the work, they kept at bay an immense number of the Russians, who, having to struggle up a steep ascent to enter the work, laboured under disadvantages similar to those encountered by our men in storming the Redan. The Russians here appear to have fought like brave and well-trained soldiers. They made their way into the body of the work, and drove the French from cover to cover for a time, having the advantage of numbers; but the odds against them were too great. The supports of the French poured in so continuously, and in such numbers, that they were overpowered; and from cover to cover, as they had momentarily driven out their assailants, they were in turn pushed back, strewing the ground with their dead and wounded. The struggle everywhere was terrific. There were places where encounters at close quarters took place, and Russians and French lay thickly heaped upon each other, so as to form mounds of dead. The diversions caused by the steamers was but momentary. It hardly turned the issue of the fight for a moment. But whilst it lasted the slaughter caused by sharpnel was very great. The Russians who were wounded crawled as they best could into their usual places of cover—the casemated traverses—there to draw their last breath or secure themselves from further peril. The French bravely pushed on, followed the retreating enemy down the steep way leading from the redoubt, and, from their commanding positions, swept down all opposition. Following the Russians, they got inside the second line of defence, armed with ships' carronades, killed the gunners at their pieces, and destroyed everything before them. The slaughter then was almost as great as in the Malakoff. The dead, however, were all Russians, as if the fire of the French had fallen in the midst of heavy and retreating masses. The First Chasseurs de Vincennes, who, with the Zouaves, had been the heroes of the fight, still held the place when I visited it, and the 20th of the Line had joined them. The colours of the latter floated proudly on an eminence close to the ruins of the round tower which once had formed a prominent part of the defences. The lower story of this piece of masonry still stood offering sharp outlines of hewn stone to the eye. Beneath it was a huge excavation and a gallery leading underground into the ditch, where traces were still visible of a passage to two mines intended to be exploded against the French. From the Malakoff the view extended on one side over the Russian works towards Careening Bay, and on the other over the Redan. Its guns commanded everything on both sides of it, and rendered the Little Redan and Black Batteries as untenable as the Great Redan. The ground in front of the former, however, bore evident traces of the immense resistance offered by the Russians The ditch and ground in front of the Little Redan was covered with slain, whose bodies lay heaped on each other as if the struggle had been renewed continually, and been incessantly repulsed. I endeavoured in a former letter to describe the encounter at that place. I have only to add that the killed and wounded on the ground amply bore out the impression of the intensity of the struggle there. After a time, however, during which the French and Russians held a position on opposite sides of the work—the latter firing from their banquettes, the former from the counter-carp—the latter were forced to retire, in consequence of the commanding position of the captured Malakoff. In their retreat they suffered severely from the fire of the French.

During the progress which I made from work to work the fire still continued to rage furiously in Sebastopol; and the slow matches left by the Russians had communicated to magazines and blown up the buildings which contained them. One of the large forts on the western side of the town blew up at half-past ten in the morning; and at three, as I was sketching in the Malakoff, Fort Paul exploded with a report that shook the ground. Masses of stone were projected into the air, and covered the harbour and docks with spray. A dense cloud of vapour, emitting a sulphureous smell, hovered over the spot on which the fort had stood, and when it blew away exhibited a confused conical-shaped mound—all that remained of a building which a few minutes before reared its two stories of solid stone in the air, and showed rows of embrasures bristling with guns. The smoke as it blew away, left the air full of a white floating powder, which fell in flakes upon the Malakoff, inundating the men around with its white particles. In the distance, Fort Nicholas was smoking so as to portend an explosion there also, and the Dockyard buildings, as well as two old steamers moored to the quay, were burning fiercely. As the tide of unarmed soldiers seemed to flow from the Malakoff in that direction, I followed the stream as it poured into the town, watching the plunderers gutting the ruined houses of their contents, and endeavouring to carry off the most portable articles. The Sebastopol people had not, however, left much behind them, and with the exception of a few chairs, tables, and common utensils, little was found of any value. Although the French General-in-Chief had agreed with General Simpson that no plunder should be taken out of the town, and this agreement was kept up by the latter with a severity which caused no little murmur, the French soldiers were but partially stopped in their proceedings, and brought up to Camp everything they found to be saleable. They were busy in the large square buildings of the naval hospital as I passed there; on the houses of the Karabelnaia, and even in the church near the Dockyard. These buildings being in rear of the Redan, and in full view of the Mamelon Vert, had suffered severely from shot and shell, and they tottered to their foundations, although built of the same solid stone as the forts. Cannon-balls had entered and penetrated walls three feet thick, and proved that Sebastopol stone is of too soft a texture to resist battering. I could give you a description of the state of other parts of the town visited since the evacuation, but time fails to do the subject justice. It is only necessary to remark that, in capturing Sebastopol, we took the great military and naval arsenal of this portion of Russia. The number of guns in our possession is countless. Huge anchors are innumerable; but I have failed to discover any mortars larger than cohorns; and there is no ammunition left in the place. The town is now under the care of the French, who have undertaken the police duties. On our part General Wyndham has been appointed Commandant.

During the week which has elapsed since their departure the Russians have been very busy strengthening their position on the north side of Sebastopol. They have erected a line of powerful works, which stretch across the land from the sea to the shores of the harbour, and their redoubts are between Constantine and the new line of works; the other, more inland, are in course of construction. The whole army appears to be encamped along the hills up to Mackenzie's Farm, and they have built works all round them, forming an intrenched camp. I cannot say what the intentions of our commanders are for the remainder of the season, or whether it is proposed to keep the army inactive till next spring.

On Wednesday, the 12th, the last of the *Vladimir* and it consorts was seen, the masts and funnels appearing above water where the Russians had sunk them.

POSTSCRIPT. SEBASTOPOL, Sept. 17, 1855.

The French are at this moment marching the whole of the First Corps to Inkerman. They are under the command of General de Salles. The English force seems not about to move. We are busy, as well as the French, in arming Sebastopol

The Naval Brigade is to be broken up forthwith

Extract from a letter of an officer on board her H.M. ——, off Sebastopol, dated 16th Sept., 1855.

Yesterday I went all over Sebastopol, entering on the extreme left (French), and streeted right through the town, and up to the Redan (both) in landing we came to the French advance battery, right opposite Constantine, which, by-the-by, is extremely jealous, for she let fly three or four shells right across amongst us. On leaving we went across the open ground for the Quarantine Harbour, and then on to the French advance trenches, then after going over about five or six trenches in the rear. The vast magnitude of these is wonderful, what with magazines out of number, and exceedingly well-built trenches, for the cover of soldiers, the work must have been laborious. Here, the ground was as much composed of shot and broken shell, Minie balls innumerable, &c., as it was of loose stones. We wended our way through the advance trenches, and towards the Russian rifle-pits; and, on nearing from the French trench, were on the small, advanced rifle-pits, capable of holding, perhaps, four riflemen. Then we crossed into the advanced Russian battery, now in ruins, the magazine having been blown up. From this we had to scale an immense bastion. Here we looked down on the top of the [illegible] and closely built embrasures. The guns were spiked with [illegible]. It is said this was full of French shot and shell. We then entered the town, but I must first tell you that on the right of this immense bastion, or battery, commenced the wall,—of great strength; and at each angle projecting the face of this last-described bastion, were two heavy guns loaded with grape, to enfilade and keep in check any attempts to storm by infantry. This place was never attempted. To continue. We entered the town, and here it was marvellous to see what our artillery had done, houses swept away, and their foundations alone remaining,—a heap of ruins, and blackened by exploded shells, &c. The French and English are quartered in the town, not a house of which remains beyond its shell; for the inside is cleared, and the roof blown to the clouds: the pieces of shell, shot, and Minie bullets, are in millions lying about; not a square yard in the place is without a sign of what artillery and riflemen have done. After clearing the town we came to the foot of the Redan. At the bottom was a plain and a road. At the bottom of this road were guns, and a ditch, in fact wherever a gun could be brought to bear on an advancing foe, there was a gun pointing: in the most extraordinary places were to be seen the muzzle of a gun. The Russians had got so hard up for gabions that they took the sheet iron tanks out, and filled them with earth instead. Thus, when we got into the Redan, they met our eyes. The inside of the Redan was a place indeed worth seeing. The artillery had cut up the ground all round most fearfully, and everything appeared to be crushed on the ruins of a town or village as allowed up by an earthquake. Here, in the ditch, could be seen the remains of the bayonet struggle—here red coats, muskets of muskets, odd epaulettes, rammods, tailors' gear, broken sponges, odd boots, old Russian articles of clothing, to say nothing of the most awful of sights, the dead, where they have been struck, where they had clasped their hands in agony, and in this form they remained when dead. I was very much shocked to see an English lady riding about unconcerned, and many hearts that day sickened to see young female forms on horseback riding through such scenes: one was a French lady. After leaving the Redan we went up to the Malakoff: and here it was much the same.

The Russian barracks are very large, but a perfect ruin, capable of holding in its best days, I should say, 40,000 men. Two of our seamen were wounded yesterday: they picked up a shell with a fuze in it and bore it down: it exploded, and slightly cut one man's neck and ankle; the other man, I think, was burnt a little. Whilst walking about, the Russians commenced blazing away across from the North; but no one was hurt. Now I think I have given you enough: so God bless you

The telegraphic reports bring our intelligence from the captured city down to the 23rd inst.; but the despatches contain nothing very definite. Prince Gortschakoff still held his position on the plateau on the northern side, waiting to see what the Allies will do next, and was enabled to announce to the Czar that up to that date nothing had been done.

The *Argus* English steamer, which arrived at Constantinople on the 17th, brought intelligence that the English and Sardinian troops were making their last preparations for being in a condition to pursue the enemy.

Great uncertainty prevailed respecting the probable movements of the Russian army. The plans of the Allies also remained secret, despite all the reports in circulation. When the steamer which brought this news to Constantinople left the Crimea a grand council of war was being held by the Generals and Admirals of the Allies.

The French troops were still occupied in demolishing the fortifications of the southern part of Sebastopol. There was much talk in the Camp of an expedition against Odessa. Not a single shot had been fired from Fort Constantine at the departure of the *Argus*, and all was quiet in that part of the town. The Allied fleets had not yet penetrated into the harbour; and the submarine machine on board the *Robert Lowe*, which was lying at Balaclava, had been removed to Sebastopol, where it will be of service to clear the entrance into the port. The bottom of the harbour is now encumbered with more than fifty sunken vessels, including eighteen sail of the line and several frigates and steamers, some of which will, no doubt, be recovered when we have time for that kind of work. Three or four hundred deserters, principally Poles, that have reached the Allied Camp, state that demoralisation had reached its height in the Russian army, which was in confusion at first, and the soldiers, worn out with fatigue, remained twenty-four hours without rations. The Russian loss was estimated at 18,000 men.

A letter from Vienna, of the 18th, in the *Post Amst Gazette*, of Frankfort, says:

According to the latest accounts from the scene of war, the Russians continue to send reinforcements to the Crimea. The Sixth Division of the Second Corps of Infantry has arrived at Bagtchesrai, and the Second and Fifth Divisions of the same Corps are on their way thither. Bagtchesrai and Simpheropol, where the chief stores of the Russian armies are, are both well furnished. But if Marshal Pelissier succeeds in forcing these points, the Russian army is undone. Once deprived of these magazines, it must either retreat upon Perekop, or lay down its arms. In the last encounter the Russians are stated to have had sixteen generals and 18,000 men killed or wounded.

A portion of the Allied Cavalry is said to have received orders to embark for Eupatoria; and the Russians, anticipating an attack, were extending their lines towards Bagtcheserai.

REPORTED OPINIONS OF THE KING OF PRUSSIA.—We find a curious speech ascribed to the King of Prussia by the *Emancipation* of Brussels. "A few evenings ago," says the Berlin correspondent of that journal, "a Russian officer congratulated the King of Prussia on having courageously maintained peace in spite of the solicitations of the Western Powers, and his Majesty replied as follows with some emphasis, as if anxious to be heard by the people around him:—'Yes, I have had the courage to maintain peace, which is of so much importance to Germany and the whole world; but if Russia displays misplaced exigencies, and if she thus extends war on the shores of the Baltic, in Italy, and perhaps elsewhere, I should also have the courage to counsel efficaciously the return to order on the part of those who should continue to disturb it. I am in accord with the Emperor of Austria; I foresaw the disaster of Sebastopol, and I believe that it would have been well to have avoided it. It was not without my consent that my Minister was present at the Te Deum at Paris. After all, when a country goes to war alone, it must expect adverse fortune. Believe me, the war must be brought to an end; it is still time to come to a fair arrangement. The opportunity is a good one, and we are ready to facilitate matters; but to-morrow, perhaps, it will be too late. Our patience ought not to be abused, and difficulties ought not to be increased. This, sir, merits serious attention.'" The *Emancipation* says that it has been assured that the text of some of the above expressions is literally exact and that the general sense of the others is correctly given.

TOWN AND TABLE TALK ON LITERATURE, ART, &c.

THERE is to be a farewell dinner to Mr. Thackeray—previous to his departure, on the 13th of next month, for America—to deliver his four lectures on the four Georges The guests will consist—so we are assured—principally of authors, artists, and actors of eminence, and persons distinguished in the learned professions. It will not be a public dinner—but one partaking more of a private character. It is fixed for the 11th, and Mr. Charles Dickens has consented to preside. This mark of good feeling on the part of his brethren in the art and mystery of the good writing is particularly due to Mr. Thackeray. Few authors have more friends among the craft than the author of "Vanity Fair," and few restrain their powers of sarcasm, or indulge in more genial outbursts of delight on the success of his fellow-labourers, than does Mr. Thackeray. We have very much, indeed, more than promising with respect to the coming lectures which and while Londoner with a love of letters, could not do better than follow Mr Thackeray to America, and have, with our American brethren, the treat of the treat designed for brother Jonathan.

The leading subject of conversation in literary circles has been the interval in England of the marble statue of her Majesty, made for one of Barry's magnificent recesses in the new House of Parliament, and executed by Mr. Gibson, of Rome. Her Majesty is represented, as we understand, as she erect, would be eight feet high. Two emblematic figures will assist the pedestal, each seven feet high—but these will not be in England until April next. The statue—it has been seen by a select few—is at Westminster near its final destination

Travellers fresh from Rome speak with perfect delight of the marvellous manner in which Mr. Gibson (the greatest living English sculptor) has coloured two marble statues of Venus and Cupid. People who went to see them, resolved to be disappointed, left with our contents quite reconciled of an ancient practice. Some experts to the contrary, Mr. Gibson has effected a sort of work, whereas they found high art in marble—heightened in beauty, and even chastened in expression, by the delicate employment of a little colour. Both are consummations of long standing. The Cupid is for Mr. Holford's new and stately house in Park-lane—now, we suspect, nearly completed.

We have great pleasure in inserting the following letter from a friend and admirer of the late Mr. Pistrucci, relative to the long-talked-about medal commemorative of the battle of Waterloo. If the medal is finished why should it not be in relieved forthwith and published? Perhaps Mr. Pistrucci's will may contain something on the subject. An artist so eager for reputation as Pistrucci can never have wished that his matrices should remain merely as matrices.

(To the Editor of the ILLUSTRATED LONDON NEWS.)

SIR,—In your memoir of Pistrucci, last week, you speak of the Wellington Medal not being finished. It has been finished and delivered now about five years, and why it is unpublished and unknown, a conversation I had with Pistrucci at his cottage in Old Windsor, will better explain than a whole Blue Book on the matter

That the Wellington Medal is the most glorious work ever produced by die-sinker there is no, from those who have seen it, a second opinion. That it will be published is a very great doubt

I had business with Pistrucci in the year 1848, when he showed me the medal all but finished. He was then working on it, giving it those finish ng touches which masters in painting and sculpture generally give to their works when in their best humour. He expressed humself bitterly to me on being ousted from his berth in the mint by one related to him for the little he knew, and he said, "When I do deliver it, my successor does not know how to harden it; and, as he has got my berth, and been the means of depriving me of the greatest part of my fame, I shall certainly not do his work for him."

Now, Pistrucci was as successful in hardening his dies as he was in cutting them, and his successor as unfortunate, and, between the refusal of Pistrucci to harden after he had delivered it, and the fear of his successor splitting it in the process, it never yet has been published

Admit the medallist, who is now the nearest approach to Pistrucci in the execution of his work, will, I am sure, if you take the trouble, corroborate my statement viz., that it has been delivered finished, and in the hands of the authorities of the Mint, for nearly the last five years

Pistrucci has left to medallists and die-sinkers a legacy worth all he has been paid ten times over. In introducing the finishing of dies with the lathe of the seal-engraver, after the heavy or rough work is done with the sculpter or chisel, a die may now be done better in one week than it would have been done in two. One peculiar advantage Pistrucci had over other men he was gifted with an eye of almost microscopic power; and I have seen him sign his name so small that, without a powerful glass, it appeared a mere line; on examining with a glass, every letter was well defined.

Trusting you can find room in your journal for this slight tribute to one who has elevated the coinage from the low state it was in fifty years since to its present state of respectability, I remain, Sir, your obedient servant,

GOLDFINCH

Our correspondent is too severe on Mr. Wyon. Mr. Wyon had great delicacy of touch, and great elegance of composition. His leading deficiency was a want of boldness.

What we take to be the last of the Parliamentary Blue Books of the season has just been issued, and is one of the most instructive. It is the evidence before the Commons' Committee on the cost of Parliamentary printing, and on the value of Major Benowski's plan for printing from logotypes. The principal witness is the celebrated author of the "Commercial Dictionary" (Adam Smith's ablest successor), who has held, since 1828, and much to the advantage of the country, the situation of Comptroller of her Majesty's Stationery-office. Mr M'Culloch tells us that the cost of printing, and of the paper required for such printing, reaches the enormous sum of £200,000 a year—divided pretty equally between the cost of printing and the cost of paper. Nor is this surprising when we reflect how much useless printing is executed for the Houses of Parliament—that 10,000 copies of Reports are printed when 500 copies would be amply sufficient; and that, according to Mr. M'Culloch's showing, we are paying Messrs. Hansard (on a contract anterior to Mr. M'Culloch's time) an annuity of from five to seven thousands a year on work which they will be glad to execute hereafter, and with a very fair profit, without any such annuity at all.

There is a morsel of Mr. M'Culloch's evidence that is especially characteristic, and, we will add, remarkably true. He is asked if he would give the papers printed by Parliament to the several Mechanics' Institutions throughout the country said to be requiring them. Mark his answer! "If I had the power of refusing them, I would not give them one; I would not inundate the country with such stuff as most Parliamentary Papers are. If you could get a Sir Isaac Newton to cull out of the million pages of trash the five or ten per cent of good that there is in them, and circulate that throughout the country—*that* might be useful."

ZOUAVES AND SAILORS PLUNDERING.—As soon as it was dawn (Sunday, 9th) the French began to steal from their trenches into the burning town, undismayed by the flames, by the terrors of those explosions, by the fire of a lurking enemy, or by the fire of their own guns, which kept on slowly discharging cannon-shot and grape into the suburbs at regular intervals, possibly with the very object of deterring stragglers from risking their lives. But red breeches and blue breeches, tepi and Zouave fez, could soon be distinguished amid the flames, moving from house to house. Before five o'clock there were numbers of men coming back with plunder, such as it was; and Russian robes were offered for sale in camp before the Russian battalions had marched out of the city. The sailors, too, were not behindhand in looking for "loot;" and Jack could be seen staggering under chairs, tables, and lumbering old pictures, through every street, and making his way to the trenches with vast accumulations of worthlessness. Several men lost their lives by explosions on this and the following day.—*Times Correspondent*

STATE OF THE BIRMINGHAM "IDOL" TRADE.—The following is the translation of an advertisement, in Hindustani, of idols for sale, of Birmingham manufacture: "Yamen (god of death), in fine copper, very tasteful. Nirondi (king of the demons), in great variety; the giant he rides is of the boldest design, and his sabre of the present style. Varounin (god of the sun), very spirited; his crocodile in brass and whip in silver. Couberen (the god of wealth), this god is of the most exquisite workmanship, having stimulated the best powers of the manufacturers. Smaller demi-gods and minor demons in every variety. No credit, and discount allowed for ready money."

NATIONAL SPORTS.

ALTHOUGH October promises us a really interesting Cesarewitch and Cambridgeshire Stakes, its first week has a fair share of such matters. Market Rasen has a little gathering, Newton Abbot and Chester have had theirs fixed for Tuesday and Wednesday. The Alma Stakes at the latter place has already a winner in it except the stout little Stork, who will have to carry a penalty. The remainder of the week is taken up by Bedford on Wednesday and Thursday; the York Union Hunt on Thursday; and Wrexham on Thursday and Friday. Steeplechasing will soon be here again, and we have heard a rumour that a Yorkshire gentleman proposes to add a very handsome amount to one in the neighbourhood of old Ebor, provided a good water jump can be selected; this being in his eyes, to use a legal phrase, "the *clearing* part of the whole thing." It is said that Sir Tatton Sykes has given £2000 for Andover, at which inability to appear on the turf this year we mustn't be hard as Lady, and intends to put him to the stud at Sledmere. This is the second Derby winner the veteran baronet has purchased within a few months, a fact which proves no small spirit in a man of 83, and we believe that he made a £2000 offer for Kingston last year, after he broke down in the Wisp.

The comments upon Saucebox's untoward defeat in the Doncaster cup called forth a very temperate and candid letter from Mr. Osbaldeston, who tells us that the shoes did not do the strong work attributed to him on the morning before the race (which is the fact of Nat riding Saucebox as well as Buckman in his gallops might have led to the mistake), and that the animal fits of Buckmaster in his case, tended to the want of a stronger piece to the Red House, alone lost him the St. Leger. It seems that he was taken out by Mr. Osbaldeston, Mr Spooner, and Nat to the course "had just six on Friday morning, and that although, in consequence of his lameness, all three advised Mrs. Osbaldeston not to start him, she declared that *he should go if it broke him down*, and his running in the Don Stakes, when a tight rein had cooled the ground, very considerably proved her decision to be as correct as it was dashing. Her husband and trainer were, we believe, equally against the horse going for the Great Yorkshire Stakes; but as she owns him solely, and is as good a judge of racing as Miss Ann Rudlands, of Ashdown Park memory, was of coursing, she did not by any means "run Buckmaster too high. She refused a £900 guinea offer for his favourite when he was a two-year-old, and it is believed that she took a £10 000 to £500 bet about him for the St. Leger at Brighton. Her husband also states that she refused £8000 for the horse before the St Leger, and might have had £9000 not to run him. There seems to be a notion among some of the supporters of the losing book, and a hurried movement of his supporters from him, that he had been "got at," and the same inferences have been drawn from the ceaseless opposition shown to him by one of the great book-makers, who seldom makes a mistake. He certainly ran, to our eye, more like a horse who felt uneasy from the ground, than from his stomach; and Mr. Osbaldeston has every right to repudiate the insulting insinuation that either he or his wife could have been parties to such a shameless proceeding. The public mind was, however, very naturally sensitive after the mysterious way in which he was scratched for the Derby, and Le and Acrobat will long be remembered in connection with these two great races. Each of them was scratched for the Derby for which they would probably have run second), then beaten for the St. Leger (each), restored his prestige most gallantly in the Don Stakes We should think it most doubtful whether the owner of Saucebox will renew his Doncaster offer to give 4 lbs and a very fast horse to make run for it, and Hungerford will not be over the St. Leger distance, as Mr. Osbaldeston is quite right, to make Buckman either at the Houghton or the second October Meeting, when the ground is pretty certain to be softer. The principal incident of the past week has been the reappearance of Fisherman Tom, very well and fresh, to judge from the style in which he cut down his opponents over very hard ground. Great care and patience have, as in the case of Stockwell, quite triumphed over the foot infirmity which deprived the turf of both of them so long. His half-sister is very promising, though not so large boned, and was purchased at the Burdett sale for six hundred guineas. The declaration of bankruptcy which has just been made in the case of Mr. Mare has been a great disappointment to the Newmarket people, as he had a small stud there, with Goding as trainer and Jem Snowden as rider, and had built a range of model stables with house complete during the last three years. He has never had anything of much mark, and his handsome Annandale two-year old, George Brown, had sadly disappointed him, and borne the "light blue and orange cap" to very little purpose this season.

The tryers will resume their scarlet coats next week, and Scotland, faithful as ever to her national sport, leads off with the Biggar St. Leger (open) on Tuesday and the following days. Bellock (Fermanagh) is also fixed for Tuesday and Wednesday; and the Everley Club will put their legs once more into the slips at Amesbury, and invite Mr. McGeorge's piercing ken, on Thursday, Friday, and Saturday. Lord Sefton's well-known frame, in his green coat, and his silver couples slung across his shoulder, will be sadly missed from both the plains of Alcour and Wiltshire, as the modern race of coursers not a little lack the enthusiasm of their seniors. Cricket has come to an end, and it almost gives one a chill to record a water-fixture, but the ensuing week will see the last of them, too, and the Prince of Wales Yacht Club take their closing trip on Saturday, starting from Folly House at three p.m.

NEWMARKET FIRST OCTOBER MEETING.

TUESDAY.

Match: 200, h ft.—Plenty filly, 1. Tyre, 2
Sweepstakes of 10 sovs. each.—Anglo-Saxon, 1. Persia, 2
Buckenham Stakes. Polmoodie, 1.
Eastern Counties Handicap.—Elsecrow, 1. Strood, 2.
Match: 50, h ft.—Baudalero, 1. Middleton, 2
Hopeful Stakes.—Intimidation, 1. Spaniel, 2.
Grand Duke Michael Stakes—Claret, 1. Strood, 2.
Sixty-Biennial Produce Stakes—King Tom, 1. Boer, 2.

WEDNESDAY.

St. Leger Stakes.—Hebera, 1. Vandal, 2.
Handicap Sweepstakes of 15 sovs.—Loosy, 1. Lord Raglan, 2.
Eighth Triennial Produce Stakes—Mary Copp, 1. Intimidation, 2.
Sweepstakes of 10 sovs each—Miranda filly, 1.
Sweepstakes of 10 sovs each—Algyone, 1. Frampton Maid, 2.
£50 Black Swan, 1. Triton, 2.

THURSDAY.

Rutland Stakes.—Nine filly walked over.
£50 Plate.—Cranbourne, 1. Quince, 2.
Seventh Triennial Stakes. Rifleman, 1. Hind, 2.
Queen's Plate.—Homily walked over.
Sweepstakes.—Anglo Saxon, 1. Roebuck, 2.

NORTHALLERTON RACES.—THURSDAY

Trial Stakes.—Hospodar, 1. Sarabund, 2
Two-Year-Old Stakes.—Mirage, 1. Bessie Byrne, 2.
North Riding Handicap. Brazey, 1. Eulogist, 2.
Amateur Stakes. Evangeline, 1. Foxberry, 2.

FRIDAY

All Aged Stakes. Hospodar, 1. Byrne, 2.
Welter Handicap.—Bourgeois, 1 Medal, 2.
Northallerton Handicap. Bourgeois, 1. Baron, 2.
Farewell Stakes. Double Mixture, 1. Impostare, 2.

RUSSIAN STORES CAPTURED OR DESTROYED.—General Pelissier says:—"Of the 4000 cannon found at Sebastopol, at least 50 are of brass. Others were thrown into the roadstead at the time of the retreat. I have ordered them to be sought for. We have already taken 200,000 kilogrammes of powder away from the place, and there is still more to be found. The number of projectiles will exceed 100,000. A despatch from Admiral Bruat, of the same date, announces that the vessels of the Allies destroyed in the Sea of Azoff, between the 6th and 11th of September, five fisheries on the coast of Serviask, and 68 in the lakes and rivers of the neighbouring coast: they burnt 31 storehouses, containing nets or provisions, and 98 boats laden with provender and provisions."

THE RUSSIAN INFERNAL MACHINES.—Some of the Highlanders went into the Redan on Sunday morning, and finding that gather a and med provide tably left it immediately for their former position They had no sooner done so than a tremendous explosion took place, followed The enemy had very probably perceived their entrance, for which they had been waiting, and then caused the explosion Our allies were not so fortunate on the right The 18th Regiment of the Redan and other troops, who had assaulted the Little Redan, were establishing themselves there for the night Just about the time when the explosion occurred in the Redan opposite to our works, another mine was sprung on the Little Redan It produced a frightful effect, hurling a great number of Russians into the air, and knocking or otherwise injuring many more It is said that as many as three hundred suffered by this explosion The precipitance of the French engineers prevented a similar catastrophe at the Malakoff They had examined for mines and galleries, and had come across a large pipe charged with gunpowder This they had carefully cut asunder, and they had separated each end from communication with the other It was subsequently proved to be a channel of communication between the mine in the Little Redan and one in the Malakoff, had it not been that the second mine of this tube had been destroyed, an explosion in the Malakoff would have taken place almost simultaneously with that in the Little Redan, and numbers must have perished.—*Letter from the Camp.*

MUSIC.

MR. COSTA'S NEW ORATORIO.—The copyright of the oratorio of "Eli," which created so great a sensation at the late Birmingham Festival, has been purchased by Messrs Addison and Co., of Regent-street, by whom it is to be forthwith published, not only in the usual arranged form, but in full orchestral score. It will be carefully revised, and will contain several important movements suggested to the composer by the effect of their performance at Birmingham. This great work, we understand, will be produced at Exeter Hall, by the Sacred Harmonic Society, early in next season.

THE THEATRES, &c.

ADELPHI.—We must now expect that at certain theatres "The Fall of Sebastopol" will form the subject of stage illustration. Mr. Cooke has patriotically devoted his amphitheatre to this national purpose, and, on Monday, employed his dramatic and equestrian resources to realise, as far as possible, the results of the great siege. Mr Stocqueler is the author of the drama, which, of course, is one of strong domestic interest, with a vivacious Irishman to boot, the colouring of which is in accordance with the stirring incidents that form the public portion of the story. The latter set before us the French Encampment, with its Zouaves, and fresh reinforcements continually arriving, the English army at Balaclava, the Russian heights by moonlight, with a view of Sebastopol, and troops of Guards, infantry, and Cossacks proceeding to a sortie: a surprise in the trenches, a grand inspection of British troops before Sebastopol; and the closing attack on the Malakoff and Redan. The latter is commenced in the circle, which is connected with the stage by means of an inclined plane The storm of exploding shells and cannon, with the flash and smoke and glare of blazing ruins, rivets the scene to the eye and ear in a fearful manner. The victorious Allies are at length visible, as the cloud of combat clears away, and rend the air with their shouts and vivas. The effect is altogether very startling, strange, and realistic.

YUCCA GLORIOSA OR ADAM'S NEEDLE.—In the grounds of T. Tryon, Esq., Baldwin-park, Northamptonshire, is a fine specimen of the above plant, with two fine spikes of flowers. When planted in March, 1852, it had a single root, being the old stem broken off above ground from a plant that flowered in 1849, with all shoots and suckers removed to form new plant. In 1853 another plant flowered—making three in six years, and there is every prospect of a pair of fine plants flowering in [illegible] next year. The seed-vessels or capsules from the plant that flowered in 1853 are now fully ripe, and when so young.

CHARITABLE BEQUESTS.—Chambers Hall, Esq., has bequeathed to the St. Mary Hospital, Paddington, £1000; and, to the Salisbury Infirmary, £1000. Mr. Edward M. Cole, of Bristol, has left £200 to the Churchwards of Christ Church, Clifton, towards erecting the tower; and to the Bristol Royal Infirmary, Bristol General Hospital, Bible Society, Church of England Missions, Female Penitentiary, and the Orphan Asylum, each £50, and to the New Orphan House, Ashley Down, £100. Miss Louisa Duff, of Dorking, to the Church Pastoral Aid, £300; British and Foreign Bible, £100; Church Missions, £100; Moravian Missions, £100; London City Mission, £100; Ladies' Hibernian Female Charity School, £200; Society for Propagating the Gospel among the Jews, £100; and to the Society for Poor Curates' Clothing and Distressed Church, and the Clothing Society for Ireland, each £200 to each.

WILLS.—The Will of the Right Hon. Charles William Earl of Sefton, of Croxteth-hall and Westminster-square, has been proved under £80,000 personalty. Sir William Abraham Chatterton, Bart., of Castle Mahon, Ireland, and of Rue Park, Essex, £16,000 personalty within the province of Canterbury. John Gwynn, Esq., of Veryan, Cornwall, £50,000 John Hind, B.D., of St. John's College, Cambridge, £10,000. The Venerable George Hodson, M.A., Canon of Lichfield and Archdeacon of Stafford, £9000.

RAILWAY STATE CARRIAGE FOR THE VICEROY OF EGYPT.

THIS magnificent saloon State Carriage has been recently constructed by Messrs. J. Wright and Sons, of Birmingham, for the use of his Highness the Viceroy of Egypt, on the Alexandria and Suez Railway. It is of large dimensions, being 26 feet 6 inches long, by 8 feet 6 inches wide, and 6 feet 4 inches high in the inside; divided into three compartments communicating with each other by double sliding doors. The State-room, 14 feet long, occupies the centre, and is trimmed with rich a ber-coloured silk damask well padded; the curtains are of the same material, lined with white silk. A large chair, covered with crimson silk damask, in a frame work of gold and gilt, is provided for the Viceroy; there are also five smaller chairs *en suite* for the officers of State; and a very beautiful oval marqueterie table, with ormoulu mountings, occupies the centre of the saloon

On the right of the State saloon is a retiring-room, fitted up with a costly pier glass, a couch, a satin-wood wash-table, &c. The windows are of plate-glass, ornamented with the Crescent, and the Star of Egypt.

The third compartment is for his Highness's servants, and is lined throughout with satin-wood relieved by elegant gilt mouldings; it contains a sofa or divan, also a bracket-table and a chiffonière, as a receptacle for a massive silver kettle and coffee-pot with spirit lamps, for making coffee. The floor in all the compartments is covered with a rich Axminster carpet, manufactured expressly for this carriage; and the interior is lighted at night by four patent lamps in the ceiling, with chased and gilt mountings.

Particular attention has been paid to the ventilation by apertures over the windows. The carriage, though complete in itself, has a second roof, supported upon large richly-carved gilt blocks, giving an open space between the two roofs, to secure a constant current of air, to keep the interior as cool as possible.

The exterior of the carriage is elaborately decorated with scroll-work in gold and relief, tastefully interspersed with groups of flowers on a ground colour of pistachio green. The Viceroy's insignia, surrounded by trophies, are painted on the doors. The decorations are specially designed with reference to Eastern love of gorgeous effect, rather than in accordance with English taste. The body of the carriage is mounted on an iron underframe of the most approved construction, on six wheels with patent safety tires and patent axles; the under frame is highly ornamented, and the ends are cased in wood elaborately carved and gilt.

On the whole, this railway carriage reflects the highest credit on the builders, for the taste and skill exhibited in every part of its construction.

The general design and details were prepared and forwarded to England from Alexandria by the Director-General of the Egyptian Government Railway and Transit Administration, and have been admirably carried out by Messrs. Wright. The upholstery is by Messrs Holland and Sons.

This carriage has been taken out to Alexandria by the Peninsular and Oriental Company's steamer *Indus*. From its large dimensions it can only be conveyed on deck: the case containing the body alone weighs upwards of fifty tons.

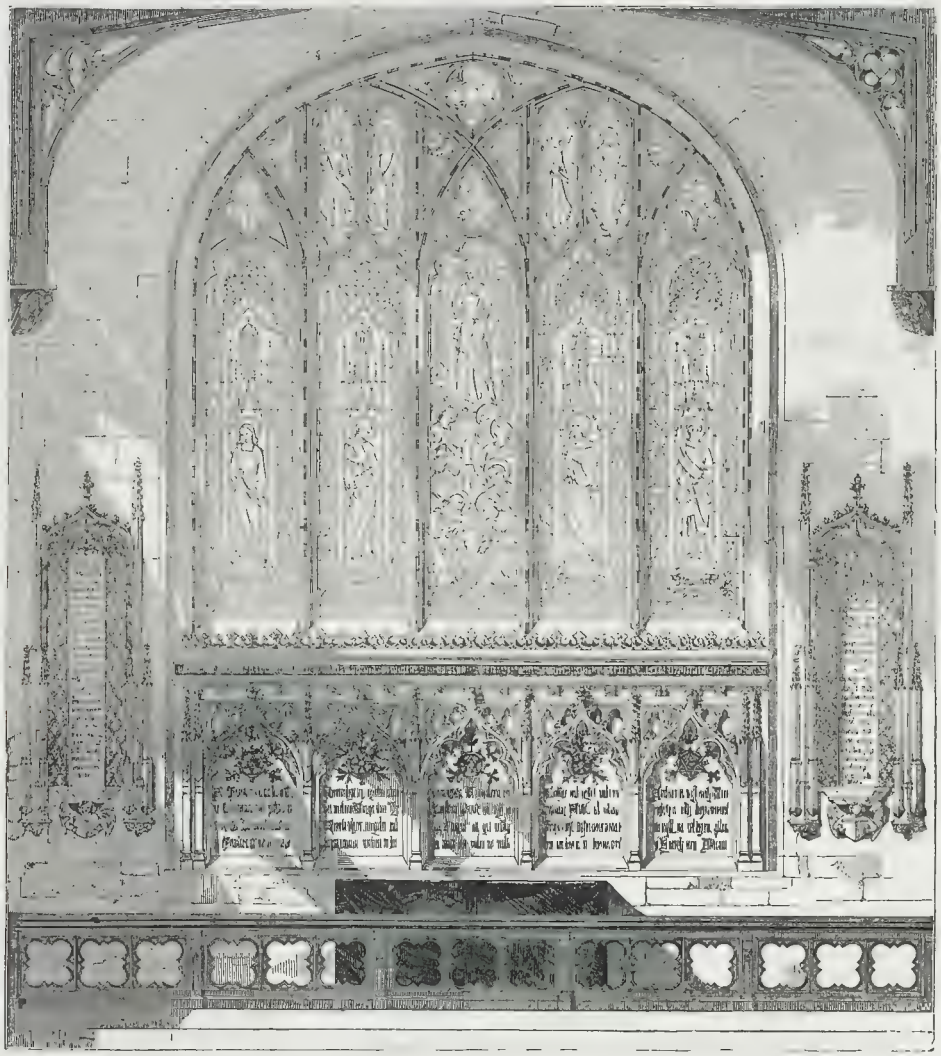
This carriage will be used by the Viceroy on the railway, which will shortly be opened the entire length between Alexandria and Cairo

In connection with the subject of railway development in Egypt, it may be mentioned that the Viceroy has given orders for the formation of the line across the desert between Cairo and Suez, a distance of eighty-four miles; which, from the perfectly level nature of the ground, can be executed with the greatest facility. Two cargoes of rails have already left Wales for Alexandria, his Highness being very anxious that this most important work shall be carried out as speedily as possible.

THE ROYAL MEMORIAL TO THE LATE JOHN CAMDEN NEILD, ESQ., IN NORTH MARSTON CHURCH, BUCKS.

ALTHOUGH the eccentricities of this gentleman, who, it will be remembered, bequeathed his estates to her Majesty some three years ago, were freely commented upon by the press at the time, the fact of his existence would probably have passed away from public recollection altogether had not this tribute to his memory on the part of his Royal legatee revived an interest in the matter. That very isolation which induced Mr. Neild to select as his heir an illustrious lady personally unknown to him, and which enabled her to receive his bequest without in the slightest degree interfering with any claims of kindred or affection, involved the legatee in the responsibility of taking care that a monument becoming the social position of the deceased should record, if not the virtues—which scarcely appear to have thriven in a somewhat unkindly breast—at least the fact of the mortal career of a gentleman by birth and education, and a personal benefactor. This responsibility appears to have been duly felt, and through a sense of it, no doubt, the Memorial we engrave has been caused by her Majesty to be executed.

In this instance a very happy illustration has been afforded of the manner in which a monument may be so introduced into a church as to serve the double end of commemorating the departed, and at the same time of adding to the beauty of the structure in which it is to be erected. It is too often the case that large sums of money are spent upon monuments which disfigure rather than adorn the buildings in which they are placed.



THE ROYAL MEMORIAL TO THE LATE JOHN CAMDEN NEILD, ESQ., IN NORTH MARSTON CHURCH, BUCKS.

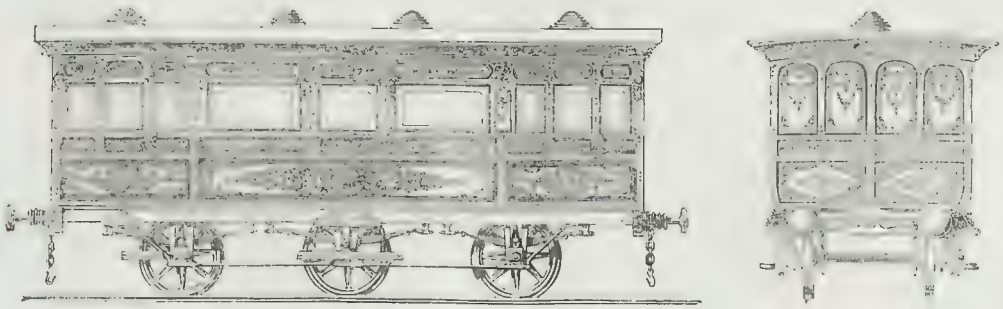
Often a quarter of the money spent upon the marble urns over which allegorical figures swaddled in drapery mourn the virtues of the departed squire, would have sufficed to repair the simple old chancel for which such costly memorials are a world too fine, or would have added whatever feature of use or beauty the structure might most have demanded. From such, as we deem it, culpable extravagance in lavishing on the dead sums which would have been better bestowed in ministering to the necessities or spiritual gratification of the living—the Royal lady by whom the monument we engrave has been erected must be regarded as entirely free, since not only has it been so devised as to add a graceful feature to the noble old church of the parish in which Mr. Neild's property was principally situated, but its cost has been less than a third of the whole sum spent by her Majesty in restoring simply, but most thoroughly and substantially, the chancel, which at North Marston forms an unusually large and important feature of the church

The subject which has been selected for the window is the Ascension. High up in the centre compartment appears our Saviour, and at his feet are grouped the Apostles, whom he is supposed to have just left—some of whom are attentively examining the prints upon the earth left by his ascending feet. This mode of symbolising the duty of the church is of not unfrequent ancient occurrence, being to be met with in various mediæval sculptures, as at Ely, and in some of the early block books. In the four other principal bays stand the four Evangelists, under canopies, whilst in the minor openings above are angels and the Holy Dove descending as it were to meet the ascending Saviour. Along the bottom of the whole runs the text, "Now is Christ risen from the dead, and become the first fruits of them that slept." The window has been executed with the greatest care, and a very happy result, by Miss Harriet Clarke, assisted in the ornamental portion of the work by Messrs. Ward and Nixon. Beneath the window is a reredos sculptured in Caen stone, by Mr. Cundy, of Pimlico. Upon its frieze is carved the commemorative inscription, which states that—

This Reredos and the Stained-glass Window above it were erected by her Majesty Victoria (D.G.B.R.F.D.), in the eighteenth year of her reign, in memory of JOHN CAMDEN NEILD, Esq., of this parish, who died August 30th, 1852, aged seventy-two

In the compartments of the reredos, as well as in the backs of two niches, one on each side of the Communion-table, the Creed, Lord's Prayer, &c., have been emblazoned; and these portions of the work, as well as whatever coloured decoration has been introduced, have been carried out by Mr. Miller, of Brewer-street, Golden-square.

Mr. M. Digby Wyatt was the architect her Majesty honoured by her selection on this occasion, and it is from his designs, and under his superintendence, that the whole of the works have been carried out.



RAILWAY STATE CARRIAGE FOR HIS HIGHNESS THE VICEROY OF EGYPT.—(SEE PRECEDING PAGE)

MR. GORDON CUMMING'S LECTURE.—RIDING OUT THE BEST IVORY-ELEPHANT. SHOOTING FROM THE SADDLE. PAINTED BY HARRISON WEIR.

HAYMARKET THEATRE.

"THE SULTAN" was revived at this theatre on Monday week. The character of *Roxalana* was vivaciously and gracefully supported by Miss Blanche Fane. Of this lady we this week present our readers with a portrait. A more pleasing and attractive vaudeville actress has not for a long period visited the English stage. The daughter of a gentleman whose own performances, under the *soubriquet* of Mr. Rang r, have bestowed occasionally great delight on the public, in comedy, and in some excellent pieces of his own composition, in which Frenchmen or Irishmen have the lead, we may readily conceive that she has been instructed in her art both by precept and example. For some considerable time Miss Fane was contented to be regarded as an amateur; but for the last year or two she has wisely matriculated in the provinces, having performed in the Theatre Royal,

MISS BLANCHE FANE, OF THE THEATRE ROYAL, HAYMARKET.

Liverpool, in order to qualify her for a professional position on the London boards. The success with which she has appeared in "Court Favour" and "The Sultan" will, no doubt, introduce her to a round of characters, with which she cannot fail to delight many an audience previous to her departure for America, for which, we believe, that her engagement at this theatre is intended as a preparation. She, indeed, promises to be one of the most interesting actresses in the present era of the stage. Her figure is *petite*, but elegantly formed; her complexion and hair are fair, while her entire deportment gives every evidence of good breeding and education, without which no permanent eminence can be attained in the higher walks of the dramatic profession. Altogether, it may be safely predicted that Miss Fane will, with care and industry, attain a high position in that profession where so much depends on youth, talent, and personal attractions.

MR. GORDON CUMMING'S LECTURE AND ILLUSTRATIONS.

WE are happy to find that, notwithstanding London is empty, "the Lion Slayer at Home" receives a goodly company every evening, at his artistic salon in Piccadilly. So prompt a recognition was due to the lecturer's taste and talent, and the original and exciting character of the narrative of perilous adventure and incident bristling with points of interest. By way of illustration of this remarkable exhibition, rather than engrave the salon, however picturesque in its way, we have selected one of the scenes

PARIS FASHIONS FOR OCTOBER.—(SEE NEXT PAGE.)

or Pictures—"Riding Out the best Ivory-Elephant—Shooting from the Saddle," painted by Mr. Harrison Weir. The following extract from the lecture describes this extraordinary scene:—

When I passed through Kuruman Mr. Moffatt informed me that elephants were, even in those days, the most distant game to reach, and the difficult to vanquish: and I certainly found his words come true, for I often almost despaired of ever reaching the land of elephants. I shall never forget the feelings of excitement and intense interest with which I first beheld their fresh tracks of a fountain near Bamangwato, near Masseney. This was a very interesting fountain, situated in a little rocky hollow at the southern extremity of endless elephant forests, at which I had at length arrived. Numbers of old-established elephant footpaths led away from the fountain in different directions; and even the hard rock was worn hollow by the feet of the mighty game which for ages had trodden there.

My usual mode of hunting the elephant was to take up their tracks at the early dawn of [illegible] which they had drunk at the fountain overnight, and carefully follow them up, which was generally in a dense cover of the *acacia horrax*, or wait-a-bit thorn. On being aware of the presence of man a headlong flight is generally the first move with the elephants: this is a very striking scene, and accompanied with a noise like the rushing of a tempest, for they do not swerve from their straight course for trees of moderate size, but send everything crashing and flying before them. At this particular moment the hunter must ride boldly in among the herd to select the elephant carrying the finest tusks, and to get the elephant I wanted cleared the herd by riding down on under his stern and yelling loudly, which caused the others to incline to the right and left. When the elephant finds flight is avoiding he suddenly pulls up in his career, and, facing about, he charges the hunter with incredible supernatural fury; at the same time trumpeting so loud and shrill that the earth and forests seem to tremble. The hunter then rides hard for his life; and when the elephant halts he must also halt, and fire from the saddle, as the elephant turns to retreat. Thus in hunting the elephant [illegible] conflict, the stupendous monarch of the forest finds his strength give way, and at length he colossal form [illegible] prostrate on the earth before his insignificant-looking but more gifted foe. You will thus be enabled to perceive that the [illegible] of peril encountered in hunting the elephant depends in a great [illegible] on the nature of the ground where the attack is made; for in nine cases out of ten, the fight is conducted in dense jungles of the wait-a-bit [illegible] [illegible] [illegible]

AMUSEMENTS, &c.

THEATRE ROYAL, HAYMARKET, Manager, Mr. Buckstone. Every Evening (except Saturday) at Seven o'clock, the Comedy of THE MAN OF MANY LIVERIES. To conclude with Mr Compton, Miss Joyce, and the Company supported by the first-rate Dancers, Perna, Rosati, and Petipa, in the Divertissement of SPANISH DANCERS. In Two New Ballets, and Miss Stanfield's Fine COURT FAVOURITE.

GREAT NATIONAL STANDARD THEATRE, Shoreditch. Proprietor, Mr. JOHN DOUGLASS. [illegible] Every Evening [illegible] Saturday Morning at Eleven o'clock, [illegible] Sunday at Seven o'clock, [illegible] Monday, Tuesday, Wednesday, Thursday, and Friday, at Seven o'clock, [illegible] Saturday at Three and Seven o'clock. [illegible] Private Boxes, Stalls, and Orchestra Seats can be secured at the Box-office, which is open from Ten till Five daily. [illegible] Places for the Pit and Gallery can be secured at the Box-office, which is open from Ten till Five daily. [illegible] Doors open half an hour before the Performance commences. [illegible] Carriages may be ordered to be in attendance at Half-past Ten o'clock.

ROYAL LYCEUM THEATRE.—SIGNAL SUCCESS. The hitherto Unprecedented Success of Mr. Leslie's Performance of Professor Anderson, the Great Wizard of the North. On MONDAY OCTOBER 1, and during the Week, will be presented, for the First Time, a Comedy, in Two Acts, entitled [illegible] Mr. Leslie, Mr. Shalders, Mr. Paul Bedford, Mr. Emery, Mr. Gough, Mr. Rogers, Mr. Parselle, Mr. Addison, Mr. Fitzjames, Mr. Lovell, Mrs. Leigh Murray, Miss Reynolds, and Miss Oliver. After which, a Farce, in One Act, entitled [illegible] Mr. Leslie, Mr. Shalders, Mr. Paul Bedford, Mr. Emery, Mr. Gough, Mr. Rogers, Mr. Parselle, Mr. Addison, Mr. Fitzjames, Mr. Lovell, Mrs. Leigh Murray, Miss Reynolds, and Miss Oliver. To conclude with [illegible] Mr. Leslie, Mr. Shalders, Mr. Paul Bedford, Mr. Emery, Mr. Gough, Mr. Rogers, Mr. Parselle, Mr. Addison, Mr. Fitzjames, Mr. Lovell, Mrs. Leigh Murray, Miss Reynolds, and Miss Oliver. Doors open at Half-past Six o'clock. Commence at Seven. Private Boxes, Stalls, and Orchestra Seats can be secured at the Box-office, which is open from Ten till Five daily. [illegible] Places for the Pit and Gallery can be secured at the Box-office, which is open from Ten till Five daily. [illegible] Doors open half an hour before the Performance commences. [illegible] Carriages may be ordered to be in attendance at Half-past Ten o'clock.

THE LION-SLAYER at HOME, 232, Piccadilly.—Mr. GORDON CUMMING DESCRIBES every Night, at Eight o'clock, his EXPLORATIONS and ADVENTURES in SOUTH AFRICA. Morning Entertainments every Tuesday at 3 o'clock. Admittance, 1s. Stalls, 2s. Private Boxes, 10s. 6d. Open for Inspection of Mr. Gordon Cumming's Collection of Weapons, Trophies, &c., on View during the day, from Eleven to Seven.

WALKER'S OLIO of GIRAFFES [illegible] Every Evening at Eight, and Saturday Morning at Three. Admission, 1s. Stalls, 2s. 6d. Private Boxes, 10s. 6d. Open from Eleven to Seven. 4 Coventry-street.

DIORAMA.—GRAND ARAB FAIR, at MIDNIGHT, consisting of upwards of 1000 highly-decorated Figures, forming every part of the Indian Drama. Open for general admission from 11 till 5. Lectures by Dr. Bachhoffner, at 12, 2, 4, and half-past 7. Admission, 1s. 4 Coventry-street.

PANORAMA of the RHINE, 14, [illegible] Every Evening at Eight, and Saturday Morning at Three. Admission, 1s. Stalls, 2s. Private Boxes, 10s. 6d. Open from Eleven to Seven. 4 Coventry-street.

THE EXHIBITION of the PHOTOGRAPHIC SOCIETY, by ROGER FENTON, Esq., Tasem at the GALLERY of the SOCIETY of BRITISH ARTISTS, Suffolk-street, Pall-Mall East. Admission, One Shilling.

ROYAL SCOTTISH EXHIBITION of LAST YEAR'S PICTURES, at the GALLERY, 6, Waterloo-place, Pall-Mall. Open from Ten till Six. Admission, 1s.

THE ZOOLOGICAL GARDENS, REGENT'S-PARK.—The enclosure of Living Animals includes a numerous collection of [illegible] Lions, Tigers, Leopards, Panthers, Bears, Wolves, Camels, Dromedaries, Llamas, Deer, Kangaroos, Monkeys, Parrots, and many other Birds, Reptiles, &c., and a large number of Horses, Cattle, and Sheep. The Gardens are open every day, Sundays excepted, from Nine in the Morning until Sunset. The Band of the 1st or Grenadier Guards will perform, by permission of Colonel Parker, every Saturday at Four o'clock in the afternoon. Admission, 1s., Monday, 6d.

EXCURSIONS to DOVER, [illegible] Every Week-day, at 8.30 a.m., for Canterbury, every SUNDAY, at 8.30 a.m., for Margate and Ramsgate, on each Sunday, the 30th inst.,

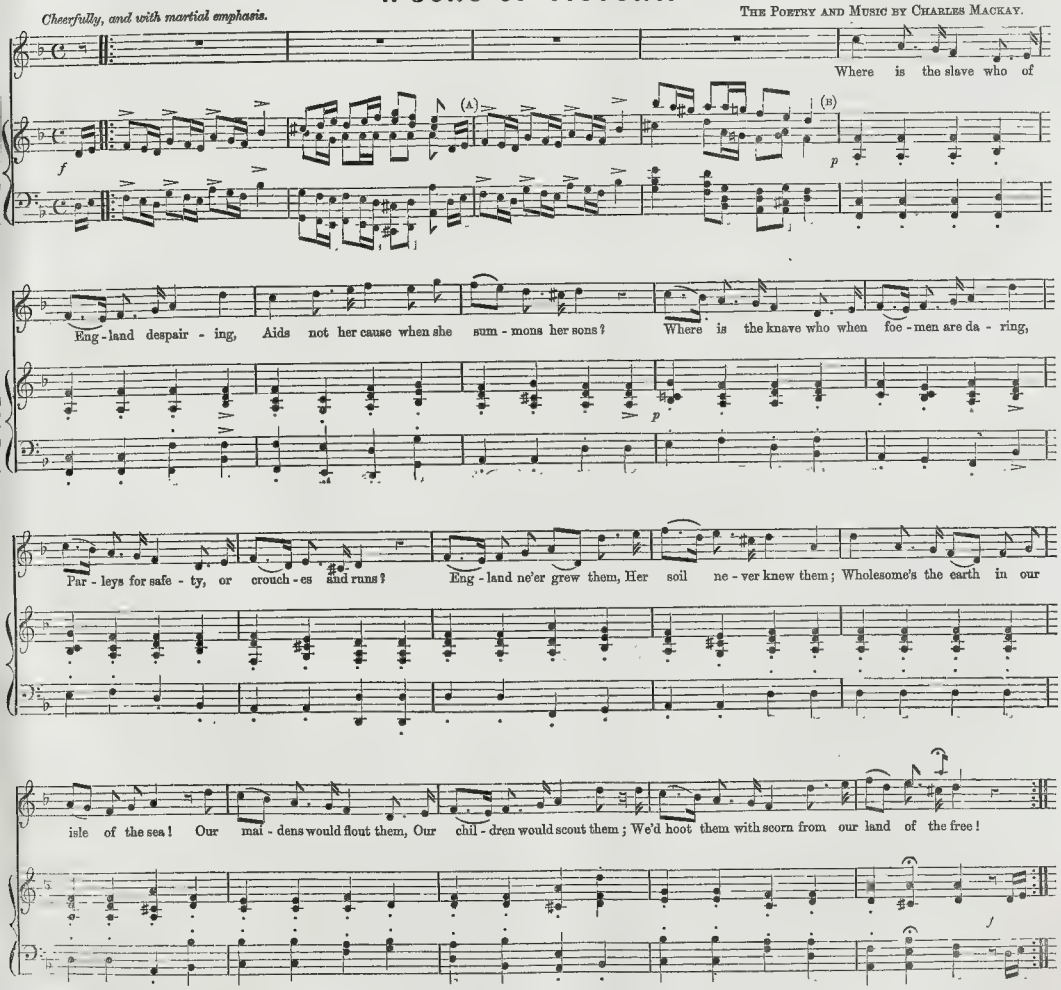
INVESTITURE OF THE ORDER OF THE BATH, BY LORD STRATFORD DE REDCLIFFE, BEFORE SEBASTOPOL.—SKETCHED BY E. A. GOODALL. (SEE PAGE 382.)

ENGLAND! DEAR ENGLAND!

A SONG OF VICTORY.

Cheerfully, and with martial emphasis.

THE POETRY AND MUSIC BY CHARLES MACKAY.



Where is the slave who of
(A)
(B)
f
p
Eng-land despair-ing, Aids not her cause when she sum-mons her sons? Where is the knave who when foe-men are da-ring,
p
Par-leys for safe-ty, or crouch-es and runs? Eng-land ne'er grew them, Her soil ne-ver knew them; Wholesome's the earth in our
isle of the sea! Our mai-dens would flout them, Our chil-dren would scout them; We'd hoot them with scorn from our land of the free!
f

I.

Where is the slave who, of England despairing,
Aids not her cause when she summons her sons?
Where is the knave who, when foemen are daring,
Parleys for safety or crouches and runs?
England ne'er grew them,
Her soil never knew them;
Wholesome's the earth in our isle of the sea!
Our maidens would flout them,
Our children would scout them;
We'd hoot them with scorn from our land of the free!

II.

Foemen may dare us with haughty defiance,
Low as Sebastopol's tow'rs shall they fall;
Strong in the right in immortal alliance,
England and France shall o'ermaster them all.
Shame and perdition
Shall track their ambition;
Justice shall gleam in the glaive that we bear,
And nations benighted
To victory lighted
Shall learn from our greatness what free men can dare.

III.

England! Dear England! our fathers before us
Bled for thy freedom, and left us their fame;
England, our darling! the mothers who bore us
Gave us their blessing entwined with thy name.
Ours be the glory
To better thy story;
Lofty and pure be thy banner unfurl'd!
If great we receive thee
Still greater we'll leave thee,
England! Dear England! the queen of the world!

* For symphony after third verse go to (A) and end at (B).

THE WAR IN THE CRIMEA.

(From our Artist and Special Correspondent.)

[The following appeared only in a portion of our last week's impression]:—

CAMP BEFORE SEBASTOPOL, Sept. 5, 1855.

THERE are few spots more calculated to impress one with the greatness of the contest in which we are engaged before Sebastopol than the ground which separates our advanced parallels and saps from the formidable works of the Russians. It is not merely because the ground is strewed with projectiles of every kind—shot, shell, slugs, grape, grenades, and the like—that it has a desolate and peculiar air, but it appears to have been rent into fragments by the passage of some tornado. Large holes are blown into mounds of rock, blackened and powdered by explosions. Huge lumps of stone are strewed around amongst the iron and leaden missiles of war; whilst splintered muskets and shreds of human clothing attest the presence and direction of men. In spots the earth and rock, more capriciously formed than in others, rear themselves in misshapen undulations and projections, of which the soldiers on either side take advantage to form a shelter for their bodies. It is a sort of debatable land, alternately occupied by friend or foe; the favoured spot contended for nightly and held indomitably by its temporary occupant. Here the solitary sentry takes his dangerous post, couched or rampant, looking out for enemies, who prowl at the dead hours of the night, as much in quest of some one to surprise as to see that no surprise is intended. These are services of danger, but necessary to ensure the safety of many; for at no great distance in the rear are parties of men, unarmed, bearing gabions; others are casting earth into those that have already been placed, others, again, are filling sacks with ballast at a distance, for the ground is rocky and will not bear digging. The sap must perforce be a flying one—not the full sap, which gives greater security and is more lasting. In dead silence these operations are carried on; but still the labours of the party are watched, and when a gleam from the explosion of a large gun shows where men are at work, the temporary cover is rudely tested by showers of grape, or by slugs from the rifles of the enemy. Such as I have endeavoured to describe them are the open spaces in front of the Great Redan, where saps are nightly advanced towards completion. Such also is the nature of the ground between the French advances and the Russian Malakoff and Little Redan. These are the favourite spots for Russian sorties, and those in which the old soldiers of both armies show the most telling examples of patience, skill, and courage.

If a few young soldiers carrying gabions and sand-bags take an alarm natural enough to their inexperience—as happened during a sortie on the 31st of August—the more wary men soon deprive the enemy of the advantage he has temporarily obtained. He is steadily driven back, carrying off perhaps some gabions and muskets, but leaving not a few dead behind. Still, these interruptions are serious, and the sagacity of the enemy teaches him to renew them as often as he can. The French, as well as our works, have more than once borne the marks of well-directed assaults; but this mode of annoyance, in order to be completely successful, requires more daring than appears to have fallen to the share of the Russians of late, and for the last few days the sorties they have made have been repulsed with so much ease, as to make us believe in a deep discouragement. On the last occasion, when they moved out of their trenches in numbers, they were observed by the French on the sides of the Mamelon advancing stealthily towards the head of the sap on the right slope of the Redan, and before they could open and surprise us, our men were apprised of their presence by ironical cheers from our allies, who urged them on by crying out "Bono Russe," and then terrified them by cries of "Bono Anglais" This terrible raillery seemed to paralyse the Russians, who marched on feebly, and gave way without coming to close quarters, after receiving a furious fire, which lasted about ten minutes. This sortie took place on the 4th, being the last of a series which commenced on the 31st of August, and continued on the 2nd and 3rd of September. It was on these occasions that our army lost some valuable officers. On the 2nd, Captain Fraser, of the 95th, had his thigh fractured by a shell, and he died shortly after. Captain Forbes, of the 30th had his arm shot off, and did not long survive. And the right hon. of the 3rd Captain Pechell of the 77th was on duty in the fifth parallel, a work hitherto left incomplete. He went out with Captain Parker to post sentries in one of the pits which are so plentiful around, when he was shot. The Russians had had the pit before us, and formed an ambuscade. Their discharge killed four men, but did not touch Captain Parker. That officer succeeded in killing two of the enemy with his revolver, and then retreated with one man remaining. After a short time the enemy cleared the pit, where our sentries were again posted. During a vigorous cannonade, kept up on the night of the 2nd, a lucky shot struck the raft-bridge in the harbour of Sebastopol, and rendered it impassable for the whole of the following day. The necessary repairs were, however, effected without further interruption, and the continual stream of traffic to which we had been accustomed again poured over from side to side. Carts innumerable passed to and fro at all hours, not affording externally any indications of their contents. It is difficult, indeed, by those or any other signs to say what the intentions of the enemy may be. It is obvious that the new bridge is intended as a means of final retreat, and it is even said that a large number of guns has been taken from the south to the north side, a large reserve artillery being posted on the Katcha. Still the Russians have not been so dispirited by our bombardment of the 17th and 18th of August, and the continual musketry which plays on the Redan and Malakoff, to abandon the idea of repairing the works and mounting new guns. These works, silenced or nearly so on the 18th, have gradually reopened their embrasures, and are occasionally from several guns. Two or three in the Malakoff are particularly intended for the Quarries Battery on the spur of the Redan-hill, and several on the Redan throw grape into our advances and sap unsparingly. There is no doubt, I am told, that the Fourth Division which fought on the 16th at the Tchernaya has been ordered into Sebastopol, whilst its General was sent to St. Petersburg for misconduct on that day. The army in Sebastopol is increased by this means to 40,000 men, and a recent addition of men has been made from the new militia regiments raised by the Emperor. An amusing story is told with respect to a body of these men, who arrived to the number of 17,000 in the Crimea. They were a rude, undisciplined set, inefficiently armed and accoutred, wearing, indeed, nothing more destructive than their own peasant dress and bushy beards. General Gortschakoff ordered a body of these men into the trenches, where they refused to go, saying, with truth, that they were peasants, unaccustomed to fight; and that they came to labour, and so serve their country. Gortschakoff, however, would not allow their excuse; and, having first dismissed them into the interior in disgust, sent for 8000 of them, whom he incorporated with the troops, after shaving and otherwise altering their outward aspect.

The divisions which now remain out beyond the Tchernaya, in the vicinity of Mackenzie's Farm, are the 5th, 7th, 12th, 16th, and 17th. The Grenadier corps is said to have arrived at Kief, from Warsaw, on its way hither. If that reinforcement arrive even after the capture of the south side of Sebastopol, we may expect a general engagement, in which the Russians may expend a final effort to dislodge us. The army outside Sebastopol and in the hills near the Tchernaya has been a source of perpetual alarm to the Allies since the 16th of August. Regiments have been turned out at night, not once or twice, but four times within the last week, and the Highland Brigade has been again permanently detached from the front to take a position near the Piedmontese at Kamara. On the night of the 3rd the prospect of an attack was considered so imminent, that all the steam transports in Balaclava had steam up, and cast off their moorings in readiness to tow out ships. The cavalry brigades have also been out nightly, but hitherto the enemy has not answered official expectation by appearing.

CAMP BEFORE SEBASTOPOL, Sept. 8, Six a.m., 1855.

AT a quarter past five on the morning of the 5th, as the sun had just risen in a pure sky, the whole of the batteries from Kamiesch to the Dockyard Creek were opened by the French with a vivacity and precision almost unparalleled since the commencement of the siege. Salvo after salvo was poured upon the astonished enemy before he began to answer, and many minutes elapsed before the great works which front those of the French opened a well-fed cannonade, which for a few hours equalled that which opposed it. As the time stole on, however, a marked diminution was noticeable in the vigour of the Russian batteries; and, although from the lines forming the first, the second, and even the third defences of Sebastopol, guns were continually discharged, the artillery had not the rapidity or precision of its first discharges. For many hours the bombardment was confined to that portion of the town in which it was supposed that the French had discovered troops and stores, gathered together as if in a comparatively safe place. However, about noon, the French right near Inkerman opened with several new batteries, whilst many of those in our trenches broke forth and joined in the general roar. The Russians were observed at the early outbreak of the fire to muster in considerable numbers on the northern side; and, whilst a large staff was visible scanning our lines, a number of companies was observed marching down to the bridge of rafts and crossing into the town. Large working parties at the same time crossed from the south to the north side, having doubtless been interrupted in their labours by the violence of our efforts. Had it not been for a gun at distant intervals fired from embrasures in the Redan, one might have supposed that the work was completely empty. The day continued to wear on, and the usual aspect of the embrasures from Inkerman to the Dockyard Creek seemed to be little altered from that which had been daily visible for a week past. An occasional shot from Chapman's and Gordon's, now and then a shell from the mortar batteries entering into the Malakoff and Redan, announced their presence in those works by clouds of red dust and white smoke, darting in columns into the air, and then sailing slowly to leeward. The batteries on the Russian side of Inkerman seemed not particularly hard upon us; and whilst the fire was still kept up in salvos on the western, the eastern portion of our redoubts was comparatively silent In no previous bombardment, however, did the French exhibit such determined good will as in the attack on the Russian right, the effect on the earliest like a gigantic roulade on a prodigious instrument; and the guns on the right no sooner emitting their brilliant flashes and dazzling clouds of smoke, than the fire ran along the line down to the sea-shore, in perfect time, and with the same speed almost as if a gunpowder train had been fired from one end to the other.

It was very soon discovered that the Russians were replying with shot to our attacks, and seemed inclined to spare their shells; and this, not unfairly, led to the supposition that they were becoming sparing of their hollow ammunition. The Redan, although comparatively idle, showed that it was not silenced, and at intervals sent shots into our advanced trenches and Chapman's Battery. A bold spectator was seen for a moment on the parapet of the work, and then observed to run along the side, skipping from embrasure to embrasure. Finally he jumped back into the work apparently unhooded and unhurt. It is generally believed that the Redan and Malakoff are casemated with navy beams of wood similar to those which were found in the Mamelon Vert, and the defenders descend into places of safety when they find the fire against them too heavy to bear.

Towards the afternoon the English attacks began to take a more decisive part in the bombardment; and the French unmasked several new batteries, which played with great effect upon the works of Careening Bay, the Little Redan, and the Malakoff. Clouds of smoke and dust enveloped that portion of the Russian defences; in the midst of which the French vigorously pushed the parallel connecting the heads of their saps against the Mamelon Vert and the Malakoff Still, the batteries which had been built to damage the shipping appeared to be silent; and a general opinion gained ground that they had been rendered useless by the alteration of the position of the ships, which lay quiescent as usual in a line from Fort Nicholas to Fort Paul. Our artillery had been deprived early in the day of one chance at these ships by the dismounting of a 68-pounder in our right attack.

Towards evening the fire became more dense on the right, and almost rivalled in vivacity that which the French kept up at intervals on the left. The Quarries Battery, with its eight cohorns, its mortars, and 32-pounders, made the Malakoff earthworks fly about in clouds. The embrasures of the guns directed against it were damaged, and rents were made in the magazine, though here the thickness of the old tower, converted into a receptacle for powder, saved the redoubt from a perilous explosion. The casualties in this as well as in the other works were slighter than they had ever been known; and we had to deplore the loss of one officer only—Captain Anderson, acting engineer of the 31st, who was killed in an early part of the day.

The shades of evening fell upon the scene. The French works on the left had ceased firing, and took a necessary respite after the hard work of the day. But the right continued their efforts, and the Quarries' Battery, as well as others on the Inkerman right, commenced a well-directed blaze of rockets—the former against the Karabelnaia suburb, the latter against the shipping in the harbour. A fire was kindled in a short time, in that portion of the town immediately situated behind the Barrack, near Fort Nicholas, but a far more important one was lighted in one of the two-deckers belonging to the enemy. It lay in the line of ships stretching across the harbour, broadside on to the Malakoff, in the vicinity of Fort Paul. In the grey of the evening a slight flame alone marked the spot where the fire had taken hold of the vessel; but as darkness closed upon the scene, it became more intense, and evidently baffled the endeavours of the Russians to extinguish it. The flames were not long in covering the whole of the upper decks, and licked the spars and rigging with forked and flashing tongues. The stately masts reared their white forms above the blazing mass as the ropes and shrouds peeled and crackled away, and continued to stand long after the lower yards had fallen, and thrown up in their fall volumes of smoke and sparks. A few shots indistinctly heard were supposed to be the mortars on deck exploding from the heat; but no explosion marked the presence of a powder magazine; and it was supposed, with reason, that the Russians had flooded it. The fire grew fiercer and the night darker every moment. Black clouds scudded swiftly from the westward, and the smoke, issuing from the guns which roared along the lines joined with the dark vapours of the sky, spread a baleful curtain over the scene. In the midst of the obscurity the blazing ship cast a lurid glare over Fort Paul, which came into light behind it, tinged with streaks of red the masts of the ships which surrounded it, and threw its quivering rays upon the edges of Fort Nicholas and Fort Alexander. The Battery of Gordon was relieved in darkness upon the burning pile, and the clouds of smoke which issued from its guns formed great banks of darkness more black than those which overhung the Malakoff and Redan. In the same moment the French left poured forth a salvo upon the works opposed to it, and was answered immediately by the Russians. The air was filled with flashes and minute specks of revolving shells, whilst the enemy were observed to cast into the works of our allies those *bouquets* of grenades which are so dangerous to the soldier, although harmless to fortifications and heavy guns. Presently the mainmast of the two-decker fell in through the deck beneath it. A broad glare accompanied the fall. Then the mizenmast disappeared, and the foremast drooped its head till it appeared to overhang the water; the bowsprit held to the last, and was seen licked by the flames, which issued from every port-hole. Then the glory of the scene began to fade. The bright red flickered; the smoke was thinner; and soon the Russians had nothing left upon their waters but the black and smoking wreck of what once had seemed a large and noble vessel. The name of that ship was the *Santa Maria*.

The bombardment lasted the whole night without interruption, and day broke almost on the same scene as had been enacted the previous day. The fire, however, had only been kept up at a moderate speed. At half-past five, the 6th, it broke out afresh—not merely on the French left, which continued to bear off the prize for quickness and precision, but throughout the English lines in the centre, and the French right. It slackened at intervals, then increased in density, and slackened again, as the guns became heated and required a pause. Strong breezes from the westward drove the smoke in heavy columns on the Russians, and at certain times enveloped the town in masses of vapour. The hulk of the *Santa Maria* lay like a log upon the water, near Fort St. Paul, and the remainder of the shipping appeared in the morning light huddled together in close proximity to each other, where they had been moved on the previous night to escape the dangerous vicinity of the fire. The Russians soon, however, went to work, and replaced their ships in position, hauling in a new two-decker to fill the space vacant by the loss of her consort. The Russians, whose vigour had appeared impaired during the previous day were angularly inactive on this the second of the bombardment. Still they kept up at certain moments a return of a few shots. The Redan continued to fire at intervals from guns at the extremities of its western and eastern faces, and from other works along their line. Their efforts were most marked on the left attack, and the Malakoff hardly gave a sign of life. Our sea-service mortars fired at intervals on the ships without doing any damage, and the Russians continued to stream to and fro from north to south along their bridge of rafts, unmindful of the fire of the Allies. In the evening their works showed evidence of the violence which they endured, and the batteries became more and more rugged every hour. The third line of defence opposed to the French left seemed, it is true, to keep up an undiminished fire, but the efforts of the Russians were utterly unavailing to create a pause in the activity of our bombardment. The day passed in this wise without any serious loss to the Allies, and as it closed, a large fire in the Karabelnaia suburb became visible by the columns of flame and smoke which it raised

The Allies continued the work of the previous thirty-six hours by an unceasing fire which lasted during the night, and the echoes of the hills were again broken at dawn on the 7th by a terrific salvo commencing on the French left and gradually spreading to the centre and right. Crowds of spectators, attracted by the hope of an assault, lined the heights at every available point to obtain a glimpse of the expected action, but the Generals were evidently satisfied that the terrible fire they had kept up for so many hours had been sufficiently prolonged. At half-past eight there was a pause; and, as if by enchantment, there was a cessation of explosions from end to end of our lines. The stream of spectators slowly disappeared from the heights, and every thing seemed as still as if no hostile forces were busy in dealing destruction one against each other. The ships of the Allies were pitching in the bay of Sebastopol, whilst the sailors hung their hammocks to air in the rigging. The steamers lay blowing off their steam at anchor, and the stillness of the hour was not broken by the Russians, who, no doubt, were pleased enough at their momentary respite. It was, however, but a pause of an hour. The French left burst again at half-past nine into its accustomed *roulades*. The English centre recommenced its fire, and Inkerman joined in the chorus which deafened every one by its roar. Volumes of smoke and streams of fire belched from the iron mouths of the guns, as the deadly missiles were hurled, to become the messengers of death and destruction. The mortars gave out their rumbling and cavernous noise, as they sent high into the air their large and hollow projectiles—the circular curl of their smoke still hovering over the pieces, long after the deadly shell had done its work, and burst in the enemy's trenches. In the midst of the din two tremendous explosions took place on the left of a slope, and covered with their volume of sound the roar of 400 pieces of artillery. Two fire-balls, or *fougasses*, had been sprung in the advanced parallel, close to the Malakoff and Little Redan, and formed craters ready to be crowned with parapets and form part of works nearer than ever to the enemy. A grand cheer was given by our men as the explosions took place, and then the spectators again turned their attention to the continuation of the bombardment. The day was spent in alternate pauses and outbreaks of fire similar to that just described, and the works of the Russians seemed at last to have received such a shaking as I had never before witnessed. The embrasures of the Redan and Malakoff, and of the batteries towards Careening Bay, seemed to have lost all shape, and appeared like jagged mounds of earth, in which one could scarcely conceive the defenders to be safe. Still in the deep angles of some of the batteries a few shots were fired; these, however, were hourly less frequent, and the Russians began to fire more constantly than they had ever done before from their batteries on the northern shore. The Black Battery, which had long been the terror of the defenders of the Quarries, was so mauled and cut up as no longer able to reply, and small fires here and there in the town marked the places where distant shells had exploded. In the midst of all this, however, the church, a large building in the form of a temple, and numerous other buildings, purposely spared, hitherto remained apparently untouched, and preserved the fairness of their proportions. At four o'clock a shell from our mortars again successfully struck a two-decker anchored near Fort Nicholas, and in a short time volumes of smoke issued from her. She was in too dangerous proximity to the rest of the fleet to be left in her position, and she was speedily taken in tow by a steamer which hauled her into a berth near the Karabelnaia. There she continued to burn invisible to us until darkness came on and showed us the flames rising from her hull, and consigning her like the *Santa Maria* to destruction. At six o'clock another grand salvo along the whole line again covered the Russian works with projectiles and smoke, and, as it did so, a shell from a mortar struck the deck of the *Constantine* 120, and, covered her with dust and smoke. The earth upon her deck saved her probably from the fate of her consorts, for the smoke and dust cleared off in a few minutes, exhibiting the sailors busy in the rigging, whilst an active man was seen hoisting the Imperial flag in token of defiance on the jib-boom.

During the day great activity was visible amongst the staff of the various Generals: it seemed as if a vague anxiety and secret preoccupation prevailed throughout the camps. Officers rode about in all directions, and soldiers were to be seen in groups commenting upon the probabilities of an approaching assault. The new draughts, of which several had arrived on the two previous days, were especially surrounded and complimented by all the soldiers on their luck in having probably to distinguish themselves. At noon a large force of Sardinians was moved from the position of Kamara to take the place of French troops probably intended to act elsewhere; and in the English camps all the field hospitals were emptied of their sick and wounded, in anticipation of an event which all expect. To-morrow is anxiously looked for, to end our suspense, and show whether Sebastopol is to be ours or not; for, if the Malakoff were not taken after this bombardment, it is difficult to suppose that Sebastopol can fall this autumn.

One piece of intelligence, hitherto omitted, I have to subjoin. Omer Pasha returned to the Crimea on the 6th inst., and has been in communication with the Allied Generals. I cannot say whether his stay be intended to be permanent or not. It has been blowing a gale all day from the northward and westward, veering this evening to the north-east, and a very hard one

CAPTURE OF THE MALAKOFF AND EVACUATION OF SEBASTOPOL.

(From our Special Correspondent.)

CAMP BEFORE SEBASTOPOL, Sept. 10th, 1855

THE great question of preponderance in the Black Sea was finally and irrevocably decided on the night of the 8th inst., when the Russians, having been beaten from the Malakoff by the French, evacuated the town of Sebastopol after setting fire to it in several places, and burning their ships. This event which had been so long desired that most of the sanguine commenced to despair of its accomplishment, has cast a joy upon the French Camp in which our men rejoice, although they feel deeply the regret of having had so little share in the glories of the day. Our allies attacked and won the Malakoff at the same moment that we attacked and were repulsed from the Redan. Victory for once was denied us, for reasons which may probably be inferred from the narrative that follows.

The bombardment which had been kept up with less vigour than usual during the night of the 7th, broke out at daybreak into a complete fire from end to end of our lines. It burst over every part of the Russian works with the fury of a tornado, sending up clouds of dust and smoke, which were driven into our camp by a cold north wind, blinding the men whose duty called them to the trenches, and filling the air so densely as to render objects indistinct at a certain distance. As the bombardment commenced, preparations for the assault were made in the camps of the Allies, and numerous regiments were drawn up under arms at dawn. It had been considered proper to forward the men in detachments, and not in columns so as to keep the enemy as much as possible ignorant of our intentions. The storm was intrusted to the Second and Light Division, portions of which were to form immediate supports, whilst the rear was to be kept by the Fourth Division, the Guards and Highlanders, and the Third Division, under Sir William Codrington had the general command of the storm, and was supported by General Markham, the northern camps, as well as the bridge, were under the command of General Simpson, and all the regiments of Second and Light Division were paraded at their alarm posts. At half-past nine

SKETCHES IN THE CRIMEA.

TOWN OF BAGTCHESERAI, ONE OF THE CAPITALS OF THE CRIMEA, AND HEAD-QUARTERS OF THE RUSSIANS.—FROM AN ORIGINAL SKETCH BY WILLIBALD RICHTER.

and tall poplar-trees stretching in two long lines on each side of the muddy stream of the Djourouk Sou. A steep road leads down to it, which passes the modest triumphal arch erected in honour of the visit of the Empress Catherine II. to the capital of her new conquest in the last century, and which bears the simple inscription, "1787." The town has completely retained its Oriental character, and in passing down the long street, nearly three-quarters of a mile in length, the little open shops of the tailors, the shoemakers, the bakers, the locksmiths, and the kalpac-makers, are seen, with their proprietors sitting cross-legged, in Eastern fashion, and working and selling at the same time. Bagtcheserai is celebrated for the number of its fountains and the purity of its water, which one writer pretends is the lightest in all Tartary and Turkey. There are no less than 119 fountains for a population of 9547 inhabitants. At the end of the long street, just across the little river, is the great sight of Bagtcheserai, the ancient palace of the khans, which all travellers stop to visit.

Now that Turkey is becoming so much Europeanised, this palace, as a specimen of the old architecture of the Turkish race, goes on increasing in interest. The great men at Constantinople are sacrificing the ancient peculiarities of their palaces to modern conveniences, but this venerable monument is kept up by the Sovereigns of Russia precisely in its ancient condition. I was much struck with it when the brightly-painted gateway first opened upon me. This divides in two a long line of buildings, of only one story in height, with all the windows filled up with carved woodwork, and ornamented with rude arabesques painted in bright colours.

Right and left on entering are ranges of apartments, which all open on a long gallery, whence there is a good view of the interior court and the groups of fantastic buildings raised irregularly around it.

At the entrance of the second court on the left is the gate called the Iron Gate, leading to the principal apartments, on which is an inscription declaring it to have been built by Menghli Geray Khan, who conquered the Crimea in 1480, and was acknowledged as its Sovereign by the Turks.

A staircase leads into the richly-ornamented hall, in which there are two fountains, one of which is called Selsibil, or the fountain of Mary, on which the Russian poet Pouschkin has written some beautiful verses. Beyond this hall is that of the divan, the great council-room, placed in the midst of a terraced garden. This is one of those magnificent buildings in which the climate of the East can really be enjoyed. Its floor is of marble, and its fretted ceiling tastefully gilt, while the centre is occupied by a marble basin, into which the water is perpetually trickling from a fountain with fifty jets. The only light that is admitted is toned down through painted glass, and the softest divans invite repose from the heats of summer. The terraces of the garden outside are planted with roses; and the clearest streams of water fall in small cascades from one marble basin to another.

PRINCE MENSCHIKOFF'S PALACE, AT BAGTCHESERAI. INTERIOR COURT.—FROM AN ORIGINAL SKETCH BY WILLIBALD RICHTER.

SKETCH IN THE BALTIC.—A FRENCH FUNERAL AT SEA.—(SEE NEXT PAGE.)

FRENCH FUNERAL AT SEA.

THE accompanying Sketch of a French Funeral at Sea is from the pencil of Mr. Carmichael, our Artist in the Baltic. The ceremony observed on occasions of this nature bears a strong resemblance to the usage in our own service, with the exception that, in accordance with the Roman Catholic faith, on the morning of the day of burial, a solemn mass for the repose of the soul of the departed is performed on board the ship, at which all the officers and men are required to attend. No Englishman who is present can fail to be much struck by the beautiful manner in which the choral parts of the service are performed, and the deep solemnity and respect with which the whole proceedings are conducted.

CAPTURE OF SEBASTOPOL.

DESPATCHES FROM GENERAL SIMPSON.

War Department, Sept. 22

Major the Hon. Leicester Curzon arrived this morning with a despatch from General Simpson to Lord Panmure, of which the following is a copy:—

Before Sebastopol, Sept. 9, 1855

My Lord,—I had the honour to apprise your Lordship in my despatch of the 4th instant that as the Engineer and Artillery officers of the Allied armies had laid before General Pelissier and myself a report recommending that the assault should be given on the 8th instant, after a heavy fire had been kept up for three days.

This arrangement I agreed to, and I have to congratulate your Lordship on the glorious results of the attack of yesterday, which has ended in the possession of the town, dockyards, and public buildings, and destruction of the last ships of the Russian fleet in the Black Sea. Three steamers alone remain, and the speedy capture or sinking of these must speedily follow.

It was arranged that at twelve o'clock in the day the French columns of assault were to leave their trenches, and to take possession of the Malakoff and adjacent works. After their success had been secured, and they were fairly established, the Redan was to be assailed by the English, the Bastion, Central, and Quarantine Forts, on the left, were simultaneously to be attacked by the French.

At the hour appointed our allies quitted their trenches, entered and carried the apparently impregnable defences of the Malakoff with the impetuous valour which characterises the French attack; and, having once obtained possession, they were never dislodged.

The tricolor planted on the parapet was the signal for our troops to advance.

The arrangements for the attack I intrusted to Lieutenant-General Sir William Codrington, who carried out the details in concert with Lieutenant-General Markham.

I determined that the Second and Light Divisions should have the honour of the assault, from the circumstance of their having defended the batteries and approaches against the Redan for so many months, and from the intimate knowledge they possessed of the ground.

The fire of our artillery having made as much of a breach as possible in the salient of the Redan, I decided that the columns of assault should be directed against that part, as being less exposed to the heavy flanking fire by which this work is protected.

It was arranged between Sir W. Codrington and Lieutenant-General Markham that the assaulting column of 1000 men should be formed by equal numbers of these two divisions—the column of the Light Division to lead the Second to follow. They left the trenches at the preconcerted signal, and moved across the ground preceded by a covering party of 200 men, and a ladder party of 320. On arriving at the crest of the ditch, and the ladders placed, the men immediately stormed the parapet of the Redan, and penetrated into the salient angle. A most determined and bloody contest was here maintained for nearly an hour, and, although supported to the utmost, and the greatest bravery displayed, it was found impossible to maintain the position.

Your Lordship will perceive, by the long and sad list of casualties, with what gallantry and self-devotion the officers so nobly placed themselves at the head of their men during this sanguinary conflict.

I feel myself unable to express in terms which can convey the sense I entertain of the conduct and gallantry exhibited by the troops, though their devotion was not rewarded by the success which they so well merited, but to no one are my thanks more justly due than to Colonel Windham, who gallantly headed his column of attack, and was fortunate in entering, and remaining with the troops during the contest.

The trenches were, subsequently to this attack, so crowded with troops that I was unable to organise a second attack, and was obliged to make use of the Highlanders, under Lieutenant-General Sir Colin Campbell, who had hitherto formed the reserve, to be supported by the Third Division under Major-General Sir William Eyre. I, therefore, sent for these officers, and arranged with them to renew the attack the following morning.

The evacuation of the town by the enemy was made manifest during the night. Great fires appeared in every part, accompanied by large explosions, under the cover of which the enemy succeeded in withdrawing their troops to the north side by means of the bridges of boats constructed, and which they afterwards disconnected and conveyed to the other side.

Their men-of-war were all sunk during the night.

The boisterous weather rendered it altogether impossible for the Admiral to fulfil their intention of bringing the broadsides of the Allied fleets to bear upon the Quarantine Batteries; but an excellent effect was produced by the animated and well-directed fire of their mortar-vessels, those of her Majesty being under the direction of Captain Wilcox, of the *Odin*, and Captain Digby, of the Royal Marine Artillery.

It now becomes my pleasing duty, my Lord, to place on record the high sense I entertain of the conduct of this army since I have had the honour to command it. The hardships and privations endured by many of the regiments during a long winter campaign are too well known for me to comment upon. They were borne both by officers and men with a patience and unmurmuring endurance worthy of the highest praise, and which gained them the deserved applause and sympathy of their country.

The Naval Brigade, under the command of Captain the Hon. Henry Keppel, aided by Captain Moorsom, and many gallant officers and seamen, who have served the guns from the commencement of the siege, merit my warmest thanks.

The prompt, hearty, and efficacious co-operation of her Majesty's Navy, commanded by Rear-Admiral Sir Edmund Lyons, and ably seconded by Sir Houston Stewart, has contributed largely to the success of our undertaking; and here, perhaps, I may be permitted to say that, if it had pleased God that [illegible] the Naval Brigade [illegible] supported by my ever-to-be-lamented predecessor in this command, I am sure that it would have been of the highest advantage to the service to expose the deep sense which I know he entertained of the invaluable assistance and counsel he received on all occasions from Sir Edmund Lyons. When at times affairs looked gloomy and success doubtful, he was at hand to cheer and encourage, and every assistance that could tend to advance operations was given with the hearty good-will which characterises the British sailor.

Nothing has contributed more to the present undertaking than the cordial co-operation which has so happily existed from the first between the two services.

I cannot sufficiently express my approbation of the conduct of the Royal Engineers under Lieutenant-General Sir Harry Jones, who has conducted the siege operations from the commencement of the year. For some time past he has been suffering on a bed of sickness; but the eventful hour of the assault would not permit him to remain absent, he was conveyed on a litter into the trenches to witness the completion of the arduous undertaking.

My warmest thanks are due to the officers and soldiers of the Royal Artillery under the command of Major-General Sir R. Dacres, who, during the arduous operations of this protracted siege, have so manfully contributed to its ultimate success.

I must beg further to record my thanks for the cordial co-operation and assistance I have received in carrying out the details of the service from the Chief of the Staff, the Adjutant and Quartermaster-General, [illegible] Staff, as well as Generals commanding Divisions and brigades of this army.

I must reserve to myself, for the subject of a future despatch, bringing before your Lordship the particular mention of officers of the various branches of the army, whom I shall beg to recommend to your favourable notice.

I entrust this despatch to my aide-de-camp, Major the Hon. Leicester Curzon, who has been Assistant Military Secretary to my noble predecessor and myself since the commencement of this war, and who will be able to give your Lordship more minute details than the limits of a despatch will allow.

I have, &c. JAMES SIMPSON.

The Lord Panmure, &c. General Commanding.

OFFICIAL LIST OF OFFICERS KILLED OR WOUNDED, SEPTEMBER 8TH.

KILLED.

30th Foot: Lieut.-Colonel Patullo, Captain J. C. N. Stevenson, Ensign R. G. Deane.
Provost Lieutenant-Colonel W. H. Cuddy. 41st: Captains B. Avery, J. A. Lockhart, Captain C. Rochfort. 49th: Captain L. A. Cox, Lieutenant L. Bladelow. 7th: Lieutenants L. L. Wright, C. H. Bird. Lieutenants R. L. Somerville, J. Bunbury. 33rd: Lieutenant H. L. Dawson. 77th: Captain W. Parke. 88th: Captain H. W. Gregson. 95th: Captain R. Preston, Lieutenants A. D. Swift, H. F. Wilmot. 97th: Lieut.-Colonel Hon. H. R. Hastings. Major A. P. Wodehouse, Lieutenant A. B. Mayne. Rifle Brigade: Captain M. H. Hammond. 3rd Battalion Rifle Brigade: Lieutenant H. S. Hyde. Field Train Department: Deputy Assistant Commissary-General [illegible]

WOUNDED.

Royal Sappers and Miners: Captain C. H. Seeley. 20th Foot: Brevet-Major [illegible] 30th [illegible] 47th [illegible] 1st: Captain [illegible]

Lieutenant J. Egan, C.B. 46th: Farden C. Mitchell. 7th: Lieutenant H. M. Jones. 9th: Lieutenants F. Godfrey, A. Gordon, and W. G. D. Massy. 33rd: Captain W. H. [illegible] Lieutenants L. O'Connor, C. Bent, and G. Holden. 34th: Lieutenant-Colonel George 97th: Captain C. [illegible]

SEVERELY WOUNDED.

Royal Sappers and Miners: Lieutenant H. C. Elphinstone. 63rd Foot: Lieutenant-Colonel P. Lindsay. 47th: Captain and Brevet-Major W. F. G. Morgan. 30th: Lieutenant G. A. Morgan, A.D.C. 1st: Lieutenant R. W. Pratt. 9. H. Cane. 3rd: Lieut. [illegible] 30th: Captain G. F. C. Peacock, Lieutenants M. B. Field, G. H. Sanders. 34th: Major A. Cure, Captains R. Hearne, J. R. Hume. Lieutenants W. B. Rumley, the Honourable F. Augustus. 49th: Brevet-Major J. H. King. 52nd: Lieut.-Colonel L. B. Tyler; Lieutenant W. B. Davenport. 7th: Brevet-Lieutenant-Colonel J. R. Egerton; Captains H. F. H. [illegible] [illegible]

Ensigns R. C. Martin, W. W. Young. 23rd: Colonel D. Lyons. [illegible] Lieutenants L. E. Millett, J. Williamson, F. M. H. De [illegible] Brevet-Lieutenant A. Fox. 41st: Lieutenant-Colonel [illegible] 77th: Captain P. J. Butts. 88th: Lieutenants G. J. Maxwell, C. C. W. [illegible] L. G. Scott, and G. B. Watson. Captains R. B. [illegible] G. Wallace [illegible] Captains R. Brown, T. Wade, and J. H. Wade. Ensigns [illegible] Burgess, P. J. Deverill, and H. H. Gooderidge. 97th: [illegible] Lieutenant E. W. H. Barley. 3rd Battalion Rifle Brigade: Major [illegible] Hon. R. H. Rollew. Lieutenants H. Eyre, W. H. Beckes, J. C. Moore, R. Borrough, and P. [illegible] Brigade-General C. Van Straubenzee. 88th: Brigade-Major Shirley, C.B.

SEVERELY CONTUSED.

77th Foot: Lieutenants C. B. Knowles, M. A. Wathen.

SLIGHTLY WOUNDED.

63rd Foot: Lieutenant H. A. Palmer. 90th: Captain [illegible] J. Hutton.

War Department, Sept. 21.

Lord Panmure has this day received a despatch and its inclosures, of which the following are copies, addressed to his Lordship by General Simpson:—

Before Sebastopol, Sept. 8

My Lord,—At daylight on the 5th inst. the batteries of the Allied armies opened a steady and continuous fire against the enemy's works.

During the night one of the vessels, supposed to be a frigate, stationed on the north side of the harbour, was destroyed by fire, as is believed, a shell from a French battery on the right attack. The firing, during the 6th, 7th, and up to the present moment, has continued uninterrupted, and but feebly responded to by the Russians.

Another frigate was discovered yesterday afternoon to be on fire, and has been entirely destroyed. From the length of time it contained burning, it is supposed to have contained stores.

About eleven o'clock last night a heavy explosion took place, but I have not as yet been able to ascertain in which part of the enemy's works.

I beg to inclose a list of casualties to the 6th inst.

I have, &c.,

JAMES SIMPSON.

The Lord Panmure, &c. General Commanding

OFFICERS, NON-COMMISSIONED OFFICERS, AND PRIVATES KILLED AND WOUNDED, FROM THE 3RD TO THE 8TH SEPTEMBER, INCLUSIVE

KILLED.

77th Foot: Captain W. H. G. O'Connell. [illegible] Sept.
31st: Captain Charles Anderson. Assistant-Surgeon [illegible] Sept.
Royal Artillery: Captain E. G. Bruce. [illegible] Sept.
Sept. 3.—1st Battalion Scots Fusilier Guards: Private William Heaser. 2nd Battalion 1st Foot: Private Edward Dufine. 7th: Private Charles Ward. 9th: Private Henry [illegible] 31st: Private John Hicker. 34th: Private Thomas Sullivan. 97th: Sergeant John Long. Private George Williams, William Sharpe. 95th: Private Patrick Carroll.
Sept. 4.—Royal Artillery: Gunner Jonathan Hodgson. Private [illegible] 41st: Private William Bragg; George Jones. 49th: Private William Barrett [illegible] Edward Mahon.
Sept. 5.—Royal Artillery: Colour-Sergeant Alexander Morrison, Gunner William [illegible] erly. Royal Sappers and Miners: Sergeant William Wilson. DESPATCHES FROM SIR E. LYONS.

Admiralty, Sept. 22

Despatches of which the following are copies have been received by the Rear-Admiral Sir Edmund Lyons, K.C.B., Commander-in-Chief of her Majesty's Ships and Vessels in the Mediterranean and Black Sea:

Royal Albert, off Sebastopol, Sept. 10.

SIR,—Of the operations on shore, which have produced the successful result of the struggle for the possession of the siege of Sebastopol, her Majesty's Government will be informed by General Simpson; but it is my duty to report to the Lords Commissioners of the Admiralty what has taken place afloat and on the seaboard under my own observation.

It had been arranged by General Simpson and Pelissier, Admiral Bruat and myself, that precisely at noon on the 8th the Allied fleets should open fire upon the Quarantine [illegible] and thus [illegible] the approach of the assaulting columns; but unfortunately [illegible] which had been fine for some days, changed in the morning to a heavy gale and heavy rain, which rendered it impossible [illegible] ships to take up the stations assigned to them in the order of this exposed [illegible] which appear by the inclosed report from Captain Wilcox [illegible] Captain Inglis, of the Royal Marine Artillery, [illegible] to recommend to the favourable consideration of their Lordships, that the mortar-vessels attached to the [illegible] effective force from their position in the Bay of Sebastopol.

As the day cleared [illegible] the batteries [illegible] they were in the morning; but, during the night, several heavy explosions were heard, and at dawn we observed that the fortifications on the south side were in flames, and that the six remaining ships of the Line had been sunk in their moorings, leaving afloat no more of the late Russian Black Sea fleet than two steamed corvettes and nine steamers, most of which are very small.

Soon after the enemy were seen retreating across the newly-constructed bridge, until the south side of the harbour, on which the naval and military arsenals, the public buildings, and the town of Sebastopol, are situated, appeared to be completely evacuated, and then the southern portion of the bridge was hauled over to the north shore.

It is now my pleasing duty to render justice to the admirable conduct of all who have had the honour and happiness to command during the last nine months of this arduous struggle, and whose duties I shared in before; for although, with the exception of the Naval Brigade in the Camp, whose gallant bearing from the beginning, under the command of Sir Stephen Lushington has been beyond all praise, and never more so than during the last two bombardments under the command of the Hon. Captain Keppel, it has not fallen to the lot of the navy on this occasion to perform distinguished deeds of arms such as those of their gallant brethren in the army; still whilst straining every nerve night and day, under very trying circumstances, to supply the means for carrying on the siege, in the glory of which they could not share, the generous cheer of encouragement, unalloyed by envy, has always been heartily given in the day of triumph; nor have sympathy and assistance ever been wanting in the hour of distress and suffering; this same sentiments having pervaded all ranks—captains, officers, seamen and marines, all agreeing with each other in following, as I believe I have said once before, the excellent example set them by my able second in command and coadjutor, Rear-Admiral Houston Stewart.

Perhaps in closing this letter I may be permitted to indulge in the expression of the gratification I feel in reflecting that, under all the circumstances in which it mates, my gallant colleagues Vice-Admiral Bruat and I have gone heart and hand together, and that the most perfect understanding and hearty co-operation in the great cause of humanity in which we are all engaged have invariably prevailed throughout both fleets.

I am, &c., EDMUND LYONS.

Rear-Admiral and Commander-in-Chief.

To the Secretary of the Admiralty.

Strelitska Bay, Sept. 8, 1855

SIR,—I have the honour to report that, in pursuance of the [illegible] which I received from you this morning, I opened fire from the mortar-vessels at 30 a.m., upon the Quarantine Battery, and a general and more rapid fire was kept up until 7 p.m., upon the Quarantine Battery and Fort Alexander. The mortar vessels were much exposed to the swell, which set into the bay [illegible] a large object desirable, and I therefore directed the [illegible] Bay and the Bastion de Quarantine, where I [illegible] and the Russian reserves were placed.

The force of the wind and heavy swell which prevailed were sung[illegible] unfavourable to accuracy, and the general satisfactory [illegible] due to the ability exercised by the officers of Royal Marine Artillery who commanded it; and I beg to submit to your notice the names of First Lieutenant Starr, First Lieut. Hewett, First Lieut. Brookes, First Lieut. Festaug, and First Lieut. Pitman, the officers employed.

The non-commissioned officers and gunners also performed their duties in a most satisfactory manner; and I may especially mention the services of Colour-Sergeant Horner, who, in the absence of an officer, undertook the firing of the *Firm*, mortar-vessel.

Owing to the state of the weather, and the smallness of the means at the disposal, the officers in command had to overcome great difficulties in maintaining the position of their vessels; and I beg to be allowed to express my high opinion of the services of Messrs. Lest, Creagh, and Pearson, Brent, Hart, and Vaughan (mates), who so ably performed these duties, and greatly contributed to the success of the firing. I have, &c., G. DIGBY,

Captain Royal Marine Artillery.

Rear-Admiral Sir Edmund Lyons, Bart., &c., G.C.B.

H.M.S. *Odin*, off Sebastopol, Sept. 8, 1855

SIR,—I have the honour to report, for your information, that, acting in pursuance of your directions, and in conjunction with Captain Bazhan, commanding four French mortar-vessels, you did me the honour of placing under my command, our fire was directed, till seven p.m., against the Quarantine Fort and outworks, as well as upon Fort Alexander and the upper bastion (where, near to the latter place, a large number of the enemy's reserve were posted), keeping their fire so completely under that only a few shot and shell were returned, and but few fired upon the French battery and advanced works before us. A small number of carcasses were also successfully thrown into the town and upper bastion which produced a conflagration of some extent.

To Captain Digby, Royal Marine Artillery, and the artillery officer in each vessel, I have much pleasure in bearing my testimony, and I am glad of the opportunity of bringing to your notice the unfathomable and zealous conduct of Mr. H. K. Lest, mate, in charge of the *Firm*, who, from being the senior officer of the mortar-vessels, has always ably carried out my instructions; and I am happy to [illegible] the unswerving conduct of Messrs. J. B. Creagh, T. L. Pearson, H. W. Brent, A. F. Hart, and Henry Vaughan, mates, in charge of the other mortar-vessels.

I have also great pleasure in stating that no casualty occurred, and that neither the mortars nor vessels were at all damaged by the heavy firing.

I have, &c., J. A. WILLCOX, Captain.

Rear-Admiral Sir Edmund Lyons, Bart, &c., G.C.B.

PROCEEDINGS OF NAVAL BRIGADE

Royal Albert, off Sebastopol, Sept. 10, 1855.

SIR,—I beg leave to inclose, for the information of the Lords Commissioners of the Admiralty, a copy [illegible] Captain Keppel reporting the proceedings of the Naval Brigade [illegible] on the 7th and 8th instant, and inclosing a list of casualties.

I am, &c., EDMUND LYONS, Rear-Admiral and Commander-in-Chief.

The Secretary of the Admiralty.

Royal Navy, Brigade, before Sebastopol, Sept. 9, 1855

SIR,—I have the honour to inform you that, in pursuance of instructions, a vigorous fire was opened from the batteries at six o'clock on the morning of the 7th, and was maintained throughout the day. The fire was recommenced yesterday morning with increased vigor, preparatory to an assault to be made by our allies on the Malakoff, and subsequently by ourselves on the Redan.

2. At noon both batteries were observed to slacken fire from their trenches, and possess themselves in gallant style of the Malakoff Battery, on which the tricolor flag was hoisted, and the Imperial eagles planted within ten minutes of their quitting their trenches.

3. The Redan did not appear to be sooner displayed on the Malakoff than our storming party issued from their trenches and assailed the salient angle of the Redan, but the enemy were by that time prepared to meet them, and as the supporting party advanced, a heavy fire of grape and canister was opened upon them, in spite of a heavy fire of musketry from our batteries on all parts of the Redan, not assailed, as well as on the flanking batteries.

4. After maintaining the Redan they had gained for some time, our troops were obliged to retire, the killed and wounded left on the ground sufficiently testifying how gallantly they had fought.

The fire from our batteries was kept up until dark, and at about eleven o'clock the enemy evacuated the Redan, after having fired a train that exploded the magazine.

6. This morning's light showed how successful and complete had been the victory gained by the Allied forces.

7. The enemy had evacuated all their positions on the south side of the harbour; the town, Fort Nicolai, Fig Tree Bay, and docks were on fire, and three line-of-battle ships had been sunk in the positions they were last seen in when at anchor.

8. The conduct of the officers and men of the brigade under my command has been such as to continue to merit the high opinion you have been pleased to express of them.

9. I have the honour to inclose a list of casualties for the 7th and 8th.

I am, &c., HENRY KEPPEL,

Captain Commanding Royal Naval Brigade.

Rear-Admiral Sir Edmund Lyons, G.C.B., Commander-in-Chief.

A LIST OF CASUALTIES IN THE ROYAL NAVAL BRIGADE, ON THE 7TH AND 8TH SEPTEMBER, 1855:

[illegible] James Carson, captain of the [illegible] Albion.

[illegible] *dead* William Skinner, ord., Queen, severely; William T. Golding, ord., London, severely; [illegible] Lowrie, ord., London, slightly; John Buckley, ord., London, slightly; John [illegible] John Carmichael, ord., Rodney, slightly; James Mackay, [illegible] Colings, A.B., Albion, dangerously (since dead); [illegible] Hall, A.B., severely; Mr. Gordon C. Sinclair, acting mate, Queen, severely; Roger O'Brien, [illegible] Queen, severely; Thomas Mahon, captain maintop, Queen, severely; Lieut. W. H. D. Selby, [illegible] H. Llewelyn, second master, Queen, slightly; Mr. W. V. Archer, assistant surgeon, Niger, slightly; Alfred Goggins, A.B., London, slightly; [illegible] Scott, A.B., Rodney, slightly; Michael Fitzgerald, A.B., London, severely; [illegible] Cross, A.B., Queen, slightly; Jas. Warden, A.B., Albion, slightly; [illegible] Gray, A.B., Rodney, slightly; William Jarvis, A.B., London, slightly; John Jago, A.B., Leander, slightly; Henry Gibbs, ord., Rodney, [illegible]

Contused. Joseph Leech, A.B., Leander, severely; Thomas Oates, Canadian fireman, Rodney, slightly; William Crowhurst, ord., Queen, slightly; Thomas Reeves, gunner's mate, [illegible]

MARSHAL PELISSIER'S DESPATCH

Head-quarters at Sebastopol, Sept. 11.

M. le Maréchal,—I shall have the honour to send you by the next courier a detailed report on the attack which has placed Sebastopol in our power. To-day I can only give you a rapid sketch of the principal scene [illegible] of this [illegible] of the War.

[illegible] the [illegible] the Admiralty, and notwithstanding [illegible] and [illegible] to [illegible] decide attack by the

enemy against the positions which we occupy on this river. [illegible] was made to deliver a decisive assault against Sebastopol itself. The [illegible] of the right attack commenced on the 17th of August with [illegible] against the Malakoff, the Little Redan, the neighbouring defences, and the roads, in order to permit our engineers to establish defences close to the place, from which the troops might be able instantly to throw themselves upon the enceinte. Our engineers besides prepared materials for escalade, and on the 5th of September all our batteries of the left opened a very violent fire against the town. The English on their side kept up a hot cannonade against the Great Redan and its redoubt, which they were to attack.

All being ready, I resolved, in concert with General Simpson, to give the assault on the 8th of September, at the hour of noon.

General M'Mahon's Division was to carry the works of the Malakoff; General Dulac's Division was to attack the Little Redan; and in the centre the Division of General La Motterouge was to march against the curtain connecting these two extreme points. Besides these troops, I had given ten to General Bosquet. General Mellinet's division of the Guards, to support the first three divisions. Thus far for their right.

In the centre the English were to attack the Great Redan, escalading it at its salient.

On the left the First Corps, to which General de la Marmora had wished to join a Sardinian brigade, having at its head General Levaillant's Division, was to penetrate into the interior of the town by the Central Bastion, and afterwards turn the Flagstaff Bastion in order to establish a lodgment thereabouts.

General de Salles had instructions not to pursue his attack further than circumstances might render it advisable.

Further, the fleets of Admiral Lyons and Brunt were to operate a powerful diversion of firing against the Quarantine, the Roadstead, and the sea front of the fortress; but the state of the sea, agitated by a violent north west wind, was such that neither the line-of-battle ships nor the frigates were able to quit their anchorage. The English and French mortar-boats, however, were able to go into action. Their fire was of remarkable excellence, and they rendered us great assistance. At noon exactly the divisions of Generals M'Mahon, La Motterouge, and Dulac, electrified by their chiefs, sprang to the Malakoff, the Curtain, and the Little Redan of the Careenage. After unexampled difficulties, and a most exciting foot-to-foot combat, General M'Mahon's division succeeded in effecting a lodgment in the enteence part of the Malakoff. The enemy showered down a storm of projectiles of all kinds upon our brave troops. The [illegible] of the Careenage, especially battered by the *maison en croix* and the [illegible], it was necessary to evacuate after its occupation; but the division of La Motterouge made its ground good on one part of the Curtain, and that of General M'Mahon guard ground in the Malakoff, where General Bosquet sent constantly the reserves which I sent forward to him. The other attacks were subordinated to that of the Malakoff, that being the capital point of the defences of the whole place.

Standing on the Brandon Redoubt (on the Mamelon), I considered that the Malakoff was entirely in our power, and I gave the signal which had been agreed upon with General Simpson.

The English immediately advanced bravely against the salient of the Great Redan. They were able to effect a lodgment in it, and struggled a considerable time to maintain their position, but, crushed by the Russian reserves, which advanced incessantly, and by a violent fire of artillery, they were forced to return into their parallel.

At the same moment General de Salles had directed an attack against the Central Bastion. The Levaillant Division had begun to establish itself in it, as well as in the Right Lunette; a tremendous fire of grape was succeeded by the arrival of Russian reinforcements, so considerable in number that our troops, already decimated by the fire of the enemy, and whose chiefs had been disabled, were compelled to fall back on the place whence they had sallied.

Convinced that the taking of the Malakoff would be decisive of success, prevented the renewal of any attacks on other points, which, by compelling the hostile army to remain on all its points, had already attained their main object. I then directed my sole attention to the retaining possession of the Malakoff, which General M'Mahon had been previously enabled completely to obtain. Besides, a great and critical moment was impending.

General Bosquet had just been struck by the bursting of a shell, and his command I gave to General Dulac. A powder-magazine near the Malakoff exploded at this moment, from which contingency I anticipated the most serious results.

The Russians, hoping to profit by this accident, immediately advanced in dense masses, and, deployed in three columns, simultaneously attacked the centre, the left, and the right of the Malakoff. But measures of defence had already been taken in the interior of the fortress; for which purpose General M'Mahon opposed to the enemy bodies of unbranded troops, whose nothing could destroy; and, after the most desperate efforts, the Russians were compelled to make a precipitate retreat. From that moment the discomfited enemy appears to have renounced all idea of further attack. The Malakoff was ours, and no effort of the enemy could wrest it from us. It was half-past four o'clock.

Measures were immediately taken for crushing us to repulse the enemy, in case he should attempt against us a nocturnal attack. But we were not required to act with any uncertainty. As soon as it became night fires burst forth in every side, mines exploded, magazines of gunpowder exploded in the air. The sight of Sebastopol in flames, which on the whole army contemplated, was one of the most awe-inspiring and sinister pictures that the history of wars can offer. The enemy was making a complete evacuation; it was effected during the night by means of a bridge constructed between the two shores of the roadstead, and under cover of the successive explosions that prevented me from approaching and harassing the rear-guard. By the morning of the 9th the whole southern side of the town was freed, and in our power.

I have no need of enhancing in the eyes of your Excellency the importance of so great a success. Neither will it be necessary for me to speak of the brave army, whose warlike virtues and devotion are so thoroughly appreciated by our Emperor: and I shall have, great as the number is, to name to you those who have distinguished themselves among so many valiant soldiers. I cannot yet do so, but I shall fulfil this duty in one of my next despatches.

Deign to accept, Monsieur le Maréchal, the expression of my respectful devotion.

The General in Chief, PELISSIER.

GENERAL NIEL'S DESPATCH.

Sebastopol, September 11.

Monsieur le Maréchal, —The place of Sebastopol was stormed on the 8th of September. That assault has rendered us masters of the Malakoff work, the occupation of which renders the defence of the suburb almost impossible. It enables us to cut off the communications of the town with the north side of the roadstead. After rallying several columns, and resuming the offensive with a courage to which we are bound to do homage, seeing that his uttermost efforts remained fruitless, he began in the evening to evacuate the town; during the night he set it on fire, and he employed all his power in destroying with his own hands the defensive works and the great establishments which Russia had been accumulating for so many years in this fortress. He has sunk his ships, frigates, and other sailing vessels, preserving only the steamers; lastly, he has burned and pulled down the bridge of boats by which he communicated with the forts of the north side, abandoning to us in its way the town, suburb, and everything else on the south side of the roadstead.

The defence was energetic; on several points our attacks were repulsed; but the decisive attack, that which ensured our success, was not doubtful for any instant. The first division of the First Corps, commanded at present by General M'Mahon, carried at the first onset the Malakoff work, and there maintained itself heroically, understanding that it held in its hands the keys of the place.

I am going to give you an account of the dispositions that had been taken for diminishing as much as possible the numerous difficulties attending this terrible assault, made, not on a place invested, on a limited garrison, but on a vast fortress, defended by an army equally numerous, perhaps, as that which attacked it.

In the attacks directed against the town our approaches had been carried to within forty metres of the Central Bastion and thirty metres of the Flagstaff Bastion. At the attacks on the Karabelnaia suburb the English, impeded by the difficulties of the ground and by the fire of the enemy's artillery, had only been able to advance their approaches to about 200 metres from the salient of the Great Redan.

Before the front of the Malakoff we had arrived to within 25 metres of the enceinte which surrounds the tower, and had carried our approaches to the same distance of the Little Redan of the Careenage. This important result was due to the incontestable superiority of our artillery over that of the enemy.

The General-in-Chief of the Allied armies had made the following arrangements:

The general attack of the place was fixed for the 8th September at noon. On the morning of the 8th the artillery of the attacks against the town and that of the English attacks, who until then had husbanded their fire, were to resume it with great energy.

Such a cannonade was never heard. We had mounted in our two attacks more than 500 cannons. The English had about 200, and the Russians more than we. The fire of the enemy damaged our trenches, but did us little harm. Ours, notwithstanding the great extent of the place, converged on it, and must have caused immense loss to the Russian army. During the last few days which preceded the assault our infantry fatigue parties were principally employed in enlarging the most advanced *places d'armes* and the defiles, and in carrying to the spot the means of crossing the ditches.

The aim of all our efforts was the capture of the work constructed behind the Malakoff Tower. This work (called the Kornileff Redoubt by the Russians), which is an immense redoubt, a kind of citadel of earth, occupies a [illegible] which intersects [illegible] of the Karabelnaia suburb takes the Redan attacked by the English *de revers*, and is only 1200 metres from the south port, on which the Russians had constructed a bridge of rafts, now their only communication between the suburb and the town. The Malakoff Fort is 250 metres by 150 metres in dimensions. The parapets have more than six metres of relief above the soil, and in front of them is a ditch which before our attacks was six metres in depth and seven in width. It was armed with 62 guns of various calibres. In the front part, inclosed by the parapets, with the Malakoff Tower, of which the Russians have only preserved the *rez de chaussée*, which is crenellated. In the interior of the work the Russians had raised a vast number of traverses, under which were excellent bindages where the garrison found shelter, and had beds arranged on gothic arcades in two rows, one above the other. A Russian officer of engineers, who was made prisoner, states that the garrison of this part of the Malakoff, which I have just described in order that you may judge of the difficulties which our soldiers had to surmount, consisted of not less than 3500 men.

The Malakoff front, which is a thousand metres in length, is bounded on our left by Fort Malakoff, and on our right by the Little Redan. This last work, which, at the commencement of the siege, was only a simple redan, was transformed little by little into a citadel, closed in on each side in two rows, one above the other. A Russian officer of engineers, who was made prisoner, states that the garrison of this part of the Malakoff, which I have just described in order that you may judge of the difficulties which our soldiers had to surmount, consisted of not less than 3500 men.

The Malakoff front, which is a thousand metres in length, is bounded on our left by Fort Malakoff, and on our right by the Little Redan. This last work, which, at the commencement of the siege, was only a simple redan, was transformed little by little into a citadel, closed in on each side in two rows, one above the other. The exterior fronts of the two redoubts of Malakoff and the Careenage were connected by a curtain armed with sixteen cannons, and behind the enceinte the Russians had raised a second, which connected the curtain of the gorge of the two redoubts. This second enceinte, armed in part, had not, however, a ditch presenting a serious obstacle.

The rocky nature of the soil had hindered the enemy from excavating everywhere equally the ditch of the first curtain and of the Little Redan, and on several points the troops were able to pass it without very much difficulty. For passing the ditches, which had a considerable depth, we had contrived a system of bridges which could be thrown in less than a minute by an ingenious manœuvre, by which our sappers and officers *d'élite* had been instructed.

The French artillery was so superior to that of the Russians that it had extinguished the fire of nearly all the guns pointed directly at our attacks. The naked-up embrasures relieved us from the fear that our columns might be assailed by grape as they issued from the trenches. The parapets were destroyed, and a part of the earth had rolled into the ditch. Finally, the Malakoff fort had been assailed by so large a number of shells, thrown from our batteries and those of the English, that the gorge was filled up, took directly upon our attacks had their embrasures also filled up, and everywhere the *terrassements* had lost their original form. But behind the defences situated on the first line the Russians had preserved a large number of pieces, which we could not *contre-battre* completely, and the columns which proceeded to attack the Malakoff were exposed to the fire of numerous batteries which the Russians had raised to the north of the roadstead, and which, though fired from a great distance, were nevertheless dangerous.

You are aware that ever since my arrival before Sebastopol I was decidedly of opinion that the true point of attack was the tower or mamelon of Malakoff; and that this opinion having been adopted by General Canrobert, those attacks of the right were undertaken, which were executed by the Second Corps. From the side of the town we had been content to extend towards the left the approaches executed by the First Corps. Taking things at the point where they stood when the assault was resolved on, there was no doubt that the possession of the Malakoff Fort would lead to a decisive result; and, on the other hand, it was to be presumed that if a failure took place on this point, success obtained elsewhere could not lead to great results. However, it was not proper to attack a place so extended upon one single point. It was necessary to obtain that division of the enemy's forces which resulted from the great development of the enceinte that he had to defend, and especially to make him uneasy about the town, to which the bridge led whereby he might make his retreat.

It was to satisfy these various considerations—it was to ensure success, while economising as much as possible the blood of our soldiers in the terrible struggle then preparing—that the General-in-Chief decided that the assault should first be made on the front of the Malakoff; that if this attack, which would be made under his personal inspection, should succeed, then at his signal the English should attack the Redan and the first portion of the town, so as to prevent the enemy's concentrating all his efforts against the troops that should have already taken possession of the Malakoff Fort.

The front of the Malakoff was to be attacked by three columns: the one on the left commanded by General de M'Mahon, moving in a straight line on the Malakoff Fort by the front that faced us, and in turning slightly on the re[illegible]; the third, that to task the turning and keeping of it, cost what it might [illegible] right column, Dulac's division, was to march against the Redan of the Careening Bay, to occupy it, and detach a brigade on its left, in order to turn the retired embrasure of the [illegible] Tower, and thus bring the division of La Motterouge, issuing from the sixth parallel, having a longer extent of ground to pass over, and arriving a little later, was to carry the curtain, to proceed then against the second enceinte, and send one of its brigades to the assistance of the first column, if the latter should have not yet gained possession of the Malakoff Fort.

Such was the importance of these positions that we could not doubt that the enemy, if he lost them, would make great efforts to retake them. The Russian army, which he lost them, would make great efforts to retake them. The Russian army, which he lost them, would make great efforts to retake them. The Russian army, which

THE BATTLE O

H E T C H E R N A Y A. — (SEE NEXT PAGE.)

BATTLE OF THE TCHERNAYA.

A NEW YORK paper, received by the last steamer, describes the defeat of the Russians on the Tchernaya as an event of very little importance. The writer had no doubt taken his impression of it from the Russian telegraphic despatch, which represented it as a mere *reconnaissance en force*. Had he been as near the scene of the deadly struggle as the Allied was when he drew the Sketch of which we have given a large copy in our present Number, he would have viewed the affair in a very different light. By the time this Paper reaches New York the writer of the article in question will have found out that it is all over with his friends in the Crimea.

COUNTRY NEWS.

LORD PALMERSTON AMONG HIS TENANTRY.—Viscount and Viscountess Palmerston passed through Northampton on Saturday last, on their way to Duston, where her Lady ship possesses a valuable estate. The noble Lord's visit was so unexpected at Northampton, that there was not sufficient time to give him a public reception; and, on his arrival at the station was known, the bells of All Saints' Church chimed a merry peal, and the rejoicing of the British standard, which had only recently been taken down from commemorating the fall of Sebastopol, announced to the inquiring crowds the arrival of the illustrious Premier. The noble Lord and Lady, on leaving the station, proceeded to the dispositionment of a considerable number of carriages, and drove to Duston Vicarage, where they remained some time. They subsequently visited the works of the Duston Iron Ore Company, where they were met by the Managing Director, who conducted them over the ground. The noble Lord and Lady, who appeared in good health and spirits, afterwards took their departure for town, by the six o'clock train, amid loud and repeated cheers from the crowds assembled on the platform. Among them was a large number of farmers, with whom his Lordship fell into a conversation on the price of wheat, which branched off into remarks on the war. He noble Lord intimated that he knew from the best sources that the hospitals in the East were now in a state which would do credit to such institutions in London. He said also that the army was in a most efficient state; that a vast amount of matériel of war had been left among the ruins of Sebastopol, and that the place was not so much utterly demolished that it would not afford excellent shelter to the Allies during the winter. The noble Lord said emphatically that they might rest assured that the power and pretensions of Russia would be effectually humbled before the Allied Powers would consent to a peace. A correspondent who was present adds:—"One of the agricultural gentlemen, a farmer and miller, ventured his argumentative powers with the Prime Minister—which, it may be, to leave this great event as a memorable record to his children—and remarked, 'My Lord, we want a peace.' Lord Palmerston replied, with a smile, 'Oh, I see you are one of those Manchester school.' As there are some of these gentlemen here, another Upon which the farmers set up a tremendous shout of laughter."—*Northampton Mercury.*

THE FIRST EXHIBITION OF THE BRIGHTON SOCIETY OF ARTS was opened on Monday, the 10th instant. The gallery, formerly the kitchen of the Pavilion, is commodious and well lighted; exhibiting at present more than 300 pictures by living artists. Of these, the greater part are submitted to public inspection for the first time; a few were painted expressly for the occasion. The names of Carl, Haag, Linnell, Lee, G. A. Williams, J. Callow, A. Fripp, Robins, Oakley, Hammersley, Hayter, West, Burgess, Oliver, and of many other able artists among the contributors, will not fail to attract visitors apart from the patronage of Her Majesty, Prince Richmond, the Bishop of Chichester, and many other gentlemen of distinction have honored the society. The object of the Committee of Management in opening the present gallery will, however, prove a greater attraction, namely—the production of the artistic talent of the residents and visitors of the town. Periodical exhibitions of ancient and modern masters, a school of design, &c., are among the operations contemplated by the society.

IRISH EMIGRATION.—A Galway paper mentions that the stream of emigration from that district has subsided, at least temporarily. Preparations for departure, however, are being made by many of the peasantry, who speculate on being enabled to defray the cost of their passage out of the high wages which have been paid during the present harvest. In the neighbourhood of Ballinasloe the scarcity of potatoes is the subject of complaint, and numbers of the large proprietors are anxious to obtain them at an increased premium.

KING'S COLLEGE CHAPEL, CAMBRIDGE.—For the first time in the course of many years the Sunday services in this magnificent chapel have been thrown open to the public during the long vacation. As might be expected, numerous members have attended them, especially the afternoon one, and when the doors were opened on Sunday last, the crowding and crushing which ensued, in the absence of any regulation, was extremely unbecoming such a place.

BABY SHOW AT MANCHESTER.—The Manchester public were invited to a baby show at the Pomona Gardens on Saturday, when there were nearly 300 competitors for the prizes, and something like 5000 persons who had paid sixpence each for admission, formed the audience or spectators. The prizes were of sums varying from £3 3s. to £14 14s., giving a total of rather over £60, so that the speculation has no doubt proved a good one to the promoters. The children were brought from all parts of the kingdom. One baby had come from Boston, in Lincolnshire, about a month ago. Many of the Manchester public have expressed themselves against the proposal for such an exhibition; but it must be owned the patronage given to it by so many influential persons will give much encouragement to future experiments of the kind. The grandson of a late M.P. for one of the metropolitan boroughs was the winner of a silver teapot.

CRYSTAL PALACE FOR SUNDERLAND.—The scheme for the erection of a Crystal Palace upon a picturesque eminence within the municipal boundaries of Sunderland has been submitted to a public meeting of the inhabitants, and received with general favour. The estimated cost of building is £70,0. Upwards of £9000 was subscribed up to Thursday, which the Lord Lieutenant and the Marchioness of Londonderry contributed £100.

SCOTTISH AGRICULTURAL STATISTICS.—We observe that it has been determined by the Highland and Agricultural Society of Scotland that the Statistical Committee of that body shall be reconstituted, and it is proposed to introduce next session of Parliament, to compel the occupiers of land to make the necessary returns of their stock, &c. This exemption is exceedingly complimentary to the farmers of Scotland, and arises from the readiness which they have manifested in furnishing the information asked of them.—*Scotsman.*

THE PLUM CROP.—The greater part of the Orleans plums are now gathered and marketed in the finest condition ever remembered, and for size are unparalleled. This splendid fruit, which is nowhere obtained in higher perfection than here, has been sent to the markets of Birmingham, Manchester, Liverpool, Glasgow, London, and even into France. One agent alone contracted for and delivered 5000 pots, and others have sent off large quantities. The damsons are abundant, and also be a splendid crop; hundreds of trees are only saved from breaking down by propping and tying. The fruit hangs together in clusters, like bunches of grapes.—*Worcester Chronicle.*

THE SMOKE NUISANCE AT LEEDS.—At a large and influential meeting, on Saturday, the following resolution was agreed to:—"That a sum not exceeding £250 per annum be raised for three years, for the purpose of abating the nuisance of smoke. This exemption is exceedingly complimentary to the farmers of Scotland, and arises from the readiness which they have manifested in furnishing the information asked of them. That three gentlemen be appointed for carrying out that object. And further, that a subscription of £100 per annum, for three years, be raised for giving premiums to those engineers who, under difficult circumstances, consume their smoke in the most effective manner."

COLLIERY ACCIDENTS.—A recently-published return of the colliery accidents in Northumberland and Durham establishes the very gratifying fact of a gradual decrease of casualties since 1854. In that year the total number of accidents was 160; in 1853, 155; in 1852, 150; in 1851, 127; and for the first six months of 1855 they amounted to 69.—*Durham Chronicle*

ADVANCE OF WAGES.—A meeting of seamen's delegates, representing the towns of Lynn, North Shields, South Shields, Newcastle, Blyth, Seaham, Sunderland, Middlesborough, Scarborough, Hartlepool, West Hartlepool, and other ports, was held at Sunderland on Monday, when it was announced that the wages in the coasting trade would be £2 per London voyage, and to other ports in proportion, after the 1st of October until the 1st of April, 1856. This decision has been notified to the shipowners.

THE FOOD QUESTION IN FRANCE.—The following appears in the *Moniteur*:—"Sire,—The produce of the last harvest, and the large additions which the United States and other more favoured countries can easily supply to it, assure to our people the requisite amount of consumption during the rest of the year. Commerce—thanks to the security, encouragement, and facilities given to it by your Government—will know how to supply food for the markets, and there will be no want of grain anywhere. But the price, temporarily increased, causes sufferings which touch your heart. To alleviate them you desire to multiply labour and relief throughout the land. By your orders I submit for the signature of your Majesty a decree opening a special credit of ten millions for this object. The assistance of the departments, of the communes, of private individuals, will double and triple, if necessary, this fund of provident benevolence, and the working classes will once more bless the incessant and paternal foresight of their Emperor for their sufferings and their wants. I am, with most profound respect, Sire, your very humble and very obedient servant and faithful subject, the Minister Secretary of State for the Interior, BILLAULT." A decree follows, carrying out the suggestions of the report.

THE ASSAULT ON THE 8TH SEPTEMBER.

THE following is an extract from a letter from Staff Assistant Surgeon Walter Clegg, attached to the Light Division—

Before Sebastopol, Sept. 10, 1855.

Whilst I write the tricolor waves on the Malakoff, and the Russian flag planted on the Redan. The whole of the south side of Sebastopol is on fire, and the sky is lurid, and red and purple with the flames and the heavy smoke. The entire Camp is pervaded with the pestilential stench. Mines are still exploding every few minutes and shells are resting at their "own sweet will" in all the works which were recently Russian. The town is fearfully battered, though the churches and many of the public buildings are still standing. The Russians have all withdrawn to the north side, and I expect that in a few hours they will fire that side. At length there is no doubt that we may exclaim "*Sebastopol est pris.*" It would be old news if I entered into particulars how all this happened. Ere you receive my letter you will have read Mr. Russel's description in the *Times*, and no doubt that will be very eloquent and very truthful. I can, however, tell you all I know in a very few words. The assault was determined upon—not a few regiments only, as last time, but a general assault. The men in each regiment were addressed en parade, each man clenched his teeth, and clutched his fingers, and knew that he was about to stare death in the face, and determined to do his duty. At twelve o'clock at noon, on Saturday, the French advanced on the Malakoff. They had stepped up to within fifty yards. It was, therefore, a short run: and on they went, column after column, in silence and in perfect order, a resistless tide: over officer knew his man and every man knew his position, and in less than five minutes the tricolor fluttered from the interior of the Malakoff. Almost immediately afterwards up went the White Ensign on the Mamelon. That was the signal for the English attack on the Redan. They had 150 yards to run. The attack was made; deeds of personal valour were performed never surpassed in the history of war. Troops were many times in the fort, but to hold it seemed impossible. And on they went, in small companies, when the Russians blew up the Redan, blew up all their forts on the south side, and escaped as best they might. Their pontoon bridge was smashed by our fire, and hundreds of men floated away on it, to be picked up, probably, at Fort Constantine or other points seaward. Of course our loss is terrible. Wiser heads than mine may explain what was the use of our attack on the Redan, when (as the sequel proved) the guns of the Malakoff so completely commanded it. But the fact is, that the Redan could not be taken after the former was taken. However, it is all over now. The French loss was very great, for although they got into the place so rapidly they had a terrible hand-to-hand fight for the possession.

In the 2nd Battalion Rifle Brigade we have to lament the loss of Captain Hammond and Lieutenant Ryder. We have Lieutenants Cary, Eyre, Fuller, and Riley wounded; and about 130 men killed and wounded. With Captain Hammond we will be familiar, as I frequently mentioned to you the many acts of kindness I received from him when he commanded the depôt at Fort Cumberland. A braver soldier never on that day mounted the Redan; a Christian of more unaffected piety never entered the presence of God. He had only been in the Crimea forty-eight hours when he was killed. When the Rifles were forming for the assault, a young subaltern, going into action for the first time, who had come out with Hammond, addressed him:—"Captain Hammond, how fortunate we are! we are just in time for Sebastopol!" Hammond's eye was gazing where the rays of the sun made a path of golden light over the sea, and his answer was short and remarkable, and accompanied by the quiet smile which those who knew him well so well remember: "I am quite ready," said he. The next that was seen of Hammond was when his sword was flashing at one of the embrasures of the Redan. He was indeed at the head of his company, fighting to gain an entrance for them. A dozen bayonets were at his heart; and once he was engaged in a scuffle. In a few moments he was recognised again outside the embrasure, still hacking with his sword. The next morning at 8 o'clock Captain Balfour found him in the ditch, beneath a dozen of the slain, with a bayonet wound through his heart.

Hammond and Ryder were both buried this afternoon in the burial ground of the division, rendered sacred long ago by the sepulture of brave men. Ryder was barely eighteen years old, and was one of my first friends after I entered the service. Before the assault had lasted an hour he was shot in the throat and fell, and we carried him to the rear and brought him to the surgeon. But as it happened the surgeon was engaged at the moment that Ryder was brought in, and the young Lieutenant had his handkerchief round his throat, and was seen again on the ladders, where he was found the next day in the ditch a bayonet thrust had transfixed his forehead.

You have had some letters lately from Jacob Omnium, in the *Times*, and Jacob has been pleased to favour the Rifle Brigade with his polite attention. He has last letter (Jacob's) was read to the assembled officers and privates could be expected to follow boys only a few months from school. Concerning Jacob Omnium's destructive insinuation, I will say nothing, but I will tell him this, that when such young men as Ryder lead the way to victory, or a soldier's grave, our eldest veteran will look on him as a boy in life, and bless his memory in death, when they have dug his last resting-place

Dockyard, Sebastopol, Sept. 10, 1855.

I have been all over Sebastopol this morning. The pillage is enormous, but not of very much value. The Russians are still unburied. The French are turning every house to account. Pictures, looking-glasses, &c., are smashed in the streets; you walk over fragments of pier-glasses. If I had a dozen waggons I could fill them with relics, for being a doctor, the French admit me into houses, though they claim as a right the entire plunder of the town. I have pockets full of cartridges, and the stem of a pipe—some I have bought. The French have pickets all round to prevent the army from rushing until they have sacked the place. This morning, when the fear of mines was had cleared away, they made a hole in the Custom-house vaults to tap the wine and arrack. And there a horrible discovery was made. About one hundred Russians, during the attack on the Redan, had made some of these vaults their hospitals. Hundreds of wounded Russians, French, and English, had been carried there. I went through the vaults, and for a sight never to be forgotten. About one hundred still lived. There were five or six English of the 97th, 33rd, and 23rd, two Frenchmen, and about fifty Russians alive. Hundreds lay dead in every attitude of human torture, a few sitting bolt upright against the walls, with staring eyes, and the foam of putrescence trailing from their faces to the ground. The stench was scarcely bearable. No human being had been near these vaults for more than two days. Some of those who lived had both legs blown off, and all they were even chewing. I sent up to the front for stretchers and assistance, and then looked about for water to relieve the piercing cries which surrounded me on every side. I sought in vain for a pump or well; and to ask the assistance of the French was useless, as in the adjoining vaults were about one hundred of their wounded and hollands. I had been there nearly an hour examining the wounds of the poor fellows, when two sailors came in—"men-of-war's-men," Jack likes his grog, but Jack's "a man for a' that." They fetched me water in tin pans, during the next two hours, and to see the poor wounded Turk, and his witness their gratitude would have brought tears from stone. They clutched my hand, kissed it, and jabbered incessantly; I could not tell what they said, but word "Sevastopol" was consistently repeated: I almost fancied that they intended to express their satisfaction as they knew the worst, and that the bloody siege of Sebastopol was at an end. The post goes immediately. The French have got into the churches and set all the bells a-ringing. The effect, seeing that all the ruins are shattered, is most melancholy. I hope that this miserable war is nearly ended, and that I shall soon have the pleasure of greeting you again in old England.

I am, dear ——, yours faithfully,

WALTER CLEGG.

THE WOUNDED IN THE DOCKYARD AT SEBASTOPOL.

THE following letter from a non-commissioned officer of the 23rd Regiment to his mother at Bristol will be read with much interest:—

Hospital Camp before Sebastopol, Sept. 14.

My dear Mother,—Through God's wonderful mercy I still live, though, after all I have seen and gone through, it is almost more than I can believe. However, I can truly say that I was one of the first in Sebastopol; nor did I leave it till I was carried out. It was on the 8th of September, between twelve and one o'clock, when the word was given, and we sprang from the trenches to double over the places and scale the high and beautiful Redan battery. The distance to run was only about two hundred yards; but many a hundred brave fellows were laid low before they had got half the distance. The fire was hot at Inkerman; but it was worse here, mostly grape and canister. My comrades fell on both sides of me. One cried, "My God! I'm hit." The other dropped down without a word; and by the time I reached the ditch I seemed to have lost my own regiment altogether. Then I saw one of my officers shouting for the "23rd" to the parapet, and I made for him. The ditch was half full of dead and dying even then, and as I got up to it there was a rain from above, and scores of men of the 97th and 33rd were hurled or fell from the parapet down upon the poor wounded wretches who were shrieking in the ditch. Many of my own men were killed upon the backs of their comrades as they fell. But they still came on behind, and in another minute I had one foot in the embrasure, and was in the place. I had nothing but my bayonet, as my piece was discharged. I had just time to see that the place seemed more like a town than an open fortification, as we had supposed it to be, and the Russians were hidden, for I saw very few of them. There were, however, plenty concealed, for before I had advanced two steps I was down, shot in the hip with a Minie ball. I asked the mercy of the Almighty as I saw a Russian coming up to me, for we had thought that they murdered their prisoners in cold blood, but he only lifted me on one side where I lay, for it seemed nearly an hour, before me to the horrid hell going on outside. The roar of the guns and the yells of the men were awful, and every minute more of our fellows who got into the works were shot down and made prisoners. At last we were put into stretchers, two into a litter, and moved off into the town, and taken more than a mile to the dockyard, where hundreds of wounded Russians were already lying. There seemed enough to fill all the buildings, though these were very large and beautiful. I was put with scores of others into a vault underground, where stores had been kept. Russian doctors were waiting, and they began to dress some of the men's wounds, though numbers were already dead. My turn had not come when the doctors went off, and we saw nobody but ourselves again that night. Very soon after we were left explosions took place, and I knew from the vaulted roof that the mines were blowing up. I hoped and prayed that Sebastopol was taken, but I scarcely dared to think such good luck possible. Getting that night though was worse than anything I had experienced before. There was a dismal sort of light in the vault caused by the fires in Sebastopol; and the faces and bodies of the wounded men around me looked more horrible than I can describe. Their cries, too, were pitiful to hear, but before many hours scores of them were silent for ever. The next day passed, and the next night came, and we seemed quite deserted, and the stench of the dead was getting sickening. It was about nine o'clock the next morning when some French soldiers first found us, and, as far as I could learn, only two or three in that vault remained alive, though there were other buildings full of the wounded. The Frenchmen found several of their own dead, and had them removed immediately. The first English officer I saw was Captain Heywood, of the Rifle Brigade, and he said he would send us a doctor, and in about half an hour a surgeon of the Staff (Dr. Clegg) came in. There was very little service at the proper time and place. On the 17th of last month they were had broadside on off Kertch, at about 1000 yards from the quay, and exhibited a formidable row of ordnance. The precise number of guns we were unable to say at sea, contented himself with at once clearing out. After the bombardment, our flotilla proceeded to the Spit of Arabat, as an expedition had been planned with the object of burning some Russian stores collected in the Putrid Sea and a village placed on our right to the south-west of Genitchi. A strong westerly wind, however, put an end to our preparations for the attack. It is impossible to conceive the sudden squalls with which these waters are visited from these spits. The falconless water soon rolls in alternate mountain and abyss, and renders the navigation extremely dangerous. We have happily to deplore no loss of life, and got cheaply off with three or four boats' crews well ducked. The project, however, is but postponed. The Sea of Azoff is perpetually agitated by our little steamers. Nothing escapes their vigilance, and if I have no great exploits to record, because such are materially impossible, I have at least the satisfaction of assuring you that every one does his best. Each of the squadron commanders, Burnes, and destroys all that he can, and it is evident that the sum total of these partial operations inflicts on the enemy considerable damage. Our Commerce Bouchers presents a more animated appearance since the arrival of our steam, gun, and mortar boats. They take a tack every day into the strait, and exercise their guns. They will be in

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

The Queen has appointed the Earl of Ellesmere Lord-Lieutenant of Lancashire.

The health of the Empress of the French has improved. Her Majesty may be said to be going on favourably.

The Duchess of Kent was, for some days during the end of last week, suffering from indisposition, from which she has now recovered.

Prince Jerome has again left Paris, and taken up his residence at the Palace of Meudon.

The Mount de Chambord has left. Frohsdorf for Brunnsee, where the Duchess de Berri resides.

The Duchess d'Orleans, the Count de Paris, and Duke de Chartres, have recently joined the ex-Queen Amelie, and the members of the ex-Royal family of France, at Claremont, from Genoa.

Prince Charles Lucien Bonaparte and the Countess Camerata Campello left Glasgow on Thursday week for Inverness.

The young Prince Frederick Charles of Prussia left Berlin on the 18th, to compliment the Emperor of Russia, who, in the course of his journey, was expected to approach the Prussian frontier.

The King of Sardinia will set out for France about the 10th of October. He is to be accompanied by M. Cavour, Minister of Finance, and General d'Abormida, Minister of Foreign Affairs. His Majesty's stay at Paris will be about a fortnight.

The Queen has appointed Richard Wood, Esq., now Consul at Barcelona, to be Agent and Consul-General in the Regency of Tunis.

In consequence of the new regulations in the Palace, the Grand Equerry to the Queen of Spain, the Grand Majordome, the Grand Equerry to the King, the Secretary to the Queen, and several other gentlemen and ladies, have been dismissed.

Her Majesty has appointed Mr. Jolliffe Tufnell to be Regius Professor of Military Surgery in Ireland.

The Duke and Duchess of Brabant and the Count of Flanders arrived at Antwerp on the 16th from Brussels. They were received by the Governor of the province and the superior civil and military authorities in their official costume.

Upon receipt of the intelligence of the fall of Sebastopol, the Emperor of Austria desired his representatives at the Courts of Paris and London, to convey his congratulations to the Emperor Napoleon and Queen Victoria.

Lady Raglan arrived in the steamer that conveyed Major Curzon from Boulogne to Folkestone.

A letter from Warsaw announces the arrival there of the Russian military agents, General Rudorff and Count de Stackelberg, the former from Berlin and the latter from Vienna, to await the coming of the Emperor of Russia. More recent accounts say that Count Benkendorff has gone to Odessa to attend the Czar.

The Lord-Lieutenant of Ireland has accepted the invitation to dine with the people of Belfast. The requisition was signed by men of all parties and of all religious persuasions.

The Earl of Aberdeen, Chancellor of King's College and University, Aberdeen, has intimated his intention to appoint the Rev. Peter Colin Campbell, Professor of Greek in the College, to the vacant office of Principal.

Chevalier Bunsen, the late Minister for Prussia at London, who since his retirement has been living at Heidelberg, is going to pass the winter at Rome.

The Right Hon. W. E. Gladstone, M.P., has taken Lady Stuart de Rothesay's mansion on Carlton-house-terrace, for a term. The mansion is undergoing repairs preparatory to the right hon. gentleman taking possession.

The election of a successor to the late Bishop Haly (Leighlin and Ferns) took place last week, when Dr. Walsh, President of Carlow College, was elected by a large majority.

The Marquis and Marchioness of Westminster gave a grand reception to the nobility and gentry of Cheshire and the adjoining counties, on Tuesday, at Eaton-hall, near Chester, on which occasion the beautiful gardens and pleasure-grounds, which have been at so much money and labour to complete, were thrown open for the first time.

The Armenian Archbishop of Lemberg, Samuel Stepanowitsch, the Nestor of Christian priests, has completed his 105th year.

The Rev. Dr. Barr, of St. Enoch's, ex-moderator of the Established Church, has been appointed to preach before her Majesty and suite at Balmoral, next Sabbath (to-morrow).

The Egyptian Princes, Mustapha Pacha and Ismael Pacha, arrived at Marseilles last week with their suite, composed of eight persons, in order to join the Viceroy, whose return to Alexandria must then have been known.

Sir M. Monteflore, Bart., has returned from his journey to the Holy Land, where his mission has been highly successful. He was received by the various authorities at the places he has visited with great honour, and has obtained from the Porte great privileges for his co-religionists

Mr. W. J. Fox, M.P., makes his annual visit to his constituents at Oldham on the 7th of November, when a tea party and ball are to be given in honour of the occasion.

The Dublin farewell banquet to Mr. Duffy will take place on the 16th of next month; and the tenant-right meeting, which was fixed for next week, has been postponed to the same day.

Baron de Manteuffel is to join the King of Prussia, who started on Monday week for a tour through the south of Germany, and then for a short stay at Stolzenfels on the Rhine.

Lord Brougham is still at Brougham hall. His Lordships enjoys good health, and takes a great deal of exercise on foot.

Count Grunne, who is at present with the Emperor of Austria in Ischl, has been attacked with cholera; but was, according to the last despatches, somewhat better.

The young Viscount Lambton, heir of the Earl of Durham, being a twin, is distinguished from his younger brother, Frederick William, by a blue silk ribbon tied round his right wrist.

Baron Alexander de Humboldt recently celebrated the 86th anniversary of his birthday. Notwithstanding his great age he still unremittingly continues his important labours.

Mr. Charles Dickens, who is staying near Folkestone, is to read his "Christmas Carol" at the Literary Institution of that town on the 5th of October.

Miss Burdett Coutts is passing the season in the south of France, and is likely to remain absent from England for some months.

Professor Ernest Reinhold, son of the celebrated German philosopher of that name, and himself a very remarkable man, died at Jena a few days ago, in his sixty-second year, from an attack of apoplexy.

Dr. Newman has subscribed £100 to the fund at present collecting to pay the costs of Cardinal Wiseman in the recent trial.

Baron Sentier de Chuygné, the last surviving member of the *Parlement* under Louis XVI., died last week, at the age of eighty-nine.

Rossini has arrived at Paris from the baths of Trouville, and proposes to pass the winter there.

Mr. Moxon and Dr. Beattie, co-executors for the Post Campbell's monument in Westminster Abbey, have contradicted the report that the British nation has accepted the monument for the adornment of one of its loftiest places without fair payment.

The French Minister of Public Instruction has granted a week's extra holiday to all the public schools and colleges, in honour of the taking of Sebastopol.

The mail-train from Dublin to Kilkenny was stopped, one day last week, a short distance from Baginstown, by two large stones being placed on the rails. The guard fortunately perceived the obstruction in time, and no accident took place.

The Théâtre Imperial Italien at Paris will open on the 2nd of October, under the direction of Signor Colzado. The singers engaged are mostly old favourites, beginning with Grisi and Mario.

A mail from Australia on Monday, in addition to the usual amount of Continental and provincial correspondence, contained 720,000 newspapers, and a proportionate number of letters.

The telegraphic communication between Constantinople and Berlin is now complete. Kemal Effendi, the Minister from the Porte to Berlin, received the first telegraphic despatch from Constantinople on Tuesday week. It took four-and-twenty hours for transmission.

The magistrates of South Shields have fined several plate-layers on the North-Eastern Railway 5s. each and costs, for working on the Pontop and Shields Railway on Sunday.

The last intelligence from the Birman Empire announces that an extraordinary Embassy was on the point of setting out for France, being the first that the Emperor of the Birmans ever sent to any power in the world.

The extensive works at Windsor Castle are rapidly progressing, and will probably be completed by the 12th of October, the day on which the Court is expected to return to Windsor for the winter season.

CHESS.

TO CORRESPONDENTS.

A Subscriber.—Strawberry.—The accepted version of P. to K. 4th is entitled to much more consideration than you appear to be disposed to allow. You must "in answer to check by the Bishop, take it with the Knight" instead of with the Queen, in which case White Bishop to the Knight's 3rd, &c., and we will leave you to find out what passed next to every move "more or less."

C. B. Chesgrove-road, Stockwell.—You must have misunderstood the rule. We are not acquainted with the present Secretary.

C. W., Sunbury.—The last move is—1. B to K. 3rd.

C. B., Dundee.—Try shall at your service.

G. W.—You must be good enough to let names to send the amended diagram. The number of a Problem is found to be wrong it is destroyed.

White to play, and mate in five moves.

CHESS IN INDIA.

Chess-players of every grade have an interest in the annexed letter, as it was the medium through which that lymphatic puzzle the "Indian Problem" was first introduced to Europe, and quashed. Besides, one of the most charming little games we have met with for many a day. The letter is addressed to Mr. Staunton, and was written by the Rev. M. Leslie, [illegible] in Delhi, who died in India a few years ago, and [illegible] who knew him, and to the irreparable loss of Chess world, which he promised to become a most distinguished ornament:—

Dear Sir,—I have the pleasure to forward for your inspection the accompanying [illegible] which I have [illegible] during [illegible] and which, I believe, contains the quintessence of every player in India to whom it has been shown, and almost every one has respected antagonist the late Kemaul Ali. You will be surprised to learn that this Indian Chess King has come to his long home here, [illegible] Warm player of a very high order, though imperfectly acquainted with the different gambits. There is another player at Delhi, by name Ali, that is, however, equal, if not superior, to him in force. I was [illegible] requested —— All to take up the cudgels for me. He played out my game, and, much to the evident annoyance of the old man, won. I begged them to try a *partie*, and, after fighting like turkey-cocks, on that occasion came off decidedly victorious. I could never prevail upon to try their strength. Chess is not so much [illegible] Indian, by the most gentlemanly native I have met in India, conveying one's mind in very fair [illegible] of the Selim of our childish reading, is a player of no ordinary skill. There is also a dervish at Meerdabad who plays a remarkably fine game. These players I should consider equal in strength, not to the champion of England as he now is, but of the force he was in the years 1833-8, when I had the pleasure of contending a few games with him, with [illegible] vantage on either side. * * * Several games have of late been played by correspondence. Three of these I succeed to find [illegible] and the Falkirk." I sent you in the June [illegible] between "Sir [illegible] find it worthy, you will greatly oblige [illegible] expected a vast degree of interest, by [illegible] more inclined to do so, with the *amended counterdama*. (The following is a game alluded to) —

(*Evans's Gambit*)

WHITE.	BLACK.	WHITE.	BLACK.
1. P to K 4th	P to K 4th	14. P takes B	Q Kt takes B
2. K Kt to K B 3rd	Q Kt to Q B 3rd	15. Q takes K Kt	P takes P
3. K B to Q B 4th	K B to Q B 4th	16. R to K B 7th	R takes R
4. P to Q Kt 4th	B takes Q Kt 4	17. P takes R (ch)	K takes P
5. P to Q B 3rd	B to Q R 4th	18. B to K Kt 5th	Q to her 3rd
6. Castles	K Kt to K B 3rd	19. Kt to Q B 3rd	Kt to K 4th
7. K Kt to his 5th	Castles	20. R to K B sq (ch)	Kt takes R
8. P to K B 4th	P to Q 4th	21. K to Q Kt 4th	Q to K B sq
9. P takes Q P	B to Q Kt 3rd (ch)	22. Kt takes P (ch)	K to Kt sq
10. K to R sq	Q Kt to Q 5 4th	23. Q to K 6th (ch)	K to K sq
11. K B P takes P	K Kt to her 6th	24. B to K 7th	Q to K 5 5th
12. P t 6Q 4th	P to K B 3rd	25. Kt to K B 7th (ch)	
13. K Kt to K 6th	Q B takes Kt		

And the game is drawn by perpetual check.

After the termination of the game, a gentleman modestly calling himself "A Young Chess-Player," remarked, through the medium of the *Dark Gazette*, that if the second player, at move 24th, had played—

24.	Kt to K Kt 8th (ch)
25. P takes Kt	Q to K B 8th (ch)
26. K to R 2nd	P to K 8 3rd

The game would have eventually been decided in his favour,

A correspondent signing himself "Gambit," expressed his belief, in reply, that the second player, by adopting the move recommended by "A Young Chess-Player," must have necessarily lost the game because his opponent, for his 27th move, might have played 27. Q to K Kt 6th.

In answer to this move the "Young Chess-Player" came forward with 27. K R to K B sq.

I am not aware of his having any better move. You will perhaps discover another and a more advantageous mode of play.

"Gambit" now replied by winding up the game with the following moves, observing, at the same time that other moves might be suggested, but as they lead to an exchange unprofitable to the second party, it was needless to cite them. The moves he proceeded to give were the "—

28. B takes R	Q takes B	33. Q to K 8th (ch)	Q to K B sq
29. Kt to B 7th (ch)	K to Kt sq	34. Q to K 6th (ch)	K moves
30. Kt takes R P (ch.)	K moves	35. Q to K R 3rd (ch)	K moves
31 Kt to B 7th (ch)	K moves	36. Q to K R 7th	
32. Kt to K 6th	Q to K B 3rd		Mate.

The position prior to moves 28 would form an interesting little Problem. I must not forget to add that the "Young Chess-Player" most courteously acknowledged the game, and accounted for it by stating that his calculation had not extended beyond the 26th move

It is now high time that I gave you the Problem to which I drew your attention in the opening of my letter:—

White: K at Q R 8th, B at Q sq, Bs at K R 6th and K Kt 2nd; Ps at K Kt 4th, K B 2nd, Q Kt 3rd, and Q R 2nd.

Black. K at K 5th, Kt at K B 6th; Ps at K 4th, and Q Kt 3rd and 4th.

White playing first, to mate in 5 moves.

With this I conclude; and, should you require any information respecting Chess as it is played in India, you have only to communicate with, dear Sir,

Your sincere well-wisher,

SHAGIRD.

* Illegible in the MS.

LYNCH LAW IN CALIFORNIA.—On the evening of the 6th instant, a party of Mexicans, suspected of robbery, were attempted to be arrested at a place called Drytown. After a skirmish with some constables, in which twelve shots were fired on one side and fifty on the other, and in which some of the Mexicans were wounded, they fled to a small mining town some miles off called Jacksonville, and slaughtered the inhabitants *en masse*. "In all they killed five American men, one American woman, and one Indian; stole upwards of 2,000 dollars in money, and decamped with all the horses in the place." The whole country soon rose in arms, and in the pursuit all the Mexicans who could be got hold of were caught on the following day. About thirty-six were arrested: the rest wished to hang them all; but, to the credit of humanity, by the exertions of several gentlemen, a jury of twelve was selected from the crowd, and three of the Mexicans were found guilty, and, after half an hour's time being allowed to prepare themselves, they were hanged on the tree under the shade of which their trial had been conducted." All the houses belonging to "Spaniards," as Mexicans and Chilians are indiscriminately called, were burnt. It would appear that the band of Mexicans who committed the atrocity at Rancheria, or some of them, escaped, and killed four Frenchmen on the Mokelumne river. The excitement of the American inhabitants rose to such a pitch that there was no controlling them, and they seem to have determined to expel all of Spanish blood from among them. Day by day we have details of the progress of these scenes of horror. The Mexicans who could fled, but the "fiery cross" has sped to the neighbouring counties of Calaveras, Tuolumne, and Sonora, and has raised the people everywhere. About a week ago the Sheriff of Amador was killed by a party said to belong to the band of Mexican robbers who were the first engaged at Drytown. Several American men were wounded on the same occasion, and some Mexicans killed. The Mexicans are said to have "fought like tigers, using a revolver in each hand," but they were worsted in the end; for, on their taking refuge in their tents and houses, these were fired, and they were forced to come out, and were then shot; I don't know how many, for the accounts are confused and unconnected, evidently written under excitement. Where all this will end no one can tell. It seems clear that a large Spanish population will be expelled from three or four counties in the southern and central mines. I am not in possession of facts to enable me to form a correct judgment, but many say that the Spaniards are more abused against than cunning. The proceedings taken against them are in many instances outrageously unjust. One account has it that the three men hanged were innocent, and that an American was the ringleader of the robbers; and another account gives out that a certain band, composed chiefly of Mexicans, had both American and English ringleaders. The number of deaths produced by this "excitement" must be considerable, for J. de Lynch has not for a great while had so extensive a circuit.—*Letter from San Francisco, Aug. 17.*

TESTIMONIAL TO SIR CHARLES NAPIER.—A numerously-attended meeting, convened by a committee appointed to carry out the object, was held on Monday night at the Garden Hotel, Covent-garden, for the purpose of obtaining a testimonial to Sir Charles Napier. The chairman adverted to the circumstances connected with the command of the Baltic fleet by Sir Charles Napier, and the recall on return, and contended that the Admiralty had been goaded, vilified, and misrepresented. Several gentlemen warmly defended Sir Charles Napier, and called upon the meeting not only to sympathise with him, but to express their disapproval of the mode in which the efforts of the Admiralty were managed. Resolutions were adopted, to the effect that, having carefully considered the facts in connection with the dismissal of Sir Charles Napier from the command of the Baltic fleet, and the imputations cast upon his character and conduct, the meeting was [illegible] the Lords [illegible] was therefore determined [illegible] testimonial [illegible] to enable him to purchase an estate in Lincolnshire, and an evidence of the approbation of right and wrong; that the qualities exhibited by Sir Charles while in command were those of sound judgment, firmness, and discretion, whereby he had rendered great service to his country and deserved their thanks and gratitude. It was also determined that subscription lists should be opened throughout the country, the amount of each individual subscription being restricted to the sum of 1s., in order to see how widely the opinions expressed are shared.

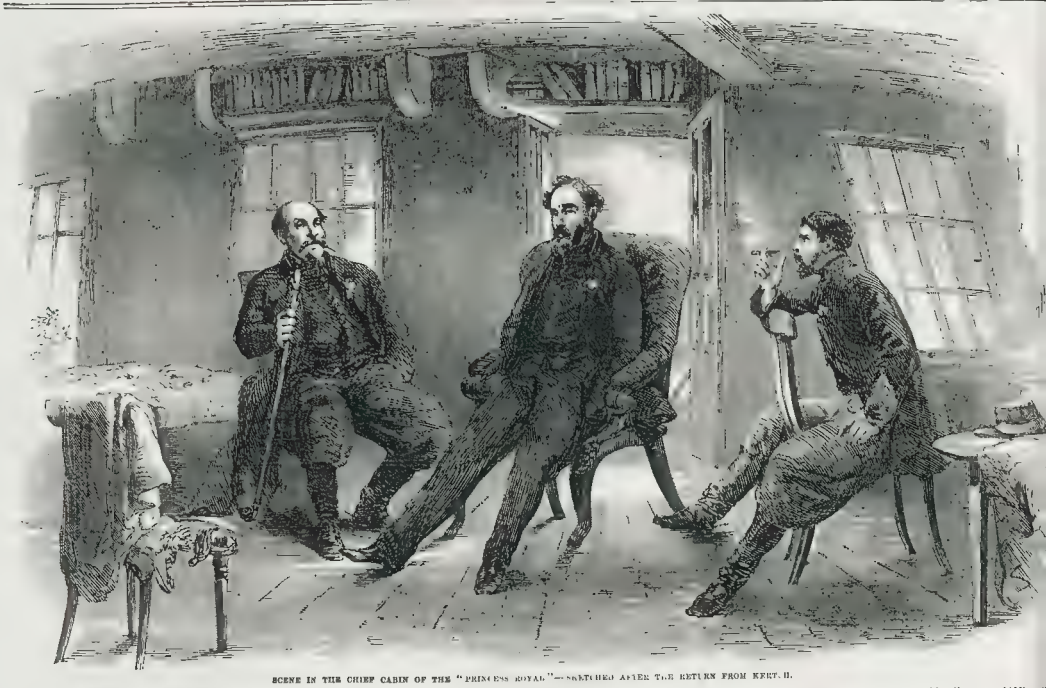
The exports of specie from the port of Boston, United States, during the present year, up to the 1st of September, have amounted to $2,750,464, against $950,000 in the same period last year.

SANTINI, THE GUARDIAN OF THE EMPEROR'S TOMB.

AMONG the many thousands of English visitors who examine in the course of every year Visconti's splendid Tomb of the Emperor—who have gazed between the bars into the sombre chapel where the body of the hero lies in state under the sword of Austerlitz—not one but are familiar with even the rough outlines of the story, in which the guardian is the first principal figure. The portrait of Santini, which we have engraved, will recall to many readers the tall, hearty old man, who lingers fondly about the chapels, or sits musing in his little bureau, every ready to give a courteous reply to inquisitive visitors, or to talk over the deeds of the first Empire. The men of the old Empire are fast fading away. A few still turn out, in Paris, on great fête days, in their old regimentals; but they seem out of place. Their air is like an anachronism, going by the side of the modern soldier, simply in the Tuileries, but at Elba and at St Helena. To be familiar with these services is to have a new interest in the man to whom they were given.

Jean Noel Santini, the son of poor parents, was born at Lama, in Corsica, in 1790. The news of victories won by the young conqueror of Italy reached even his obscure dwelling-place. The stories of glories won by his great countryman appeared to have fired his blood. Nothing but the army would do for him. At the early age of fourteen, therefore, the young Corsican went to Bastia and enlisted. He was admitted as a drummer in the battalion of Corsican Tirailleurs, commanded by Catanlo, and then garrisoned at Antibes. The young drummer was eager to see the great General; and his wish was soon satisfied. The battalion to which he belonged soon received from the command of Catanlo to that of the Count d'Ornano, and was ordered to the Camp of Ambleteuse, where the First Consul was preparing his descent upon England. Here he saw Bonaparte daily; and here he appears to have become thoroughly possessed by that reverence for the great soldier which has given a purpose and a colour to every act of his long and most eventful life. He took part in all the engagements of the French army in the north—from Donawerth to Krasnoi. He fought bravely on the banks of the Lech, the Danube, and the Lake of Sokolnitz and of the Niemen. These services were not passed by unrewarded. At the commencement of the Russian campaign he left the ranks of the army to enter the personal service of the Emperor. He became a chief Imperial courier, under the orders of M. Delindre; and in this capacity he saw the flames of Moscow, and watched the disasters of Lefysic. He then followed his master, in the first hours of his evil days, to Fontainebleau. Here he lingered upon the steps of the palace, to beg the Count d'Ornano to obtain for him the happiness of accompanying Napoleon to Elba. But the household was complete. At last it was arranged that if he could pay his own journey he should be allowed to be of the exile's band, and that some kind of employment should be found for him on his arrival. He was delighted, even while the infamous valet Constant was sneaking from the Imperial presence, laden with his master's bounty; and Rustan, the Mameluke, was offering to sell secrets of the Empire to the Duke de Berri—who, it should be added, declined the bargain with a proper scorn.

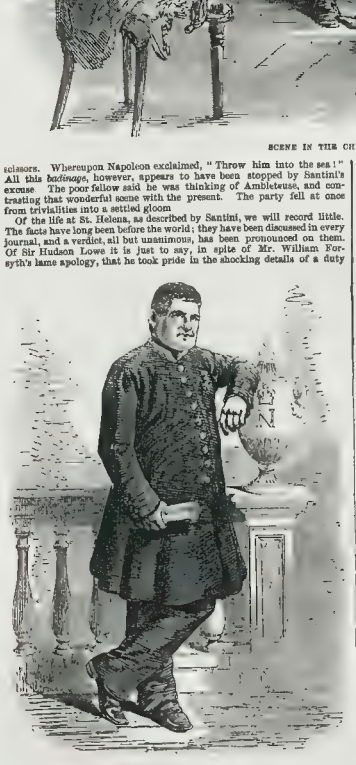
On the arrival of the exile off Elba Napoleon sent Santini on board a vessel that put off from the land to question the crew as to his popularity upon the island, and to bring back their answers "with the brutal frankness of the *corps-de-garde*." The Emperor once fairly installed at Porto Ferrajo, Santini endeavoured to get himself placed; and, after having tried in vain to obtain justice from the officers of the household, addressed himself to his master friend, who at once appointed him guardian of his portfolio. In this capacity the Emperor did him the honour to pull his ear on one occasion, in token of forgiveness for some trivial omission or indiscretion. When an attempt was made on Napoleon's life, and suspicions fell upon Bruland, the Governor of Corsica, as the instigator of the attempt, in the interest of the Bourbons, Santini was dispatched, at night, to Corsica, to make secret arrangements for the transmission of intelligence to Porto Ferrajo, concerning every man who should leave Bruland's dominions. He executed the dangerous mission with a success that procured him the honour of a second pull at his ear by his master. We may now go rapidly forward with the brave servant's history—while the Hundred Days lasted—to find him, still faithful to a great misfortune, on board the *Northumberland*, bound, with the fallen Emperor, a prisoner of England, to St. Helena. The ship had passed Teneriffe, the heat was excessive. Cypriani asked Santini to cut his hair. Santini was performing this operation in the fore-part of the vessel, when Napoleon, who was walking about with General Gourgaud and Count Las Cases, perceived his old servant at work. "What!" said Napoleon, "if I am not mistaken there is my old guardian of the portfolio, turned barber." He then advanced to Santini, and added, in Valois *patois*. "When you have finished, you shall cut mine—if you don't cut it well—beware." Santini gives a wonderful description of the emotion with which he laid his hand upon the head that had held Europe in subjection. He was very nervous, and Napoleon amused himself a little at the brave fellow's expense. "See, General," said the Emperor to General Gourgaud, "that this mountaineer does his work properly. If he does it badly, I shall have him thrown into the sea." He then turned to his valet-de-chambre, Marchand, who was religiously collecting the fallen hair into a serviette, and told him also, to watch the newly-appointed hair-dresser. Santini, terribly nervous, presently pinched the Imperial ear with the handles of the



SCENE IN THE CHIEF CABIN OF THE "PRINCESS ROYAL."—SKETCHED AFTER THE RETURN FROM KERT. II.

scissors. Whereupon Napoleon exclaimed, "Throw him into the sea!" All this *badinage*, however, appears to have been stopped by Santini's excuse. The poor fellow said he was thinking of Ambleteuse, and contrasting that wonderful scene with the present. The party fell at once from trivialities into a settled gloom.

Of the life at St. Helena, as described by Santini, we will record little. The facts have long been before the world; they have been discussed in every journal, and a verdict, all but unanimous, has been pronounced on them. Of Sir Hudson Lowe it is just to say, in spite of Mr. William Forsyth's lame apology, that he took pride in the shocking details of a duty



M. SANTINI, [illegible] TOMB OF NAPOLEON, AT PARIS.

which no gentleman could have fulfilled. The soul of Santini, it is natural to expect, revolts even at the memory of the red-headed gaoler, who tried to buy him over, as a spy upon his master. He turns from the portrait to recount how he shot turtle-doves to provide something delicate for his master's coarsely-served table; how he made him a coat out of an old grey wrapper; a pair of shoes out of an old pair of boots, lined with satin, given to him by the ladies Bertrand and Montholon; how he broke up the silver plate of the fallen monarch, and effaced the eagles from it, before selling it. All this stirred up the poor fellow's indignation to a frightful pitch. At last he thought of a means of serving his master. He sought and obtained an interview with him. At this interview he told Napoleon that he had resolved to leave St. Helena, and to return to Europe with a description of the shameful treatment, the petty annoyances, and the positive privation to which the conqueror of Austerlitz was subjected by the base agent of the British Government. The Emperor pinched Santini's ear, gave him the celebrated protest to read and learn by heart, and carry in his head to Europe. When the brave Corsican had mastered it, and repeated it to his Sovereign, he obtained another pinch of approbation. Napoleon bade him repeat it in London to some of the party in England that saw his degradation and its authors with disgust, and get it printed for circulation. Santini was then to visit the various members of Napoleon's family, but particularly Prince Eugene at Munich. It was afterwards agreed that, lest Santini should forget some sentences of the protestation, it should be written upon little pieces of white satin, which he had remaining from the lining of Napoleon's shoes, and sewed in the lining of his coat. Thus armed against the British Government, and their servant, Sir Hudson Lowe, Santini took leave of his master, and went on his way to England. His reception by Sir Robert Wilson and Lord Holland, and the indignation which the publication of the protest created, are matters of notorious history. Lord Holland's noble speech in behalf of Napoleon was a manful protest on the part of the English people against acts that belonged not to the country, but to the Administration that, to the misfortune of England, then held power. Napoleon never forgot this humane appeal. His will bore testimony to his enduring gratitude. He bequeathed to Lady Holland the antique cameo which he had received from Pius VII.

Santini then addressed himself to the rest of his mission, delighted, no doubt, to learn that his efforts would lighten the load of miseries that were heaped upon his great master. We cannot follow him through the dangers he encountered, nor the miseries he endured, in his travels to see the members of Napoleon's family. We may note that the Grand Duchess of Baden allowed him a pension from 1829, when she learned that he lived in Paris; but that when, through the influence of Baron Fain, Santini obtained the position of doorkeeper in the cabinet of Louis Philippe, after the revolution of 1830, he gave up this allowance, bidding the Duchess reserve it for some unfortunate. Santini also received aid when he was in Rome in 1821, from Queen Hortense.

In 1832 Santini left the cabinet of Louis Philippe, and entered into the service of the Post-office as courier. He remained at this employment till the Revolution broke out. In this great drama he was an *acteur inédit*. And then, when quiet was restored, and Napoleon III. advanced upon the scene, he remembered the gallant services of his uncle's servant, created him Chevalier of the Legion of Honour, and confided to his care the ashes of his uncle, and the splendid tomb in which they lie. Let the hottest Napoleonists never forget the chivalrous act of the Bourbon who placed these ashes in the Invalides!

SKETCHES IN THE CRIMEA.

We are indebted to the courtesy of a distinguished Commander in the Crimea for the three accompanying characteristic Sketches of Life in the Camp. The first scene took place in the chief cabin of the *Princess Roy*

GENERAL JONES IN THE TRENCHES BEFORE SEBASTOPOL

SKETCH OF THE FUNERAL OF THE LATE LORD RAGLAN IN THE CRIMEA.

on the morning of May 5, on the signal being announced to Le Baron N——, Colonel of the —th Regiment, and his two Chefs de Bataillon, that the expedition to Kertch was abandoned, and that orders had come for us to return to Sebastopol forthwith. There were 800 French troops on board, all in the like state of consternation and disgust, all save the good-natured Major, who, between each puff of his weed, consoled the miserable fellows with anticipations of future glory.

The following colloquy took place. In the middle of the group is seated the Colonel, who, on the announcement being made, exclaimed :—"S—errre moi, qui aurait été Brrrrigadier!"

The Chef de Bataillon thereupon says :—"F . . . . erre ce ton des gueux ces télégraphes."

The good-natured Major contents himself as follows :—"N'importe, ce sera pour une autre fois."

In the next Illustration, our Correspondent has sketched General Jones, as he was daily to be seen, superintending the works of the trenches ; the brave officer stands erect, and exposing himself to the enemy's fire, in a way which caused all his friends to remonstrate with him.

The third Sketch is from the Funeral Procession of the late Lord Raglan, on July 3rd. The whole army was under arms, and a pageant unsurpassed, even by the funeral of "the great Duke," took place. The *cortège* started from head-quarters in the following order :—A Regiment of Lancers, English ; ditto Chasseurs d'Afrique, French ; ditto Cuirassiers, French ; ditto Lancers, Sardinian ; ditto Lancers, Sardinian. A troop of Horse Artillery drawing a gun carriage, with the body, on each side of which were two Generals—La Marmora and Pelissier on the right, General Simpson and Omer Pacha on the left, then an immense concourse of Generals and other officers—the rear of the procession being closed by a regiment of cavalry.

The road from the English to the French head-quarters was lined on each side with British infantry and thence to Kazatch, a distance of five miles with French infantry. There the remains of our beloved Chief were embarked on board the *Caradoc* for transmission to England, with all the honours of war, by the fleets, procession of boats, &c. All the heights *en route* were crowned with field guns, which sent forth their mournful, slow salute. The Allied fleets, with their colours half-mast, and in the distance the booming of the guns of the Russians and the Allies, who never ceased battering one another, combined to render this one of the most remarkable and sublime sights ever witnessed.

THE ROYAL ALDERSHOTT CLUB-HOUSE.

THIS splendid accommodation has just been provided at the Camp at Aldershott, by Mr. Thos. M. Stapleton, who, jointly with Major Chambre, the Honorary Secretary to the Committee, were the original projectors of the Aldershott Club. H.R.H. Prince Albert has visited the building, and suggested some additions and improvements, which have been carried out by the proprietor without any extra cost of subscription to the members. The Prince, who appeared much interested on the subject, at the solicitation of Lord Torrington, consented to become patron of the Club, and gave permission to attach the title of "the Royal Aldershott Club." By the unremitting exertions of Major Chambre, we understand that upwards of 400 officers of the Camp have already given their signatures as subscribers. The General commanding, Major-General Knolleys, immediately on the officers expressing their wishes on the subject to him, forwarded the proprietor's request, together with a letter of rules and regulations prepared by Major Chambre, to Lords Hardinge and Panmure who immediately gave the ground for the purposes of the Club, with permission for its erection, with a lease at a nominal rent for thirty-five years The building has been constructed by Mr. S. Henning, of Cliff-house Works Bow. It is of large dimensions, being 82 feet front, and 130 feet deep ; and contains a reading-room, 80 by 30 by 20 feet high ; coffee room, 50 by 26 feeding-room, 40 by 30 ; three billiard-rooms, card-room, and smoking-room, each 26 by 20 ; and numerous offices of all descriptions.

It was commenced on the 28th July, and ready to receive the furniture on the 28th August (being just one month from the commencement), and during that time several additions were made to the original design to meet the wishes of the committee. The decorations, designed by Mr Henning, are chaste and appropriate, and have been well carried out by Mr Connor, of Fenchurch-street. The carpet for the principal room has been designed expressly for the purpose, and contains upwards of four hundred yards. The room is handsomely lighted up (for the present) by three or-molu chandeliers of forty-eight lights each, till the arrangements shall have been completed for gas. The *cuisine* is admirably fitted up by Jeakes and Co., with all the modern improvements, regardless of expense The building has altogether a unique and imposing appearance, is perfectly dry, and fit for immediate occupation.

The total cost, with fixtures and furniture, will exceed £4000. The officers, by their arrangement with the proprietor, avoid all risk or liability, as the whole responsibility and expenses of every kind devolve on him. It is intended to have racket, quoit, and cricket grounds attached for the use of the members.

THE ROYAL ALDERSHOTT CLUB-HOUSE.

NOTES OF THE WEEK.

IF speech was given us to enable us to conceal our thoughts, the electric telegraph seems to have been invented to delay the transmission of intelligence. I am very glad to see that the flagrant delay in forwarding the details of the greatest incident of the war is raising an agitation on this subject. In England, as I have more than once had occasion to mention, the only means by which those intrusted with the electric wire seek to prevent its being generally used, are incivility, carelessness, and extortion; but these are the commonplace contrivances that would suggest themselves to vulgar minds. The bold course of "ignoring" (*pace* the *Morning Post*) the telegraph altogether is a Napoleonic stroke reserved for generals whose other resemblance to Napoleon is so manifest. Dr. Lardner has demonstrated, by experiment before M. Leverrier and two commissions —one of the Legislative Assembly of France, the other of the Institute — that a message of 232 words can be sent 1032 miles, and written out in full at the other end of the wire, in fifty-two seconds. There is a telegraph to the Crimea, and we wait nearly a fortnight for details of the fall of Sebastopol!

Another thing excites remark—I was going to say amuses people, but, though the fact is ridiculous, it connects itself with a subject too grave for light treatment. On Monday it was most properly ordered that a thanksgiving for our great success should be offered next Sunday. But the French did not wait for official despatches before rendering their thanks to Providence, and the most magnificent hymn in the world was sung at Notre Dame, amid every circumstance of solemnity and grandeur, upon the receipt of the telegraphic message from Marshal Pelissier. Why was our national gratitude forbidden to manifest itself until the honourable Captain Curzon had opened his despatch box? Do the authorities think that an electric message is not "a thing to thank Heaven on"? Or is the excellent Metropolitan as slow as Joseph Addison was in preparing a public document worthy of a great occasion?

There are few topics of the week that do not connect themselves, more or less, with the great business of the day; but some home grievances contrive to make themselves heard. The St. James's-park aggression appears to have been successfully repulsed; or, at all events, the invader has laid down his tools and agreed to an armistice. Indeed, he declares that it was never intended to do anything until Parliament met, and that the marking out the ground was only done to enable people to understand what was proposed. It would be discourteous to doubt the assertion. It only remains to take care that when negotiations are renewed, they are based upon four points:—1. That the projected abomination be utterly abandoned. 2. That the public, not only on foot, but on horseback, in cabs private or hired, and in private carriages of all kinds, be permitted to pass across the Park at all hours. 3rd. A Protectorate against omnibuses, railway vans, and all other oppressive conveyances. 4th. A limitation of the impertinence of all the gouty gamekeepers and other officials. I think that a stable peace might be signed at the Stable-yard founded on these conditions, and I am quite sure that the people of London ought to accept nothing less.

The unhappy dwellers in "quiet streets" are now breathing out their wrath against the street organs—wrath to which the daily papers are usually kind enough to allow a vent "in the black time of the year." The complaint, as heretofore, is, that the brown vagabonds who work these machines tyrannize over the streets they frequent; and that they defy all orders to move unless you are backed by a constable, who, of course, is not to be found, or, if he is found, is too stupid or too pig-headed to do your bidding. There is no doubt that this Italian Contingent does perpetrate oppression and also robbery, in the shape of black mail. Physicians write to declare that, though their patients have been in the most painful state of nervous irritability, there has been no removing the grinding nuisance, and distressed students complain that their labours are rendered utterly nugatory by the wearying noises of the organ-man. One writer records with great delight that he cleared the street by quietly emptying a pail of cold water over a recalcitrant minstrel, and he recommends his plan for imitation. How far the magistrates lawfully can, or might feel it right, to aid oppressed housekeepers, by throwing cold water in their turn upon any complaint against this method of dealing with the nuisance is a question which cynics disposed to take the law into their own hands had better not inquire; but if the police court would take this view of the case, and have it intimated that the mildest and most nominal fine would be the penalty for any little act of self defence against the Italian invasion, a good deal might be done. But the people who really encourage these pests are, I regret to say, the farrer and gentler part of the population. A young lady will keep a brown rascal grinding at the corner for an hour, because he plays the *deux-temps* that reminds her of that ball where Charley Egerton, and so forth; and the matron next door will give him another innings because Bobby and Jimmy are "so fond of the red white-and-blue," and baby crows the moment an organ begins. What is the use of pleading, epigrams, or pails of water, against this alliance? Submit to the organs, or leave the street.

The French caricaturiste just now are amusing Paris with feats of French cockney sportsmen, apparently a never-tiring theme, or, at all events, a never abandoned one at this time of year. The satire, however, is not very lively. One cut represents a housekeeper, dutifully watching her master's departure, with gun, game-bag, and dog; and she remarks, "Now, then, master is off to shoot, so I had better go to market and buy a hare for dinner." In another, a sportsman, with tremulous expression, and evidently tugging at the guard of his trigger, while hares, partridges, and other game, scuttle away leisurely before him, exclaims despairingly, "Everything goes off except this abominable gun." The peasants, too, come in upon all occasions. A sportsman is going stealthily, to shoot a hare on her form, when a cunning Jacques seizes him, and demands in a fierce whisper how much he will give him not to "announce" him to the hare. The bathers, too, make subjects, as heretofore—one old hag refuses to let a young lady go further into the sea, on the ground that for what she has paid it is impossible to afford her more water; and, in another picture, an elderly lady, flat to a rope, but under the mistaken idea that she is drowning, cries out to a huge, selfish cockney for aid. "Madam," he replies, "I will take charge ——." "Of me? O, thank you, my preserver!" "No, Madam, for I do not swim, but of your last wishes, if you will do me the favour to screech them to me."

India must have heard of Sebastopol from Marseilles, for though the Indian Overland Mail, which closes at noon on the 10th and 26th, had departed before we knew of the triumph, there was ample time to ship the news on board the *Alexandria* steamer. Fortunately we have been able to hurry off details by this mail, though, but for the energy of Mr. Crowe, the Special Correspondent of the ILLUSTRATED LONDON NEWS, to whom I, as an "outsider," may be permitted to record my sense of obligation, one would have had no opportunity of examination of the tidings, or of comment upon them. He has earned the thanks of thousands of Indians, who in some thirty-four days will be devouring his narrative.

FRENCH REJOICINGS AT ROME.—A "Te Deum" was sung on the 18th inst. at Rome, in the Church of St. Louis des Français, as a thanksgiving for the successes of the Allies at Sebastopol. The Comte de Rayneval and the Archbishop of Sebaste officiated. The principal part of the Staff at Legation, General Aupick, the Municipal, and all the officers of the French garrison were present, besides a large assemblage of Roman nobility. Mgr. Hughes, Archbishop of Syra, officiated in the absence of Mgr. Bedini, who afterwards fired by the French garrison. In the evening all the French establishments were illuminated.

VACCINATION OF KING BOMBA.—*Il Piemonte*, reporting the arrival at Naples of Signor Monzo, Director of Police at Naples, states that the measure was adopted at the suggestion to the English Government; but mentions, as a sign of the times, that the Queen of England, that he dismissed at the same time the Minister of War, Prince Ischitella, who had opposed the arbitrary proceeding.

AKHTIAR.

A RETROSPECT.

Straw roll the veil of Time aside, and trace we once again
The conquering march of heroes on the old Crimean plain;
Ceased be thy roar from rock to shore, thou cannon-mouth of war,
While here we lie, to sleep or die, at rest in Akhtiar.*

All brightly rolled the wild blue wave, and lightly flew the breeze,
That lured and fanned thy classic shore, historic Chersonese,
When round a nation's lordly fleet we watched the ripples play,
As it ploughed a path to victory towards Kamiesch' ready bay.

The wild goat climbs by Alma's steep; he starts to mark the sod
Where, strange amid his native wilds, the Western legions trod;
And, standing lone on that lost height whose shrieking herds have fled,
He scents afar the gale of war, and owns the conqueror's tread.

One memorable, fateful year!—It seemeth like a dream,
Since the blood of two great nations flowed on Alma's crimsoned stream;
And the fluttering flag of victory we followed fast and far,
Till, lo! we stand, a plighted band, in conquered Akhtiar.

While grimly looms yon castled ridge o'er Balaclava's bay,
The dying sun with quickened march speeds down the darkening day;
So, ruining, does rust the lost band—so spurred to Death's embrace—
Who saw the Pale Horse sweep the vale, and met him face to face.

Dread silence shrouds the hilly pow, nor jon nor gunner more
Awaits the madly dashing spears—the heroes charge is o'er;
The desert eagle's screams alone swell wildly on the air,
Where yon hollow mid the cloven hills shows blank as their despair.

We ask our hearts if those that throbbed to list that tale of fear
The dazzling glory blinded most, or most the rushing tear?
We tell our souls reward as sweet shall greet us from afar
From eyes that wept: those that sleep at rest in Akhtiar.

While yet by sorrow thrilled we stood, strange mists rolled o'er our sight,
From the cloudy pall of Inkerman swift-gathering in a night;
By the sun of France's clearing those mists were swept away,
And he who cried "To rest!" then, is conqueror to-day.†

Once more the living tide rolled back, to cast upon you shore
The stranded wreck of armies never to do man of conquest more.
When high o'er vanquished Inkerman the sun rose battle-red,
The foeman's cavern'd city lay—a city of the dead.

A little pause, a little breath, and still we cried again,
"Kind winds, this one proud message bear across the homeward main:
The old war planet, ruddy Mars, we hold our ruling star,
Till the flag we bore from Britain's shore shall float o'er Akhtiar."

Proud new horles come swarming; they rest the Tartar's Golden Gate,‡
Too soon for Fortune's hopeful heart, too late for many too late.
Tchernaya's reddening tide—see yon the Czar's lost legions fall
Before the sword of [illegible] the ruin of old Gaul.

All vainly strove the baffled foe—the noble river saw
The Freeman's foot upon her shore, and bade the Serf withdraw.
In vain they hold the battled bridge, in vain they ford the stream,
A conqueror won by bes[illegible] slaves is but a monster's dream.

Away the vanished vision flies,—fling, fling the sword away!
So empire sank in her days of empires yield to-day:
On many a brow the Mu-ov blade hath graved a glorious scar;
But Freedom's self hath ruled the fight in conquered Akhtiar.

E. L. HERVEY.

* Sebastopol. † General Bosquet. ‡ Perek.

THE ROYAL MONUMENTS.

(To the Editor of the ILLUSTRATED LONDON NEWS.*)*

SIR,—My attention has been called to a passage in your Number of the 8th inst. on the subject of the Royal Monuments. I do not know whether you are responsible for remarks which come under the head of "Table Talk," but I can hardly think you would adopt the tone taken by the writer of the passage in question, which, in dealing with a subject on which those who have most thought of the matter find great difficulty in coming to an opinion, instead of treating it as its importance deserves, assumes a tone of idle banter, and makes up for want of argument by mis-statement of what had been proposed.

Now, I recollect that your first notice of my Report on the Royal Monuments, though you certainly openly expressed a jealousy of their restoration, you spoke of my report as in "admirable" one, or something to that effect, which would be a great misuse of terms had that Report been such as to authorise such expectations as your writer of "Table Talk" states that he had entertained; for, though I have no doubt that that Report meant more to the side of restoration than many would agree with, I am quite sure that its tone was perfectly the reverse of what would be imagined by merely reading the remarks in question.

The misrepresentation of my views is the more annoying to me, inasmuch as I am, I believe, usually considered as a leading advocate of "conservation" in the treatment of ancient monuments, in opposition to the usual system of destructive restoration. I was, I believe, nearly the first to make a public protest against the havoc continually making with our ancient churches, in a paper read at a public meeting in 1845, and since published. I believe my views on this subject are too well known to suffer much from mis-statement; but I am anxious publicly to disclaim such views as those attributed to me lest any unwary church restorer should be so ill-advised as, placing more confidence in my views than in those of an unnoticed "Table Talk," to imagine that list of monstrosities was really advocated by me, and suppose himself acting on my authority in imitating them. I do not, of course, suppose my one would suspect me of the foolery which your writer expected at my hands. All I mean is, that some of your more simple readers might imagine it to express in a grotesque form the general spirit of my views on Restoration.

I wish it also to be understood that I was *not* the leader in this matter. It originated in a paper read before the Institute of British Architects by Professor Donaldson, followed by a discussion of three evenings. In this discussion on I was considered to lean to the anti-restorat on side. It resulted in an address from the Institute to the Queen, calling attention to the state of the monuments.

It was in consequence of this that I was called upon by Sir W. Molesworth, a twelvemonth later, as the organ of the Board to the Abbey, to report to him, as President of the Board of Works, on the subject. I undertook this most reluctantly, as I felt that my report must go in some degree against my feelings, as I would fain (as your writer says) see the monuments left "for our time at least just as they are." Was it, however, possible that on being called upon to report monuments not dropping to powder, and so decayed that they will not bear even a touch of the chisel, and whose desolate condition daily proves a wanton injury, I could report that they should remain "just as they are"? I should have preferred not to have been asked, but the question *being asked*, could I with truth have given such an answer? If I had done so, the daily-increasing decay would soon show the hopelessness of such an idea. I endeavoured to weigh the arguments on either side as fairly as I could. I recommended, generally, the restoration of such objects only whose forms are mechanical, as architectural mouldings, &c., and suggested that the opinion of antiquaries should be taken before going any farther than the mere mechanical repairs. I may or may not have gone too far in what I recommended—however that might be, the Report was legally examined by several Members of State, and I was honoured by the cordial approbation of Her Majesty and Prince Albert. Since I have thought the [illegible] the objections entertained by antiquaries to what I had suggested, I have been the first to endeavour to meet views so consonant with my feelings, though in some degree contrary to my practical opinion. My own views have been in some degree modified by the success of some careful experiments I have made, by which I have at length succeeded in discovering a method by which the pulverising stone is restored to hardness and durability without disturbing the lesse particles which a brush of feathers would at present sweep from its surface. If this is effected I shall be well content that no more be done, "in our times at least," though there are several other things which I believe *ought* to be done. No one has ever done so much as I have in investigating and recovering the designs of these decayed tombs, and I think I may claim some credit for the two things which I have practically effected, the restoration to their places of the ironwork of the tombs of Queen Eleanor and Henry V. As to the pedestal of King Charles, the grant was not made on my recommendation. All I have done is to *recommend the preservation untouched of the old stone*, accompanied only by what is necessary for the safety of the statue—the fall of which I foresaw, the writer of the "Table Talk" would deplore as much as I should.

In furtherance of my general principles on Restoration I am in the habit of sending a copy of lithographed instructions to clerks of the works, &c., engaged in repairing old buildings.

I am, Sir, your obedient servant,

GEORGE GILBERT SCOTT.

Sept. 24, 1855.

CURIOUS AND INTERESTING DISCOVERY.

The following curious letter purporting to be from the pen of O. H. Green of the United States sloop-of-war *Decatur*, [illegible] of the United States of Angellan, Feb. 15," and appeared in the *New Orleans Picayune* of the 1st inst.—

"There being no appearance of a change of weather, I obtained leave of absence for a few days, and, accompanied by my classmate and friend, Dr. Davidson, Assistant Surgeon, was landed on Terra del Diago.

With great labour and difficulty we scrambled up the mountain side, which like the whole south east shore of those straits, and, after ascending 1200 feet, we came upon a plain of surprising richness and beauty. The fields, the greatest variety of fruit-trees in full bearing, and signs of civilization and refinement meeting us on every side. We [illegible] any account of these people, and, thinking this island [illegible] except by a few miserable cannibals, and [illegible] armed, and you can [illegible] establish at our approach, [illegible] unfriendliness.

Our dress amused them, and being the first white men ever seen by them, they imagined that we had come from their God, the sun, on some peculiar errand of good. They are the noblest race I ever saw—the men all ranging from 6 feet to 6½, well proportioned, very athletic, and straight as an arrow. The women were among the most perfect models of beauty ever formed, averaging 5 feet high, very plump, with small hands and feet, and with a jet-black eye which takes you by storm. Their teachers of religion speak the Latin language, and have traditions from successive priests, though half a hundred centuries [illegible].

They tell us this Island was [illegible] about nineteen hundred years ago, by [illegible] which was visited by a violent earthquake which [illegible] the Straits of Magellan; that on the top of the highest mountain [illegible] head to the sun, whose base rested where the waters now [illegible] great temple which according to their description [illegible] now existing we saw, must have been [illegible] high, built of the purest marble; [illegible] upon the mind, in viewing this people and this part [illegible] to the world.

The ship is in sight that will carry this to you, and I must now close, only saying that the official report of Dr. Bainbridge to the Department will be filled with the most interesting and valuable matter, and astonish the American people. The vessel proves to be the copper ship *Cocopar*, from the Chinchi Islands, with guano, for your port, and I will [illegible] myself of this opportunity to send you a specimen of [illegible] as it falls, and to be over [illegible] I [illegible] iron, taken in one of their warm[illegible] before the Straits of Magellan existed.

They number about 2000 men, women, and children. And I [illegible] the population has not varied two hundred, as they prove by the [illegible] tions, for immemorable ages. As the aged grow feeble they [illegible] to die, and if the children multiply too rapidly, they are sacrificed by the priests. This order comprises about one-tenth of the population, and what the ancient Greeks called 'Gymnosophists.'

They are all of one peculiar race, neither will they [illegible] into their order. They live, for the most part, near [illegible] called Tanuhan, which takes its rise in the mountains, passes through the magnificent valley of Leavu, and empties into the Atlantic at the extreme south-western portion of the island.

The residence is chosen for the sake of their fresh [illegible]. Their diet consists of milk, curds with sour herbs. They eat [illegible], rice, and all fruits and vegetables, esteeming it the height of [illegible] taste anything that has life. They live in little huts or [illegible] one by himself, avoiding company and discourse, employing all [illegible] in contemplation, and their religious duties. They eat [illegible] necessary dispensation of nature, which they voluntarily [illegible] penance, evidently thirsting after the [illegible] lies, and firmly believing that the soul, at death, is relieved [illegible] and launches forth into perfect liberty and happiness [illegible] always cheerfully disposed to die, bewailing their [illegible] celebrating the funerals of the dead with joyful solemnity and [illegible].

THE PARIS EXHIBITION.

WE have already glanced at the *Exposition*, as the French call it in comparison with the Great Exhibition of 1851, so as to give the reader a glimpse at the respective advantages of the two grand displays of artizan industry. The large Engraving upon page 400, however, represents, beyond verbal description, the superior position of the French Exhibition Building to that of the Crystal Palace in Hyde-park, in the proximity of the fountains in the heart of the city of Paris—situated in the Champs Elysées, and by the side of the Seine; commencing at the Place de la Concorde, opposite to the entrance of the gardens of the Tuileries, and extending along the side of the river for rather more than three-quarters of a mile.

The Exhibition is contained in three distinct buildings, which are entitled, first, *the Palais de l'Industries*; second, the *Annexe*; and, lastly, the *Palais des Beaux Arts*. The first and second are connected by a long gallery, together with a large circular building, in which are exhibited the magnificent productions of the Imperial factories of France, in china, tapestry, &c. By the side of this connecting gallery is a large inclosed space, in which is a building for agricultural implements: those from England, however, are not exhibited here, but in the *Annexe*. In this space of ground are shown also carriages and many other large objects which are too large to be placed within the Building, or which are left to more advantage in the open air.

The *Palais des Beaux Arts*, as its name implies, is dedicated to pictures and sculpture; the *Annexe*, to machinery, raw produce, and the coarser articles of manufacture—as metal castings, metal, indiarubber, paper, &c. &c. In the *Palais de l'Industrie* is placed the splendid collection of silks, woollens, linens and cottons, cutlery, bronze and metal work, china and glass, productions in the precious metals, books, printing, dodgins, and a vast number of miscellaneous articles. The general effect of the group of buildings is well described by Mr. C. Knight, in Knight's "New Guide to Paris and the Paris Exhibition," the best work produced for the occasion:—

At first sight the Palais de l'Industrie reminds us strongly of the Crystal Palace of 1851, or rather of the great central transept. But still we would it more nearly resembles, not only in size, but in appearance, the building of the same order erected by a company which has a lease or concession of the property, after which the building is to become the property of the Government. It is solidly constructed of stone and iron, and presents an elegant and substantial appearance. Its position is nearly east and west, the main entrance being on its north side in the Champs Elysées: the walls are pierced with a [illegible] of solid circular-topped windows, and at each end there is a central entrance-door, with another on each side of it in the transept. The entrances are clearly arranged, both for appearance and utility, and in exceptions jutting out from the main building, those *pavillons*, as they are called, break what, without them, would be the monotonous lines of the walls, and afford scope for architectural display which has been taken full advantage of; and, at the same time, they supply very convenient space for wide and noble staircases, six in number, without trenching in any way upon the space for the Exhibition itself. They also contain the *bureaux* of the executive officers, rooms for the *dames de comptoirs*, and sundry other offices.

The centre of the building forms one grand avenue, nearly 900 feet long by 150 feet wide, covered by a semicircular glass roof, 140 feet from the floor. The general effect of the building is injured by a want of uniform elevation, presenting rather a disjointed appearance.

The principal front of the Exhibition Building has already been engraved in our Journal. The present illustration shows the entire group of buildings, and the appropriate [illegible] of the space outside, the centre being laid out as a garden, with flower-beds and fountains, and arbours, summer-houses, alcoves, and seats, where the visitor may rest awhile from his fatigue and enjoy the elsewhere prohibited cigar, within the confines of the Exhibition. To the left [illegible] the Annexe, and [illegible] for the foreign classes; and in the centre is a short [illegible] for the use and [illegible] the benefit of the workmen and strangers [illegible] the rear of the [illegible] the arrangements for cooking [illegible] open to the view of the customer; and the entire [illegible] the first time on an extensive scale, a mixture of [illegible] and [illegible] of [illegible] and marketing such establishments [illegible] in London.

ATLAS of ASTRONOMY. By A. KEITH JOHNSTON, F.R.S.E., F.R.G.S., Author of "The Physical Atlas," "Geographical Works," &c.
Forty Maps, Diagrams, and Illustrations, engraved on Steel and Printed in Colours, with Descriptive Letter-press.
WILLIAM BLACKWOOD and SONS, Edinburgh and London.

"In connection with the diffusion of geographical knowledge, I cannot omit to mention the magnificent publications of Mr. Keith Johnston of Edinburgh, in his Atlas of Physical Geography. It is seldom that such a mass of information has been presented in a form so beautiful, combined with so much accuracy. . . . I have only to add my testimony to the value of these works, which I witnessed with much satisfaction in the Map Room of the British Association (the Duke of Argyll, at Glasgow.
Sir R. I. MURCHISON, Pres. R.G.S.

GEOGRAPHICAL WORKS, By ALEX. KEITH JOHNSTON, F.R.S.E., F.R.G.S., F.G.S., Geographer to the Queen.

THE ILLUSTRATED LONDON NEWS

No. 764.—VOL. XXVII.] SATURDAY, OCTOBER 6, 1855. [WITH A SUPPLEMENT, FIVEPENCE.

IS PEACE POSSIBLE?

IT is not only the Peace party, usually so called, but the organs of other parties in the State, aided by the astute enemies of England who sit in conclave in Vienna, who assert that the victory achieved by the Allied armies at Sebastopol is the natural conclusion of the war, and that peace at the present moment is possible, and ought to be made. It is important to inquire whether there be any amount of truth or of common sense in these views. Austria, with the worldly wisdom which cowards often display, and in which they quite as often defeat their own ends, aspires once more to be the umpire of European destiny; and Russia, foiled in war, is but too happy to accomplish, by means of the mutual fears, jealousies, and antagonisms of the States of the European system, those objects which as yet she has not been able to secure by the red hand of battle. If Great Britain and France have many friends, so has Russia. Wherever there is a despot and an oppressor of the people, there Russia has a supporter. Wherever there is a man who begrudges the cost of war in a rightful cause, and thinks it better to endure wrong, and save his money, than to resist it, and pay an increased amount of taxation there also Russia has a friend. Wherever baseness, meanness, jealousy, and pusillanimity sway the actions of Governments and politicians, instead of the love of right and justice, and the spirit of manly honour and independence—there also Russia has allies. In our own country Russia has some friends, besides those who have spoken in her behalf in Parliament and served her cause in Cabinet Councils; or how would a newspaper, professing to be the exponent of the views of rational and patriotic men, dare to say—as the organ of the Peace party says in its last publication—that the people of England received the news of the fall of Sebastopol with "extravagant bravado;" with "bombastic self-glorification;" with "a gloating and ferocious spirit of revenge;" with "wild projects for further conquests;" and with "an utter loss of self-restraint and self-respect"? There are not many Englishmen who would insult their countrymen in this manner; but that even one has been found to do so will no doubt be encouragement for the Czar, who will reprint the malicious slander in the *St. Petersburgh Gazette*, and represent it to his subjects as the enlightened opinion of a large and growing party in this country, as he did the pro-Russian speeches with which Mr. Bright and Mr. Gladstone both pained and astonished their countrymen.

But enough on this part of the subject. The country tolerates Mormonism, and can tolerate the party of Peace-at-all-price, and be none the worse for its forbearance. We return to the inquiry with which we started—*Is peace possible?*

Far be it from us to deny it. Peace is always possible on certain conditions, and with or without conditions is more desirable than war. None but an idiot or a villain loves war for its own sake, or considers it other than a monstrous evil, bringing in its wake thousands of other evils, almost as great and pernicious as itself. But war, in the estimation of all brave, sensible, and good men, is but the means to an end. That end is PEACE. No civilised nation fights for fighting's sake. It is to conquer peace, and in default of all other modes of securing it, which modes they tried in vain, and with the most remarkable patience, that Great Britain and France have reluctantly and sorrowfully taken up arms against the enemy of Europe. The question then resolves itself into another—Have they succeeded in conquering and extorting peace from their unwilling enemy? If they have not their task is not ended; and peace is only possible on the supposition that they have grown weary of their work; that they have found it beyond their strength or their means, or that they lack the heart and the energy to complete what they have begun.

Peace—so precious and so desirable—is only possible upon one of two suppositions. The first is that Russia should sue for it, and express her readiness to give all fair and reasonable security against any renewal on her part of the pretensions that led to the war. Europe would have reason to rejoice most unfeignedly if such were the result of the great victory at Sebastopol. Instead of raising difficulties, it would be the duty of every honest man, every sincere Christian, and every true patriot, to call upon the rulers of Great Britain and France to sheathe the sword, and accept the surrender of the repentant enemy with the courtesy and the readiness befitting the great occasion and their high civilisation. Any *bonâ-fide* offer made by Russia to cease hostilities, and throw herself upon the justice and generosity of Europe, would be received by the statesmen of Great Britain and France with respect and attention. If Russia be in this mood, peace is not only possible, but imminent.

But, if Russia and her rulers be not in this frame of mind? If, instead of suing for peace, they are preparing to renew, re-invigorated, and re-exasperated war? Would peace be possible then? Austria thinks the Allies have done enough. So it would appear, do some of the journals in this country that affect to speak the sentiments of what was once called the Protectionist party; and so do also some of the crotchety statesmen who were parties to the declaration of war against Russia, but who never made themselves parties to its effective prosecution; and so, as a matter of course, do the Peace-at-all-price party. But is this the opinion of the people of England and France? Is it the opinion of Europe? Is it the opinion of the Germans, the Italians, the Swedes, or the Turks? Or do any reasonable men, in any part of the world, consider peace to be possible at the present moment, and without further effort on the part of the opponents of Russia to secure it? Is it not obvious and clear as daylight that peace, if offered to Russia by the Allies in other words, by the surrender of the Allies to Russia, before Russia is beaten, and that the existence of security would be a mere truce, a temporary cessation of the war, a treacherous lull, to be succeeded, at no remote day, by a more deadly storm than that which is now raging, a premium upon war, and encouragement to the strong aggressor to choose his time—an abrogation of ill-gotten power, and all the fruits of victory an absorption of and the principles of right at a time, dastardly, stupid acquiescence in the predominance of Russia, who would thereby become the mistress of Europe? England and France do not fight for gain. They did not take arms to deprive Russia of territory, or make themselves greater or more powerful, at her expense; but to set limits to her encroachments which having been unresisted at an earlier period, had led to renewed encroachments on her part—by arms, by diplomacy by stratagem, and by violence, and to the peril of the extinction of one of the States of Europe. This was their task. Have they accomplished it? To undertake such a work, and stop short of it, merely because war is severe, and peace desirable, would be ignominy for ever. And what appears to some people to be worse even than ignominy it

MAJOR-GENERAL WINDHAM, C.B., "THE HERO OF THE REDAN."—FROM A PHOTOGRAPH BY SHARP AND MELVILLE.—(SEE NEXT PAGE.)

would be war. Peace obtained by the surrender of the Allies, after a barren conquest, without indemnification and security, would be peace only in name. It would settle nothing, arrange nothing for the future, and would render the Governments of England and France responsible to God and man and to all future time, for the brave blood uselessly shed in the Crimea. It would stamp with the opprobrium of rapine and moral prostration the sacking of Sebastopol, and the destruction of life by which the tremendous victory was achieved; and would not only stultify the great nations in the face of Europe and of the world, but would encourage ambitious Russia on all future occasions to treat them with contempt; and every little despot—even he of Naples—to imitate the example. Where then would be Civilisation? And where would be Peace? No! Peace under present circumstances is neither desirable nor possible. A peace thus ended would be but the prelude to another war—less honourable—less successful and far more bloody, costly, disastrous, and protracted than that which the country is now waging, with the support of her gallant allies, and in which, with renewed exertions and the blessing of Heaven, it will be honorably and triumphantly successful.

GENERAL CHARLES WINDHAM, C.B., THE "HERO OF THE REDAN."

THE gallant soldier, of whose heroic valour, coolness, and determination, the leader of the Redan storming parties, it is impossible to speak too highly, is the younger nephew of the distinguished statesman, William Windham, who was late at Felbridge, in the county of Norfolk, descended by lineal hereditip to the present Windham. The General was born in Norfolk, and is the fourth son of Vice-Admiral Windham, and younger brother of the late Sir W. H. Windham, M.P., who represented East Norfolk in 1832; he is also brother of the Countess of Listowel, and uncle of Lord Ennismore. He was a Guardsman, having spent his early military career in the Coldstreams. He entered the Army in 1826; acted during the campaign as Assistant-Quartermaster-General of the Fourth Division; and a few weeks since was appointed by General Simpson to the command of the Second Brigade of the Second Division, upon Brigadier-General Lord ——'s appointment to the Ceylon command; and he has since been appointed Commandant of the position occupied by the British (Karabelnaia).

The heroic course which Colonel (now General) Windham took in the assault on the Redan to be reckoned amongst the most glorious achievements of the war—was fully detailed in our account last week of that memorable attack. After describing the difficulties with which the storming party had to contend from the superior numbers and position of the enemy, and from a general impression entertained by the soldiers that the place was mined, and that they might be at any moment blown up, the fruitful and disproportionate loss of officers, who fell by reason of their prominence in endeavouring to dissipate any undue apprehension of the kind—we are told that the Brigadiers capable of guiding the attack were reduced to one—Colonel Windham. This gallant officer did more than could be expected of human energy to accomplish, in order to obtain a prompt and adequate reserve with which he felt the Redan might have been held, despite any amount of force the Russians could bring to bear upon them. Three times did Colonel Windham send officers to Sir E. Codrington for reinforcements; for though the need of help must have been obvious to the superior officer placed in a position to command the entire attack, none came. All three officers failed to deliver their message, in consequence of being wounded whilst attempting to pass from the ditch to the rear of the Redan. The Colonel's Aide-de-Camp, Lieut. Swire, was next dispatched, but he, also, was dangerously wounded as he went on his perilous errand. For an hour the enemy were mowing our men down by hundreds, and even the small drifts that from time to time arrived were so disordered from the fire to which they had been exposed, as to be almost useless. At length Colonel Windham determined upon taking a course which, for personal daring and recklessness of his own life, has rarely been paralled.

A Russian officer stepped over the breastwork, and tore down a gabion with his own hands. It was to make room for a field-piece. Colonel Windham exclaimed to several soldiers who were firing over the parapet, "Well, as you are so fond of firing, why don't you shoot the Russian?" They fired a volley, and missed him, and soon afterwards the field-piece began to play on the head of the salient with grape. Colonel Windham saw there was no time to be lost. He had sent three officers for reinforcements, and, above all, for men in formation, and he now resolved to go to General Codrington himself. Seeing Captain Cavalier, of the 9th, near him, busy in encouraging his men, and exerting himself with great courage and energy to get them into order, he said, "I must go to the General for supports. Now, mind, let it be known, in case I am killed, why I went away." He crossed the parapet and ditch, and succeeded in gaining the parallel, through a shower of grape and rifle-bullets, in safety. General Codrington asked him if he thought he really could do anything with such supports as he could afford, and said he might take Lee Royals, who were then in the parallel. "Let the officers come out in front—let us advance in order, and if the men keep their formation, the Redan is ours," was the Colonel's reply; but he spoke too late—for at that very moment the men were seen leaping down into the ditch, or running down the parapet of the salient, and through the embrasures out of the work into the ditch, while the Russians followed them with the bayonet and with heavy musketry, and even threw stones and grape-shot at them as they lay in the ditch.

Colonel Windham is universally allowed, by the course which he took, to have retrieved, in his own person, the honour of the Army on that day, aided by those brave men who fell for the most part at his side in the attempt to sustain this unequal contest. These eminent services are thus recognised in the General Order for Colonel Windham's promotion:—

The Queen has also been most graciously pleased to command that Colonel Charles Ash Windham, C.B., shall be promoted to the rank of Major-General, for his distinguished conduct in leading the column of attack which assaulted the enemy's defences, on the 8th of September, with the greatest intrepidity and coolness, as specially brought to notice of her Majesty in the public despatch of the Commander of the Forces, dated the 4th of September, 1855.

The Correspondent of the *Morning Herald* states:—

It is known only to a few of the friends of this gallant officer who have survived the Crimean campaign, that when the celebrated flank movement of the army was made on Balaclava, Colonel Windham on that occasion was the bearer of the despatch to the naval Commander-in-Chief (Admiral Dundas), requesting the co-operation of the fleet, and that he afterwards proceeded with the order from Admiral Dundas to Sir Edmund Lyons, directing him to take the *Agamemnon* round to Balaclava

The Portrait of the General upon the preceding page has been engraved from a photograph taken by Messrs. Sharp and Melville, at their establishment in Old Bond-street, the day before Colonel Windham left England for the Crimea.

SOUTHERN RUSSIA.—For more than a year several thousands of men have been daily engaged in strengthening the fortifications and the defences of this city, both on the land and sea sides; so that at the moment Odessa is at place not to be despised by the Allied forces. We do not, however, anticipate a visit from the Allied fleets until they have first tried their hands upon Nicolaieff, to which place the Emperor has proceeded. It was at Nicolaieff last nearly all the ships employed in the defence of Sebastopol was prepared. Their residence to the Crimea in flat-bottomed boats upon the Dniester, loaded at Cherson, and conveyed in waggons by the Alexchki road to Perekop. You may depend upon it that Russia will make the greatest possible efforts and sacrifice to prevent the destruction or capture of that arsenal. Immense fortifications are being erected. There are 42,000 effective men in Cherson.—*Letter from Odessa, Sept. 20.*

PRINCE MENSCHIKOFF.—The *Patrie* of Saturday states that a Russian family now in Paris have received a letter from a high official person in Moscow, in which it is announced that Prince Menschikoff has become a monk in one of the monasteries in the old capital of Russia. The statement is made with great confidence, and it is added that the unfortunate Russian seems to owe his country that induced the *ci-devant* Ambassador of the Czar to the Sultan to take this step.

The Lord-Lieutenant of Ireland has appointed the following gentlemen as Assistant Commissioners to inquire into endowed schools in Ireland, under the provisions of the 18th and 19th Victoria, cap. 69:—Arthur Sharman Crawford, George Whitley Abraham, Frederick William M'Bain, and Edward Pennefather, Esqrs, barristers-at-law.

The Sultan has decided on sending swords of value and Medjidié decorations of the 1st class to the Allied general officers who distinguished themselves at the siege of Sebastopol. The swords intended for the Commanders-in-Chief are covered with diamonds and of the value each of £7000

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday.

THE splendid weather that for so long has kept us in the *douce illusion* that autumn was yet far distant, is giving way before the season which holds rightful sway. Touches of white frost at night, and damp, chilly days, have quite chased lingering summer away.

There has been within the last three weeks a fresh influx of foreigners, and this will doubtless continue through the month; but Paris, notwithstanding, cannot at this moment be called gay; and there is little going on worthy of being chronicled.

The question of subsistence continues painfully to occupy the minds of all. The working class, finding it impossible to supply the wants of their families on their present salaries, in many paris petition for, and even demand, an increase of pay, which, in the face of the exigencies of the moment, affecting as they do the upper as well as the lower ranks of society, it is often extremely difficult to accord. It is hoped that the number of new buildings erected within the last twelve months, and now being sufficiently completed to be habitable, will, after the January term, in some degree, bring down the price of lodging, which, in Paris, has been perhaps the greatest cause of suffering to the working class; and it is to be hoped that the earnest solicitude displayed by the Government to diminish the expense of alimentary substances, may, ere long, tend to an amelioration in the present state of things.

We are happy to be able to state that the report relative to the disappointment of the Empress's expectations is erroneous, and that her Majesty's health continues to progress favourably. The Court is to remain at St. Cloud until the end of the year. The arrival of the Duc and Duchesse de Brabant, who are to reside at St. Cloud during their stay in France, is to be attended with some fêtes, but on account of the mourning of the Duchesse and the situation of the Empress, it is supposed these will be rather of an intimate character, and will consist principally of excursions to Compiègne and Fontainebleau: it does not appear that there will be any ball given.

The journey of M. de Walewski to Brussels has given rise to innumerable conjectures, and has been accorded a significance and importance wholly foreign to its real nature. M. de Walewski, accompanied by the Comtesse de Walewska, has been absent from Paris but forty-eight hours. His mission was wholly independent of any political aim whatsoever; its object was simply to meet a relation on matters of private and personal interest, who, being a Russian, could not, at the present crisis, conveniently come to Paris. M. de Walewski did not, during his brief stay at Brussels, see any person connected with the Belgian Court or Government, or any one interested in politics.

Last week took place, at the Church of St. Louis des Invalides, the anniversary service commemorative of the death of the Maréchal St. Arnaud. Mass was performed by the Abbé Ameilm, curé of the Invalides, and the church was crowded to excess by military men of the highest grades, many important members of the Government, and a number of those who had shared the glories and sufferings of their leader in the camp and campaign which he so brilliantly led.

A decree has been passed forming the Cent-Gardes into a body of mounted Grenadiers of the Imperial Guard, and augmenting the number to 400. The order will come into effect the 1st of January.

The question, frequently agitated, of reorganising the Pages of the Imperial household, is again brought forward, it seems with renewed likelihood of being carried into execution.

Canada has, under recent circumstances, and indeed throughout the progress of the war, shown so much interest and sympathy for its mother race, that the French Government, desirous to testify their sense of this feeling, have resolved to repair the loss sustained by the colony in the destruction of the State library by fire. With this intention they have offered to the colony entire collections of the best classical, scientific, and other works, through the medium of the representative of the Congress sent by Canada to congratulate the French on the recent triumph of their arms.

Abd-el-Kader appeared on Wednesday at the Hippodrome, where his presence created considerable sensation. As a souvenir of his visit, the Emir has received from the Emperor a magnificent dressing-case, fitted up by Tahau with all the refinement of European luxury. With all due respect, we cannot consider the offering of a very useful or *apropos* character

In compliance with a decree passed in January, a new institution, founded on the model of Tattersall's, and called by that name, has been established in the Quartier Beaujon, near the top of the Champs Elysées, and the buildings, which are large and commodious, have just been completed.

The principal artistic interest of the moment has been the concerts of the Choral Union of Cologne, which had such a merited success two years since in London. Its triumph here has been no less complete. At one of the late representations Rossini was so enchanted at the performance that he requested to be permitted to attend a rehearsal. He expressed the warmest admiration, and requested the repetition of one of the *morceaux*.

At last the "Santa Chiara" has appeared at the Grand Opéra. The applause which attended its first representation was considerable, *eu les circonstances;* we say no more than that the ballet of the third act was decidedly the success of the evening. The management of the Opéra Comique and the Théâtre Lyrique, combined under the direction of M. Perrin, is about to be dividedthe latter house falls into the hands of M. Fallegrin, formerly manager at Marseilles, and now director of the camp theatres for the Emperor. A lively discussion, as to the possession of the services of Mdme. Marie Cabel is going on between these gentlemen, which will probably require the intervention of the Minister of State to decide. On Tuesday took place the opening of the Italian Opera with "Mose in Egitto." We cannot report its success: during the whole evening there was but one moment of genuine applause. Next week we purpose entering more fully on the subject.

CAPTURE OF CHINESE PIRATES

The Hong Kong papers received by the last Overland Mail, contain an account of certain combined operations of the British and American naval force against a large piratical fleet near Kulan, in which we had eight seamen and marines killed, and fifteen or sixteen wounded. Captain Fellowes, of the *Rattler*, Lieutenant Orlando, and several other officers, were blown up in one of the captured junks, but fortunately without much personal injury. The survivors were all picked up by the master's mate of the *Powhattan*, who had luckily gone into the boat the moment before the explosion took place. In this junk was an immense quantity of treasure, said to amount to 200,000 dollars, and the desperation with which her crew fought may be judged of from the fact, that even after the Americans gained the deck they were encountered hand to hand. One man made himself particularly conspicuous, and, notwithstanding several wounds, continued to throw missiles, but ultimately he ran below, and is believed to have fired the train which blew up the vessel.

Ten junks were also burnt, five of which more than ordinarily deserve notice. They were built of the most substantial materials, evidently for war purposes, as they differed in many respects from the common trading junks. They carried very large guns—32, 24, and 12 pounders. A 68-pounder was found in one of them; another had no less than 21 guns mounted, the weight of one of which, carrying only an 18-pound shot, was estimated at no less than 50 cwt. Two lorchas and seven junks that had been detained by the pirates were released—two of which, however, had to be burnt, to prevent their again falling into the hands of the piratical junks that escaped, time and an adverse wind and tide not allowing them to be brought away. The officers employed estimate the number of guns taken at 200 large and small, and the pirates at 1000, 500 of whom were killed.

THE WAR IN ASIA.

A letter from Erzeroum, of the 4th ult., says:—

We have here a report that 20,000 Russians attacked Kars in two divisions—one 6000 with four battalions, six guns, and a division of irregular cavalry, and on the other side with the great majority of the force. The Bash-bazouks and the regulars attacked this force, of which 300 were killed—the rest retreated. This report, although vouched for by the authority of General Tahir Pacha, requires confirmation.

This must have been a false report, as it was utterly impossible that anything could be known at Erzeroum of the affair, which took place at Kars only on the night previous. The following is the account given by General Mouravieff, in the *Invalide Russe*:

The English General Williams, who commands at Kars, experiencing daily greater difficulty in feeding the garrison, especially the horses, resolved to send away the greater portion of the cavalry from the fortress.

On the 3rd of September, at [illegible] with 6000 regular horse, without counting the Bashi-bazouks, with three Pachas and a great quantity of heads of families, left Kars, and advanced in regular order, from the heights of Tchakmak, towards the village of Deve Boyun. This was perceived by the advanced guard of Colonel Baron Ungern Sternberg. Lieutenant-Colonel Loschakoff, who commands the 3rd Regiment of Musulman Cavalry, charged from the flank the centre of the column, and rode into its dense masses. The rear of the column turned immediately towards the right, where it was surrounded and routed. [illegible] the head of the column [illegible] the village as soon as it could, but Lieutenant-Colonel Loschakoff gave hot pursuit. He was reinforced by Colonel Ungern Sternberg [illegible] and Lieutenant-Colonel Kishinsky accompanied them with two squadrons of Prince Royal of Wurtemberg's Dragoons. The pursuit lasted all day-break, at different times the Turks succeeded in defending themselves by barricading themselves in houses [illegible] purposes. The head of the column, which had crossed the brow of a hill at a gallop, was met near the village of Akhkom by Colonel de Schilt's regiment, and a company of Relief Chasseurs, which hastened up in support: the portion of the Turkish cavalry was surrounded, and finally annihilated.

Omer Pacha was at Trebizond on the 1st, but nothing positive is known regarding his projected campaign. It is said that the Allied Turkish troops will not become necessary in Asia till the Russian army in the Crimea has been defeated. If that is to be the policy, it is questionable whether anything will be done in Asia till 1856.

A letter from Constantinople of the 24th ult. says that Omer Pacha is concentrating 50,000 men at Redout Kaleh, a fort on the frontier of Asia, which the Turks took from the Russians at the commencement of the war.

BOMBARDMENT OF RIGA.

A telegraphic despatch from Hamburg, dated Wednesday, states that six English vessels arrived on the 27th ultimo before Riga, and bombarded for several hours the batteries of Dunamunde and Wittge-Boulieu

THE CZAR'S MANIFESTO.

According to a letter from St. Petersburg, received at Berlin on the 1st inst., the Emperor Alexander, accompanied by the Grand Dukes Constantine, Nicholas, and Michael, made a grand inspection, on the 26th ult., of the troops, the fortifications, and the dockyard at Nicolaief. At Moscow, where he was on the 20th ult., the Czar issued the following manifesto to the military Governor-General and A.D.C. General Count Zakrevski:

THE CZAR'S ADDRESS.

COUNT ARSEN. ANDREJEVITCH. After my accession to the throne of my ancestors, I heartily desired, Alexander, accompanied by the Grand Dukes Constantine, Nicholas, and Michael, made a grand inspection, on the 26th ult., of the troops, the fortifications, and the dockyard at Nicolaief. At Moscow, where he was on the 20th ult., the Czar issued the following manifesto to the military Governor-General and A.D.C. General Count Zakrevski:

THE CZAR'S ADDRESS.

COUNT ARSEN. ANDREJEVITCH. After my accession to the throne of my ancestors, I heartily desired to visit my well beloved and faithful metropolis, where I was born and where I was baptised under the protecting shade of the relics of the miracle-working St. Alexis of Moscow. In the accomplishment of that desire, I beheld with the warmest satisfaction the really upon a welcome exhibited towards myself and family by the inhabitants of Moscow. Russia has at all times thus received her Emperors. I charge you to testify my sincere gratitude and satisfaction to all classes of the population of Moscow. My happiness would be complete if preceding events had not saddened these moments of rejoicing.

From my order of the day to the Russian armies, it is already known that the garrison of Sebastopol, after an unexampled siege of eleven months' duration, and after having been reduced to a handful of valiant and endurance, has crossed over to the north side of Sebastopol, leaving the enemy only "bloodstained ruins. The heroic defenders of Sebastopol have done all that human prowess could do. These events must be accepted as the unsearchable decrees of Providence, who has visited Russia with a season of heavy trials. But Russia has endured trials far heavier, and the Lord God has always come to her aid with his beneficent and unseen succour. Trust then in Him. He will defend Orthodox Russia, whose sword has been drawn in a just and Christian cause.

I am happy to see that every one of my subjects shows himself ready to sacrifice his fortune, his family, and the last drop of his blood to maintain the integrity of the empire and the national honour. From this fact and from this sentiment of nationality I draw consolation and strength; and, uniting my soul inseparably with my faithful and valiant people, trusting in God's assistance and mercy, I repeat the words of the Emperor Alexander I.—"Where truth is, there God will be."

I am your ever unalterably affectionate

ALEXANDER.

A telegraphic despatch from Odessa announces that the Czar has left Nicolaieff for the Crimea.

AMERICA.

The steam-ship *Atlantic*, which left New York on the 18th ult., arrived at Liverpool on Monday.

The *New York Herald* states that a steady stream of emigration to Europe continues. Mr. Harris, the United States' Consul at Japan, had left Washington, charged with making a new commercial treaty with Spain—the former treaty being of no value, in consequence of the way in which the tonnage duties were levied by the Royal monopolies.

Advices from Mexico state that affairs were still in a very unsettled state; the Government of Carrera was decidedly unpopular, and in Vera Cruz and Zacatecas its partisans had been attacked and defeated by the supporters of the plan of Ayutla. Among the candidates for the Presidency, Alvarez appeared to be the most prominent. At last accounts he was within twenty leagues of the capital. It was reported that Carrera had officially signified his disposition to deliver the government into the hands of the Liberals. Newspapers had multiplied with amazing rapidity at the capital since the flight of Santa Anna. They are filled with proclamations of the new officials. Every person clothed with authority seems to impose such laws and regulations as he thinks fit. Carrera had issued an edict which he develops his policy. He proposes to reform the army, establish the National Guard upon a better footing, and lay the foundation for a more desirable order of things generally. General Gasden, the United States' Minister, was the only diplomatic representative who had failed to visit the Provisional President and congratulate him on his accession to power. The omission had caused much surprise and comment.

From Havannah we have advices to the 8th. Assassinations had become rather frequent; among the victims was Mr. G. C. Backhouse, the British Commissioner to the mixed commission for the suppression of the slave-trade.

Her Majesty's brig of war *Arab* had sailed from Havannah for Jamaica. Santa Anna was at Queria Bringa, the vessel in which he was voyaging having had to take refuge at Nuevitas. A correspondent of a Washington paper states that Santa Anna is worth about 7,000,000 dollars.

THE ROYAL MEDICAL COLLEGE.—This school, designed for the education of the sons of medical men, was most auspiciously inaugurated on Wednesday last. The founder of the college, John Propert, Esq., was well supported by a great number of the members of the medical profession. At noon, the boys, numbering 100, were assembled in the schoolroom, which was gaily fitted up with flowers and flags, and regaled with roast-beef and plum-pudding. At the conclusion, the "health of the Queen" and "prosperity to the institution" were given with hearty cheers by the boys. The parents and friends of the boys then sat down to an elegantly served *déjeuner* in the grand hall; the chair being occupied by T. Pownall, Esq., the much-respected Middlesex magistrate, who has been a staunch friend of the institution from its commencement. Many appropriate toasts were given by this gentleman in excellent style, and the whole affair was kept up with great spirit until a late hour.

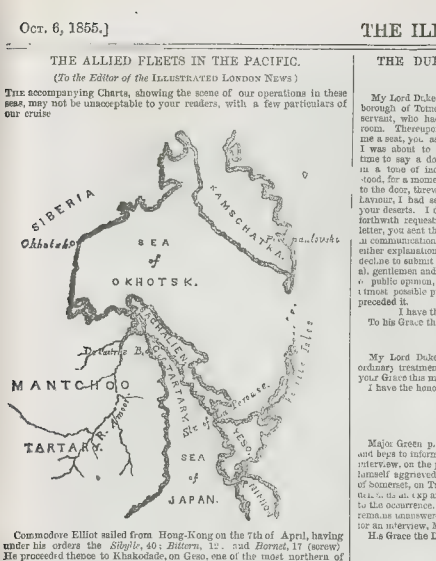
BANQUET IN HONOUR OF THE CRIMEAN VICTORIES.—A banquet in celebration of the triumphs in the Crimea is to take place in Glasgow on Friday, the 12th inst. In addition to the Duke of Hamilton and Sir Archibald Alison, Bart. (who respectively take the prominent positions of chairman and croupier), the Duke of Montrose, the Earl of Eglinton, and Lord Belhaven, have expressed their high approval of this patriotic gathering, and their intention of being present.

CITY BATHS AND WASH-HOUSES.—Sir James Duke, Bart., M.P. will present, at a Common Council on Thursday next, the petition from the guardians of the West London Union to the Corporation, praying for the establishment of baths and wash houses in the city of London.

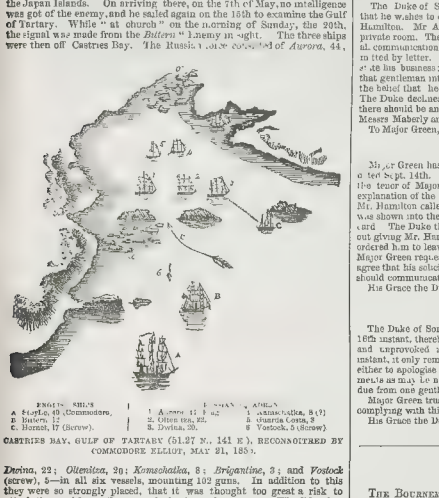
THE ALLIED FLEETS IN THE PACIFIC.

(To the Editor of the Illustrated London News*)*

The accompanying Charts, showing the scene of our operations in these seas, may not be unacceptable to your readers, with a few particulars of our cruise



Commodore Elliot sailed from Hong-Kong on the 7th of April, having under his orders the *Sibylle*, 40; *Bittern*, 12; and *Hornet*, 17 (screw). He proceeded thence to Khakodadi, on Geso, one of the most northern of the Japan Islands. On arriving there, on the 7th of May, no intelligence was got of the enemy, and he sailed again on the 15th to examine the Gulf of Tartary. While "at church" on the morning of Sunday, the 20th, the signal was made from the *Bittern* "Enemy in sight. The three ships were then off Castries Bay. The Russian force consisted of *Aurora*, 44;



ENGLISH SHIPS	FRENCH SHIPS	RUSSIAN SHIPS
A Sibylle 40 (Commodore).	1 Artemise 16 (Capt.)	1 Aurora 44 (Capt.)
B Bittern 12	2 Otter 16, 22	2 Oliwitza 20
C Hornet, 17 (Screw).	3 Darien 30.	3 Vostock 5 (Screw)

CASTRIES BAY, GULF OF TARTARY (51.27 N., 141 E.), RECONNOITRED BY COMMODORE ELLIOT, MAY 21, 1855.

Diana, 22; *Olivutza*, 20; *Komschatka*, 8; *Brigantine*, 3; and *Vostock* (screw), 5—in all six vessels, mounting 102 guns. In addition to this they were so strongly placed, that it was thought too great a risk to attack them with our three vessels, having only 65 guns. We did what we could, however, to entice them to come out, and have it out fairly; and sent *Hornet* close in to give them a shell or two, but all to no purpose; and on the morning of the 23rd *Bittern* was dispatched to Khakodade, where she expected to find the Admiral, and procure immediate reinforcement; but though she reached the Admiral on the 29th of May, it was the 3rd of July before Sir James Stirling really left the Strait of Sangar, and proceeded to the relief of the Commodore, with *Winchester*, 50; *Spartan*, 26; and *Bittern*. But, unhappily, on meeting the Commodore in the Strait of La Perouse on the 7th, it was only to hear that the Russians had contrived to elude him while absent from Castries Bay between the 22nd and 28th. They had gone he knew not whither, but believed that they had got through the passage at the head of the Gulf of Tartary, and so into the river Amoor, where they are known to have large settlements. On the 17th he put his head up the Gulf of Tartary. On the 26th he anchored in Tonquere Bay, on the Sagalien coast, and within fifty miles of Castries Bay, and about the same distance from the narrowest part of the Gulf. Nothing was done, however, till after the arrival of the *Bittern*, on the 27th. That afternoon Commodore Elliot was sent over in the *Hornet* to Castries Bay, found it empty, ran out of it, and about eight or ten miles to the northward, then crossed to the Sagalien side, and returned to the Admiral on the morning of the 29th. The Commodore reported that though their researches had been very imperfect, yet from what they had seen, there was no practicable passage for ships. The Admiral made all sail for the southward, down the Gulf of Tartary, but has we believed far from the scene of the expected fray. On the afternoon of the 1st of July we fell in with the French frigates *Constantine* and *Sibylle*, and the report was spread that the Admiral was going to leave the squadron; so it proved, for presently Commodore Elliot, who had already been ordered to take *Spartan* and *Hornet* under his orders, received permission to part company and boat through the Strait of La Perouse, going thence to the Sea of Okotsk, to destroy the Russian settlements. The French frigates accompanied him, and his five ships worked gallantly away, while *Winchester* and *Bittern* were unwillingly running to the southward "to rest on their laurels," that is, we suppose, to ground on their beef-bones in some port in China or Japan. Your obedient servant,

E. N.

Legitimist Machinations.—A correspondent of the *Donau* writes that an unusual number of faithful Legitimists has recently visited the Duchess of Berri at Brunnsee. A very lively telegraphic correspondence has also been maintained between Brunnsee, Naples, and Brussels during the last few weeks. Her Royal Highness, who is extremely charitable and kind to the poor, lives popular in the Valley of the Mur. It is supposed that the maintenance of the establishment at Brunnsee costs at least 300,000 f.

M. de Manteuffel, the President of the Council, has returned to Berlin, but the King and Queen of Prussia were not expected till the 6th inst. The fêtes and receptions at Stolzenfels and Coblentz are now over.

The last official bulletin of the health of the King of Sardinia is in favourable character. The whole population have shown the most lively concern for his Majesty's indisposition.

The banks at Melbourne have, it is said, in face of an Order in Council, refused to take the sovereigns coined at the Sydney Mint

THE DUKE OF SOMERSET AND MR. ALFRED HAMILTON

1, Whitehall-gardens, Sept. 24, 1855.

My Lord Duke,—Wishing to see your Grace on a subject connected with the borough of Totness, I called at your house on the 11th instant, and your servant, who had previously taken my card to you, ushered me into your room. Thereupon, without in any way acknowledging my salute, or offering me a seat, you asked, in a most insolent tone, "What do you want?" As I was about to explain the purpose of my visit, and before I had had time to say a dozen words, you pointed with your hand to the door, and, in a tone of increased insolence, ordered me to leave your room. As I stood, for a moment, in amazement, at such extraordinary conduct, you went to the door, threw it open, and again desired me to retire. If, for this behaviour, I had severely chastised you on the spot, you would only have had your deserts. I did not do so; but, having left your house, I wrote to you forthwith requesting an explanation. To the messenger who delivered my letter, you sent the reply "No answer." I then put my friend Major Green in communication with you, and he has been unable to obtain, at your hands, either explanation, expression of regret, or other satisfaction. Now, unless you decline to submit yourself to those rules of society which are held sacred by all gentlemen and men of honour, it becomes my duty to bring you to the bar of public opinion, by which you shall be judged. To this end I shall give the utmost possible publicity to this letter and to the correspondence that has preceded it.

I have the honour to be, my Lord Duke, Your very obedient servant,
To his Grace the Duke of Somerset. Alfred Hamilton.

National Club, 1, Whitehall-gardens, Sept. 11, 1855.

My Lord Duke, I shall feel obliged by some explanation of the extraordinary treatment received at your hands, on the occasion of my calling on your Grace this morning

I have the honour to be, my Lord Duke, your very obedient servant,
Alfred Hamilton.
(No answer was returned to this letter.)

9, James street, Buckingham-gate, Sept 10, 1855.

Major Green presents his compliments to his brother the Duke of Somerset, and begs to inform him that he called, this afternoon, in hopes of obtaining an interview, on the part of his friend Mr. Alfred Hamilton, who, naturally, feels himself aggrieved by an affair which took place at the residence of the Duke of Somerset, on Tuesday last, and which the Duke of Somerset must be aware, demands explanation on his part, more particularly as the letter in reference to the occurrence, which was left at the Duke's residence on Tuesday last, still remains unanswered. If the Duke of Somerset will appoint a time and place for an interview, Major Green will do himself the honour of calling.

His Grace the Duke of Somerset

Maiden Bradley, Frome, Sept. 14, 1855.

The Duke of Somerset has received a letter from Major Green, who states that he wishes to obtain an interview with the Duke, on the part of Mr. Alfred Hamilton. Mr Alfred Hamilton was admitted by mistake into the Duke's private room. The Duke had never seen nor heard of him before, and declined all communication with him, as any matter of business should have been transmitted by letter. Mr Alfred Hamilton then wrote a letter, but did not state his business: the Duke is still, therefore, at a loss to understand why that gentleman intruded into his room, to which he only obtained access from the belief that he was a Mr. Hamilton with whom the Duke is acquainted The Duke declines any further correspondence with Mr. A. Hamilton, but if there should be any business requiring attention, the Duke's solicitors are Messrs Maberly and Bendhurst, King's-road, Bedford-row.

To Major Green, 9, James-street, Buckingham gate

9, James-street, Buckingham-gate, Sept. 16, 1855.

Major Green has had the honour of receiving the Duke of Somerset's note dated Sept. 14th. The Duke of Somerset appears to have quite misunderstood the tenor of Major Green's communication, which was simply to obtain an explanation of the conduct of the Duke of Somerset towards Mr. A. Hamilton. Mr. Hamilton called at the Duke of Somerset's residence on the 11th inst., and was shown into the Duke's room by a servant, who had previously taken a card. The Duke then, it appears, without the slightest provocation, and without giving Mr. Hamilton the opportunity of explaining the object of his visit, ordered him to leave the house. The above is the affair concerning which Major Green requests an explanation, and the Duke of Somerset no doubt will agree that his solicitors are hardly the gentlemen with whom Major Green should communicate concerning this matter

His Grace the Duke of Somerset
(No answer was returned to this letter.)

9, James-street, Buckingham-gate, Sept. 20, 1855

The Duke of Somerset having left unanswered Major Green's letter of the 16th instant, thereby tacitly declining to offer any explanation for the gratuitous and unprovoked insult offered by his Grace to Mr. Hamilton, on the 11th instant, it only remains for Major Green to call upon the Duke of Somerset, either to apologise to Mr. Hamilton, or appoint a friend to make such arrangements as may be necessary to afford Mr. Hamilton the satisfaction which is due from one gentleman to another under such circumstances

Major Green trusts the Duke of Somerset will see the necessity of at once complying with this request.

His Grace the Duke of Somerset
(No answer was returned to this letter.)

* The letter dated Sept. 11, 1855.

The Bournemouth Sanatorium, which is a branch establishment of the Brompton Consumption Hospital, was opened on Tuesday. Divine service was held at St. Peter's Church in the afternoon at three o'clock. A sermon, very appropriate to the occasion, was preached by the Rev. John MacQuire, B.A. After the sermon the offerings of the congregation were collected, which amounted to £14. On leaving the church the clergy, the choir, and children went in procession to the Sanatorium. On entering the grounds the choir chanted the 126th Psalm; and on arriving within the building, the Rev. A. M. Bennett offered up the several appropriate prayers for blessings on those who had been instrumental by their prayers, their labours, or their offerings, in raising that house; for the sick and suffering, who might in that place at any time be received with kindness; for those who shall administer to the sick; for a blessing on the medicines that would be used; and for the clergy. A hymn was then sung, and the service concluded with a blessing. The children connected with the school of St. Peter's Church, about 100 in number, were then regaled with a plentiful supply of cake, tea, &c.

Railway Accident in Russia. A terrible accident occurred on the 11th ult., on the St. Petersburg and Zarskoe Selo Railway. The train got off the rails near the canal which surrounds the capital, and ran straight against some locomotive sheds. The shock was such that the first carriage was crushed to pieces; eleven persons were killed on the spot, and forty were more or less severely injured. Among the latter were the Princess Katzyuska. Princess Soltikoff, General Elmowitsch, and Prince Alexander Trubetzkoy.

New Process of Obtaining Glycerine.—This appears to be the age of the utilisation of waste products. We have lately heard of the iron works' slag being used to make building stone, of sewage deposits being turned to valuable account. In a paper read by Mr. G. F. Wilson, F.R.S., at the Glasgow meeting of the British Association, a new instance was given. Mr. Wilson stated that the remarkable substance glycerine might, by means of distillation, be obtained pure in great quantities, and showed it to be applicable to a variety of very dissimilar purposes—for instance, as a solvent of quinine, as a substitute for lanolin in Sladdick's process for photography, as a substitute for cod-liver oil as a fattener, as a cheapener of the alcohol used in spirit-lamps, as a remedy for chapped hands and sunburnt faces, as a preservative of the colours of some objects of natural history, especially the brilliant colours of the scales of fish. Mr. Wilson's paper which is published in extenso in the *Journal of the Society of Arts*, of the 28th of September, concludes with a paragraph to which we beg to call the attention of our readers:—"Though a variety of uses, actual and possible, for pure glycerine have been mentioned, yet when we consider its power as a solvent, and at the same time its blandness, and freedom from all irritant, caustic, acrid, and fermenting properties, we must feel that not a tithe of its uses have yet been developed; that in glycerine there is a wide field open, requiring many scientific and practical labourers, and which, once fully worked, will yield a tenfold crop of uses. Pure glycerine will then take its proper place among the most valued of modern products; and produced, as it will be, in great quantities, it will be recognised in the arts, as well as in medicine, as a new, real blessing to mankind."

Prince Charles Lucien Bonaparte arrived in Edinburgh on Monday week, accompanied by his daughter and son-in-law the Count and Countess Campello. On Tuesday the distinguished strangers visited the Castle, the College, Holyrood Palace, and the Botanic Gardens, accompanied by the Lord Provost, Sir William Johnston, and Mr. Keith Johnston.

The railway from Copenhagen to Korsoer is now completed, but will not be opened to the public until the 15th November. It is during that period that the rolling stock will be delivered. The line is [illegible] English miles in length, and crosses the island of Zealand.

Sandon Hall, in Stafford-hire, the seat of the Earl of Harrowby, which was burned down about seven years ago, has been rebuilt, and is completed that the noble Earl and family now occupy

NOTES OF THE WEEK.

The old joke, current in the Iron Duke's time, to the effect that England had ten thousand Field Marshals, might now be revived, but for an important deficiency. The startling fact used to be proved by saying, "Well, there's the Duke, that's one." This the hearer admitted. "Then there are the Duke of Noodle, Viscount Foodle, the Marquis of Loodle, and the Prince Doodle—*four* ciphers." "Well?" "One and four ciphers are ten thousand." But though three new ones have been made this week, it is difficult to say who is to be the integer to give value to the rest. Another gratifying fact is, that the Commander in the Crimea is made a General—the English army having, hitherto, certainly been without such an article. One is glad that the heroic Windham is promoted—glad, also that at all events he is not put upon the same level as General Simpson. Should Windham ever want a motto, Shakspeare will help him to one from the lips of Fluellen, "Up to the breaches! Will you not up to the breaches?"

The latest problems proposed for the consideration of the public world are, first, whether a gentleman has a right to call on a Duke whom he does not know, and demand a personal interview; secondly, whether, having accidentally made his way into ducal presence, he ought to be treated rudely and ordered out of the house; thirdly, whether, on the whole business, the Duke ought to fight him? All three questions would be answered in the negative by most people; but the newly ennobled Duke of Somerset answers the second in the affirmative, and thereby would seem to claim pedigree with another family, made famous by Sir Walter Scott—namely, the "saucy Seymours."

One is a little surprised that Mr. Disraeli, meeting an assemblage of his fellow-countrymen for the first time after the greatest event in the modern history of the nation, could not find a single phrase of congratulation upon a success which, even though it was gained under Lord Palmerston's administration, the right honourable gentleman, as an Englishman, must rejoice at. Yet, at the Bucks Agricultural Association, he not only passed over the fall of Sebastopol, but contrived to make the subject of decorations for Crimean service the point of a scarcely respectful comparison. A variety of "clod-compellers" were to receive badges for sobriety, straight ploughing, and other bucolic virtues, and Mr. Disraeli thought it worth while to illustrate the propriety of conferring these distinctions upon the astounded rustics by reference to the bestowal of a military order upon the heroes of the Allied armies. Was he afraid that a burst of the eloquence with which he was stoced—a cordial tribute to the bravery of the Army, and an expression of congratulation to the nation on the triumph of our Sovereign's arms would not be (to use his own word) sufficiently "diffused"? His fears were vain—reporters were present: during the recess they are as watchful as spiders for a straying orator. Mr. Bright seems to have shown more tact. Fancy Mr. John Bright eulogising the House of Commons—all sides of it—for willingness to listen to the grievances of the people, and readiness to consider remedies for the same. So spake he the other day, and one would not deduce the inference that this most able speaker, despite his pertinacious war-blundering and absurdity, had utterly despaired of addressing the House from a position on the right hand of Mr. Shaw Lefevre.

Among the other signs of a healthier and more serious feeling upon topics of importance, it occurs to me that the tone of our police reports ought to be noted. Twenty-five years ago these records of the vice and sorrow of the metropolis used to be composed in a spirit of levity which would not now be tolerated, even by the readers of sporting newspapers. Had two wretched women, under the mingled excitement of rage, drink, and jealousy, assaulted one another, the reporter would as soon have thought of preaching a sermon on either vice, as of describing the scene as one to be lamented, as a scandal, and as an evidence of wickedness, and of neglected training. He would have sat down to his work with a wink, stretched out his tightly-strapped trousers, and proceeded to detail, with a profusion of interlarded quotation, how the "green-eyed monster," working upon "a mind diseased," resident in the *corpus* of a damsel, "yclept" Mary Mahoney, had stimulated her to let fly "one—two" upon the "larboard *peeper*" of her *quondam* friend, Lucy Cook, who, having much "spirit" in her, gave the "retort courteous," in the shape of "an appeal to Mary's ivories," &c. The cooking up these incidents of police administration with a due spice of slang, especially that of pugilism, and with thieves' cant and fag lines from plays, was a quarter of a century ago an important part of newspaper manufacture. Now, happily, we have learned that there is not only no fun in vice, but that its exhibition is a reproach to ourselves; and at all events we record such matters in a fitting tone, however little we may do towards preventing their recurrence. The police report now is the most painful portion of the day's reading, but from other causes than those which make the reports of other days so offensive when one lights upon them by accident in an old file of papers.

What appallingly dreary places are the river-side hotels now the places where a few weeks ago you had to telegraph for a room hours before dinner, if you seriously intended dining; and where the carriages, in long array before the doors, made one mutter, with James Smith—

He that doth dine at a guinea a-head,
Doth ne'er by his head get a guinea.

Now the last whitebait, who had survived to be as large as a herring, has followed his timer predecessors to their grave. Now brown bread, eaten by "swells," scorned by waiters, has given place to white. Now punch dwelleth in darkness. A few rooms alone are kept open, lest it be thought that the house is abandoned, and the rest are given up either to workmen or brown holland. Enter and astonish the small staff still retained—astonish it still more by ordering dinner, as calmly and audaciously as if the month were July. You will not be insulted; on the whole, you will be pitied, and kindly tended, as soon as you have taken off your hat and your hair has convinced the waiters that you have not escaped from Hanwell. They will relieve guard, however, lest you may have other views upon the spoons and forks than those of a diner. you may see future dinners in those spoons; and appearances are against you: what do you by the river in October? But the suspicion vanishes as your superior manner at table is observed, and you will have a good dinner—such a one as you might get at the Club, if you dared order it there, but with no *specialités*. You are waited on quietly—something compassionately, perhaps; and an attendant, pitying your utter solitude, will even tell you that "that is a large foreign boat passing," or mention that the tide is just at the turn—a melancholy suggestion, too, when one remembers what attends that period. And as you go away you are regarded somewhat wistfully, as one whose condition gives no great expectation that you will ever be seen there again. You retire, a fuller and a sadder man, from the chamber where, but six weeks ago, you talked and laughed yourself into a headache, and laid your grievance on the blameless and excellent wine—*de paterâ novum fundens liquorem*. Such is life, as has been justly remarked heretofore.

American Sympathisers.—It is stated on good authority that sums of money have been sent to the Carlists of Catalonia by the Filibusters of the United states, who, it seems, count much on the success of a rising in Spain, and are confident of being able to treat with the Count of Montemolin for the transfer of Cuba. With reference to American sympathy, an American gentleman in Paris says, that among all intelligent Americans the feeling is one, if not of sympathy for the Allies, at least of strict neutrality. Sometimes but rarely, when Russian prospects appeared for a brighter than they now are, a proposition was made to an American gentleman, recently in Paris, to enter the Russian service with a high title and pension near the person of the Emperor. The reply was, that too high an estimate was placed upon his talents, but that such as they were they were due exclusively to his own country and to Republican principles

HOSPITAL IN SEBASTOPOL. J. R. DURGAN ATTENDING THE WOUNDED. FROM A SKETCH BY E. A. GOODALL.

THE RUSSIAN HOSPITAL IN SEBASTOPOL.

Our Artist in the Crimea has given a Sketch of one of those "chambers of horrors," to which the *Times* correspondent refers in the following passage:—"Of all the pictures of the horrors of war which have been presented to the world, the hospital of Sebastopol presents the most horrible, heart-rending, and revolting. It cannot be described, and the imagination of Fuseli could not conceive anything at all like unto it. How the poor human body can be mutilated and yet hold its soul within, when every limb is shattered, and every vein and artery is pouring out the life stream, one might study here at every step; and at the same time wonder how little will kill! The building used as an hospital is one of the noble piles inside the Dockyard wall, and is situated in the centre of the row at right angles to the line of the Redan. The whole row was peculiarly exposed to the action of shot and shell bounding over the Redan, and to the missiles directed at the Barrack Battery, and it bears in sides, roofs, windows, and doors, frequent and destructive proofs of the severity of the cannonade. Entering one of these doors I beheld such a sight as few men, thank God, have ever witnessed! In a long low room, supported by square pillars, arched at the top, and dimly lighted through shattered and unglazed window frames, lay the wounded Russians, who had been abandoned to our mercies by their General. * * * * * * With the roar of exploding fortresses in their ears, with shells and shot forcing through the roof and sides of the rooms in which they lay, with the crackling and hissing of fire around them, these poor fellows, who had served their loving friend and master, the Czar, but too well, were consigned to their terrible fate. Many might have been saved with ordinary care. What must have the wounded felt who were obliged to endure all this, and who passed away without a hand to give them a cup of water, or a voice to say one kindly word to them? In the midst of one of these 'chambers of horrors' for there were many of them—were found some dead and some living English soldiers, and among them poor Captain Vaughan of the 90th, who has since succumbed to his wounds."

HAYFIELDS IN THE VALLEY OF BAIDAR.

We have here a troop of French cavalry, with their arms piled, in one of those extensive hayfields in the fertile valley of Baidar, from which the Allies have obtained enormous supplies of forage within the last few months. The peaceful scene represented in the accompanying Engraving, may perhaps have given place before now to a very different state of things. By the latest letters from the Crimea we learn that the French had made a great demonstration towards Baidar and Aitodor, "which led to no result, except directing the attention of the enemy to the pass from the latter place to the plateau of the Belbek." Another Correspondent says:—"The march of some French cavalry and infantry from Baidar towards Kamiesch is retarded by the rain. It is reported that in their recent reconnaissance they ascertained that the position of Aitodor was too strong to be forced."

SKETCH IN THE VALLEY OF BAIDAR, BY J. A. CROWE.

GENERAL BOSQUET.

THE French General, of whom we give a portrait here, has played a distinguished part in the Crimean war from the landing at Old Fort twelve months ago, to the storming and capture of the Malakoff. In the arrangements made by General Pelissier on the 8th ult., which were crowned with so signal a success, the task to which General Bosquet was appointed was to attack the Malakoff and the Little Careenage Redan (bastion No. 2 of the Russians), salient points of the enceinte of the Karabelnaia. In that sanguinary affair Generals Saint Pol, Pouterès, Bisson, and Couston fell, and General Bosquet, who was stationed in the sixth parallel, 200 mètres from the curtain, had his shoulder struck by a bullet. Soon after this took place, General Dulac, who had taken the command of the corps when General Bosquet was wounded, gave the signal to return to the trenches, leaving the ground all strewn with dead. We are glad to learn that General Bosquet is in a fair way of recovery.

The accompanying portraits of Gen Bosquet, and Capt. Dampierre, one of his principal staff officers, have been copied by permission of Messrs. Agnew and Sons, of Manchester, from one of the photographic pictures taken by Mr. Fenton, in the Crimea, during the spring and summer of the present year, and now being exhibited in Pall-mall East.

GENERAL BOSQUET.—FROM THE EXHIBITION OF PHOTOGRAPHIC PICTURES TAKEN IN THE CRIMEA, BY ROGER FENTON.

SEBASTOPOL, FROM CAREENING CREEK

THE View here given by our Artist was taken before the flames of the burning city had been extinguished. The creek, as will be seen, was at that time covered with the wreck of sunken vessels. A letter in the *Moniteur* gives the following interesting incident, which took place near the Careening Creek —

The ambulance is situated in the deepest and most abrupt part of the ravine, surrounded and commanded by enormous rocks, in the hollows between which habitations for the surgeons and officers attached to the ambulance had been prepared. A number of wounded soldiers might be seen slowly descending the steep path leading to the ambulance, carrying others of their comrades more severely injured than themselves. When, in the night, the first explosion was heard from the Russians blowing up the works previously to their retreat, all the wounded who were passing at the time halted on the summit of the plateau to contemplate the view of Sebastopol in flames. Forgetful of their own sufferings, they remained there the whole night, looking at the imposing scene. Among them was a sergeant of infantry, who was being conveyed to the ambulance on a litter. He felt assured that his wound was mortal, and, although medical assistance might perhaps have prolonged his life for a day or two, he insisted on being set down to die on that spot. He was placed in a sitting position, the upper part of his body supported against a large stone, and his face turned towards the burning town. He contemplated the scene with the utmost delight, and soon after, feeling that his life was fast ebbing away, he rallied his remaining strength, took off his kepi, and waving it in the air cried, "Adieu, my friends. Sebastopol is ours! Vive la France! Vive l'Empereur!" and in a few minutes afterwards expired.

BATTLE OF THE TCHERNAYA.

(To the Editor of the ILLUSTRATED LONDON NEWS.)

CAMP BEFORE SEBASTOPOL, Sept. 17th, 1855.

I READ with regret in the last number we have out here of your interesting paper a statement that the Russian soldiery before the battle on the Tchernaya had been excited by drink. Few persons had better, or so general, opportunities of judging of the condition of the prisoners and wounded as myself, and I think I may venture to give [illegible] I was present at the action, and saw the prisoners brought in, and spoke to very many of them. I saw no instance of intoxication, or of any excitement beyond what any man would feel after [illegible] similar circumstances. From ten o'clock until half-past five o'clock I was engaged on the plain, relieving the wounded by having their knapsacks placed under their heads, covering their wounds from swarms of flies, and giving them water. They were very grateful, most earnestly blessing me, struggling to kiss my hand, and kissing theirs to me continually. In the hundreds I thus visited I met with no case of even partial excitement arising from liquor—nor do I believe there was any. Others may have met with an individual case or two; but it would be hard to judge our own army so strictly. Most of the wounded had certainly, besides their water-barrel, a small bottle, containing about two wine-glasses of spirit. When I offered them a little brandy they would sign to their coat-pockets, where we found this little bottle generally unbroached. They were always content with a few drops of this in water, and many even preferred the water alone. Men already excited by drink would not have been found so abstemious. To their courage and patience under most frightful mutilations and injury I must bear record. I could not have believed, until I saw it, that so many thousand human beings could lie in that scorching sun under every possible physical suffering with so much fortitude and resignation, and so little impatience or complaint. One poor fellow, both of whose knees were smashed to a jelly, was partly sitting up. Declining every offer of water, he deliberately put his hand into his pocket, and, taking out a clasp-knife, opened it, and cleaned the blade; then, spreading open his haversack on his lap, he drew out a large piece of brown bread, from which he cut himself a slice, and proceeded to dine. This despatched by enormous mouthfuls, he poured himself out a little water, with which he mixed a few drops of spirit, held the vessel towards me with a cheerful smile, in token of drinking my health, I suppose, and drank it off. Then he replaced the various articles he had been using as carefully as if he were going on the march, gave me a nod significant of good day, stretched himself as much at ease as he could, and lay resigned to his fate. In fact, I heard but one murmur or one moan on the whole of that blood-stained field; these came from the young officer referred to in the letter of your Correspondent. He was, indeed, shockingly shattered above the knees, and most earnestly did he implore me

SEBASTOPOL, FROM CARENING CREEK, AFTER THE STORMING.—FROM A SKETCH BY E. A. GODDALL.

to get him removed, or to bring a surgeon to the spot. I galloped over and over that long plain; wherever I saw a red jacket or a naval uniform, there I rushed, but I am ashamed to say that neither could I hear of had any one seen, a Balaklava surgeon on the field. Indeed, it was a disgrace to us that we sent neither ambulance nurses, nor even any medical officers in so great an emergency. The French and Sardinians worked incessantly. To their honour every mule that took up a wounded Frenchman was invariably balanced by a Russian on the opposite side and their carriages were temporarily filled by Russians only. Nevertheless, late in the following day I found wounded still on the field, for some of whom I procured stretchers and pack bearers to carry them to the nearest hospital. All this time our ambulance was idle. French and Sardinians were loud in their complaints of want of co-operation, and very justly.

I met also Irish surgeon, who, as soon as he had bound up the wounds of a few got half a dozen for the next miles, followed me to the Russian left or I shall never forget his look of joy and gratitude when he saw me returning for his case was hopeless. The bones were shattered to the very joint. We left him to die, after we had done all that was possible for his comfort.

By 9 o'clock labour was terminated, as your Correspondent describes, by the wanton barbarity of the Russians, who, attracted probably by my white horse, directed their heavy guns upon me, and those who were assisting me at the very moment we were succouring their own wounded. Unable to Lamount, from a shot in my leg, I was forced to take shelter in a ditch, behind a large old picture tree. The tree was soon smashed by the round-shot, and as the Lancers began to seem everywhere sounding men flying to arms, and those on the opposite side shouting to me "Suivez-vous, Monsieur," there was nothing left for me but to run the gauntlet, and get in by the Tchernaya bridge. Here, as I cantered over, a shot only a little above my head scattered a people pouches the French had just got together, and sent them in all directions. Such was the Russians' requital of my day's service in behalf of their abandoned wounded. I served not them but humanity

I have the honour to be, Sir, your obedient servant,

WM. JNO. COOPE,

Rector of Falmouth and Assist.-Chaplain to the Forces.

CALENDAR FOR THE WEEK.

SUNDAY, Oct. 7 18th Sunday after Trinity.
MONDAY, 8—Eddystone Lighthouse finished, 1759.
TUESDAY, 9—St. Denys. Dutch Fleet defeated, 1797.
WEDNESDAY, 10—Oxford and Cambridge Terms end.
THURSDAY, 11—Old Michaelmas-day.
FRIDAY, 12—Wat Tyler killed, 1381.
SATURDAY, 13.—Fire Insurance due.

TIMES OF HIGH WATER AT LONDON-BRIDGE,
FOR THE WEEK ENDING OCTOBER 13, 1855

LIST OF ENGRAVINGS
IN THIS WEEK'S "ILLUSTRATED LONDON NEWS."

SKETCHES FROM THE CRIMEA:
Hospital in Sebastopol—Dr. Durgan attending the Wounded (from a Sketch by F. A. Goodall) ... ... page 401
Attack of Major-General Windham, "the Hero of the Redan" (from a Photograph by Sharpe and Melville) 401
Sketch in the Valley of Baidar (by J. A. Crowe) 404
Portrait of General Bosquet (from the Exhibition of Photographic Portraits now open in the Gallery, by Roger Fenton) 405
A Passage from Corunna Cross, after the Storming (from a Sketch by J. A. Crowe) 405
Scene in the Redan. Two-Page Cut (from a Sketch by J. A. Crowe) 408-409
The Redan—A Nurse kept busy—Removing the Wounded (Sketched by F. A. Goodall) 416
Portrait of Marshal Pelissier, Commander-in-Chief of the French Army in the Crimea 417
The Assault on the Malakoff—Two Page Cut (Sketched by J. A. Crowe) ... ... 420 & 421
The Wreck on the Pacific Rocks. Squadron in Castries Bay 421
Westward-Ho! Life Guards Sail 421
Ceremony of Laying the First Stone of the Asylum for Convalescent Workmen at Vincennes 412
Westward-Ho! Band of England (Uxbridge House) 413
The Ramshall Hills—Country of the Santhals (Sketched from the Ganges) 413
Portrait of M. Hincks, the new Governor General of the Windward Islands (from a Photograph by Mayall) 413
Mechanical and Electric Telegraph—Apparatus for the Automatic Recording of the Velocity Experiments 423

*** Next Week we we shall engrave several Sketches of the Interior of Sebastopol, received from our Artists and Correspondents.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, OCTOBER 6, 1855.

THAT the blow, struck so successfully in the Crimea, is to be followed up, it would be unreasonable to doubt, utter as is the public want of confidence in the General who at present commands the English army. For though General Simpson may think that enough has been done for this year, and may be quite content with setting his engineers to demolish the docks of Sebastopol South, while the Russian engineers are fortifying Sebastopol North, it is said that Marshal Pelissier has pledged himself to the Emperor that not one Russian soldier shall spend his Christmas-day in the Crimean peninsula. This declaration may, or may not have been made, in terms; but it is certain that Marshal Pelissier thinks that if "much has been done, more remains to do," and the French Marshal has a habit of acting up to his convictions. Prince Gortschakoff reports to his Sovereign that a large body of the Allied troops had been landed at Eupatoria, and that a still larger has made demonstrations—in one case amounting to an engagement—on his left flank; and we have confirmation of the statement of the embarkation of soldiers on the 20th and 21st September. The impression in the Camp is that the position on the Mackenzie ridge is to be assailed by a combined movement of troops southwards from Eupatoria, and meeting others who are to advance by a route from the south, the line of which is kept secret. If this prove to be true, Prince Gortschakoff will have but two alternatives before him, either of which, we have a right to anticipate, will be fatal to his army.

The Russians continue, with apparently unabated zeal, to defy the onward progress of their enemies, and the daily spectacle of the demolition of their works and stores seems only to irritate them into occasional firing, not very formidable. But, in the mean time they are strengthening their position, and those who see in their movements an elaborate scheme to cover a retreat, give them credit for executing this *ruse* with marvellous and profound artifice. The French have thrown up new mortar-batteries, and work them with considerable effect, having succeeded in setting one large pile of buildings on fire. Rocket practice is also kept up against the Russians. Rumours that they had determined to retreat, that they were retreating, that they had retreated, have been transmitted very copiously, from various quarters, especially from Vienna, but at present all is uncertain, and the best hope which can be expressed is, that the fire of the Allies in Sebastopol, which was steadily increasing, and the movements at the two points of which mention has been made, will compel the enemy to make his final election, whether he will be routed *en masse* or in detail.

Unrecalled, so far as the public know, the Commander of the British forces in the Crimea has been promoted to the rank of General. This is perhaps a necessity of the undistinguishing routine of our army, for unless General Simpson were to be actually cashiered, his step could hardly be denied him; though a man of much niceness of perception might see anything but honour in a formal promotion, when such a record as that which announces that Windham, the hero of the Redan, is made a Major-General; and *why*, follows the barren tribute. Though we are aware that the Government professes to find it difficult to name General Simpson's successor, it is mockery to pretend that, in the list of British officers in Sebastopol, a man of energy and ability cannot be found. If Government will take counsel of those who have served in the Crimean campaign, and will dispense with inquiries as to such a man's connections, and with all research in the "Peerage" touching his pedigree, he may easily be found; but it is hard work to find a General whose elevation is at once satisfactory to the army and to aristocratic circles.

Public interest has so completely settled upon the events in the south, that tidings from the Baltic come almost strangely, especially when they appear to prove that our magnificent fleet in the north has not been utterly inactive. We learn that, on the 27th September, six English vessels (without any French aid) appeared before Riga, and bombarded two of its batteries for several hours. The results of this feat have not yet reached us.

We notice, with much regret, in a powerful contemporary, an attack upon the whole of the Royal Family of Prussia. As regards the King of Prussia—whose vacillating and unworthy conduct has aggravated the bitterness and greatly tended to protract the duration of the war—we leave him to the wrath of all who may be pleased to stigmatise his impolicy, as it deserves; or to the contempt of those who think anger misplaced against so feeble and purposeless a Sovereign. But why, in the name of justice, should the brother of the King—the heir-apparent to the Throne—and his amiable son, the Prince Royal of Prussia (now on a visit to the Court of Queen Victoria), be made the objects of the unmannerly, not to say the indelicate, onslaught to which we allude? What have they done? Do they approve of the conduct of Frederick William IV? Have they aided in the degradation of their country? Is it not well known that the heir-apparent to the Prussian Crown, distinctly and emphatically disapproves of the miserable policy by which the reigning Sovereign has earned the dislike of his own subjects, and the condemnation of all Germans, as well as of all Englishmen and Frenchmen? Our contemporary, who looks upon the dethronement of the present King as no improbable event—an opinion which is very prevalent in many parts of Europe, and by no means unknown or unfavourably received at Berlin—seems to imagine that the retribution which would thus fall upon the head of Frederick William IV. would involve his brother and his nephew, and extend to the whole dynasty of Hohenzollern. But, with all due deference to the opinions of the *Times*, such a result would not necessarily follow; for the next heir to the Prussian throne is as popular as its actual occupant is unpopular, and makes no secret of his sympathies with the Allies in the righteous war which they are waging against Russia. To say nothing of the bad taste which has dictated this attack against a young Prince, whose visit to this country had its origin in feelings which ought to be spoken of with respect, and which in almost every private and family circle within the realm, will be mentioned with sympathetic and friendly interest; we think it in the highest degree impolitic and unwise, in a public point of view, to raise objections so ill-founded to the alliance of a daughter of England with the house of Hohenzollern. Such an attack, if directed solely against the King, might perhaps excite little or no reprehension, and none would join in it more cordially than his own people; but, directed against his unoffending relatives, who do not share his opinions, or his acts, and are in no way responsible for them, it is both ungenerous and mischievous. If supported by the English people, it would go far to stigmatise us as no better than a nation of unreasonable bullies. It offends not only the sense of right in the illustrious persons who are its objects, but it will offend the self-love of the Prussian people, to whom it is an object of some comfort, in the midst of their degradation, to indulge in the hope that with a new reign will commence a new era; and that, if it be their misfortune to be misgoverned at the present time, they have a better prospect for the future. They know what writers in this country should know also—that the compulsory abdication of a weak or a bad King, instead of weakening and degrading a dynasty, may strengthen and exalt it. For our parts, we feel bound to raise our protest against the assumption, that the *Times* on this matter represents public opinion. On the contrary, we believe that such attacks are received with pain, if not with disgust, in humble as well as in high circles, and trust that we have heard the last of them.

HIS Excellency the Viscount de Persigny, the French Ambassador, and Madame de Persigny, accompanied by the Countess of Clarendon, and by his Excellency the Count de Lavradio, the Portuguese Minister, and Madame de Lavradio, and his Excellency the Marquis d'Azeglio, the Sardinian Ambassador, visited on Thursday last the paper-mills at Londwater, Herts, the establishment of Mr. Herbert Ingram, where the paper for the ILLUSTRATED LONDON NEWS is manufactured. The distinguished party were shown over the works by Mr Ingram, and appeared to take much interest in the various processes of the manufacture.

A WORCESTER paper states that Lord Ward served as a volunteer in the attack upon the Redan, on the 18th of June, and that he and the Colonel of the regiment to which he was attached had a narrow escape from one of the enemy's shells, which exploded so near as to smother them in dust.

ROYAL PANOPTICON OF SCIENCE AND ART. This palace of instruction, which has been for some time past closed for rearrangements and repairs, was reopened on Monday last with a new, or rather an improved, programme of entertainment; for the performance on the grand organ, the exhibition of machinery at work, Heaks's diving apparatus, the colossal electric machine, and the playing of the famous fountain still remain for the peace at solution of phenomena, as well mechanical as physical, or to gratify the curiosity of sight-seers. The managing committee, taking a leaf out of the book of the Polytechnic Institution, have, to add to these attractions, entered into arrangements with Messrs G. F. Angell and C. F Partington, engaging both these gentlemen to deliver to the visitors, at stated hours during the day, lectures of a popular character upon the electric, galvanic, dynamic, pneumatic hydrostatic, and other appliances exhibited in the octagonal hall, as well as galleries of the building. They have also secured the services of Mr. Leonard Bruce of Gloucester. They have also secured the services of Mr. Leonard Bruce to supply, by his graphic, yet historical commentary and explanation of the lasso, the scenes of the War in the Crimea, the Alma, Balaclava, and Sebastopol. We, too, have had to find St. Mary the Redcliffe, the Bridge of Sighs, the Palace of the Doge—around which the waters of Shakespeare Otway, Byron, and Lewis have thrown a classic interest

THE COURT.

The residence of the Court at Balmoral will be prolonged until the 17th inst., in consequence of the continued fineness of the weather.

On Friday se'nnight her Majesty gave a dance to the tenants upon the Balmoral property, to the gamekeepers and gillies upon Balmoral, Abergeldie, and Birkhall, and to the servants and others employed at Balmoral and Abergeldie Castles. The keepers from Inversnaid were likewise present; and her Majesty was pleased to command that all the non-commissioned officers and soldiers of the 79th and 93rd Regiments, quartered at Ballater, who had served in the Crimea, should also be invited. A very numerous party assembled in the Iron Ball-room, near to the Castle. At eight, after before ten o'clock, Queen and the Prince entered the ball-room. They were accompanied shortly before twelve o'clock, but the festivities were kept up by the Highlanders for some time afterwards.

On Saturday the Queen and the Prince, accompanied by the Princess Royal and Prince Frederick William of Prussia, drove out in the vicinity of Balmoral. Brae, the Duke of Athole's Camp to his Royal Highness Prince Frederick William of Prussia, and Captain Hamilton, Aide-de-Camp to her Majesty.

On Sunday her Majesty the Queen and her Royal Highness the Princess Royal, and the Royal Highness Prince Frederick William of Prussia, attended Divine service at the parish church of Crathie. The service was performed by the Rev. Mr Barr.

On Monday the Royal Highness Prince Frederick William of Prussia left Balmoral. Her Majesty the Queen and the Prince drove with his Royal Highness to the Cairnwell on Deeside. Their Royal Highnesses the Prince of Wales and Prince Alfred spent the day at Loch Muick.

His Royal Highness Prince Frederick William of Prussia arrived in town on Tuesday, by the Great Northern Railway, and the Prince Consort at Balmoral. His Royal Highness proceeded direct from the railway station to Claridge's Hotel, Mount-street, in Brook-street, where apartments had been engaged for his Prussian reception.

The Duke of Leeds was seized with indisposition at his residence at Newmarket on the close of last week. His Grace has been gradually improving since Monday night.

His Excellency the Swedish Minister, since returning to town, has removed the temporary offices of the Swedish Legation from Berkeley-square to No. 21, Park-place.

The Earl of Minto and family have arrived in Eaton-square, to make preparations for the marriage of the Lady Charlotte Elliot with Mr. Torrell, M.P., which is to take place at St. George's, Hanover-square, on Tuesday next.

The marriage of the Lady Adelaide Fitzalan Howard, youngest daughter of the late and Duchess of Norfolk, and Lord George Manners, M.P., second son of the Duke of Rutland, was solemnised on Thursday, at St. James's Church in the presence of a select circle of the friends of both noble families.

CHURCH, UNIVERSITIES, &c.

APPOINTMENTS.—*Rectories*: The Rev. C. F. Hayden to Helmdon, near Brackley. Northampton; Rev. W. Blow to Lyng, Breton, near Cromer, Norfolk. Rev. J. Wilkinson to Bradwell, near Chipping Camden, Gloucestershire. Rev. T. W. Blake to Broughton Poggs, near Burford. Rev. C. Lowndes to Barrowell, with Little Hampden annexed, Bucks. Rev. J. Bradshaw to Bradwell, near Chatham; Rev. L. H. Woosnam to Llanyssil, near Montgomery. Rev. the Hon. and Rev. R. W. Shirley to Newton Solney, near Burton-on-Trent. Rev. J. D. Watson to Bulmer, near York. Rev. Thomas Rev. J. H. Milne to Neatishead, near Newton; Rev. R. F. Burdon to Marston, near Wallingford. *Incumbencies*: The Rev. J. P. Nash to St. Peter's Church, Clifton-wood, near Bristol. The Rev. Thomas Bedingfield to Bedingfield; Rev. J. W. Hall, M.A., to the Perpetual Curacy of Liverpool *Perpetual Curacy*: The Rev. R. G. Calthrop to Holy Cross, Bath.

THE QUEEN has appointed the Rev. B. Jowett Regius Professor of Greek in the University of Oxford, in succession to the late Dr Gaisford, Dean of Christ Church.

ST. PETER'S, SAFFRON-HILL. On Wednesday evening a deputation from the congregation of St. Peter's, Saffron-hill, presented their pastor, the Rev. J. Gorton, with a purse of gold and a most elegant address, as a testimonial of their esteem, and as a token of their esteem for him, and of their approbation of the course he has pursued under very peculiar circumstances, and in the midst of labour and difficulty, and what, in the case of some persons, would be of ease, and where the position would be considered. Rather the second Nehemiah, he has in twelve months, when Mr. Mansfield's congregation have given him and his people up.

THE LATE MR CAMDEN NEILD. I observed in last week's Number of the LONDON NEWS an account of Majesty's having to [illegible] Mr. Neild, whereby the late Mr. Camden Neild had possessed a large property, and which had, through his bequest of all his property to the Crown, come into possession of her Majesty. Her Majesty, in pursuance of her Majesty's munificence in regard to the same property should be made known. Mr. Neild has a small place in the parish of Chesham, Oxfordshire, and I am informed that he has upwards of building Church, schools in the parish, and [illegible] the Union to find an [illegible]. Exertions are being made for the erection of schools and an application was made by the Rev. [illegible] to the Queen, and I regret to say that [illegible] graciously declined to [illegible] to be transmitted to him in the usual [illegible] I received a letter from the Hon. Colonel Phipps, stating that Majesty had commanded him to inclose a cheque for £50 in aid of the object described. I am, yours, &c., A. S. L., Chelsea, January 1st, 1855.

HANCOCK'S PATENT PERMANENT SAFETY INKSTAND. One of the most desirable objects in an inkstand is to avoid the exposure of the ink to the atmosphere, for it is then soon rendered unfit for use. This is accomplished in the inkstand under notice, by the reservoir for the ink covered by a flexible, elastic, and elastic membrane, which, when depressed at the centre, causes the fluid to rise through the air contained in the reservoir to the pen, and when the pressure is removed, returns the dip-cup or receptacle; when a second pressure, in the diaphragm, after taking a dip, the ink remaining in the dip-cup will have been [illegible] By this means a fresh supply of ink is obtained sufficient for one letter to be taken at each dip, and the ink in the reservoir will be for the most part protected from dust and evaporation.

THE PERSIAN RAILWAY TO BE MADE. The Ottoman telegraph to Schumla, at which [illegible] connected with that of the Crimea, and with the western of European lines, commenced work under happy auspices. The first despatch which it transmitted to Constantinople was that which announced the taking of Sebastopol. The second despatch transmitted from Constantinople was one in which the Times Monitor [illegible] its representatives at the Courts of Paris and London, congratulating the Emperor and to the Queen the congratulations of the Sultan on the [illegible] victory.

ANOTHER PIECE OF THE "TRUE CROSS." A gentleman named Debaisieux, of Amiens, has just presented to the church of Chalinargues (Cantal) a piece of the true Cross, which he says he found in a chapel, which, in the time of Louis XIII., was the property of the Abbey of St. Denis. This piece was originally presented to the chapel by Philip Augustus, who obtained it from Saladin, Emperor of Constantinople, and the French Monarch received it from the Emperor [illegible] with precious stones. M. Debaisieux, who is [illegible] to give up the relic, which has been in his possession for many years, [illegible] Archbishop of Bourges preferred to retain it, and thought [illegible] of the native village. [illegible] was deposited [illegible] with many thousands of [illegible] pilgrims.—*Galignani's Messenger*.

AN ANCIENT BRITISH VILLAGE. Mr. Nicholas Whitley, of Truro, while canal running on Dartmoor, has discovered in the neighbourhood of Trouleworthy Tor, and not far from the head of the Plym, some interesting and very distinct remains of an ancient British village. The huts are generally small—from nine to twelve feet in diameter—and have been hitherto known Mr Whitley is of opinion that there are relics of several other villages on the eastern side of the moor which were not noted by the late Rev. R. Rowe, in his "Perambulation of Dartmoor."

THE PLAGUE OF FLIES. An extraordinary plague of flies has lately prevailed in parts of Gloucestershire. It was first detected on Saturday last, when the air was observed to be filled with the black-winged species, a close examination of which revealed to the unpractised eye of rose in the spring, but which is seldom in force late in the year. On Sunday the plague in Cheltenham, the great annoyance of persons who were out of doors, and who were [illegible] and [illegible] The rain [illegible] a shower [illegible] of the [illegible] though, after a shower [illegible] There was but [illegible] to-day.

LATEST INTELLIGENCE.

CAVALRY ACTION NEAR EUPATORIA.
DEFEAT OF THE RUSSIANS.

The following despatch from Marshal Pelissier was posted at the Paris Bourse on Friday (yesterday) afternoon: "A cavalry action took place on the 29th September, at Koughil, five leagues from Eupatoria. The Russians, under General Korf, were defeated by the French, under General D'Allonville. The Russians lost 50 killed, 105 prisoners, 6 guns, 12 caissons, and 250 horses. The French lost 6 men killed, 37 wounded."

Information is said to have reached the French Camp at Sebastopol that the Russian army had been reduced to 120,000 men by the losses in the late combats; that General Gortschakoff was endeavouring to concentrate his forces as much as possible, in order to be able to maintain himself against an attack from the Allied army until the reinforcement of 20,000 men which he had ordered up from Perekop should have arrived. They were expected about the end of the month, and it was thought that the General would then return into the interior of the Crimea. General Gortschakoff begins by degrees to direct his ambulances towards the north. A letter from Varna, of the 22nd ult., states that five blockading steamers have left for the Gulf of Odessa.

The *Patrie* of yesterday says

Accounts previously received [illegible] at a Grand Council of War held at Moscow, it was resolved that [illegible] Crimea should be defended to the last extremity, and it was after that [illegible] the Emperor set off for Nicolaieff. [illegible] added states that the Czar has left Nicolaieff, and arrived

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS
TAKEN AT CHISWICK, DURING THE WEEK ENDING TUESDAY, OCT. 2, 1855.

Month and Day.	Corrected Reading of Barom. at 32 A.M.	Thermometer: Highest Reading.	Thermometer: Lowest Reading.	Mean Temperature of Day.	Departure of Temperature from Average.	Degree of Humidity.	Direction of Wind.	Rain in Inches.
	Inches	°	°	°	°	°		Inches
Sept 28	29.665	67.1	41.2	53.2	+ 1.2	84	S.W.	0.04
" 29	29.597	67.2	41.7	54.1	+ 2.1	81	S.W. & S.	0.02
" 30	29.48	73.5	47.1	58.8	+ 4.7	83	CALM.	0.19
Oct 1	29.485	69.1	47.3	57.4	+ 3.3	71	S.W.	0.07
" 2	29.780	68.1	33.1	49.1	— 4.9	78	CALM.	0.00
" 3	29.97	69.1	31.1	49.1	— 0.9	85	CALM.	0.37
" 4	29.97	69.1	44.1	54.5	+ 4.5	83	N.E.	0.11

Note.—The sign + denotes above the average [illegible] the days — below the average. The numbers in the seventh column are [illegible] opposition that the saturation of the air is represented by 100.

The reading of the barometer decreased from 29.64 inches at the beginning of the week to 29.40 inches by the 30th September, increased to 29.[illegible] inches by the 3rd October, and decreased to 29.[illegible] inches by the end of the week. The mean for the week, at the height of eighty-two feet above the level of the sea, was 29.51 inches.

The mean temperature of the week was 56°7—being 3°40 above the average.

The range of temperature during the week was 30°9.

The mean daily range of temperature during the week was 15°9.

Rain fell during the week to the depth of 0·30ths of an inch.

The weather during the week was dull and gloomy, and the sky cloudy; rain fell frequently, attended by lightning on the evening of the 28th, and by a thunderstorm on the morning of the 30th. A dense yellow fog was prevalent during the early morning of the 2nd inst

For the month of September the mean reading of the barometer at the level of the sea was 29.149 inches; the range during the month was 1·080 inch. The highest reading of the thermometer during the month was 77°0 on the 22nd, and the lowest, 29°0, on the 27th; the range of temperature during the month was therefore 48°0. The mean of all the highest readings by day was 68°8, and of all the lowest by night was [illegible]; the mean daily range of temperature during the month was [illegible]. The mean temperature of the month was [illegible] —being 0°2° *below* the average of 38 years. The mean temperature of evaporation during the month was 53°0. The mean temperature of the dew point was 51°46. The mean degree of humidity was 82, complete saturation being represented by 100). And the fall of rain during the month was 1.1 inch.

Lewisham, October 3, 1855. JAMES GLAISHER.

HEALTH OF LONDON.—During the week ending last Saturday the births of 1707 children were registered within the metropolitan districts: of these, 864 were boys, and 813 girls exceeding the averages of the corresponding weeks in the last ten years by 107 boys, and 101 girls respectively. The deaths during the week are below the average amount, and London is healthier than it usually is in September—the number this week being 1160, of which 624 were males, and 536 females. Diarrhœa still continues to decline, but was fatal to 73 persons, of whom 62 were under three years of age. Cholera was the cause of 9 deaths. To zymotic diseases 203 deaths are referred; to diseases of the tubercular class, [illegible] were caused by phthisis; to diseases of the brain, nerves, &c., [illegible] diseases of the heart, 58; to diseases of the respiratory organs, [illegible] being caused by bronchitis, and 45 by pneumonia, and to violence, privation, and intemperance, 164 deaths are attributed.

EXHIBITION OF MR. FENTON'S PANORAMIC PICTURES OF THE SEAT OF WAR IN THE CRIMEA.—On Saturday her Majesty Marie Amélie (ex-Queen of the French), the Duke and Duchess [illegible] Comte d'Aumale, and the Duke de [illegible], attended by Count [illegible] and suite, honoured the Exhibition of Panoramic Pictures, at 311 Regent-street, with a visit. The gallant visitors [illegible] will shortly leave England for the Continent, [illegible] Calais.

JEWISH THANKSGIVING.—The Jews observed Thursday last as a day of thanksgiving for the late victory before Sebastopol. A special Form of Prayer, prepared by Dr. Adler, the Chief Rabbi, for [illegible] used in all the United Congregations throughout England [illegible] morning.

PRESERVATION OF LIFE FROM SHIPWRECK.—On Tuesday a meeting of the Royal National Life-boat Institution was held at its offices, John-street, Adelphi, to reward certain individuals for saving the crews, consisting of five coastguardmen, in consideration of the risk of life which they incurred in a stormy seven men, capsized from a boat in Cork Harbour, during a dark, [illegible]-stormy night [illegible] Mr. Rogers, of Kingsale, Broadstairs, received £2 for their promptitude in putting off in a boat to the rescue of two out of three men, capsized from a boat near that place. It appeared that the institution was progressing very effectively to make its life-boat establishments as complete and efficient as possible, and that it is only limited in its truly benevolent operations by the want of funds. During the present year 1326 wrecks have taken place, many of which have occurred on the coasts of the United Kingdom. Charles Lombe, Esq., having been elected as Vice-President of the society, the proceedings closed.

STATE REFORM ASSOCIATION.—A meeting of the Tower Hamlets Branch Association was held on Tuesday evening last, at the Hoxton Literary Institution, where a numerous and highly respectable company assembled. John Ingram Lockhart, Esq., F.R.A.S., presided on the occasion, and entered at some length into the objects contemplated by the association. He believed that the time had now arrived for a general agitation for State Reform; and if Reformers would but be content to merge for a while their minor differences in one strong, combined, and peaceful agitation for the sake of their great common principle—manhood suffrage—our long desire for a representation of the State would be crowned with a speedy fulfilment. The chairman then called upon Mr. W. Tidd Matson, the secretary of the association, to read the address of the committee to the British people. Mr. S. C. Horry, barrister-at-law, moved the first resolution:—"That this meeting approves of the objects and principles of the State Reform Association as detailed in the address issued by the committee, and pledges itself to yield the movement every possible support." This resolution, which was seconded by Mr. J. S. Linwood, was carried with but one dissentient. Mr. John Matson, one of the guardians of the poor of Hackney, moved the second resolution:—"That as it is unjust and unsafe in any one to withhold a right from others which he claims for himself; and as the franchise is the inherent right of every man who contributes to the support and welfare of the State, this meeting proclaims its adhesion to the principles of manhood suffrage, and pledges itself to secure, by all lawful means, the exercise of the vote to every male adult twenty one years of age, of sound mind, and not undergoing punishment for crime." Mr. Wm. Tidd Matson seconded the resolution, and said that it was intended to hold local meetings of this nature in every part of the metropolis. He [illegible] that, in order to avoid anything like a property qualification for membership to the association, every man in the country who chose to register his name could become a member; one penny only being charged for registration. The amount of subscription to the movement was left to individual discretion. The resolution was carried unanimously, and, after a vote of thanks to the chairman, the meeting separated.

ELECTION OF LORD MAYOR.

Somewhat more excitement was caused last Saturday than is usually manifested when the return of a Lord Mayor expectant is unopposed, in consequence of the heir-apparent to that high honour on the present occasion being a Jew. It is a fact pretty well known, that unless in times of great excitement, and under very peculiar circumstances, the election of the chief magistrate is pretty much a matter of form. Notwithstanding the high reputation of Mr. Salomons, the senior Alderman below the Chair, dark suspicions were hinted that the opponents of Jewish claims were determined, if possible, to prevent his return by nominating to the Court of Aldermen Mr. Finnis and Mr. Lawrence, who stand next in rotation. In that case the Court of Aldermen would have had no alternative but to return one of those gentlemen as Lord Mayor elect, thereby ousting Alderman Salomons from the seat. To prevent such a catastrophe, the members of the Jewish persuasion mustered in large force, and filled the foremost places in the hall. Shortly after eleven o'clock the huge state carriage drove up to the Guildhall, bearing the Lord Mayor, his chaplain, and Mr. Sowell, sword-bearer. There was a rumour afloat, which, happily for the honour and dignity of the City of London, was not realised, namely, that this gigantic and stately vehicle, which has borne about so many of Whittington's illustrious successors, was to be seized for some Property-tax due from it by Alderman Sidney, the late Lord Mayor, but for which that worthy Alderman considers the Corporation, and not himself individually, responsible. There is no exemption upon it, which is held by the assessor, Mr. White, a brush-maker, of Cannon-street; but Mr. White being a considerate man, and unwilling to interfere with the pomp and ceremony of the great civic election, humanely withheld his hand—sundried, it is said that he has consented to waive all harsh proceedings in reference to the matter until the settlement of a suit which is now pending between the Corporation and the late Lord Mayor.

At twelve o'clock the Lord Mayor and Sheriffs and several Aldermen (Mr. Salomons being amongst the number) proceeded to the Church of St. Lawrence Jewry, where a portion of the Church service was read by the Rev. Allaston Boultbee, M.A., the Vicar; and a sermon preached by the Rev. Edward Cummings Upton, M.A., of Magdalen College, Oxford, Chaplain to the Lord Mayor. Shortly after one o'clock the civic procession returned to the Guildhall, in passing through which Alderman Salomons was loudly cheered.

Mr. Serjeant Merewether, the Town clerk, having announced to the Livery that their duty was to elect a chief magistrate for the ensuing year, the aldermen, Sheriffs, and Common Council Aldermen Humphreys, the two individuals to be presented to the Lord Mayor and the Court of Aldermen, their duty being to report one of them to the Hall. The Aldermen, who had previously retired, then returned and immediately announced that their choice had fallen upon Alderman Salomons—an announcement which was received with tremendous applause

The Lord Mayor elect, in thanking the Livery for the honour conferred on him, said he was not insensible of the responsibilities that attached to the office, nor was he unaware of the new circumstances which attached to himself personally, such as had never been experienced by any of his predecessors in office. He could assure the crowded meeting by whom he had been elected, that he would to the utmost of his power fulfil all the duties that devolved upon him—that, being aware of his responsibilities, he would do all he could to show how highly he valued the principle of popular election (Cheers). He could not forget that it was just twenty years ago since he was elected by a meeting like the present, to the important office of Sheriff of London and Middlesex. Mighty changes had occurred since then, not only in this country but throughout the civilised world. They all, more or less, spoke of progress rather than retrogression; and he trusted that the maintenance of old institutions was consistent with popular rights, and above all, with the rights of conscience (Loud cheers).

Thanks were then voted to the Lord Mayor and Sheriffs, after which the meeting adjourned.

INAUGURATION OF THE NEW LORD MAYOR AND SHERIFFS.—The inauguration of the Sheriffs of London and Middlesex took place on Monday. At one o'clock the Lord Mayor elect, accompanied by [illegible] Sheriffs elect, Mr. Rose, the Alderman, and the City functionaries, left the Guildhall in [illegible] and proceeded to Blackfriars, where they took water for Westminster, for the presentation of the Sheriffs to the Cursitor Baron, and to receive her Majesty's approval. The lower part in the [illegible] Royal Exchange was tastefully [illegible] in a highly-complimentary speech, [illegible] gentlemen who had been elected to the shrievalty for the ensuing year. His Cursitor Baron having made a few brief remarks, [illegible] Sheriffs were then [illegible] in the choice made by the citizens of London. The usual formula of suit and service (the counting bob-nails and [illegible] wood) was then gone through, and the Cursitor Baron having [illegible] declared the business at an end. In the evening, the procession retired in the same order they had gone in. The inauguration banquet of the new Sheriffs, Mr. Alderman Kearsey and Mr. Alderman Abbiss, took place in the evening at the London Tavern, when about 250 gentlemen sat down to dinner.

CAUTION TO VISITORS AT THE BRITISH MUSEUM.—Numerous robberies have of late been perpetrated at the British Museum, and other places of public resort, by elegantly-attired women, aided by male accomplices. On Wednesday, Miss C. Munns, residing in Haydon-square, visited the Museum in the company of her sister, and was robbed of her purse containing a small sum in gold and silver. On her companion being made aware of her loss she felt her pocket to be assured of the safety of her own property, and found her purse safe; but soon afterwards, on her great chagrin, she discovered the contents, which she ascertained had been abstracted, and the purse replaced in an empty state. On the same day, Mrs Theakston, a widow lady from Hampstead, lost a valuable [illegible] photographic miniature set in gold.

COUNTRY NEWS.

THE ROEBUCK TESTIMONIAL.—The following letter has been received by Mr. [illegible] Master Cutler, from Sir Edward Bulwer Lytton:—"[illegible] I have the honour to [illegible] to add that in my slight contribution to the Testimonial I [illegible] merited tribute I wave altogether the consideration of Mr Roebuck's especial politics. I do not even desire by it to mark my approval of that part he took in the appointment and proceedings of the Sebastopol Committee. I do not ask myself where I have agreed with or differed from Mr. Roebuck in the opinions he has expressed or the line of policy he has adopted. I desire only, as a member of the British Parliament, to convey my sense of the dignity conferred upon the national assembly by any man who, whatever be the party he addresses, brings into its debates commanding intellect and unimpeached [illegible] true, has many men thus nobly endowed [illegible] conspicuously than in your representative, at [illegible] national interests is accompanied by anxiety for her honour and [illegible] known; none who, whether he be right or wrong in the eyes of others, would more rigidly abstain from the wrong or more firmly maintain the right, according to the lights of his own judgment and the dictates of his own conscience. Tributes such as the one now proposed are monuments to living worth more wisely devoted than those which we devote to the dead. For I know not why we should [illegible] our tokens of regard [illegible] deserve them until the [illegible] only could have [illegible] and has ceased to beat. As man cannot [illegible] the epitaphs inscribed upon the [illegible] them, so the tombs that we [illegible] often only serve as a reproach and penitence that we neglected it when with us. I rejoice that in this case [illegible] the [illegible] use sense of its loss. I have the honour to [illegible] EDWARD BULWER LYTTON [illegible]

EMIGRATION FROM LIVERPOOL.—The total number of vessels which have left Liverpool for all foreign ports during the quarter ended [illegible] been seventy-seven, on an aggregate tonnage of 85,767 tons, and having on board a total number of [illegible] souls. Of these have proceeded to the United States, 1389 to Canada, 327 to New Brunswick, 234 to Sydney, and 600 to Melbourne. This number which [illegible] over, does not include those who have taken their departure in the ships, not under Government inspection, shows a diminution of about one half, when compared with the corresponding quarter of 1854. In the month just ended the arrivals at Liverpool from the United States and all foreign ports has been 5487, of which 1705 only have proceeded to the Australian ports, and the remainder chiefly to the United States. The number is almost exactly one half that exhibited in the return for the corresponding period last year.

EXTENSIVE DEFALCATION BY A GOVERNMENT OFFICER.—On [illegible] the Queen's Bench, Mr. [illegible], a clerk of the Inland Revenue for the [illegible] district, was brought up, and remanded before the city magistrate, charged with embezzling between £4000 and £5000 the moneys of the Crown. The prisoner was committed for trial at the next spring assizes, on the charge of embezzlement; but has since appeared himself in £1000, and two sureties in £500 each. It is said that Mr. Moah is well known on the turf, and that he has [illegible] engaged pretty extensively in sporting transactions.

SWINDLERS AT SOUTHAMPTON.—The Southampton papers of Saturday last give particulars of the detection and exposure of two audacious swindlers in that town—a man and woman, who went by the name of Heinemeiere. After running in debt to the various tradesmen, they attempted to leave Southampton secretly, with large quantities of household furniture, china, drapery, and millinery, which they had bought, but never paid for. The waggons which contained the goods were [illegible] and [illegible] which [illegible] had been [illegible] to whom they had [illegible] On application to give up the goods they were liberated, and the tradesmen took possession of what goods they could find [illegible] their [illegible]

OBITUARY OF EMINENT PERSONS.

THOMAS LORD DELAMERE,
OF VALE ROYAL, CHESHIRE.

THIS greatly-respected Nobleman expired on Sunday last, at his residence in Hereford-street, after an illness of about ten days. His Lordship was born on the 9th August, 1767, and had, consequently, attained the patriarchal age of eighty-eight; but he remained till the last in the unimpaired possession of all his faculties. Lord Delamere's family, which claims the same ancient descent as that of the Marquisses of Cholmondeley, is one of the most illustrious in Cheshire, where the family estates principally lie. His Lordship was married, on the 17th December, 1810, to one of the daughters of the ancient house of Wynnstay. Henrietta Elizabeth, sister of the late, and aunt of the present, Sir Watkin Williams Wynn, Bart.—and through this alliance was nearly related to the distinguished members of the Grenville family. Her Ladyship, who was remarkable for her high mental endowments, died on the 17th August, 1852. Lord Delamere is succeeded in his title and estates by his eldest son, the Hon. Hugh Cholmondeley, who married, on the 23rd March, 1848, Lady Sarah Hay, daughter of the Earl of Kinnoull. He leaves two other sons: Thomas Cunliffe, born 4th August, 1818, late Captain in the 43rd Regiment, and now Colonel of the Royal Cheshire Militia—married, August, 1850, to Katherine, daughter of Sir Tatton Sykes, Bart.; and Henry Peter, in holy orders, born 15th June, 1820, and married, May, 1848, to Mary, daughter of the late, and sister of the present, Lord Leigh; also one unmarried daughter, Henrietta Charlotte.

GENERAL D'OYLY,
COLONEL OF THE 33RD (DUKE OF WELLINGTON'S) REGIMENT.

THIS gallant officer died on the 26th ult., at Nevill-park, Tunbridge-wells, aged 75. He was the youngest and last living of five brothers, sons of the late venerable Archdeacon D'Oyly, of Buxted, Sussex, every one of whom attained distinction. The eldest was Thomas D'Oyly, Esq., D.C.L., the eminent Serjeant-at-Law, whose death was recorded at the commencement of the present year; the second, the late Sir John D'Oyly, Bart., official resident at Kandy, in Ceylon; the third, Sir Francis D'Oyly, K.C.B., who fell gloriously at the Battle of Waterloo; the fourth, the late Rev. George D'Oyly, D.D., Rector of Lambeth, and one of the editors of D'Oyly and Mant's Family Bible; and the fifth, Henry, the deceased, the subject of this notice.

General D'Oyly was born April 21, 1780, and entered, as Ensign, in 1797, the Regiment of Grenadier Guards, in which an uncle and his brother (the above named Sir Francis) were serving. He became Lieutenant and Captain in 1799. Major in the Army in 1811, Captain and Lieutenant in 1813. He was promoted to the rank of Colonel in the Army and Major in his Regiment, in 1830, and Lieutenant-Colonel in his Regiment, 1837; Major-General in 1838, and Lieutenant-General in 1851. In 1847 he became Colonel of the 33rd, or Duke of Wellington's Regiment (which has gained so many laurels in the present war), and during his last year he became full General.

The several officer's services were long and brilliant. He took part in the campaign of North Holland, in 1799, under Sir Ralph Abercrombie and the Duke of York; and served in Sicily in 1806 and 1807. He served in the north of Spain, under Sir John Moore, in 1808 and 1809, and was engaged in the Battle of Corunna. He accompanied the disastrous expedition to Walcheren in 1809; and was at Cadiz during the siege in 1812, under Lord Lynedoch and Major-General Sir George Cooke. He acted as Aide-de-Camp to Sir Joseph Bradford under Lord Lynedoch in 1813; afterwards with the army, under the Duke of Wellington, in Holland and France, and was severely wounded at the Battle of Waterloo.

General D'Oyly was married, in 1836, to Caroline Maria, youngest daughter of the late Colonel Geo Langton, of Newton-park, Somersetshire, many years M.P for his division of the county, by whom he had three children; two of whom, a son and a daughter, with their mother, survive.

SIR HENRY ELLIS.

THE Right Hon. Sir Henry Ellis, K.C.B., was a gentleman of long experience and high reputation in the British diplomatic service. He acted as temporary Minister Plenipotentiary in Persia in 1814; and was, in 1833, appointed a Privy Councillor. From 1834 to 1841 he was a Commissioner of the Board of Control; and in the years 1835 and 1836 he was again Ambassador in Persia. He accompanied Lord Amherst in his famous mission to China, and he published at the time a well-written and popular account of that expedition. In 1842 he was sent on a special mission to Brazil, and [illegible] was made a Civil Knight-Commander of the Bath. His last great employment as a diplomatist was as British Minister to the Conference of Brussels on the affairs of the Scheldt. Sir Henry died in Manchester on the 24th ult. Sir Henry had a pension for the abolished office which he formerly held of Clerk of the Pells.

LIEUTENANT COLONEL KENNEDY.

LIEUTENANT-COLONEL ARTHUR KENNEDY, of the 10th Hussars, was the third son of the late John Kennedy, Esq., of Cultra, county Down. Arthur Kennedy entered the British Army as an Ensign, in the 24th Foot, in 1803, and rose through the various grades to that of Lieutenant-Colonel in 1837. He served with much distinction during the Peninsular War. He was in Portugal in 1808, and in Spain at the defence and retreat of Sir John Moore, which terminated so gloriously at Corunna, January 16th, 1809. He was in the campaign of 1813-14, under the Duke of Wellington, who [illegible] the Ebro and the Bidassoa, the battle of Nivelle, the [illegible] Nive, the passage of the Adour, the battle of Orthez, and [illegible] those other famous engagements of which the victorious entrance into France was the result. In 1815, Kennedy shared in the glorious campaign of that memorable year, and was with the Duke of Wellington's army from its entry into [illegible]. Lieut.-Colonel Kennedy died at Hallybrook, Randalstown, county Antrim, on the 14th ult., aged seventy-four years.

VICE-ADMIRAL EDWARD HENRY A'COURT REPINGTON.

The death of this gallant naval officer occurred at his seat, Amington-hall, county Warwick, on the 22nd ult. Admiral Repington had nearly completed his seventy-second year. He was the second son of the late Colonel Sir William Pierce Ashe A'Court, Bart., M.P., and next brother of the present Lord Heytesbury. He entered the Royal Navy in 1798; and, in 1803, acquired great distinction by a brilliant exploit off St. Domingo. [illegible] command of a boat, he captured a French schooner. In the following year he participated in the bold but unsuccessful attack on Curaçoa.

Admiral [illegible] A'Court assumed the additional [illegible] Repington on succeeding by will to the estates of [illegible] Charles Edward Repington, Esq., of Amington-hall, county Warwick, and subsequently sat in Parliament for Tamworth, in the county of which town Amington-hall is situated.

CHARLES YORKE LUCAS CALCRAFT, ESQ.,
OF ANCASTER HALL, CO. LINCOLN.

THIS gentleman, a Deputy-Lieutenant for Lincolnshire, died on the 15th ult., at Douglas, Isle of Man, aged 55. He was elder son and heir of the late John Charles Lucas, Esq., who took the additional surname and arms of Calcraft in 1792, on succeeding to the estate of Ancaster, derived from his maternal female [illegible]

Mr. [illegible] was [illegible] 29th Nov., 1839, Mary Jane [illegible], daughter of James [illegible], Esq., of Ancaster, in the County, [illegible] A. Reid, Lord [illegible]

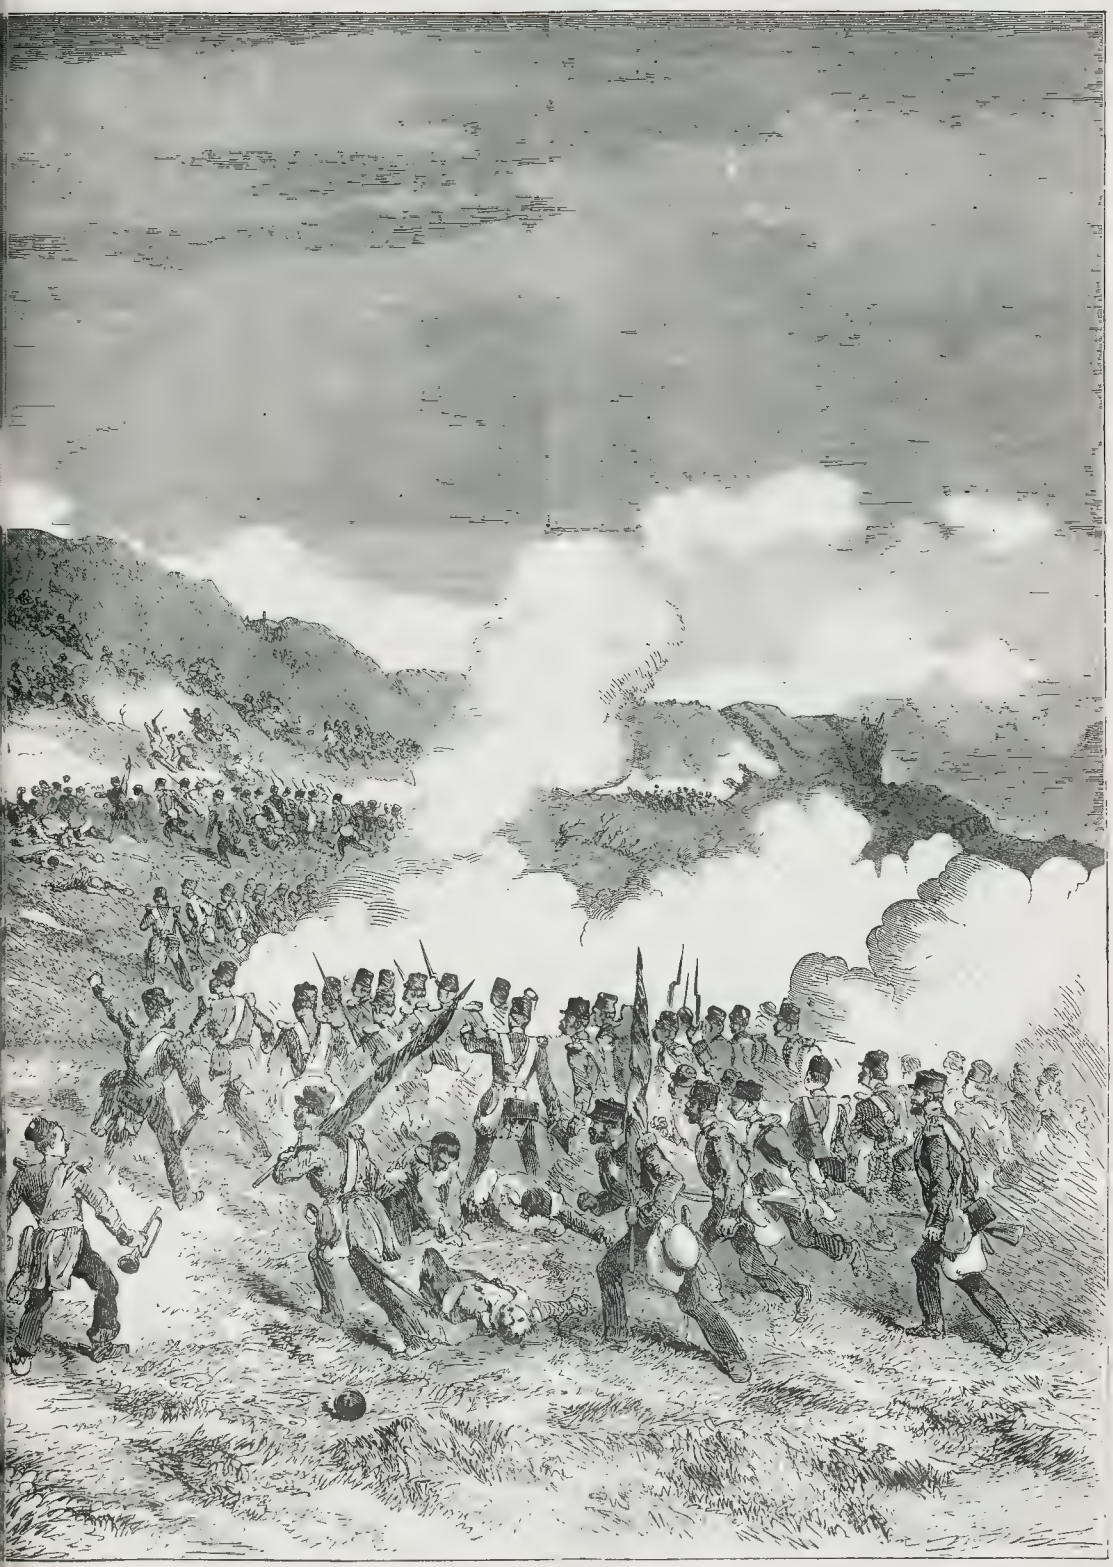
ALEXANDER MACLEAN, ESQ., OF ARDGOUR.

COLONEL MACLEAN, of Ardgour, a Deputy-Lieutenant [illegible] counties of Argyll and Haddington, and for some time Colonel of the Argyleshire Militia, was the eldest son of Hugh Maclean of Ardgour in Scotland. He was born in 1764; and married in 1786 Lady Margaret Hope, daughter [illegible] second Earl of Hopetoun; [illegible] he had several children [illegible] as, John Hugh, of the Scotch Bar, and Archibald, Captain, R.N., [illegible] unmarried; the third, Alexander, in the East India Company's Civil Service, married Jane Helen, daughter of Sir John Dalrymple, Bart., and has issue. The Macleans of Ardgour [illegible] their descent from the famous Gillean of Treadh, and are a [illegible] family of considerable distinction in North Britain. The late Col. Maclean, of Ardgour, was [illegible] of Hugh Maclean, of Ardgour, by Elizabeth, his wife, daughter of Alexander Houston, Esq., of Jordan Hill, [illegible] John Maclean, of Ardgour, by his wife, a daughter of Alexander [illegible]

A PROVIDENTIAL DISCOVERY.—A sapper, who was exploring the batteries of the Redan, just as the [illegible] for the town, discovered a rather large cobbler, which he [illegible] of a sack, and then called the attention of the officers to it. On [illegible] it was found to be of thick [illegible] covered with [illegible] persons. The sack was [illegible] to a very large powder magazine dug under the [illegible] Redan, of which made the bold [illegible] tremble when they thought [illegible] from which they had escaped. The wretches [illegible] the sea, which it caused to the other shore, from whence [illegible] to display [illegible] the [illegible] not [illegible] time [illegible] were up, one after [illegible]

It appears from last week's [illegible] of Mrs. [illegible] the "Esher murderess," [illegible] and all the officials of Bethlem Hospital [illegible] her acquittal, but the accuracy [illegible] Widow and others in favour of her lunacy at [illegible]

STORMING OF THE REDAN.—FRO



SKETCH BY J. A. CROWL. (SEE NEXT PAGE.)

THE ASSAULT ON THE REDAN.

THE following spirit-stirring account of the assault on the Redan, of which we give an Engraving this week, is by Lieutenant Harkness, of the 55th Regiment, in a letter to his mother:—

About half-past twelve, a white flag, hoisted on the Mamelon, gave notice to the English to attack the Great Redan. Away went the stormers of the Light Division, closely followed by those of the Second; the enemy, of course, were well prepared for us, and had been firing grape at our trench from the beginning of the French attack. My company was the third from the front. When it came to my turn, I jumped up and over the parapet, and calling to my men to follow me close and keep together, we rushed across the open ground. The distance from our trench to the Redan ditch, as since ascertained, is over 200 paces. The heavy fire of grape and musketry from the flanking batteries swept this space from both sides in a fearful storm, and our men fell rapidly from it. I reached the ditch unhurt, and slid down into it. It was about ten feet deep, and twenty or thirty feet across. The men here got mixed all together. We crowded up the scaling ladders which was very difficult to do, as many wounded were trying to come down by them. Once on the top slope, it was possible to stand without the ladders All this time a fierce hand-to-hand fight was going on within. The parapet was very high inside, which made it extremely difficult for the men to get down, so that no sufficient body could be formed at once for a charge. The Russians had brought up a large force, which occupied the interior defences and kept up a murderous fire, which shot down our poor fellows as they were getting on the parapet and kept up the heaviest fire on the Russians, but suffered terribly from the concentrated aim it had upon them in return. Colonel Windham was most conspicuous, giving directions everywhere in the midst of the fire.

Generals Hume, Roxby, Johnson, and myself, were on the parapet near together. We held our position for nearly two hours, unable to advance for the crushing fire of the enemy, who not only occupied an extended and flanking position, but actually outnumbered us. Still we were unwilling to give up what we had gained.

At length the order to retire was given, and now came the most dreadful part of the business, for a retreat is always worse than an advance. Every one was in such a hurry to get down the ladders, and we were so closely packed together, that the whole mass of men on the steep parapet overbalanced, and they fell together in the ditch headforemost. I shall never forget that horrible moment; several hundred men fell headlong together, all with fixed bayonets and drawn swords, numbers must have been run through by taking on the bayonets, and had their limbs broken by the weight falling on them. It is miraculous to me how I escaped so well; I was at the top of the ladder when I fell with the rest, but I was not so much underneath the others. I turned aside several bayonets with my hands, which nearly ran into me. My sword was wrenched out of my hand, and I lost it. It was very one for himself at that moment. As we scrambled up the counterscarp, the Russians, who had retired back into the Redan on the signs of our retiring, mounted the parapet and threw shells in the ditch stones, grape-shot, muskets with fixed bayonets, live shell, and actually hatchets and axes. We returned to our trenches through the fire of grape and musketry, which was now, if anything, heavier than before, and the ground was thickly strewed with our killed and wounded. By God's mercy, I again crossed in safety. The only harm I received are of a trifling nature.

THE REDAN AFTER THE STRUGGLE

A person who visited the Redan soon after the Russians left it saw on every side remnants of the desperate struggle; torn red coats, muzzles of muskets, odd epaulets, ramrods, tailors' gear, broken sponges, odd boots, old Russian articles of clothing, to say nothing of the most awful of all—the dead; where they had been struck, there they had clasped their hands in agony, and in the form they remained when dead.

DESPATCHES FROM GENERAL SIMPSON.

War Department, Oct. 2, 1855

Lord Panmure has this day received a despatch of which the following is a copy, and its enclosures, addressed to his Lordship by General Simpson:—

Sebastopol, Sept. 18, 1855.

My Lord, I have much satisfaction in laying before your Lordship the accompanying copy of a letter I have received from Marshal Pelissier, bearing testimony to the services of Major-General Rose and Lieut.-Colonel the Hon. St. George Foley, who are attached to the head-quarters of the French army, and I beg to recommend these officers most favourably to your Lordship's notice.

I avail myself of this opportunity to bring before you the name of Lieut.-Colonel of Lieut.-Major de Scalcan, who succeeded the late Lieut.-Colonel Vinat in my Head-Quarters.

He is unremitting in his attention, and performs all the duties I have required of him with a zeal, intelligence, and cheerfulness that merit my warmest thanks.

I have, &c., JAMES SIMPSON, General Commanding.

The Lord Panmure, &c.

Admiralty, Oct. 1.

A despatch, of which the following is a copy, has been received from Rear-Admiral Sir Edmund Lyons, Bart., G.C.B., Commander-in-Chief of her Majesty's ships and vessels in the Mediterranean and Black Sea:—

EMBARKATION OF THE NAVAL BRIGADE.

H. ya Albert, off Sebastopol, Sept. 18, 1855.

Sir, I have the honour to inclose, for the information of the Lords Commissioners of the Admiralty, a printed copy of a general order which has been issued to the army on the re-embarkation of the Royal Naval Brigade.

I am, &c.

ED. LYONS,

Rear-Admiral and Commander-in-Chief.

The Secretary of the Admiralty.

Head-quarters, Sebastopol, Sept. 17, 1855

The service for which the Naval Brigade was attached to this army having been completed by the fall of Sebastopol, the force has been ordered to embark.

The commander of the forces heartily thanks the officers, petty officers, and seamen for the very efficient services they have rendered in the batteries, and on all occasions when they had against the enemy was required; and he has to notice the patience and courage with which, side by side with the soldiers of this army, they have endured the dangers and hardships of nearly a year's duty in the trenches.

Lieut.-General Sir J. Bell cordially acknowledges the obligations he is under to Rear-Admiral Sir Stephen Lushington, K.C.B., who so ably commanded the brigade from its formation until his removal by promotion to a higher rank, and to Captain the Hon. H. Keppel, R.N., who succeeded him, and retained the command until the conclusion of this ever-memorable siege.

By order, H. W. BARNARD, Chief of the Staff.

ILLUMINATION AT SHEFFIELD.—On Monday the town of Sheffield was brilliantly illuminated in honour of the fall of Sebastopol. The day was a general holiday, the principal shops, manufactories, &c., being closed. Immense numbers of people arrived in Sheffield during the day. Everywhere flags flowed from houses, shops, workshops, and public buildings. An immense procession started at one o'clock, and passed through the principal streets. Platforms were erected for the Mayor and Corporation, the Master Cutler, a committee of the Cutlers' Company, and other civil authorities; Gen. Sir Charles Wetherall, and the Tyrone militia; Wilson Overend, Esq., in the uniform of a deputy-lieutenant of the county, &c.; and about 100 private gentlemen, all mounted. The chief attraction in the procession was a number of men and parts of men which seated eight soldiers who had served in the Crimea, who were cheered most heartily. The hours fixed for the illumination were from seven to eleven o'clock; and the effect produced by the blaze of gas in almost every shop and place of business was magnificent. In a small circle of streets around the market-place there were nearly 500 devices in gas and transparencies.

THE RUSSIAN ARTILLERY.—The Russians have either very few mortars, or some reason for not using them against us. It is not at all improbable that while they had brought nearly every available mortar to the south side, they were unable to convey any away previous to the capture of the Malakoff, and consequently the only means of throwing shells into the Allied works were the field-guns. Some species of ordnance would very probably induce them to convey mortars to the front. Some portable kinds of artillery in the first instance, and large ones in the end. Of that the assailants took plenty of care they had had time to make themselves even to the other side. The few missiles thrown against the Allies' position have occupied the town and arsenal, from the north side, have been round-shot, probably discharged from sunk guns.—*Letter from the Camp, Sept. 21.*

A MALAKOFF CASE OF RECOVERY.—A private of the 7th Fusiliers was struck on the back of the head with a grape-shot, which he carried in his head up to the Camp. The piece of metal, nearly as large as a four pound shot, was removed in the hospital, and the man's death was momentarily expected. However, to the surprise of every one, however, he has survived, and is now walking about amongst the tents of his regiment, almost as well as ever, never been broken.—*Daily News Correspondent.*

The King of Greece had sent decorations to the members of the Divan at Constantinople, on the occasion of the signature of the treaty of Commerce between Turkey and Greece.

THE WAR IN THE CRIMEA.

(From our Artist and Special Correspondent.)

CAMP, SEBASTOPOL, Sept. 22, 1855.

EVERY visit to the captured stronghold of Sebastopol increases my astonishment at the enormous resources possessed by the Russians for the maintenance of their position. Engineers, artillerists, and officers of every rank, freely express their wonder that Prince Gortschakoff should have so speedily abandoned a town still amply provided with means of defence. The trophies left behind—consisting chiefly of ship's guns of various size, to the number of 2500, the vast magazines of shot and shell heaped together in the bomb-proof vaults of all the forts, gunpowder deposited in mounds of many tons—would have served to protract for some weeks longer the final catastrophe. The Russian General, however, was probably sufficiently acquainted with the temper of his troops to know how far he could trust them in a final and desperate resistance, which might have jeopardised the whole army. The danger of losing all means of retreat, from an attack simultaneously undertaken by our armies and fleets, was no doubt present to his mind, and he took advantage of the favourable respite given him on the side of his sea defences, by the fury of the weather, to effect a retreat whilst the bridge of rafts was still open to him. The fury of wind and weather, on the 8th of August, alone prevented our fleet from making a powerful diversion during the moment of assault. Every preparation had been made by Sir Edmund Lyons to pour broadside after broadside into the besieged city, and cut off all means of retreat from the Russians by the destruction of their bridge. Every ship had been cleared for action, moveables stowed in the lowest depths of the holds, and shot at hand. The wind, however, was too strong to allow of any movement, and the captains of our fleet had to undergo the painful sensations attending inactivity at a time when all felt the utmost desire to be up and doing in behalf of the army then perilling its thousands upon the earthern walls of Sebastopol. Hemmed in on all sides, their communications threatened and possibly destroyed, the Russians would then perhaps have fallen back in despair upon their last intrenchments—the barricaded streets of their mutilated city; we should perhaps have suffered severely, and our losses even in victory might not have compensated the capture of 30,000 prisoners. Still, had such been the termination of the storming of Sebastopol, however great our losses might have become, the Allies would have been in a position to take speedy advantage of the force remaining in the open field, behind the heights of Mackenzie, and 60,000 men, dispirited by the loss of 50,000 comrades, might have been an easier prey than the 100,000, whose white tents now line the heights of the northern horizon, securely reposing behind redoubts in positions of extreme advantage. The state of the hostile armies at present is one of mutual observation. The fears of an attack from the combined force of the Russians, freed from the anxiety of defending Sebastopol, I have not shared in, although expressed by great numbers. And even though they should be reinforced by the whole Grenadier division, by last advices at Simpheropol, the Allies would still create apprehensions of defeat too strong to give rise to fear of an attack in force. A skirmish on the 17th in the neighbourhood of Mackenzie's Farm, between the vanguard of the French and the advanced post of the Russians there, led to the belief that the enemy was now in retreat; and the departure of a large force from the north of Sebastopol towards the Belbek on the 17th, induces many to believe that so far from intending to fight, Prince Gortschakoff will secure himself for the winter in the almost impregnable positions afforded by the precipitous hills that overhang that river. The continued passage of large convoys carrying stores from the water's edge, north of Sebastopol, and moving to the eastward, tends to confirm this view; and, though the works apparently intended to be opened against the south side of Sebastopol are still in course of rapid erection, this febrile activity is considered by many as a blind to enable the main army to effect its retreat without molestation The British army, in the meantime remains motionless in its camp, save parties daily to clear the trenches of our guns, and empty the Russian magazines of their live projectiles. General Windham, who was immediately named Commandant o four part of Sebastopol, after his brave, but ineffectual storm of the Redan, has taken up his quarters in the town with Captain Dewar of the 49th and Captain Rowland of the Rifles and 3rd Buffs, and forty-one Town Majors, doing duty in permanent quarters. The trenches and works of Sebastopol in our immediate occupation are open to the public; whilst the French still maintain the strictest seclusion in their part of it, under the plea of danger to spectators from bombardment. Hitherto, however, this alarm has been groundless, as the Russians have not armed their redoubts with guns, or if they have the places are carefully concealed and blinded. That they may at some future moment open from the mortars which they removed from the south side is possible; but if this happen, the expectations held out of an evacuation of the north side will turn out groundless. A few shells and rockets thrown daily into the creek where some small remnant of shipping is laid up, or launched into the convoys of carts which unceasingly move to and fro, are all the signs of activity given by the French and English. The bulk of the former, indeed, are no longer encamped in their summer quarters, but echeloned on the road to Mackenzie's Farm; whence they may be ordered to advance at any moment if the field is taken for an autumn campaign. Rumours of such a resolve are not wanting in the Camps, and the projected move of some divisions of our army is the topic of conversation. The siege-trains, in such an event, would be turned into field artillery, and a small-arm ammunition brigade formed, such as was projected last year, and abandoned in consequence of the siege. Daily drill and field movements are the constant occupation of our troops, slightly relaxed in discipline as they have been by the draught of so many young soldiers, and the free-and-easy work of the trenches. In some instances determined drill and constant attention are required by regiments, which will be much benefited by a rest from active employment during a few months. The Duke of Wellington's maxim was repose to bring his men into perfect discipline, and every one knows that arguments of various kinds failed to make that great commander break ground before he felt certain that the condition of his troops was such as to ensure success at the opening of the campaign. Wearied and raw troops would never have fought Ciudad Rodrigo, and the presence of such troops nearly produced disasters at Burgos. It is a secret to no one that the dead stormers of the Redan were most of them officers, non-commissioned officers, and old soldiers. If, however, no other obstacle were present, a most serious one would be found in the weather with which we have been visited for a week past. Alternate gleams of sunshine and heavy showers marked the first days; whilst during the last seventy hours rain has poured incessantly down, beating in from the north-east before a gale of wind. It is fair to suppose that the usual warm autumn will succeed to this period of wet and cold; but, at present, motion is denied us by the softness of the roads, which impedes the movements even of the Commissariat, in consequence of the ways from Kadikoi to Camp being as yet unmetalled. This—an old grievance—will, I trust, soon be remedied, as orders have been given for the instant completion of these roads. It would be comparatively easy to form a metalled communication between Balaclava and the Woronzoff road where it leaves the heights celebrated by the battle of October 25, to follow the slopes of the hills up to the elevated plain on which our camps are placed. That road is the only good and practicable one at this moment of rain and wind, and it creates a complete communication to the very centre of Sebastopol.

The character of the ground which forms the hills along which the Allies painfully advanced their trenches and parallels is now fully understood by actual inspection; and a survey of the ground has been undertaken, which will give us somewhat tardily it is true, a perfect idea of its form and sinuosities. The Arsenal Creek is the outlet to three of the ravines forming the French and English left attacks; whilst, on the right, the ravines pour their waters into the harbour near the Dockyard and Karabelnaia suburb. The ground which intervenes is extremely high and broken into two ridges, jutting out to the southward, and crowned by the Redan and Malakoff. These ridges form two spits projecting into the harbour; one of which, being very precipitous, is faced with stone, presenting to the eye a prodigious parapet two hundred feet in height; from the summit of which the eye wanders over the north side of the harbour, the waters of the Arsenal creek on the left, with the palace like buildings of Sebastopol west rising in terraces from the harbour's edge, and the Dockyard on the right flanked by the projecting spit on which stood Fort Paul, still covered with the remains of numerous buildings, used as hospitals and barracks. To the right of these again, or to the eastward, are the ruins of Karabelnaia, and the serpentine folds of the waters which debouch from Inkerman, round a host of pretty headlands, crowned with its batteries, now silent and blackened, though so lately instinct with life and fire. The wide and elevated terrace from which this view is observed is itself covered with a host of large and important buildings, specially devoted to Government purposes, but now damaged beyond hope of repair. The whole buildings were all constructed of Inkerman stone, of that soft kind which is found near Caen in France, and whose peculiar characteristic is that it has deas with every year's exposure to the sun and air. They were, however, of such recent erection that the balls and shells projected from our batteries entered into the stone as a musket-ball would into a dead board, pushing their way peremptorily through, and displacing large masses in the passage. Where one wall of great thickness has fallen to arrest the passage of a shot the next has been an effectual barrier, and the iron missile is visible imbedded in the soft substance, where it remains as a token of its destructive power, now expended, perhaps, for ever. Nothing indeed, can be more remarkable than the destruction which was everywhere dealt by our artillery, leaving the edifices apparently unharmed. "I see," said a spectator, a virgin city. Why is it spared?" And, involuntarily, our eyes were turned towards the town, and the question seemed unanswerable. In truth, the destruction was as complete as it could be; for men could certainly not live in these buildings, so shattered were they by missiles of every description. One of the most battered edifices, whose walls bore unmistakeable evidence of our fire, was situated about three hundred yards in rear of the Redan. It was full of holes of various sizes, and the roof partially fallen in. Behind it was another building, also much battered; and in the midst of a garden to the left of it a small Greek church, of which the golden ball and cross still hung pendent from a green steeple, much rent and very ragged. A large ball lay on the ground, having been prostrated from its eminence and broken. That ball will never toll again for the "Te Deums" or funerals of Russian victors. Behind that, again, was the enormous stone quadrangle of the naval hospital and barracks; inside of which were large rooms, broad and airy, with rows of slanting beds along its sides, and a double one down the centre, at each side of screens, neatly ornamented and skirted with woodwork. In the cellars were numbers of helmets, clothing for various branches of the service, and muskets, in quantities. This great quadrangle was partially unroofed, and dilapidated internally with shot and shell; a large portion of the roof had fallen in on the western side, and the windows were ragged and torn. The northern face looked on the high precipitous parade already alluded to, covered with buildings, most of which were entirely unroofed, and the walls alone left standing—the light of heaven streaming through the apertures, and into the ground-floors below. It also had a view towards the east, on the dry docks built by Mr. Upton, being six in number, well faced in stone, and in perfect repair. Here were the sheers burnt on the morning of the 9th, and the remains of two small ships, of which the keels and charred sides lay on the muddy bottom. The waters of the Tchernaya no longer flowed into them, although the arches of the aqueduct which once carried them across that river were still in sight, on the shore of the Upper Creek, showing in bright colours on the blue surface of the waters. They were not fitted to receive very large vessels, and I should think that none but steamers or men-of-war, of the smallest class could have been repaired there. The eastern side of these docks were edged by rows of large buildings forming stores for Government purposes, and a military hospital, which, on the morning of the 9th, contained six hundred souls in a pitiful state of destitution. The scene which met the eye there was in truth appalling. In a long room adorned with arched recesses the dead and wounded lay side by side, two or three Englishmen occupying berths by the side of Russians. Two of our soldiers, hit in the thigh, were under the care of some of our surgeons, who were probing their wounds. Many Russians were dead, in every attitude of despair. Some had fallen from their beds, and met their death in the evident attempt to crawl out and relieve some of their wants; others were stiff on their wooden pallets. All had been left without medical assistance for three days, and the Englishmen there had not even been visited. In the afternoon of the 10th a flag of truce was brought over by the celebrated Captain of the *Vladimir*. He came for the Russian wounded, who were given up to him by Captain Keppel, in the course of whose conversation with the most gallant of the Russian sailors who ever floated, a wish was expressed that, after the peace, which could not but be considered near at hand, happier times would enable both to meet under more pleasing auspices. The Captain of the *Vladimir*, however, affected to believe peace as far as ever from conclusion; and those two brave men parted, the Russian taking away with him the remnant of the unfortunate sufferers from the hospital. The *Vladimir* steamed away with its freight, and next day was consigned to the deep, doubtless to the great dispiriting of its Commander. It was in the dead of the night, as I before told you, that this was done. A party of the English Naval Brigade had been marched down towards the water's edge to erect a new battery, when the steamer was observed coming out of the creek east of Fort Catherine. Our tars had but just broken ground, and were without cover, arms, or covering party. It was a trying moment. The utmost silence was enjoined by Lieutenant Gough, in command. The sailors lay down on the ground, anxiously watching the movements of the ship. A broadside of grape would have destroyed them all; but as their attention was riveted on her, they saw an unusual tremor in her frame. She canted on one side, then the other, lurched suddenly, and sunk head foremost into the water. The sailors, drawing hard breaths, resumed their picks and shovels, and continued their work.

At the extremity of the spit edged by the Dockyard buildings, was Fort, Paul, the explosions of which I witnessed on the 9th from the mounds of the Malakoff. Its place is marked by a heap of stones and rubbish, ground to particles by the force of gunpowder. Below the quays stretched a broad flat expanse, almost level with the water's edge, covered with carts and waggons, most of which had been burnt, the remains strewing the ground to the foot of the esplanade. The sheer precipice and flat surface of that work looked bright and grand in the sunshine, as the precipitous faces of the Maltese forts do in the glare of a Mediterranean sun in the first hours after noon. In strong contrast to its unsullied whiteness, and the grandeur of the Dockyard buildings, were the hovels of the labouring tenants of Karabelnaia, whose grey mud walls incline in every direction, and charred in places by fire, were dotted here by the black of smoke, there by remnants of plaster facing, whilst the mass retained a general grey tone of a yellowish colour, relieved by the distant and highly tinted hills of Inkerman. The view to the westward and southward from the terrace is equally grand as that which lies open to the eastward towards the enemy. To the southward it plunges down the Arsenal Creek, a long and wide expanse, across which the Russians had a bridge now in course of repair, and is arrested by a large battery, called the Creek Battery, which covers the vale into which the Woronzoff road

and the Waters of the Valley of Death lead us. The road to the Creek Battery follows the sides of the precipitous slope, and is separated from the water's edge by the Arsenal, which is covered even now with the trophies of our victory, amongst which the members of our newly-appointed mixed commission are daily busy making inventories of the spoil. Captain Marten, of the *Royal Albert*, Captain Montagu and Shawe, of the Artillery, are on this commission. Past these trophies, a mass of ruined houses with white gables and charred rafters protruding everywhere, present themselves to the eye, which wanders without effort away to the strong embrasures of the Creek Battery (of which I send you a Sketch), and a pretty landscape behind, memorable by having been the scene of General Eyre's exploits on the 18th of June. Then the Woronzoff-road, leading up the west slopes of the Arsenal Creek, takes you into fashionable Sebastopol, where General Bosnine now holds command, and more remains to be described to you. Yesterday the Allies were very busy shelling from 8-inch mortars every building and redoubt within range. The Russians might be seen scampering on all sides out of storehouses and earthworks, in which they had concealed themselves safe from the prying glance of hostile eyes; they returned a few shots at long intervals from field-pieces.

On Monday the Naval Brigade left its camp at daybreak, and marched into Balaclava amidst loud and continued cheering from soldiers of every rank. The bands of the 14th and 18th joined that of the sailors in an outburst of music, and with banners unfurled, and an owl and cat taken from Sebastopol, fastened like two combatants on the back of a horse, the jolly remnants of our jack tars returned to their respective ships. This and the distribution of medals to the soldiers of regiments are the only incidents of the week I have not hitherto recorded. General Bosquet, wounded, as you know, at the attack of the Mamelon by a piece of shell falling upon him, is not progressing so favourably as might be wished but is in no danger I am told. He has got the Bath, which is an honour he much prizes.

The news from the Crimea during the last few days has been very meagre, but some blow is evidently about to be struck. A telegraphic despatch received at Paris on Wednesday says:—

> Two divisions, one French and one English, occupy Sebastopol. The army of operation, under Marshal Pelissier, will take the field. General Simpson and General La Marmora will hold defensive positions. The fleet has received orders for important operations. The Allied forces are full of confidence.

An Odessa letter of the 19th, published in the *Military Gazette* of Vienna, says: "It is notified with suspicion that the Governor-General of the Crimea has countermanded and prohibited the further introduction of provisions and goods into that peninsula."

The Paris journals of Wednesday state that the news of a great battle was shortly expected from the Crimea, as though they were in possession of information which enabled them to speak with certainty on that point. There is, however, reason to believe that these prognostics rest merely upon conjecture, both the Allied Governments having determined to observe the utmost secrecy with regard to the information which may be received from the seat of war. The conjecture is not, however, devoid of probability, if we may judge from the reinforcements being daily sent off to the Allied Commanders.

THE DEMONSTRATION AT EUPATORIA.

The brief telegraphic despatch given last week, regarding a movement from Eupatoria against the Russians has been confirmed. The following despatch from Prince Gortschakoff, in the *Warsaw Gazette*, speaks of a division of the Allied army having been sent to Eupatoria, but we can find no evidence of this in the letters from the Camp:—

> Sept. 22.
>
> The enemy has conveyed to Eupatoria about 20,000 men, and has so concentrated there about 30,000 troops. The enemy daily attacks the left flank of our positions. On the 22nd the enemy had an engagement with our cavalry, after which he withdrew towards the road of Simferopol, and towards the mountains. On the 23rd the enemy redescended from the mountains, and forced a passage.
>
> The "daily attacks" to which the Russian General alludes must have been towards Baidar. The *Military Gazette* of Vienna makes the following remarks on the present picture of affairs:—
>
> The demonstration so often declared and so often denied to come from Eupatoria appears, after all, to be really about to be made. Prince Gorstchakoff reports on the 23rd ult. that nearly 30,000 men are concentrated at that spot that his left wing is repeatedly alarmed, and that on the 22nd there was a collision with the Russian infantry, after which the Allies withdrew to Urkusch, descended, however, the plateau again on the 23rd, and repaired a road. Since Urkusch, Kadikoi, lies in the north east of the right wing of the Tchernaya, and Russian detachments stood before the 8th of September near Fort Nikolaieff, on the left bank of the Tchernaya, it results from the above despatch that the district of the Tchernaya is in the hands of the Allies, and that the Russians have stationed their left wing at Tchufut-Kale, and their centre near Mangup Kaleh and Mackenzie's Farm, so that the right wing beyond Inkerman as far as the north forts, while the bulk of the army is at Bagtcheserai.
>
> The attack on the Russian left wing near Tchufut-Kale, if repeated and successfully followed up, may be intended to produce the evacuation of the positions mentioned above, and thus force the Russians to fall back on their main body. The difficulties of the ground are, nevertheless, of such a description, that a practicable route for cannon only exists along the regular road beyond the Tchernaya, near Kam Most Farm, through Kadikoi, Makenzie, then across the Belbec, near Khutor. The possession of the road is to be secured before any further offensive operations can be carried on.

Prince Gortschakoff writes, on the 26th, that on the previous evening the enemy had debouched from Eupatoria to the number of 35,000 men, and occupied some neighbouring villages, from which they withdrew towards evening. On our left flank (he adds) nothing new has occurred.

RUSSIAN VERSION OF THE CAPTURE OF SEBASTOPOL

The first Russian version of the fall of Sebastopol is contained in a general order addressed by Prince Gortschakoff to his troops, and in an incomplete report of the progress of the siege published in the *Invalide Russe*. The Russian General, after lauding the efforts made by the army under his command, goes on to explain that at last the place became too hot for them:—

> As the approaches of the enemy gradually advanced, their batteries were erected nearer the walls. The circle of fire which surrounded Sebastopol grew daily narrower, and sent death and destruction upon the courageous defenders still further into the town. Taking advantage of the superiority of their fire at short range, the enemy after the concentrated action of their artillery during thirty days—which cost our garrison from 500 to 1000 men per day—commenced that terrible bombardment (*bombardement d'enfer*) from their innumerable engines of war, and of a calibre hitherto unknown, which destroyed our defences, which had been repaired night after night with great labour and at great loss, under the incessant fire of the enemy. The principal work, the Kornilof Redoubt, on the Malakoff Hill (the key of Sebastopol as a part dominating the whole town), having experienced considerable and irreparable damage.
>
> To continue under these circumstances the defence of the south side would have been to expose our troops daily to a useless butchery, and their preservation is to-day, more than ever, necessary to the Emperor of Russia.
>
> For these reasons—with sorrow in my heart, but with a full conviction I resolved to evacuate Sebastopol, and take over the troops to the north side by the bridge constructed beforehand over the bay by boats.
>
> We still occupy the position which protects Sebastopol on the enemy's hands. Did not remember the sacrifice we made for the sake of Moscow in 1812. Moscow was surely as valuable as Sebastopol: we abandoned it to the immortal battle of Borodino. The defence of Sebastopol during 349 days is superior to Borodino; and when the enemy entered Moscow in that great year of 1812 they only found heaps of stones and ashes. Likewise, it is not Sebastopol we have left to them, but the heaps of stones from which we have ourselves set fire to, having abandoned the defence of the defence in such a manner that our great-grandchildren may recall the remembrance thereof with pride to all posterity.
>
> Sebastopol, I repeat, is abandoned to ruins, with its full walls, its precipices of movement, and a new war commences, a war in the open field, that most congenial to the Russian character. Let us prove to the Emperor, brave soldiers of Russia, that we are still imbued with the spirit which animated our troops in our memorable and patriotic struggle. Wherever the enemy may show himself we will present our breasts to him, and defend our native land as we defended it in 1812.

NATIONAL SPORTS.

The Second October Meeting, which lasts from Monday to Friday next, bids fair to have very "holding" ground, and rather a good list. Only half-a-dozen matches are at present made for it; and, in fact, this class of sport, which was once the very heart-blood of the meetings, when the giants of the turf were wont to meet in front round the Club decanters, is each year becoming less fashionable. On Monday, Mary Copp and Habena are engaged in two races, for which they will most likely walk over; and, in addition to smaller stakes, there are three matches. The Royal Stakes, with Peroe, Chalice, Clementina colt, Pilatot, Hazel, and Claret (5lb. extra) in it; and the Clearwell Stakes, in which Nina filly, Porto Rico, and a dark colt, probably headed by Findon, a son of Touchstone and Alice Hawthorne, will appear, are the two events of most note on Tuesday, next we see the Chesterfield, which has 73 scratchers. The top weights, Rataplan and Muscovite, who has, it is said, been specially kept for it all the season, will most probably both go, along with King Tom and Typee. The field is likely to be very large; and Hobgill will, by that time, represent Parr; but, as far as weights are concerned, Mr. Sykes, a five-year old, with only 6st. 81b. on, including his penalty, has far the best of it. There will be a novelty on this day in the shape of a Thousand Sovereigns (h. f.) Triennial Match, between the Duke of Richmond and Lord Glasgow. All six of the Duke's nominations are living, and only five out of Lord Glasgow's seven; but "not more than two to the post" are the conditions. Mincepie's Stockbridge running seems to promise her the Bedford Stakes on Wednesday, while the Bold Buckleian cannot start for his fifty sovs. sweepstakes. On Thursday the principal feature is the Bretby Stakes, which has thirteen fillies on it, with Kalopyge and West Australian's dark sister Victoria among them. Kalopyge is also in the Prendergast on Friday, with Porto Rico, Overreach, Dramatist, and eleven others. The veteran Duke of Rutland is at "the Palace," but too unwell either to go on the heath or enjoy partridge-shooting at Cheveley.

The Caledonian Hunt is fixed for Wednesday, Thursday, and Friday; and there will also be meetings at Bramcote and Lincoln on Tuesday, and at Steyning on Thursday. Some trotting races, with Alma, Sebastopol, and Inkerman Stakes, are also announced at Aintree on Wednesday—professedly for the Patriotic Fund. The gigantic Ephesus passes into the hands of the Prussians for £1000. He won fifteen out of thirty-three starts in his five seasons, or stakes to the amount of £3110. His distance was three-quarters of a mile, and over a T.Y.C., even with 9st. 7lb on his back, he was always dangerous. Captain White, of Melton and Cheshire fox-hunting renown has bought Mr. Mare's colt, in which he has always, we believe, had a slight interest. These Newmarket matters were inquired most affectionately after at the meeting of the creditors on Thursday week. The horses were served under a warrant from Sir William Booth, the present high Sheriff of Cambridgeshire, who had some two or three in training with Mr. Mare's. Hence, as the ruthless bailiff knew no distinction, the High Sheriff, like "the man who eloped with his own wife," found that his property had been seized by his own horses. All the Marquis of Waterford's stud, announced for sale at Carraghan are on the 26th instant, and Bingo's own, who broke down trying Oulston last July, is to be let or sold. The weights are out for the Leamington steeplechase; and Bourton, 12st 7lb, heads the 23. Mr. Saxon has been fined 40s. and made to find sureties, for striking a man who asserted on Lichfield Ground Stand that his horse Cleveland was being "pulled." The horse really broke down at that moment so badly that Mr. Saxon lost his money, and Mr. Drake after refusing £250, to sell him for £5.

The Scotch coursers have had no small loss on Bright Idea, who broke her leg in a private trial last week; though, like War-Eagle in his last course, she would not be denied, and struggled on for nearly a quarter of a mile. She won the greatest Scotch Cup of last season, and was never led to her hare except by Judge, who is quite the speediest greyhound of the day. The Border St. Leger (club) and the All Aged Stakes (open), in Roxburghshire, will be run for on Thursday, &c., at the Cumbernauss Meeting is also fixed for Tuesday and Wednesday, and the North Union (Antrim) for Wednesday and Thursday next; the Wild Dayrell and Craven Open close on Wednesday, and come on November 12th. The notes of hound and horn are once more heard in the woodlands, and in the course of ten days the regular meets will commence. Foxes, owing to the long frost and snow of last season, and the dry summer, which has prevented the young hounds not a little from improving their acquaintance with the scent, are exceedingly dark on the Atherstone country. A great deal is expected in the Atherstone country from Mr. Selby Lowndes's beautiful "Lady pack." We are sorry to hear that ill-health will compel Mr. Drake to lay aside his scarlet for at least two seasons. Lord Alvanley, the hunting circles is that the master of the Cottesmore country. Mr. John Trollope, has bought his pack at a low figure, with the understanding that if at the end of two seasons Mr. Drake resumes hunting, he is to have them back at the same, Sir John engaging to buy them outright in the other event, at an advanced price.

The once celebrated yacht, *America*, has lain dormant all the season, at the Isle of Wight. It is yet to be proved that an English yacht can outsail her, and when a certain keel fruitless form of hull, her beautiful lines and running, powerful stern, we long for the Yankee sew back, which has distanced so exquisitely in the Great Exhibition year, to show that she could still hold her own. Sailing matches for the season are quite ended; but there will be a boat race from Woolwich to Limehouse Hole for £50 a side, on Friday, between two Oxford boatmen and two from Newcastle-on Tyne.

CHESTER AUTUMN MEETING—TUESDAY.

Mickleham Stakes—The Chicken, 1.	Tramp, 2
Dukinfield Plate—Mincepie, 1	Lollard, 2
Tarporley Stakes—Rataplan, 1	Lady Wise, 2
Chester Handicap—Bengal, 1	Mary Copp, 2
Julius Stakes—Alma, 1	Habena, 2

WEDNESDAY.

Nursery Stakes—Nina Sosa, 1	Pilot, 2
Grosvenor Stakes—Pyrrha, 1	Mickleham, 2
Chester Handicap—Bengal, 1	The Chicken, 2.
Whitefield Handicap—Stray Petrel filly, 1.	First Fly, 2.
Pair of Stakes—Peroe, 1	Master Slender, 2

THURSDAY.

Produce Stakes—George Lindsay, 1	Minos, 2.
Town Stakes—Ledbeaux, 1	[illegible], 2
Leicestershire Stakes—Mincepie, 1	Wallace, 2.
Two-year-old Stakes—Mathematician, 1	Ceres, 2

FRIDAY.

Handicap Stakes—Mary Copp, 1	[illegible], 2
Sweepstakes—Parr, 1	The Pet, 2
Queen's Plate—Quince, 1	Wanderer, 2
Stratton Park Stakes—Georgium Sidus, 1	Tramp, 2

ON DRAWING ANIMALS IN MOTION.

HORSES WALKING AND TROTTING.

(To the Editor of the ILLUSTRATED LONDON NEWS.*)*

Sir,—Having received applications for further information respecting the mode of drawing horses in motion, I venture to ask you to grant me once more and finally a small space for [illegible].

It must be borne in mind that before we can succeed in representing nature in motion we must be able to depict her accurately at rest; and, as a means of attaining this proficiency, I [illegible] in my letter of the 4th August, the adoption of the calculations of the eye. As the student becomes more expert [illegible] he may dispense with the aid of the compasses altogether, and trust entirely to the correctness of his eye. This, however, cannot be acquired until this aid might be nearly altogether dispensed with. A sensible habit of mechanical accuracy is a preliminary to the attainment of mental [illegible]. We do not find that the man writes crookedly because the boy is taught to form "round text" and "small hand" by the [illegible] rules. The rules of perspective should of course be mastered, but the adaptation of these rules to practice depends in a great degree upon the cultivation of the mind and eye. The data from which we start in drawing perspective may be erroneous, unless they are [illegible] determined by a power of truthful observation so rare in its existence and convenient that we may well be surprised at ever finding anything approaching the perspective of nature. Even when the art of true perspective [illegible] is acquired, the skill to put it in motion and give it vitality must be [illegible]. We may master all rules, and yet produce nothing worth possessing.

The question to be answered now is, How does the horse walk and trot, and how should these movements be represented by the artist? Trotting is [illegible] walking—the principle of both paces is the same—the [illegible] appeared to make room for the hind one on the same side. It has been asserted, "the horse exercises his motive power laterally or diagonally." [illegible] [illegible] [illegible] M. Youatt, in his valuable work [illegible] [illegible] [illegible] which he found it. The [illegible] appears to be that the horse's motion in these paces is the result of [illegible] and of the lateral and diagonal impulses; no two of his legs move [illegible] consecutively at the same angle; one foot precedes another in such a manner that a succession of instants two feet on the same side are alternately on and off the ground together, but not for the same duration of time. The same effect is produced diagonally at corresponding intervals. We may here observe that in *all* the horse's paces the hind feet are moved *first*; in them principally resides the propelling power.

This variety of movement prevents the working and fatiguing of the same muscles perpetually at the same moment: it is in reality the secret of the horse's grace and power of action. The artist, therefore, need not be [illegible] to representing any one particular aspect of walking and trotting: he may seize and depict that feature of movement which best pleases his fancy, and suits his skill, provided it be natural.

The horse is not a machine; he exercises a volition over each limb separately or unitedly; and the power of will may be shown in no endless variety of action according to his mood or the state of circumstances in which he is placed.

We all know the conventional mode of representing horses walking and trotting: two legs placed diagonally are squared up in the air, while the other two are fixed on the ground. We need no ghost to tell us that the animal does not raise a foot on one side of his body until the corresponding foot on the other side is securely established on the ground. Ought we, therefore, to attempt to escape this fact? Certainly not, if we wish to convey the idea of speed. In fast trotting, the eye cannot clearly discern the horse's feet touching the ground at right angles with the line of vision: who would dare to venture to paint nature more distinctly than she represents herself? The most permanent impression made on the eye is that of four legs moving in the air. Why, then, should we hesitate to represent that which is the most palpable aspect of the horse's pace? We must also avoid lifting the horse's legs too high and too forward. Perhaps the following suggestion may supply a rule for the required action

At the point of the horse's body where the fore-leg [illegible] the chest—I am speaking turbanously, without the slightest regard to anatomical nomenclature—form a right angle by drawing a horizontal line (A) parallel with the ground, and in the direction in which the animal moves forward, and another line (B) perpendicularly to the ground. While the leg is standing straight, the toe projects beyond the knee; but when the knee is raised to its highest point, it projects beyond the toe, and the toe gradually recovers its prominence just before the foot touches the ground. It is, therefore, erroneous drawing to represent the foot in advance of the knee when the [illegible] is at its full height. It is true that some horses, trained like actors in [illegible] *haute école*, may be taught to jerk out their toes in an affected manner, but we must, however, be understood not to speak of these boarding-school acrobats, but of animals, who want to do their work without having any time to spare or strength to waste in fanciful tricks and antics. How high ought the knee to be lifted? Measured by the horizontal line (A), it ought not to form a more acute angle than 40 to 45 degrees in walking, or 20 to 23 degrees in trotting. The average angles are, of course, much more obtuse than these, being about 60 to 45 degrees in trotting, and 45 to 55 in walking. The horse that wishes to display himself at more difficult angles is too energetic and wasteful for me, and he may find somebody else to choose him for a [illegible] purpose. In a certain dandy's window in Cornhill, might have been seen, very recently, a silver model of a horse in the presumed attitude of trotting [illegible]. I suppose there is a slow demand for this kind of Art-work, for the specimen was in that window many years, but within the last few days it has been withdrawn, doubtless to make room for more profitable merchandise. This "article" is among my earliest recollections, and it must have been studied by many delineators of horses to the detriment of the artists. The model is sufficiently well done to be a mischievous example, and it exhibits the [illegible] fault above mentioned. The feet of the off-fore-leg are [illegible] projected that it looks as if it were groping for a [illegible] endeavour to shake hands with somebody.

An attempt has been made to distinguish the movements of the camel from those of the horse, and it has been asserted that the action of the former is entirely lateral—that is to say, that he moves his legs first on one side and then on the other. I believe that this impression is a popular error, and that the camel's movements are composed, like those of the horse; but the camel being more ungainly, deliberate, and less nimble, the lateral aspect of his action is more apparent to the eye of the observer, and is naturally and habitually considered to be this animal's speciality. Making due allowance for differences of structure and habits, I think we may safely assert that all quadrupeds move in the same manner, or in accordance with the same principles.

I cannot conclude this chapter on the horse without some reference to the goodness of his nature and the kindness he deserves. He has been accused unjustly and disparagingly compared with a dog, and considered to feel little attachment to his master. The comparison is irrelevant. We might as well complain that the mountain stream does not possess the same [illegible] the grape which grows on its borders. If, however, the horse can be easily weaned from a master, where can we find a creature more faithful to his work—more courageous in the execution of his duty? Labour rather than [illegible] person who directs it is the object of his fidelity.

As man rises in nobleness of character, we may hope that animals will rise proportionally in the scale of intelligence and disposition. Because they are at our mercy we ought to be more earnest in treating them mercifully. We may be sure that humanity to animals is not among the least of those virtues which Man is endowed by the Supreme Being.

I remain, &c.

Hyde-vale, Blackheath. [illegible]

WATERSPOUT IN THE ISLAND OF CAPRI.

(From our own Correspondent.)

The subject of this Sketch is of twofold interest. It contains a portion of a panoramic view, which your Artist recently took of the enchanting island of Capri, as also the form of a Waterspout, which entered a few days since from the sea and inflicted great loss on the proprietors of the soil. Capri, distant from Naples about seventeen Neapolitan miles, from Sorrento seven, and from the nearest land two, is one of the most classic, as well as lovely, spots in the neighbourhood. It was the Syren Island of Homer by which Ulysses passed, and the name is still retained in some localities. In later times it became the metropolis of the world, under the Emperor Tiberius, who resided here seven years, and the records of his infamy and his luxury, as well as of Roman grandeur, still remain. In modern times it has had a peculiar interest for the English traveller, as having been surprised by the British troops in 1808, who kept possession of it under Sir Hudson Lowe, till Minos, &c. 1808, when they were expelled by the French under General Lamarque. Abounding as it does with so many interesting associations, the Island of Capri forms a prominent feature in the tour of every visitor to Naples. The peculiarity of its size and situation renders it a desirable residence for the invalid suffering from chronic bronchitis, and of late years it has been visited by many a sufferer with great advantage. During the summer months it is much frequented by artists, who here find inexhaustible materials for the pencil, and not few are the paintings executed here—those of Fripp and others—which have graced our exhibitions. We took our sketch early in the morning from an elevated spot now dedicated to St. Michele, formerly the site of an Imperial palace; on the left are the remains of the ancient Monastery of the Certosini, suppressed by the French during the last war, and now tenanted by soldiers. A conical mountain, called Castiglione, occupies the centre, at the foot of which rises the little town, with its cathedral and its barracks. The stupendous rock of Cura Capri, which on the extreme right rises to the height of 1800 feet, is separated from the Castiglione by a deep and picturesque valley, terminating on the south in the Piccola Marina; and here, where our foreground rests the galley of Imperial Rome, no other object is to be seen than the bark of the weather-beaten fisherman, who is dragging his nets on the scanty shore. Retracing this valley, a walk across the saddle of the island, of less than a mile, will lead the traveller to Marina Grande on the north, where he landed.

During the autumnal and winter seasons Capri seems as though it were set up in the centre of the bay to receive and ward off the fury of the elements from the capital. Thunder and lightning, wind, rain, and waterspouts are familiar and play about it constantly, especially do these leviathans of the air, waterspouts—or, as the natives call them, "Code del Zefiro"—lead their gigantic dance around the island of Syrens, now threatening every thing with destruction, now rushing out again to sea, filling the sailor's heart with fear, and sometimes entering, and marking their course with ruin. We have watched them frequently, six or eight at a time, sailing majestically through the narrow strait which separates Capri from the mainland, and far overtopping its highest elevation. The Waterspout we have sketched is one of two which entered the land on September 2nd. Its form was as that of a corkscrew, its height could not have been less than 3000 feet, its diameter was full half a mile, whilst the roar which it made was as that of a mighty rushing wind swelling louder and fearfully louder as it advanced. On its landing it lost the distinctness of its form, the island appeared to be covered with a thick mist, and the rain descended as though in buckets, washing the scanty soil from the very bones of the land, snapping the olive-tree like reeds, and hurling them through the air. As it entered from the S.W., so it passed off towards the N.E., and was "out" in the strait—so says public rumour—by a sailor on board a schooner.

WATERSPOUT IN THE ISLE OF CAPRI.—(SEE PRECEDING PAGE.)

THE IMPERIAL ASYLUM FOR CONVALESCENT WORKMEN, AT VINCENNES.

The Minister of the Interior, accompanied by M. Collet-Meygret, the Director-General of Public Safety, has lately laid the first stone of an institution which owes its realisation to the Emperor. On the outskirts of the fine Forest of Vincennes a spot had been cleared early in the summer by Government command. A new effort was about to be made to add more comfort to the condition of working men. The Emperor, in founding an Asylum for Convalescent Workmen, sagaciously read the requirements of the class; for if, in a workman's career there be one time more distressing than any other it is that spent in gaining strength after dismissal from the hospital. The illness that paralyses the arm upon which the chief support of a family rests brings not only sorrow but want. While the father is in the hospital the modest children too often want food at home. But while the workman is in the hospital, a clever housewife may often manage to work profitably enough to prevent starvation, or keep clear of the workhouse. Women and children generally have but the simplest wants, and can live upon wonderfully limited means; but the sick husband returns home, however, to gather strength, and brings with him all the peevishness and the cravings for luxuries peculiar to a weak convalescent; and then the money falls utterly, and the pawnbroker advances to play his part in the by-way tragedy. The poor fellow can hardly hope to gather strength and cheerfulness while such a struggle is going on around him. He makes an effort to begin work again before his strength is fairly re-established: the result being often a serious relapse, and a repetition of the drama from the beginning. It is at this point that the conductors of the Asylum for Convalescent Working Men are to step in and offer to the weak patient the pure air and shady walks of the Forest of Vincennes. Here, in a splendid building, standing in the midst of its own grounds, and marking one of the boundaries of the forest, he will find the comforts and cheering influences necessary to his proper establishment in health; and hence he may go direct to his work and join his family only when he can make more support: such an institution is no insignificant, no false boon to working men; and we are glad to learn that the Vincennes building, the first stone of which has been lately laid by the Minister of the Interior, is to be copied in various parts of France. The scene upon the cleared ground, when the Minister and Director-General were in the gorgeous red velvet tent, supplied by Roman Catholic clergy, was most picturesque, and bore but a fated resemblance to the laying of a foundation-stone in England. Red flammes and eagles were plentifully scattered about; music was there to enliven the proceedings; and a speech from the Minister explaining the Emperor's ideas and the plan by which it was to be realised was not wanting. All parties returned to Paris on that fine afternoon, convinced that they had assisted in the creation of a very useful, a very holy institution.

CEREMONY OF LAYING THE FIRST STONE OF THE ASYLUM FOR CONVALESCENT WORKMEN, AT VINCENNES.

WEST-END BRANCH OF THE BANK OF ENGLAND, BURLINGTON-GARDENS.

ANOTHER of the few fine architectural mansions of the metropolis has just been appropriated to a very different purpose to that for which it was originally built. A short time since we illustrated Burlington House, prior to its being converted into public offices, or being taken down; and we have now to chronicle, in the same locality, the conversion of Uxbridge House into a Banking house

The site of this fine mansion was originally part of "Ten Acres Field," which extended from Bond-street to Swallow-street. Here Leoni built, in 1720, a London residence for the Duke and Duchess of Queensbury, who befriended Gay: the poet died here, Dec. 4, 1732. This mansion, known as Queensbury House, was engraved by Pleart. It was taken down in 1792, when Vardy, architect of Spencer House and of the Horse Guards, built upon the same spot the present mansion, which, on becoming the town-house of the Marquis of Anglesey, was named Uxbridge House. The venerable Field Marshal expired here, in 1854.

The mansion has been purchased by the Directors of the Bank of England, it is stated, for the sum of nearly £50,000; and it has been converted into a "Branch Bank," for the accommodation of the inhabitants of the west-end of the metropolis. The principal attraction externally is the opening of a doorway in the façade in Burlington-gardens, the only entrance having hitherto been from Cork-street. The new entrance is beneath a handsome portico of Portland stone. The whole of the ground floor is to be devoted to the business of the Bank; and the upper part of the house will be appropriated to the residences of Captain Tindal, R.N., the Manager, and Mr. Miller, the sub manager. The spacious and lofty dining-room of the house has been converted into the principal office of the Bank, and two other of the largest rooms on the ground floor are intended to be used as the manager's private room, and a general waiting room. The necessary alterations in the building have been executed by Messrs. William Cubitt and Co., from designs by Mr. Philip Hardwicke, the architect. The whole of the works are not yet completed, but such of the changes as were required to enable the Directors to open the establishment, have been executed in less than two months.

The Branch Bank was opened for business on Monday last; pursuant to the following advertisement:—

BANK OF ENGLAND, OCT. 1, 1855.—The Governor and Company of the Bank of England hereby give notice that they have established a Branch of the Banking Department of the Bank of England at Uxbridge House, Burlington-gardens, and which is now open for business. Banking business in its ordinary branches is transacted. Private and commercial accounts are kept, purchases and sales of stock effected, post bills issued, money transmitted to any of the country branches of the Bank, and plate and securities may be deposited by parties keeping accounts.

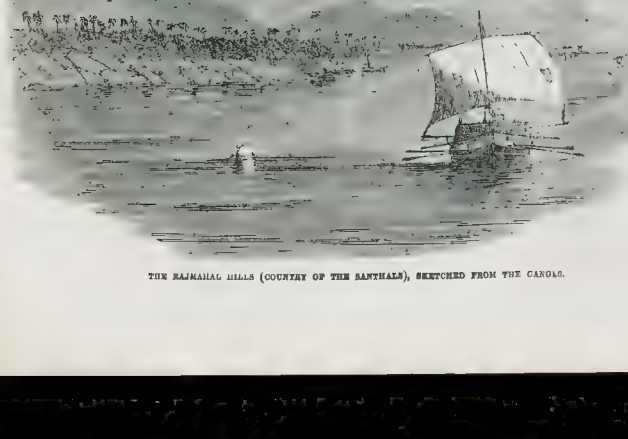
[WEST-END BRANCH BANK OF ENGLAND (UXBRIDGE HOUSE).

THE SANTHAL INSURRECTION.

ACCORDING to the latest accounts from India, the Santhal insurrection continued to devastate the country; but the insurgents were being hemmed in on all sides by our troops, and, it was thought would speedily yield to force of arms. The causes of the outbreak are still dubious; it is probable, indeed, that a combination of motives may have induced the rising. The 30,000 men supposed to be in the country are scattered about in small parties, committing ravages so atrocious that one shudders on reading them. The conflicts betwixt them and the regular troops have invariably ended in the overthrow of the barbarians; and as the close of their career approaches, it becomes matter of consideration how those that may escape shall be dealt with. Capital punishments to the extent that they are deserved, would imply an amount of slaughter not to be thought of. Those who have once tasted the pleasure of plundering the plains, may, if left in their mountains, come to forget the results of their misconduct, and repeat practices the very thought of which must keep the provinces around them in alarm. The fertile plains of Pegu, productive enough to supply food to millions, and to extinguish the apprehension of famine in Madras, lie barren for want of cultivators; and, as the Santhals are an industrious, hard-working race, never until now charged with impropriety, the *Friend of India* has proposed that the whole of those engaged in the insurrection should, with their household goods and families, be from henceforth located in British Burmah.

Bhaugulpore is the centre to which the population of the plundered districts has flocked by thousands, and from which military operations are directed against the rebels. The prevailing opinion there is that the insurrection is owing to one of two causes—viz., to the (alleged) oppression and insult to which the Santhals have been subjected at the hands of the railway people, or to the too severe application of the "rent screw" to the Government ryots of the Damun-i-koh. The feeling which has caused a rising *en masse* of a tribe scattered over some hundreds of square miles seems, however, to be far more general. Every fresh case of murder and pillage strengthens the conviction that religious fanaticism (heightened doubtless by a taste for blood and plunder) is the sole motive by which the rebels are actuated. An impostor, professing to have received a direct communication from the Deity, has called the tribe to arms, declaring that he is the instrument destined by Providence to reinstate the Santhals in the lands held by their fathers in past ages. In furtherance of this end they are directed to destroy without mercy every soul falling into their hands, with the exception of members of the following castes, viz., herdsmen, oil manufacturers, carpenters, blacksmiths, and potters; these are likely to be of service to the future lords of the soil, and are in no instance to be molested.

The effect of such a communication on a race of savage, ignorant men has been fearful, worked up to a state of frenzy by their Poojahs, at which human sacrifices are offered; they have rushed like wild beasts upon the defenceless population, butchering and mutilating in the most horrible manner men, women, and children. Whilst troops were being concentrated in Rajmahal and Berhampore, the large purgunnas of Colgong, Munneares, part of Bhaugulpore, Godda-Pussye, Chundweh, and Hendweh, have been left to their fate. The loss of life and property within these purgunnas has been fearful; fire and sword have reigned supreme within sixteen miles of this station, and within four of Colgong—that town, with the villages on the river bank, being indebted for their escape rather to the inundation than to any measures taken for their defence. Troops have since been moved out for the defence of the country, but without cavalry they can do but little against an enemy unencumbered with accoutrements or baggage, and whose late experiences have taught them the folly of an encounter with regular troops. Extreme severity, death to all found with arms in their hands or plunder in their houses, can alone save the remainder of the district from pillage. Martial law, most properly proclaimed by the authorities, has been rescinded by an order from Calcutta.



THE RAJMAHAL HILLS (COUNTRY OF THE SANTHALS), SKETCHED FROM THE CANALS.

THE NEW GOVERNOR-GENERAL OF THE WINDWARD ISLANDS.

MR. HINCKS, the newly-appointed Governor-General of the Windward Islands, is the fifth and youngest son of the Rev. Dr. Hincks, for many years Professor of Oriental Languages in the Royal Belfast Institution. His surviving brothers are—first, the Rev. Dr. Hincks, Rector of Killyleagh

MR. HINCKS, THE NEW GOVERNOR-GENERAL OF THE WINDWARD ISLANDS.—FROM A PHOTOGRAPH BY MAYALL.

the well-known author of papers in the *Transactions of the Royal Irish Academy* on subjects connected with Egyptian, Persian, and Assyrian Archæology; second, the Rev. W. Hincks, formerly Professor of Natural History in Queen's College, Toronto; third, the Rev. Thomas Hincks, Rector of Derry Keghan, in the diocese of Connor. Mr. Hincks' father is of a Cheshire family—a younger branch of which is now settled at Brecknborough in Yorkshire, as stated in Burke's "Landed Gentry." Both are descended from W. Hincks, Esq., an Alderman of the city of Chester in 1641.

The subject of this notice was educated at Fermoy School, and at the Royal Belfast Institution. He afterwards engaged in commercial pursuits, and finally emigrated to Canada in the year 1832, having previously paid a short visit to that province. In 1841 Mr. Hincks embarked in political life as proprietor and editor of the *Toronto Examiner*, which, under his management, exercised an important political influence. On the union of the provinces being completed, he was invited to be the Liberal candidate

for the county of Oxford, and, although labouring under the disadvantage of being a non-resident and personally unknown to the electors, was returned after a severe contest. He took a prominent part in the discussion of financial questions, and was a zealous advocate for Lord Sydenham's favourite measure of a Bank of Issue. In 1842 he joined the Government, which had been formed under Lord Sydenham, as Inspector-General (Finance Minister), and continued to hold the same office after the reconstruction of the Government, when Messrs. Lafontaine and Baldwin came in with their friends. In 1843 the members of the Administration resigned with one exception, owing to Lord Metcalfe's refusal to treat them as Ministers, or to acknowledge their constitutional position. In the agitation which followed, and which ended in the complete triumph of the ex Ministers, Mr. Hincks took an active part. He established a new paper at Montreal, as the organ of the opposition, and occasionally published pamphlets in defence of the principles of his party, which, it may be observed, are now universally recognised as correct; although at the time of the resignation Lord Metcalfe had many apologists. The result of the general election at the close of 1847 was a complete triumph for the principles advocated on the resignation of the Cabinet five minority earlier. Mr. Lafontaine now Sir L. H. Lafontaine, Bart.) was sent for by Lord Elgin, and returned to office with several of his former colleagues, and among others Mr. Hincks, who resumed his former office of Inspector General. In 1851 Mr. Lafontaine retired from public life, and Mr. Hincks was sent for by the Earl of Elgin, in conjunction with Mr Morin, and formed the Government which continued in office until last year, when it was defeated by a combination of the various elements of the opposition. A Coalition Government followed, to which Mr. Hincks gave his support, and which embraced several of his former colleagues At the close of the Session Mr. Hincks visited England, and was offered by Sir Wm. Molesworth the office of Governor in Chief of the Windward Islands, in reference to which it has been well stated by a contemporary—

> We have great pleasure in announcing that the Queen, upon the recommendation of Sir William Molesworth, has appointed Mr Hincks, a distinguished member of the Canadian Legislature, to the Governorship of Barbadoes. This appointment is not simple a matter as it would appear to be at first sight. It is the inauguration of a totally different system of policy to that which has been hitherto pursued with regard to our Colonies. We consider that it may be carried out to its legitimate extent, and that the more distinguished among our fellow-subjects in the Colonies may feel that the path of honourable ambition is henceforth open to them They are not Canadians, Australians, or Cape colonists, there dwellers in Jamaica or at the Cape, but Englishmen as much at home and before all—Englishmen who have the same legitimate rights to hold the highest offices in the Church or State, or in any other sphere, as any person born within the four seas. It is the feeling of Englishmen at home that this ought henceforward to be the rule of policy. The wonderful facilities of communication which now exist between the various quarters of the globe will tend indeed to make it impossible for the rule to be set for a moment that a young colonist, or a middle-aged colonist, or an old colonist, has any greater difficulties to contend with than we have ourselves. If a subject of the British Crown, born in the mother country, determines to enter upon a political career, and is at the same time connected with many of the great families or political cliques, his battle will be his made a position for himself, is just as secure as that of any colonist could be. In point of fact, the balance of chances is rather against him: for if a British subject, born in an important colony such as Canada or Australia, he has the power of obtaining early distinction in the local Legislature, which is denied to his competitor born in the mother country. We trust that the appointment of Mr Hincks to a Colonial Governorship will show that at home we have no prejudice in the matter, and ask no better than to call into the service of the country talent—home-grown or colonial: in fact, talent wherever it may be found.

The hon. gentleman left town last Friday, *en route* for Canada, where he will remain for about a month, previous to going to Barbadoes as Governor-in-Chief of the Windward Island-.

MUSIC.

THE CONCENTORES SOCIETY.—Our London musical readers are well acquainted with this old and excellent society, whose proceedings we have more than once had occasion to chronicle. But, for more general information, we may say that the "Concentores Sodales" are a body of eminent professional musicians, united for the purpose of cultivating that branch of them art for which the English school has for three centuries been pre-eminent- pure vocal harmony. The Concentores Society, we believe, is of forty years' standing, and during that long period has numbered among its members the most distinguished musicians of the time To be a member it is necessary to be a composer. At its meetings, which are regularly held during the season the president (one of the honorary members taking the chair in rotation) is expected to furnish, by new compositions of his own, the chief portion of the evening's entertainment. They are carefully sung, freely but good-humouredly criticised, and often give rise to pleasant and interesting discussions on the principles and practice of the art. From this usage our greatest masters have derived benefit; and many of their most popular works have first been heard, and their merits canvassed, at the board of the Concentores Society.

The first meeting of the season took place on Monday last, as usual, at Gresham College. Mr. M'Murdie was the president of the evening, and Professor Taylor was the vice-president. There was a full attendance of members; and among the vocalists were Messrs. Benson, Barnby Buckland, Coward, Handel Gear, E. Hopkins, C. Spencer, and Monk In addition to the new works which, in compliance with the society's rule, were brought forward by the president himself, a number of the finest ancient and modern glees and canons were sung, and received much applause from the accomplished performers. Of the new compositions by the President, three attracted peculiar notice, and were much admired.—A Canon for four voices, "As the hart pants," the words from the 42nd Psalm; a Round for three voices, "My Phillida, adieu, love!" on some quaint lines from the old poetical collection, "The Golden Garland;" and a Glee for four voices with chorus, "Queen of fresh flowers," the words by Heber. The first of these is a remarkable specimen of a most difficult class of composition. It is technically denominated "Canon 4 in 2;" a canon, that is to say, for four voices and on two subjects. In the present instance, the two subjects are led off by the two altos, and then taken up at the end of six bars an octave lower by the tenor and bass, while the subjects are further extended by the two upper parts. Rich harmony in four real parts and double counterpoint is thus created, and carried on to the end. The great difficulty in the canon is, that no admission is given (as in the fugue), to free or episodical matter; every bar must be answered with perfect precision, and the slightest license is not permitted. To accomplish all this, and at the same time to produce flowing, melodious, and expressive music, is a task which demands genius as well as skill; and that Mr. M'Murdie had done so was the opinion of every one. The three-part round gave great delight from its simplicity and tenderness and the glee, "Queen of fresh flowers," was pronounced one of the freshest and most graceful things of its class that have appeared for a long time. One feature of Mr. M'Murdie's music has always been its exceedingly *simple* quality: the singer is never troubled, nor the hearer offended, with crude, unvocal intervals. We trust that these pieces will be published. Glee-singing is not so much cultivated as it has been, and ought to be. But the lyrical works of our Wilbyes, Calletts, Horsleys, and Hullahs, are not yet thrown on the shelf; on the contrary, the taste for our pure English vocal harmony is evidently reviving.

THE THEATRES.

MARYLEBONE.—This theatre has passed under a new management: that of Mr. Douglass, of the "Standard," from whose indefatigable energy the greatest results may be expected. The audience part of the house has been much enlarged by throwing back the proscenium, and the whole extent of the long stage was, on Monday, used in the disposition of the scenery, when a new piece was mounted to inaugurate the new lessee ship, entitled "Pride and Patience," which was ably acted, and perfectly successful. It is part of Mr. Douglass' plan to make this "a sterling theatre," and he has already announced several distinguished names by which his future efforts are to be illustrated; amongst them are Mr. Anderson, Mrs. Wallack, and Miss Heraud.

DRURY LANE. —"Nitocris," Mr. Fitzball's Egyptian drama, which the manager intended to produce last Monday is deferred until next. Mr Smith has judiciously transferred the acting conduct of the theatre to Mr. C. Mathews, and that experienced [illegible] is not afraid to [illegible] on which so large an outlay [illegible] will, indeed before production The week's delay will probably make the [illegible] difference between failure and [illegible] All that we hear of the tragedy is in favour of its stage eligibility, and we shall be glad to find that the regeneration of the drama has justified [illegible] on the once classic boards of this great national establishment.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

The character of the English Stock Market has been heavy throughout the week, and prices have again had a downward tendency. Of course numerous unfavourable reports have been in circulation as regards the future, to which it would be unnecessary to allude; but it has transpired that the Bank of France has of late made very extensive purchases of gold in its country, and the heavy drain of bullion upon the Bank, this week, amounting to £1,000,000, immense supplies of that metal which have found their way to France, and for the continued decline in the stock of the precious metals in the Bank of England. About £2,600,000, sterling, have been sent £500,000 sent away this week. Large sums forwarded to the Bank of France since the purchases were commenced. It is asserted, on pretty good authority, that the Bank in question intends to double its present capital, in order to increase more confidence amongst the French capitalists. The actual shipments to the Continent this week have been about £250,000, but about £200,000 has been sent to Holland and Hamburg. Purchases of silver for shipment to the East, still to a large supply—1,000,000 dollars has come in from Mexico. From New York only about 100 dollars have come to hand, and a falling off in the receipt of gold from that quarter is still expected, owing to large quantities of bills having been purchased for shipment to England. We have no fresh arrivals to notice from Australia; but £1,500,000 may be expected during the present month In addition to the exports noticed above, the sum of £7950 to the West Indies

There has been to a considerable extent during the week, and the Bank of England has sold Exchequer Bills to the amount of £1,000,000 at 2 per cent, and in Lombard-street the best bills are now discounted at 1½ per cent. In the Stock Exchange operations for short periods have been to a large extent but English Stocks were very dull on Monday, yet prices were only slightly firm. The Three per Cents marked it 89¾ ⅞; and for the Account, 89⅞. The New Two-and-a-Half per Cents realised 74. Long Annuities, 18 5-16. India Stock, —. Bank Stock for the Account, 218. India Bonds, from £10 to £20, 60s. Exchequer Bills, 2s. to 1s. prem.; Exchequer Bonds sold at 99 to 99¾. On Tuesday great firmness prevailed and the following quotations were marked: Three per Cents, Money, 89⅞ ⅞; Ditto, for the Account, 89¾ ⅞; India Bonds, 2s. prem; Exchequer Bills, 3s. 6d. to 1s. prem.; Exchequer Bonds, 99. As the sales of Stock were rather heavy on Wednesday, prices were somewhat easier Bank Stock for Account, 218 The Three per cent Consols were 89⅞ to 89¾; Long Annuities, 18 5-16. India Bonds, 2s. to 1s. prem. The New Two-and-a-Half per Cents realised 74. Exchequer Bonds, 99. Exchequer Bills took place at 3s. discount On Thursday many of the speculators were taken "aback" in consequence of the Bank of England having announced the minimum rate of discount to 5½ per cent and more [illegible] investors were induced to purchase Consols ran down to 87¾ ⅞, and left off at 87¾ ⅞. Exchequer Bills were 1s to 4s. dis. India Bonds marked 2s. dis. Exchequer Bills 99. The Foreign House has been [illegible] in most transactions of a speculative character New Deferred Shares were marked 99 ex div.; Ditto, Three per Cents, 61½; Spanish New Deferred, 11½; Ditto Passive, 5¼; Ditto Certificates, 2¾; Mexican Three per Cents, 21½; Portuguese Five per Cents, 85; Ditto Three per Cents, 39; Portuguese Five per Cents, 85; Ditto Three per Cents, 39; Russian Five per Cents, 94; Spanish New Deferred, 11½; Ditto Passive, 5¼; Ditto Certificates, 2¾; Mexican Three per Cents, 21½; Portuguese Five per Cents, 85; Ditto Three per Cents, 39; Russian Five per Cents, 94; Spanish New Deferred, 11½; Ditto Passive, 5¼; Ditto Certificates, 2¾; Ashton and Oldham Canal Shares have sold at 1 Dash, 81; 110: Regents, 14¾; and Stourbridge, 200 A few transactions transacted in Waterford & Limerick Shares, as follows —Berwick, 7; North Western, 7; Grand Junction, 70; and Kent, 58¾

There has been rather more firmness in the Railway Share Market than of late, and prices have been tolerably firm. The receipts for the present month are £650,516 In the first ten months of the year they have amounted to £11,881,772, against £12,079,065 in 1854. The following are the official closing prices on Tuesday evening:—

ORDINARY SHARES AND STOCKS.—Caledonian, 58½; Eastern Counties, ½; Great Northern, —⅝; Ditto, A Stock, 87½; Great Western, 84½; Lancashire and Yorkshire, —; London, Brighton, and South Coast, 94; North Western, 91½; London and South-Western, 89¾; Manchester, Sheffield, and Lincolnshire, 29¾; Midland, 66¼; North British, 25⅝; North-Eastern (Berwick), 69¾; Ditto (Leeds), 122; Ditto (G. N. R.), 73¾; South-Eastern (Dover), 57¾; South Staffordshire, 10¼; Oxford, Worcester, and Wolverhampton —; South Wales, 61; Eastern Counties Extension, ¼; South Eastern, —¾.

FOREIGN AND COLONIAL RAILWAYS.—For Deferred, 137; Madras, 88; Bombay, and Madras, 2.

PREFERENCE SHARES.—Eastern Counties Extension, ¼ prem; Great Northern Five per Cents, 120; Ditto, Quarter-and-Half per Cent, 116; Ditto, Five per Cent, Sarup, 75; Great Western Four-and-a-Half per Cents, 97; Ditto, Four per Cents, 86; London and Bright n Six per Cents, 134; Manchester, Sheffield, and Lincoln, 12; North British, 8½; Paisley, Johnstone, and Renfrew, 90½; Ditto York, H and S. Purchas., 92; Oxford, Worcester, and Wolverhampton, 103½; South-Eastern, 92½ ex div.

Mining Shares have been very dull:—Cobre Copper have sold at 69½. Linares, 6 ex div; and United Mexican, 3⅝

Friday Evening

Owing to the advance in the rate of interest by the Bank of England, and to the Directors of the Bank of France having advanced the rate to 5 per cent, the Consol Market has been heavy to-day. The Three per Cents, for Money, have marked 89¾ ⅞, and for the Account, 89¾ ⅞—another strong seller. In Foreign Bonds and Railway Shares very little is doing.

THE MARKETS.

CORN EXCHANGE Friday).—Constwise, since Monday last arrivals of English wheat have been tolerably extensive; from abroad, however, they were limited, and the show of sam ples was small The demand, however, for most kinds, ruled inactive, yet very little change in the quotations can be noticed. Fine qualities of wheat have been in fair request Most kinds sold slowly, yet importers were firm, and late rates were fully supported Floating cargoes commanded full prices. Very little barley was on sale, and the trade was inactive for fine rates We had a fair supply of malting Monday's prices were fully maintained Malt was steady, and really fine oats were the turn dearer Beans, peas, and flour were unaltered in value.

Arrivals this Week.—English wheat, 6030, barley 1 90 malt, 300; flour, 800 Irish oats, 1000. Foreign wheat, 1160; barley, 630; oats, 5000; flour, 2140 sacks, 41 casks.

English, Wheat, Essex and Kent red, 58s. to 77s; ditto white, 63s to 85s Norfolk and Suffolk red, 58s to 76s; ditto white, 62s to 84s Rye, 48s to 52s; Barley, 36s to 37s; malting ditto, 36s. to 38s; malting ditto, 38s to 42s Lincoln and Norfolk malt, 85s. to 91s; brown ditto 66s to 76s; Peas, grey, 36s to 38s; maple, 36s to 38s; white, 36s to 38s Yorkshire and Lincolnshire oats, 24s to 27s; ditto Scotch and Irish, 23s to 25s; ditto potato, 24s to 27s; ditto Dutch and Friesland, 24s to 27s; English and Irish flour, 45s to 47s per sack; ditto American, 40s to 42s per barrel.

Foreign.—A few samples of fine colour and in fine condition have been sold, but we have no sales to report. Canary seed is quite as dear as last week. Linseed, Mediterranean and Odessa 52s to 53s., Baltic, 52s to 53s., Calcutta, 56s to 57s., Egyptian, 48s to 49s., Black Sea, 48s to 49s., Hempseed, 42s. to 43s., Rapeseed, 42s to 43s per quarter Linseed, Mediterranean and Odessa 52s to 53s., Baltic, 52s to 53s., Calcutta, 56s to 57s., Egyptian, 48s to 49s., Black Sea, 48s to 49s., Hempseed, 42s. to 43s., Rapeseed, 42s to 43s per quarter Linseed cakes, English, £9 10s. to £9 15s per ton; Foreign, £10 10s. to £10 15s per ton Canary, 56s. to 58s. per quarter.

Bread.—The prices of the 4lb. loaf in the metropolis are from 8d. to 10d.; of household ditto, 6½d. to 9½d. per 4 lb. loaf

Imported Weekly Averages. Wheat, 77s. 8d.; barley, 36s. 6d.; oats, 28s. 6d.; rye, 48s. 8d.; beans, 42s. 9d.; peas, 43s. 4d

The Six Weeks' Averages, wheat, 78s. 5d.; barley 35s. 5d.; oats, 28s. 8d.; rye, 48s. 3d.; beans, 42s 10d.; peas, 43s. 7d

English Grain Sold last Week.—Wheat, 16s. 7; barley, 1; oats, 16,437; rye, 1230; beans, 3156; peas, 690 quarters

Flour.—The new from China has had very little effect upon our market, in which a steady business is doing, at full quotations. Common sound qualities, 32s. 6d. to 34s.; fine, 35s. to 37s.; superfine, 38s. to 40s per sack

Sugar.—All raw sugars continue in good request, and, in some instance, prices have to be advanced 6d. per cwt. Refined goods have sold slowly at 1-16th to 1-8th per cwt. Jan's Ale, 4s. 6d.; Mauritius, 4s. 6d. to 4s. 9d. per cwt Refined goods move off briskly at from 54s. to 55s. per cwt

Coffee.—Good ordinary Ceylon has found a ready sale at 57s to 58s per cwt. A other kinds of [illegible] have changed hands to a fair extent, at [illegible] per cwt. We have a firm demand for all kinds, at very full prices The stock is 10,000 tons less than last year.

Tea.—The public sales [illegible] in most kinds of both, but in no instance do we see prices generally are well supported The best sorts [illegible] to 1d. per lb. per cwt. We have an improved [illegible] and in quantity [illegible] per cwt Home and land are firm. Most other kinds of [illegible]

Tallow.—Our market has ruled steady, and P.Y.C., on the spot, has sold to a fair extent, at 67s. 6d. per cwt, and [illegible] per cwt. Town tallow is nominally [illegible]

Oils.—Linseed-oil has moved off slowly, at 33s. 6d. per cwt [illegible] rose in steady request, at full quotations. Turpentine is steady, at 38s. 6d. to 39s. 6d. per cwt Rape sold [illegible] 38s per cwt for spring

Spirits.—[illegible]

[illegible] to 10s. 10 [illegible] 21s 6d; Russell v Berton, 25s 3 [illegible] 27s. 6d Buddle's [illegible]

Hops (Friday). There is a large [illegible] and the demand [illegible] Mid [illegible] £90,000 to £100,000.

Metropolitan Cattle Market (Monday).—The supply of beasts on to-day's market was but moderate in number and very defficient in quality; nevertheless the demand for all breeds of cattle was dull, at barely Monday's currency. We were scantily supplied with sheep, mostly in low condition. The market trade, however, ruled dull, at barely stationary prices. The show of Irish, English and foreign calves was rather extensive and the veal trade ruled heavy, at a decline in the quotations of 2d. per 8 lbs. Pigs were steady, at late rates. Much corn was sold slowly, at from 2s. 4 to 2s 6 per 8 inch, including their small end

Per 8lbs to sink the offal:—Coarse and inferior beasts, 3s. 6d. to 3s. 8d.; second quality ditto, 3s. 10d to 4s 2d; prime coarse oxen, 4s. 4d. to 4s 6d; prime Scots, &c., 4s. 8d. to 4s. 10d.; coarse and inferior sheep, 3s. 6d. to 3s. 8d.; second quality ditto, 3s. 10d to 4s. 2d.; prime coarse-woolled sheep, 4s. 4d. to 4s. 6d.; prime Southdowns, 4s 8s to [illegible] calves, 3s. 10d. to 4s. 6d.; prime small ditto, 4s. 8d. to 5s. 0d.; large hogs, 3s 10 [illegible] small porkers, 4s. 6d to 5s. 0d.; suckling calves, 28s. to 30s.; and quarter old ditto, to 38s. each. Total supply: beasts, 724; cows, 32; sheep, 6084; calves [illegible] Foreign beasts, 166; sheep, 80

Newgate and Leadenhall (Friday).—We had a slow sale for each and [illegible] case:—Inferior [illegible] to 3d to 4d; middling [illegible] 8d. to 3s. 10d; inferior mutton, 3s 6d to 4s 4d; middling ditto, 4s 6d to 5s 2d; prime ditto, 5s. 4d.; veal, 3s. 8d. to 4s. 8d.; pork, 3s. 4d to 4s 6d ROBERT HERBERT

Doors open each evening at Half-past Seven, commencement at Eight. Private Boxes £1 1s. 6d. and £1 1s., to be obtained at the Box-office, or at the principal Librarians, Stalls, 5s. Lower Seats, 3s. Upper Boxes, 2s. Gallery, 1s. Money taken at the Box-office alone daily, from Eleven till Five, under the direction of Mr. Lawrence, jun. Grand Pandemonium Morning Performance on Saturday, October 6, at Two o'clock. Doors open at Half-past One.

W. S. WOODIN'S OLIO of ODDITIES EVERY EVENING at Eight, at the POLYGRAPHIC HALL, [illegible] Strand. Stranger Boxes, 3s.; Stalls, 2s.; Area, 1s.; Amphitheatre, 1s. Box-office open from Eleven to Five.

GALLERY of ILLUSTRATION, 14 Regent [illegible] Lessee and Manager, Mr. [illegible]. Every Evening (in consequence of the WAR having induced the Proprietor to prepare the Exhibition on the Illustrations of the FALL of SEBASTOPOL, without closing the DIORAMA. The [illegible] Admission [illegible]

THE LION-SLAYER at HOME, 232, Piccadilly. GORDON CUMMING DESCRIBES every Night, at Nine o'clock, SAW and LION and AFRICA generally. Previous to every entertainment at 8 o'clock Admission 1s., Stalls 2s.; and the Collection on View during the day, from Eleven to Five.

DR. KAHN'S GRAND ANATOMICAL MUSEUM, consisting of upwards of 1000 highly-interesting Models, illustrating every part of the human frame (lessons [illegible] Models regularly) from 10s till Dusk. Lectures by Dr. Kahn, at 3 o'clock and half-past 7. Admission, 1s., 6, Coventry-street.

ROYAL POLYTECHNIC. Patron: H.R.H. PRINCE ALBERT.—The Sixth Course of Monday Evening Lectures by the Industrial Classes will commence on Monday, October 8th, at 8, with a Lecture by Jacob Bell, on the Adulterations of Food. Sir Henry Pott Bart., Rev. [illegible] Wm. Esq., F.R.S., Editor of the Builder, Dr. [illegible] Hon. F.R.S., Trevelyan Sharp, Esq., J. H. Pepper, Esq.; and G. Buckland, Esq., will lecture in this course.

THE ZOOLOGICAL GARDENS, REGENT'S-PARK. [illegible] Open [illegible] Hanging Loops, and other [illegible] Lectures, Aquarium, Illustrations, and a pair of Hippopotami, together with an immense number of birds, Reptiles, Fish, and all the Newest Animals, [illegible]

CRYSTAL PALACE, SYDENHAM. The PALACE and PARK are OPEN to the Public on Mondays, at 9 a.m., and on Tuesdays, Wednesdays, Thursdays, and Fridays at 10 a.m., and on Saturdays at 9 a.m. and 10 a.m. The Admission is 1s., on Saturdays 2s. 6d., on Monday, when the Admission is 5s.; closing each day at 6 p.m. Tickets for Admission and Conveyance by Railway, may be obtained at the Railway Terminus, Tooley-street, at [illegible] Trains run from London-bridge to the Crystal Palace Station at 9, 9, 10, 10, 11, 11, 12, 12, 1, 1, 2, 2, 3, 3, 4, 4, 5, 5, 6, 6, 7, 7, 8, 8, 9, 9, 10, 10, 11, 11, 12 p.m., returning from the Crystal Palace at short intervals throughout the day and evening.

MINERALOGY.—KING'S COLLEGE, London.—Professor TENNANT, F.G.S., will give a COURSE of LECTURES on MINERALOGY, with a view to facilitate the study of Geology, and of the Application of Mineralogy to the Arts. The Lectures will be illustrated by an extensive collection of specimens, and commence on Friday, October 5, at Nine o'clock in the morning. They will be continued on each succeeding Wednesday and Friday, at the same hour. R. W. JELF, D.D., Principal.

FISHER'S DRESSING-CASES, 186, Strand. Cata[illegible] post-free.

BIJOU NEEDLE-CASE, containing 100 of DEANE'S DRILLED-EYED NEEDLES, forwarded post free on receipt of 13 postage-stamps. DEANE, DRAY, and CO., London-bridge. Established 1700.

FOR FAMILY ARMS, send Name and County to the HERALDIC OFFICE. Fee, search and [illegible] Arms painted and [illegible] Crest, Motto, and Address on Seal, Ring, or Die, 7s. SALT, the Heraldic Office, Great Turnstile, Lincoln's-inn.

PHOTOGRAPHY.—SIMPSON and MAULE, Manufacturers of Photographic Chemicals, Materials, Cameras, and for export trade. Price Lists on application. 1 and 3, Kensington-road, corner of Newington causeway, London. Goods delivered free in all parts of London daily.

HOWARD'S GUTTA PERCHA TOOTH-BRUSHES.—The universal complaint of hair coming out by the use of brushes with wire bristles has induced Howard to get them manufactured by W. Howard, 23, Great Russell-street, Bloomsbury. Price 6d., 9d., and 1s. each. A sample sent for 8 postage stamps.

PAPERHANGINGS and Panel Decorations, in elegant new designs, for drawing-room, dining-room, and library. Great Stock papers, from 3½d. per yard; good satin ditto, from 9d.; good paper ditto, from 1½d. per yard; best-room ditto, from 5d.; rich gilt ditto, from 8d. per piece. Screen papers, for staircase, from 1d. per yard. Patterns sent for approval to all parts of the Kingdom, at C. COMPTON'S, 101, Tottenham-court-road, established Warehouse, 43, Foxsbourch-street, Corner of Mundag-lane.

PAPER-HANGINGS.—The Cheapest House in London for every description of Paper-hangings is CROSS'S Wholesale Warehouse, 3, newly-built Residences, Caledonian-road, where the Public and the Trade are supplied from the largest and most extensive assortment in the kingdom, commencing at a penny the piece of twelve yards. N.B. Estimates given for general Decorations, Painting, &c.

VENTILATING-STOVES. SUSPENSION-STOVES. Purchase one or the other for they do it two best cheapest, most handy, and economical for [illegible] Chapels, Halls, Schools, Warehouses, Shops, Greenhouses, Bed-rooms, Libraries, &c. Pamphlet with [illegible] and [illegible] DEANE, DRAY, & CO., Steve, Range, Ironmongery, and Furnishing Warehouse, London-bridge.

SMOKE-CONSUMING KITCHEN RANGE! [illegible] Smoke consumed by the [illegible] of the natural fuel, and is a certain cure for a smoky chimney. [illegible] &c., post-free, on application to BENJAMIN EDGE, Inventor, Luton; or the Range may be seen at the Depôt, [illegible] London.

THE CORK RESPIRATOR is the Lightest, Cheapest, and most efficacious ever produced. Price 1s. free by post. Caution.—Each Genuine Metal only of WILLIAM J. COUPER, 52, Oxford-street, London.

USEFUL INFORMATION. Messrs. A. MARION and CO. receiving repeated demands for samples of their papers and envelopes, which are now seen in every draper's shop, have compound a useful packet of specimens, containing two quires of [illegible] note paper and its envelopes, each sheet is numbered, and a list is inclosed which will give the greatest facility for the selection. This will be found very convenient to persons residing in the country. Price of the above packet 6d., or in stamps. Paperie Marion, 155, Regent-street.

SEBASTOPOL has FALLEN! and our glorious [illegible] may be purchased for the winter in the usual daily on TEA is certain. Money must be had. Lay in your winter stocks while you can at the old prices—it will not be long. Black Tea commencing at 3s. 6d., 4s. 0d. large finest picked leaf, 4s. 8d. EAST INDIA TEA COMPANY, Importers and Dealers, 9, Great Saint Helen's Churchyard, Bishopsgate Street.

NEW BOOKS, &c.

Now ready, price 2s. 6d., in an appropriate Tricolor Wrapper, THE COMPLETE ILLUSTRATED HISTORY of the QUEEN'S VISIT to FRANCE: consisting of a series of accurate Engravings of that interesting event. Office, 198, Strand, and may be had of all booksellers

THE COTTAGE LIBRARY.—A Catalogue of this Cheap Re-issue of Popular Books will be sent postfree on application to HILDER and SON STREET, Publishers, Halifax.

THE FRIENDLY SOCIETIES' MANUAL, [illegible] ONE Accounts, Magazine Expenses, &c. London: BUTTERWORTHS, 7, Fleet-street, Her Majesty's Law Publishers.

TOURRIER'S FRENCH SCHOOL-BOOKS.—Grammar, 5s.; Juvenile ditto, 2s. 6d.; Familiar Dialogues, 2s. 6d.; Mod. Books, 2s. 6d.; little ditto, 1s. 6d.; French as Spoken, 1s. 70,000 have been sold.—SIMPKIN and CO., D. Nutt, Strand.

Elegant Illustrated Book for Ladies, price 3s. 6d., richly gilt, TREASURES in NEEDLEWORK. "Treasures in Needlework" is brought out to meet the wishes of numerous lady needleworkers who have felt the want of a book of reference in which could be found plain practical instructions, combined with novelty and variety, in every species of Fancy and Ornamental Needlework. Profusely illustrated with Engravings. Every design in it is such as he worked out by the directions are the result of actual performance. London: KENT and CO., Paternoster-row.

DR. CORNWELL'S EDUCATIONAL SCHOOL GEOGRAPHY, 20th Edition, 3s. 6d.; with Maps, 5s. 6d.

ANALYSIS ATLAS, plain, 2s. 6d.; coloured 4s.

THE YOUNG COMPOSER; Progressive Exercises in English Composition, 17th Edition, 1s. 6d.

A KEY to the YOUNG COMPOSER, 3s.

ALLEN'S SELECT ENGLISH POETRY, 8th Edition.

ALLEN'S EUTROPIUS, with Dictionary, New Edition, 3s.

ALLEN and CORNWELL'S GRAMMAR, 23rd Edition, cap. 8vo, 4s. 6d.

ALLEN and CORNWELL'S GRAMMAR for BEGINNERS, 2nd Edition, 8d.; cloth, 1s.

CORNWELL and FITCH'S SCIENCE of ARITHMETIC, [illegible] London, comprising recent Improvements in the Arithmetical Rules and Processes in common use, many numerous Exercises, consisting of several thousand Examples, Questions, and Propositions, for the Use of Schools. [illegible] Simpkin, Marshall, and Co.; Hamilton, Adams, and Co.; Sold also by Edinburgh and Dublin: Oliver and Boyd; W. F. Kennedy

THE REDAN AT SUNRISE, SEPTEMBER 9.—REMOVING THE WOUNDED.—SKETCHED BY F. A. GOODALL.—(SEE PAGE 410.)

MARSHAL PELISSIER, COMMANDER-IN-CHIEF OF THE FRENCH ARMY IN THE CRIMEA. (SEE NEXT PAGE.)

MARSHAL PELISSIER.

[A copious Memoir of this distinguished Soldier appeared in the ILLUSTRATED LONDON NEWS of the 16th of June last. The following remarks upon his career, from the pen of a Correspondent, will, at the present time, be read with additional interest.]

It is a common doctrine that Fortune plays a great part in war, and that she bestows her favourites to the surprise, and bears them proudly away on the tide of victory. But whatever share the fickle goddess may have in the [illegible] campaigns, it is certain that the heroes who win fame, if not [illegible] are the hardy, the daring, the unselfish, the laborious. If we look [illegible] annals of the last [illegible] we shall be able to find [illegible] whose [illegible] any reputation that [illegible]. If we investigate the [illegible] services of those who carried off the [illegible] as well as the [illegible] we will be found that they deserved [illegible] they won. It is in giving opportunities that "fortune favours the brave." Some must be taken and others left. Among the highly favoured of fortune in the war is Aimable Jean Jacques Pelissier, the Commander in Chief of the French Army in the Crimea.

Marshal Pelissier is said to be of Irish descent. There live now at Waterford certain Palissers who claim him as their relative; and it is credibly stated that Pelisser, a Limerick man, was his grandfather. Thus, besides the natural tendency to arms, inherent in him by virtue of his French blood, he was perhaps impelled to follow the profession of a soldier by some of the stirrings of that vivacious temperament which distinguishes the people of Ireland. In following out that career of his choice, like many other promising young officers of the French army, who are now leaders in the Crimea, Pelissier found in the warfare of Algeria the means of earning, not only promotion but distinction. He soon fell under the searching gaze of Marshal Bugeaud, who remarked in him that energy, dash, and iron will which has since been tempered by experience. In that sanguinary and searching school of war, young Pelissier, the junior of the gallant officers who brought it to an end, rose gradually to the rank of Colonel. He was not, like Lamoricière, St. Arnaud, and Cavaignac, a Zouave officer; but, like Changarnier and Bedeau, he shone in the front of the officers of the Line regiments. Bugeaud was not, certainly, a mild warrior. He did not deal with the Kabyles and Arabs in a gingerly fashion; and it was during his command that Pelissier, catching some of his master's ferocity, committed that act which stains his otherwise fair fame—the well-known destruction of the Arabs, with their wives and children, in the caves of Dahra.

It is quite probable, however, that the massacre at Dahra did not in the least bar Pelissier's advance. Marshal Bugeaud was not the man to be frightened at a trifle himself; and surely the Government of Louis Philippe, which feared more the liberation of Abd-el-Kader than the breaking of its pledged word, was not the Government to look askance upon Colonel Pelissier; and so forward in his career went the brave Colonel; and when the leading Generals—Changarnier, Bedeau, Cavaignac, Lamoricière—left Algeria to mingle in the turmoil of the Revolution, Colonel Pelissier, left behind, was among the ablest men there, and he became in succession General of Brigade, General of Division (1850), and, finally, Governor-General of Algeria *ad interim*. From this post he was called to the East; but before he left Algeria he illustrated his command by a series of successful operations against the tribes in insurrection, including the siege of Laghouat, in 1852—a siege prosecuted with conspicuous vigour, and affording another name to the fine roll which illustrates the history of the Zouaves. It was during the period that Pelissier was fighting his way to fame that so many of the other generals now in the Crimea were winning their spurs: M'Mahon, Morris, Herbillon, Camou, Bourbaki, Bosquet, and a host besides. The latter part of the command exercised by General Pelissier in Algeria was passed in peace, distinguished by the energy and the wisdom of his rule. For his many services in that province, and the final one of Laghouat, Pelissier received the Grand Cross of the Legion of Honour.

Early in the spring he went out to the Crimea, and took the command of the First Division, posted at that time on the extreme left of the attack carried on by the French against the town front. New energy seemed infused into the siege operations soon after his arrival. The bombardment was renewed on the 9th April: between that date and the middle of May, mainly through the resolution of Pelissier, the French attack on the left was pressed forward; and in succession the outworks, or rifle-pits, in front of the Flagstaff and Central Bastions, were carried. It was about this time that the Allied Generals decided on the first expedition to Kertch. A large body of troops embarked, and had reached the rendezvous, when they were recalled by General Canrobert. Whether the irresolution here displayed arose from that shrinking from responsibility that always characterised Canrobert, or whether the recall was ordered in obedience to definite views from home, is not known; but it is singular that the resignation of Canrobert, and the appointment of Pelissier, followed rapidly on the abandonment of the first expedition. Certain, however, it is, that within a week of its debarkation, General Canrobert ceased to command the French army.

It was on the 16th May that General Pelissier was formally invested with the command. The reader will recognise his presence by the rate of events. After the outworks on the west front had been carried, the enemy, feeling himself circumscribed, made a great effort to convert an open space at the head of the Quarantine Harbour into a great *place d'armes*, whence he might break in at pleasure on the French trenches. With his customary energy, Pelissier ordered the storming of the works; but the resistance was so great, and the attack carried on under the very ramparts of the place, that it cost the French two midnight combats before they could drive the enemy out of his position. But, when accomplished, the work was well done: the French were no more troubled with sorties in that quarter. Matters now went on at a great pace. On the 24th the Allies occupied the Straits of Kertch; on the 28th, under the immediate supervision of Pelissier, the French and Sardinians seized the line of the Tchernaya. In the meantime the approaches were pushed on with vigour against the Mamelon, and the French Commander had made up his mind to have that outwork, saying "If it cost ten men, it must be taken: and if it cost ten hundred, still we must have it!" On the 7th June, after a week of bombardment, the French—led by Bosquet and Camou—went up the steep of the Mamelon, in beautiful style, just before sundown, and in a few minutes the place was their own. "They went in like a clever pack of foxhounds," was the remark of an English officer. On the same day the French also carried the redoubts on Mount Sapoune, and the English the Quarries. Resolved not to let the grass grow, the impetuous Pelissier eagerly and confidently pressed on the [illegible] and on the night of the morning of the Mamelon he was ready to assault the Malakoff. But this time he was premature. Our readers may remember the 18th June, and its sanguinary and fruitless result. A mistaken signal led to an attack in detail: the troops had to traverse a wide space; neither the guns in the earthworks nor on board the shipping, were really silenced; the Allies were hurled back with great loss. From that time it was determined to get as close to the enemy's lines as possible, before the next attempt was made to storm. We need follow the story no further: the Allies have been successful, after a long interval of seeming inaction; but the vigour which, in one short month, Pelissier imparted to the operations of the French army, shows abundantly the kind of stuff he is made of; and the Emperor, on the morrow of the capture of Sebastopol, justly converted Pelissier into a Marshal of France.

In this campaign in the Crimea, Marshal Pelissier has exhibited the character he won in Algeria. He is at once cool and impetuous capable of great patience, in the pursuit of [illegible] and endowed with that unshakable decision of character and military dash which is so popular in the French army. The great industry of the first month of his command testifies to his activity; and the six weeks of patient labour which preceded the 18th of June, conclusively that he can wait and labour for a triumph, as well as win one out of hand. And that he is generous, is shown by two recent incidents—he gave the whole credit of the victory on the Tchernaya, so far as the French were concerned, not to himself but to General Herbillon; and he named first of all Bosquet and McMahon as the leaders who had won the Malakoff. When "dash" surprised Lord Raglan in the exercise of his command, Canrobert Pelissier wrote in an order of the day:—

> "I who knew Lord Raglan, who knew the history of that noble and pure life—all of services rendered to his country—who witnessed his lofty attitude in the days of Arma and Inkermann—who recall the calm and noble grandeur of his character during this rough and memorable campaign—a man of heart, in short, will deplore the loss of such a man: a companion in arms whose cordial spirit I loved, whose virtues it admired, and whose frank and courteous assistance it was always sure of."

Marshal Pelissier is worthy of the brave troops he commands, and will, no doubt, do yet more in this war with Russia to serve his country and amplify the glory of his name.

MR. GLADSTONE AND THE BANK OF ENGLAND.

THE correspondence between the late Chancellor of the Exchequer and the Bank of England, relative to the payment of the Dividends, of which some fragments, appeared at broken intervals, is now published in full, and we are enabled to form a decided opinion on the whole controversy. The point in dispute lies in a nutshell, but it has been deemed advisable to obtain the legal opinions of the Attorney and Solicitor-General on behalf of the Crown, and those of Sir F. Kelly and Mr. Roundell Palmer on that of the Bank. The privileged Corporation in Threadneedle-street acts as an agent to Government in paying the Dividends: for the performance of which duty it receives a liberal compensation; the Executive is bound to provide it with the means, and in case there should be a deficiency in the Exchequer, the Legislature has invested the Treasury with power to raise money by bills, to be discounted by the Bank of England. It has hitherto been the practice, arising from the interpretation of certain Acts of Parliament, for the Chief Cashier of the Bank to receive in one payment the *whole* amount of Dividends on a day specified in those Acts; and the question submitted to Counsel was, whether the practice was strictly binding on the Treasury? Mr. Gladstone asserts that it may be quite reasonable when the funds of the Exchequer are ample, but that it may become very unreasonable when they are low, as, in the latter case, Government would have to borrow from the Bank, and pay interest on Exchequer Bills. It is an observed fact that the Dividends are never wholly paid on the exact day that they become due, many fundholders not making an immediate demand; and Mr. Gladstone argues that, provided provision be made from day to day, so that no public creditor is delayed in recovering his claim, the polity of the statutes is satisfied; and in that view the Crown Lawyers concur. On the other hand, the advisers of the Bank have arrived at an opposite conclusion:—

> To introduce (say they) the practice of issuing and paying to the Bank of England the amount of the half-yearly Dividend, not on one day and in one sum (as appointed by the Acts of Parliament creating the Stock), but at different times after the appointed day, and in such sums from time to time as the Commissioners of the Treasury may deem sufficient to keep the Bank of England in cash, against the probable demands of fundholders when they actually apply for their dividends, would be, in our opinion, more than a formal departure from the course authorised and prescribed by the statutes; it would be to derogate in a substantial point from the *security* given by the Legislature to the fundholders for punctuality in the payment of their dividends, and it would be to place the Bank in a position of great embarrassment between the public interests intrusted to them on the one hand and their own private responsibilities on the other. Neither the Government nor the Bank have, under the existing statutes, any legal right or power to give one fundholder (in the same stock) any preference or priority whatever above another; and the Bank are under no legal obligation to pay any dividend to any body until they have received from the Government a sum to enable them to pay all the Dividends to every body entitled. Money not sufficient for the payment of the whole Dividend is not legally *applicable* in the hands of the Bank to the payment of any part of it; the law does not suppose or provide for the case of a partial payment on account either *to* the Bank or *by* the Bank.

This opinion concludes with advising the Bank, whenever the Commissioners of the Treasury fail in making the payment of the whole amount of any half-yearly Dividend in one payment, to make a representation to the First Minister, that he may submit the matter to Parliament. The Crown Lawyers were called upon to reply to this opinion, and we subjoin some paragraphs, giving their view of the subject:—

> The relation between the Government and the Bank is subordinate to the relation between the Government and the fundholder; and it seems absurd to us to hold (as is in effect done by the opinion before us) that the statutes have created a greater obligation or liability on the part of the Government to the Bank than exists between the Government and the public creditor. But this would be the consequence if, as the Bank insists, the Government is bound to borrow money of the Bank before that money can be required for the public creditor. The obligation of the Government is to pay the fundholders as and when they apply to the Bank for such payments; and it is sufficient if it provides the Bank in due time with the means of making such payment. The Bank, in like manner, is not bound (as a literal interpretation of the statutes would import) to find and pay the fundholder on the appointed day, but wait until he comes for his dividend. That all the fundholders should apply for, and receive, their dividends on the day on which they become due, is a practical impossibility. The construction contended for by the Bank is one not suggested by any public convenience, but directed solely to its individual advantage. The Bank has stipulated for, and receives, a specific remuneration for the service it performs. But it is now seeking, in addition to this proper payment, to obtain, by means of a literal interpretation of the Acts of Parliament, the indirect advantage of compelling the Government to borrow the money of itself, under the guise of enabling it to pay the public creditor before such money can by possibility be required for that purpose.

Setting aside all legal quibbles and verbal technicalities, this last sentence hits the nail on the head and clenches it. Yes, it is quite true—a joint-stock company, most unjustly privileged, and which has grown up to be what it is by enjoying the most odious monopoly, is seeking to extort additional gain for its own shareholders at the expense of the public tax-payer. What spirit of cupidity inspires this Corporation, which flourishes under the deceptive misnomer of the Bank of England? Are not its notes, which have no more intrinsic value than the notes of any other joint-stock company, declared legal tender, in defiance of every principle of free trade? And when panic has arisen, involving the prostration of merchants, manufacturers, shipowners, and private banks, is it not an historical fact that, when danger has approached the Bank of England, the law has been suspended in its favour, to rescue it from the ruin in which other establishments have been involved? Common gratitude for innumerable favours received ought to have dissuaded the Directors from haggling about the legal interpretation of a statute, with no other object than to enhance their own gains.

The opportunity is convenient for making some brief observations on the monetary relations between the Government and the Bank. The prerogative of making money, that noble privilege of making legal tender, has long since been transferred from the Crown to that privileged Corporation. When the Treasury is deficient, and compelled to borrow, it calls into existence those instruments which are called Exchequer Bills, which are not a legal tender, neither are they convertible into gold on demand. They are simply documents drawn in anticipation of a future revenue to be derived from accruing receipts of Customs, Excise, and other sources of taxation. They possess no intrinsic value, but derive a conventional value from the authority of the State which puts them into circulation, and may be assimilated to long-dated bills drawn by the Government, and impliedly accepted by the whole body of the people, charged upon the whole of their property to the last shilling and the last acre. They are, therefore, rather [illegible] in the highest sense of the term. But be it well observed, [illegible] presented them [illegible] had been [illegible] such reason [illegible] the Sovereign [illegible] lodged [illegible] its notes [illegible] security, the security of the [illegible] highest value [illegible] embodied in the Exchequer Bill [illegible] face of it: but something more [illegible] system. The Bank charges interest for the [illegible], and that interest becomes a tax on the property [illegible] of the country, which goes into the coffers of the Public Treasury. This is just what the Bank wanted to do with Mr. Gladstone, and we give him credit for resisting the extortion; but we are surprised that a gentleman of his analytical and reflective mind should swallow the camel while he strains at the gnat. His objection is to pay interest on Exchequer Bills for some few days; but why pay at all? Some eighty years have elapsed since Adam Smith observed of this system of anticipating taxes, that "like an improvident spendthrift, whose pressing occasions will not allow him to wait for the regular payment of his revenue, the State is in the constant practice of *borrowing of its own factors and agents, and of paying interest for the use of its own money*."

An Exchequer Bill entitles A B, or order, to one hundred or one thousand pounds, as the case may be, with interest, payable out of the first aids or supplies to be granted in the next Session of Parliament; and this bill is to be current and pass in any of the public revenues, aids, taxes, or supplies, or at the receipt of Exchequer at Westminster, after the 5th day of April next. Such is the formula. It is legally competent to any person holding an Exchequer Bill to tender it in payment of taxes; and such was the practice when they were first issued in 1696 by Mr. Montague, then Chancellor of the Exchequer. At that time they were small in amount, being for sums of £10 and upwards, and thus they easily passed into commerce, and discharged the ordinary functions of money. At present the lowest Exchequer Bill represents £100, and they run as high as £1000; hence they do not pass into commerce, and are rarely, if ever, tendered in payment of taxation. Now we would ask Mr. Gladstone if any sound reason exists why we should not restore the practice of Mr. Montague, and issue small bills, even for £5? Suppose this was done, and the interest upon them abolished, would not the Chancellor of the Exchequer become independent of the Bank, and would not the country save a large annual amount of taxes? No doubt about it can exist. We now pay interest for receiving an inferior for a superior security, the commercial notes of the Bank for the Imperial bills of the nation, as if the relation of subject and Sovereign were inverted, and the Bank Directors were the Government, the Government a body of subalterns acting under the Bank, and by its favour and permission. If any of our readers think this statement overcharged, let them bear in mind that the Bank on various occasions has threatened to refuse advances to the Treasury—a state of humiliation positively disgraceful, but of which we could give many proofs. Let one suffice. The following reply to an application for pecuniary aid was made on the 6th July, 1814:—

> Resolved, that the application contained in the said letter be complied with; but, that in consequence of the [illegible] which have been made from time to time against the enormous and unprecedented amount of the advances of the Bank to Exchequer Bills, this Court entertains such substantial objections to a further increase, that it would most decidedly refuse the present application, if it were not apprehended that it would involve the very serious embarrassment by it. In assenting, therefore, thus reluctantly to the accommodation required, the Chancellor directed to acquaint the First Lord of the Treasury and the Chancellor of the Exchequer, for their guidance, that [illegible] manner, and expects such arrangements to be [illegible] every considerable reduction of these advances.

Why does not the State secure itself against the contingency of such degradation? There can be no difficulty in the matter; for if Exchequer Bills are good security to the shareholders of the Bank of England, they are good security to the whole body of the people; and, provided they are sufficiently small in amount to pass current in sales and purchases, the Government would never have occasion to borrow of the privileged Corporation. Besides, what right has a Minister of the Crown to demand from the Bank notes exchangeable into gold at Mint prices in return for large Exchequer Bills which are not so exchangeable? Now that Mr. Gladstone is out of office, and has leisure to meditate on monetary science more deeply than he seems hitherto to have done, let him turn his attention from *sums* of money to *principles* of money; and, instead of haggling about the interpretation of an Act of Parliament, make himself master of that system which would save every Minister of interest on Exchequer Bills, and render the Treasury independent of a joint-stock company.

POPULAR FEELING IN SWEDEN.—In celebration of the fall of Sebastopol, all the students of the University of Upsala assembled in the evening of the day on which the news arrived on the great square of that city with flags and banners, and, accompanied by masses of the people, proceeded in a grand procession, singing at the same time patriotic songs, to the monument of Gustavus the Great, in the Wood of Odin. On their arrival they sang the patriotic song composed by Battiger on the occasion of the Battle of Leipsic, in honour of Gustavus Adolphus, celebrated as the champion of Protestantism. They then, in chorus with uncovered heads, after which [illegible] ascended the pedestal of the monument and [illegible] has [illegible] hearers that the Allies were fighting on behalf of justice, freedom, and civilisation. The address, which was listened to with the most decorous silence, was scarcely finished when the most deafening shouts broke out from the assembled multitude, and gave sufficient proof how sincerely the sentiments expressed found a corresponding sympathy in the [illegible] with several hearty cheers were given for the [illegible] Russia, Emperor Nicholas's Finnish popular song, "Our Land," [illegible] was sung in chorus by the inspired populace, and the [illegible] of the Swedish national hymn concluded the imposing ceremony.

THE RUSSIAN ORGAN COMING DOWN A LITTLE.—*Le Nord*, the Brussels Russian organ, in its number for Sunday, has considerably modified its views as to the position of the Russian Commander in the Crimea. It is no longer so very positive that Prince Gortschakoff will not be compelled to evacuate the Northern forts; nevertheless, it puts a good face upon such a contingency. "People," says the Russian organ, "are everywhere occupied with events which have arisen in the Crimea. Everyone, strategist, or not, has his own little plan of the campaign; some make the Russian Commander-in-Chief the victim of the peninsula, others [illegible] confess that we have not the slightest knowledge in the world [illegible] be done; but we believe that considerations on the north are directly [illegible] by the Allied forces, the [illegible] upon them with effect. On the other hand, we also believe that, if Prince Gortschakoff seems irresolute to move the troops under his command to some other point, it will do so without doubt by the triumphal ones which will issue from the enemy, should it [illegible] to remain in the position which he occupies at the latest dates."

A NATIONAL OPERA.

It would seem that we now have a reasonable prospect of the formation of a National Opera—that desideratum so long and so vainly sought. The recent great improvement in our commercial law, the establishment of the principle of limited liability in trading partnerships, has afforded a facility for the accomplishment of this object, which never before existed. A number of gentlemen who, as artists and as lovers of art, are interested in the success of the English stage, have joined for the creation of a "National Opera Company," under the provisions of the Act of Parliament for limiting the liability of subscribers, and have put forth a prospectus of their plan. The capital is £10,000, in a thousand shares of £10 each. A deposit of £5 on each share is to be made on allotment, and it is considered that the sum produced by such deposits will be sufficient to carry on the management of the theatre without further calls. "The promoters of this undertaking," says the prospectus, "viewing the state of the Lyrical Drama in England as compared with that of even the smallest Continental principality, propose to establish a permanent English Opera for the performance of works of British Composers, and of such Foreign Operas as may seem most appropriate for the English stage. One of the great objects sought to be obtained is the employment of native talent; and the promoters feel that the progress of musical taste and education in this country warrants the belief that the time has now arrived for commencing so desirable and important an undertaking." A provisional agreement has been entered into for a lease of the Lyceum Theatre. It is proposed that the season shall consist of forty weeks, that there be six representations per week, and that the prices for admission shall be—stalls, 8s.; dress circle, 5s.; upper boxes, 3s.; pit, 2s. 6d.; gallery stalls, 2s. 6d.; gallery, 1s.; and private boxes, £3 3s., £2 12s. 6d., £2 2s., and £1 11s. 6d. An annual meeting of the shareholders will take place at the close of every season, and will be convened by advertisement in the *London Gazette* and morning papers; at this meeting a full statement of the audited accounts, and of the pecuniary condition of the company will be presented by the committee of management.

Such are the principal features of the scheme. It is feasible in itself, and derives additional weight from the names of the persons engaged in it. The Duke of Leinster, John Benjamin Heath, and Augustus Walter Arnold, Esqs., are to act as trustees; the auditors are Messrs. Thomas Oliphant, and J. Daff; and the Committee of Management consists of Mr. Alfred Mellon, Mr. Henry Blagrove, Mr. G. A. Macfarren, Mr. Palgrave Simpson, and Mr. A. B. Vyse—all gentlemen of judgment and experience. Mr. Mellon is named as the conductor, and Mr. Blagrove as leader of the orchestra.

The enterprise has thus begun under very favourable auspices. Besides the advantage derived from the new law of limited liability, another circumstance has opportunely occurred to remove one of the chief obstacles to the plan—the great difficulty of finding a locality. Of all the theatres in London the Lyceum is the best adapted to the purpose. It was originally opened, one-and-twenty years ago, as "the English Opera-house;" and as the English Opera-house we hope it will now be opened again. Its situation is good, its acoustical properties are excellent, and its size is quite sufficient for any legitimate object; for we do not desire that, on our musical stage, music should give way to spectacle and ballet.

We must observe, however, that there are "rocks ahead" of this establishment, on which, unless carefully avoided, there is no small danger of splitting. Of these the most perilous are the jarring claims of composers and performers. Experience has shown us how very difficult it is, even for well-meaning and worthy people, to be perfectly disinterested in their views—entirely unbiassed by any sense of personal advantage; and how often we delude ourselves into the belief that what is our advantage is also the advantage of the public. Under the phrase "encouragement of native talent" there may lurk a host of selfish feelings unknown even to those who harbour them. The encouragement of native talent is a good and legitimate object—an object to be pursued under just limitations. But how liable must an artist be to confound in his own mind, and unconsciously to himself, the idea of "native talent" with that of "my talent," and to think that *his* talent is not preferred, that native talent is neglected! An artist who has a voice in the production of works of art ought to be candid and dispassionate almost beyond human nature. He ought to be profoundly impressed with one great consideration, and should act upon it with perfect singleness of spirit—that the question is not at all between native and foreign, but between more or less excellent, and that the superior work must be preferred, no matter for the country of its birth. And the same candour—the same abnegation of all personal predilection—must govern his mind in every question between his own works and those of his countrymen, or between his countrymen when in competition with each other. How rarely do poor mortals reach such a sublime pitch of virtue! And yet the life or death of a national opera depends on its attainment.

Then, with regard to the performers: and here we encounter a problem of still greater difficulty. It is notorious that the vanities, the caprices, the jealousies, and, above all, the exorbitant exactions of actors and singers, have contributed more than all other causes put together, to the decay of the English stage and the utter ruin of its musical branch. Against all this sort of thing the managers of the National Opera must make a manful resolute stand. They must prescribe to themselves a certain course of action, and firmly abide by it. They must put an end to all reliance upon stars. In forming their company they must look to its completeness and efficiency *as a body*. They must obtain the highest talent that their means can command; and the terms they offer must be in due proportion to the various degrees of talent they require. But they must refuse to allow that *any individual whatever* is indispensable, and must be had at any price. They must themselves determine what they can afford without crippling their resources and impoverishing other branches of the establishment; and if a popular performer, pluming himself on his supposed *invincibleness*, make an unreasonable demand, they must beg to be excused, and look elsewhere. They may be assured they will have the support of the public, and ultimately the concurrence of the performers themselves.

We must further remark that the term "National Opera" is not to be taken in a narrow, exclusive sense. An English opera is to be understood, not as an opera composed by an English musician and represented by English performers, but an opera in the English language, and suitable to an English audience. This, we observe, is admitted in the prospectus, in so far as regards composers, and must also be admitted in regard to performers. A fine actor or singer, who speaks our language with propriety, is not to be rejected because he is an Italian or a German. Let all attention be paid to the claims of British talent; but let this be done by opening a fair field of competition, and not by an invidious system of exclusion. It is by uniformly giving a free welcome to the talent of Italy and Germany, that the National Opera of France has risen to be the greatest musical stage in the world.

Believing that the intelligent gentlemen who have embarked in this interesting enterprise, will establish it on a sound and liberal foundation, we give it our best wishes, and have sanguine hopes of its success.

THE CRYSTAL PALACE EXPOSITOR (George Virtue and Co).—When a fashionable tourist pays a flying visit to Rome or Athens, without having previously studied their history, or made himself acquainted with their arts, antiquities, and phases of civilisation, he returns home but little wiser than when he commenced his journey. The majority of visitors to the Crystal Palace are in a position similar to that of the uninformed traveller; their senses are dazzled, but their stock of knowledge is not much increased. To judge aright of that remarkable building it ought to be regarded as a school of instruction and a temple of art. It records the rise, progress, and fall of mighty kingdoms, whose monuments are re-produced within its walls. The spectator there beholds, collected and classified under one magnificent roof, the products of human labour and ingenuity wrought in almost every clime, and ranging from almost the earliest periods of a dim tradition to the latest inventions of modern times. Yet among the vast numbers who repair to Sydenham, how few there are conversant with the history of Assyria and Egypt, of Greece and Rome, or of the Moorish and Byzantine Empires. But, without some general acquaintance with these once powerful, but now fallen nations, the mutilated sculptures, the architectural paintings, and other signs of their extinguished civilisation, can convey but little instruction, and afford but a trivial gratification. The several Glass-books, excellent as they are, are too limited in size to afford ample historical narrative, and altogether inadequate for pictorial illustration. These two defects the *Crystal Palace Expositor* aims at supplying. The monthly numbers already published, at the low price of one shilling each, display considerable research; and, as the best test of accuracy, the original authorities are quoted in support of facts and opinions. The engravings are executed in a very finished style, and the paper and print are excellent. When the volume is completed it will be permanently useful as a work of reference; and while in course of publication it may be consulted with advantage by intending visitors to the Palace for those fine Courts already described, and also by those who are unable to take a trip to Sydenham.

THE REGISTRATION.—The Conservative Land Society has this year been again successful in establishing the claims for the freehold franchise on behalf of its members, both in Middlesex and Hertfordshire.

CHESS.

TO CORRESPONDENTS.

R. T., M. P., SIGMA, and others.—The Solution of Problem 905, as amended in Enigma 939 in the Number for Sept. 15th, is as follows:—

WHITE.	BLACK.	WHITE.	BLACK.
1. B to K B 2nd (ch)	R to Q 5th, or (a)	4. Kt takes Kt P	Anything
2. Q to K B sq	R takes Q, or (b)	5. Kt to K 6th—Mate	
3. Kt to K 5th	R takes B		

(a) 1. P to Q 5th | 2. Kt takes Kt | R takes P
2. Q to K 6th | R to Q 8th | 4. Kt to Q Kt 6th
(If he play R takes Q Kt P, then follows 3 Q | And Mate next move
takes R, &c.)

(b) 2. Q takes R | P to Q Kt 7th | 4. Q takes Q
3. Q takes R | P to Queen | And Mates next move.

K. Arkell.—Both solutions were all wrong; and were, therefore, unnoticed.

J. Lyons.—Enigma 942 place the Black Pawn which stands at Q 7th to Q B 7th, and then Mate can only be given under four moves.

E. J. L.—You may claim a second Queen, or any other piece you choose. 2. You may, in this case mentioned, have a second Bishop of the same colour.

ADAM.—The Gentleman lived to a very advanced age. Le Bourdonnais died when only forty-three.

A. G., Liverpool.—You must either have set the men up wrongly or be ignorant of the notation. Our Solution is perfectly correct. White checks with his Q at K Kt 3rd, Black must move to Q 4th. How is he to be checked? With what piece? White can adopt a very clever *coup de repos* of 2. R to Q Kt 8th, and mates by force in two more moves.

A. Z.—We can take no notice of you, now mate is to be effected in five moves by the course of any two moves named. Leave out the position once more attentively.

J. W. and C. S., Bala.—Try 1. Q to Q 3rd (ch); and, if Black move 1. K to K 5th, follow with 2. B to Q B 5th, &c. Instead of 1. K to K 3rd, he play R to Q B 3rd, then move 2. Kt to Q 8th, &c.

S. J. S.—The two games and will be found in Chess Players' Chronicle, which, owing to the paucity of communications received, will shortly be extended to sixty-four pages.

W. H. B.—Always send early in the week and your communications will be sure of attention.

C. W. Sunbury.—Your regular is given above. It begins with Q to Q 3rd (ch).

SOLUTIONS OF PROBLEM No. 901, by Sigma, Tyro, Miles, M. P., Omicron, R. W., F. R. S., C. W., Sunbury; D. D., J. P., are correct.

SOLUTIONS OF PROBLEM No. 903, by Mario, Albert, T. M. P., Scrub, C. W., Sunbury, F. M., Tyro, and Omicron, are correct.

SOLUTIONS OF ENIGMAS, by Peregrine, Alpha, M. P., Excelsior, G. W., C. W., Sunbury, Tyro, C. P., are correct. All others are wrong.

SOLUTION OF PROBLEM No. 906.

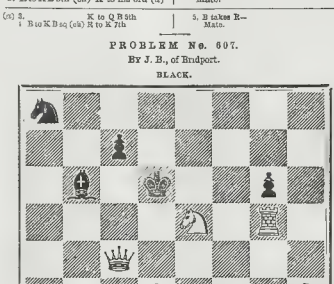
WHITE.	BLACK.	WHITE.	BLACK.
1. Kt to Q B 3rd (ch)	P takes Kt	4. Kt to Q 4th	K to Q 2nd
2. K to Q B 2nd	K to Q 4th	5. B to Q B 6th—	
3. B to K B 5th (ch)	K to Q 3rd (*a*)	Mate.	

(a) 3. K to Q B 5th | 3. B takes R—
If Black send early in the week and your communications will be sure of attention.
1. Kt to Q B 3rd (ch) | Mate.

PROBLEM No. 907.

By J. B., of Bridport.

BLACK.



WHITE.

White, to play, and mate in three moves.

CHESS IN THE METROPOLIS.

A brilliant skirmish between Mr. MCDONNELL and Mr. G. WALKER—the former giving the odds of the K Kt.*

(Remove White's K Kt from the board.)

WHITE. (Mr. McD.)	BLACK. (Mr. G. W.)	WHITE. (Mr. McD.)	BLACK (Mr. G. W.)
1. P to K 4th	P to K 4th	13. P to K 5th	K Kt to Q 4th (*b*)
2. K B to Q B 4th	K B to Q B 4th	14. Kt to K 4th	K B to Q B 2nd
3. P to Q Kt 4th	K B takes Q Kt P	15. Q B to Q R3rd (*c*)	P takes P
4. P to Q B 3rd	K B to Q R 4th	16. K P takes P	P to Q Kt 4th
5. Castles	P to Q 3rd	17. Q to her B 2nd (*d*)	Q Kt to Q 2nd
6. P to Q 4th	P takes P	18. Q R to K sq	Q Kt to his 3rd
7. P takes P	B to Q Kt 3rd	19. Kt to Q 4th (ch)	B takes Kt
8. P to K B 4th	Q B to K 3rd	20. P takes B (dis. ch)	K to B sq
9. B to Q Kt 5th (ch)	P to Q B 3rd	21. P to Q 7th (dis ch)	Kt to K 2nd
10. B to Q 4th	Q B to Q B 5th (*a*)	22. B takes Kt (ch)	Q takes B
11. R to K B sq	K Kt to K B 3rd	23. B takes Q,	
12. Kt to Q B 3rd	K B to Q R 4th	And wins.	

(a) He should have sought rather to develop his forces. Such an attack as this is premature, and loses time.

(b) He might have taken the adverse Kt without danger, we believe—*e. g.*:—

13.	B takes Kt	15. B takes B	P to Q Kt 4th
14. R takes B (best)	Q to Q 4th	&c., &c.	

(c) White plays all the rest of the game very cleverly.

(d) This *coup de repos* is well timed, for Black with all his forces is powerless to avert, through he may see, the coming danger.

* These odds were given of course during the menage of Mr. W.'s play.

CHESS ENIGMAS.

No. 944.—By an AMATEUR.

Black: K at K R 7th, B at Q Kt 6th, P at Q B 6th.
White to play, and mate in four moves.

AUSTRIA ON THE DANUBE.—Political speculators hold that Austria ought to be summoned by the Western Powers to assist them in rendering the navigation of the Lower Danube perfectly free; but the present state of things probably suits her very well. Russia has promised not to interrupt the navigation of the Lower Danube as long as the German Confederation does not meddle in the war, and consequently the neutral Powers enjoy a monopoly of the trade with the Principalities. Austria has always talked loudly of caring for her own interests, and it is therefore not very likely that she will assist in driving the Russians from the left bank of the Danube, in order that the French may be able to introduce their silks, and the English their cotton goods, into the Principalities. Total almost all the carrying trade is in the hands of the Greeks, Austrians, Prussians, and Hanoverians, we are by the official returns.—*Letter from Vienna.*

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

The Duke and Duchess of Brabant, during their visit to Paris, will reside at the Palace of St. Cloud.

The Duke of Saxe-Coburg-Gotha quitted Paris on Saturday last. His Royal Highness proceeds to Coblentz, where the King of Prussia appears to be assembling a Congress of the Princes of the minor German States.

The King of Belgium has created eighteen of the most distinguished physicians in his kingdom Knights of the Order of Leopold.

The Queen of Spain was to return to the capital on the 30th ult. She is convalescent. The Ministry continues to enjoy her Majesty's entire confidence.

The *Opinione* of Turin, in mentioning the appointment of General Wimpffen to the Directorship of War at Naples, states that he has a brother who is a General in the Russian army, and that he is well known for his philo-Russian opinions.

During the past few days, Mr. Crawfurd, M.P., Mr. Baxter, M.P., and Mr. Dunlop, M.P., have addressed the several constituencies at Inverary, Montrose, and Greenock. All of them spoke in favour of an active prosecution of the war.

The King of Greece still insists on the retirement of Kalergi. MM. Mercier and Wyse have referred home for instructions. They demand guarantees from the King.

The *New York Herald* announces, on the authority of its Washington correspondent, that General Hunt is said to be the successor of Mr. Bulwer at the Court of St. James's.

The young officer, Baron Meyendorff, who was recently killed at the side of Prince Gortschakoff, was the son of the statesman who was Minister at Vienna before Prince Gortschakoff came, and consequently nephew to Count Buol, the Austrian Minister.

The wife and family of Santa Anna passed through Louisville on the 14th ult., *en route* to New York. Santa Anna himself was expected shortly to follow.

A letter from Vienna, in the *Augsburg Gazette*, states that M. de Prokesch is much pleased with the friendly reception he has met with at the French Court, and in particular from the Emperor of the French.

The late Colonel Campbell has left the sum of £500 for the purpose of building a school in his native village of Furnighay, and a further sum of £2500 as a perpetual endowment.

The *Espana* announces the death of Donna Isabella Maria, who was Regent of Portugal from 1826 to 1828.

Prince Czartoryski has arrived at Constantinople.

General Prim has been appointed Captain-General of Grenada.

The *Warsaw Courier* relates that a man has been condemned to hard labour for quitting the Greek Church and joining another Christian sect.

A meeting of the friends of the late Mr. Feargus O'Connor has been held in Glasgow, to consider the propriety of endeavouring to erect a monument in Scotland to the deceased gentleman.

Owing to the scarcity of brandy, required for the use of the army, the Russian Government has ordered its admission free of import duty to the Governments of Ekaterinoslaw, Kherson, Taurida, and Bessaraba.

A placard issued by the proprietor of one of the Sunderland singing saloons, invites the public to come and satisfy themselves, that the music is fitted "to soothe the savage soul."

The railway from Barcelona to Tarrasa, forming part of the line from the former town to Saragossa, will be opened towards the end of this month.

The magistrates of both North and South Shields have determined to entirely withdraw the spirit licenses from the public-houses that have had music saloons in them during the year.

A man named Vriezon, of Dimxperle, near Diest, in Belgium, caused a few days ago the birth of his twenty-fifth child to be registered.

Mr. Bates, the late town-clerk of Belfast, has died of a broken-heart, it is stated, in consequence of the law proceedings carried on against the bankrupt Corporation of that unfortunate city.

The loss of life from snake-bites in Scinde has become so serious that Government has taken measures for the destruction of these reptiles.

The attendance of both buyers and sellers at Howden horse-fair was immense. Hunters sold from £180 to £200; carriage horses from £110 to £180; and riding horses from £75 to £100.

A vessel has which is now lying in the harbour of Greenock has brought a quantity of brandy, whisky, &c., from Melbourne. The cargo is returned to this country as unsaleable in the colony.

A revolt of Mussulmans in Abyssinia has been put down. The new King has declared that he will protect the Europeans, and that all religions shall be free.

The Hurst Castle telegraph station has been given up, and intelligence of ships and mail packets passing the Needles can be no longer communicated to Southampton and London.

Preparations are being made at the Invalides to receive the guns taken at Sebastopol and the Russian flags; which latter are to be placed by the side of those of Austerlitz, Wagram, Jena, Algiers, &c.

J. Windward, a harvestman, has been fined 18s. 6d. by the Bury St. Edmunds magistrates for doing his work badly, being remonstrated with by the farm bailiff.

It is said that the purchases of gold recently made in England by the Bank of France amount to fifty millions of francs, and that the Bank has lost one million and a half by the transaction.

Great ravages have been committed by myriads of insects upon almost all the turnip grounds in the county of Kent. The blight has been so extensive among the white kind, that in many fields scarcely a turnip of the last sowing is left.

Sir W. Denison proposes to make good the deficiency in the revenue of New South Wales, by increasing the duty on tobacco fifty, and on other articles 100 per cent. Publicans' licenses are to be doubled, and assessment of stock to be reintroduced.

Seventeen gold-diggers from Melbourne, Australia, were landed from the ship Northumberland at Torquay, a few days ago, having with them upwards of 400 ounces of gold.

The municipal council of Rouen, at its last sitting, voted a credit of 250,000 francs, in furtherance of measures for relieving the pressure on the poorer classes and the workmen by the present high price of food.

New companies have been formed for increasing the amount of the French merchant navy. All the ship-builders at Marseilles, Bayonne, Nantes, and Saint Malo, have received orders for building ships that will take more than two years to complete.

John Grassick, a branch of the clan Macfarlane, Moorhead, Tannadice, died on Tuesday, 11th of September, 1855, at the age of 102 years.

Out of fifty young German medical students who some months back entered the service of Russia, and the majority of whom went to the Crimea, ten have died from different maladies, and thirty have been seriously injured in their health by the fatigue and sufferings which they have undergone.

A law has been passed in California for the due observance of the Sabbath; and the proprietors of circuses and gambling dens readily succumb, and advertise that they shall do everything according "to law and order."

A severe thunderstorm visited Aldershott on the 28th ult., accompanied with torrents of rain, deluging the Camp and the surrounding district. The permanent Camp for 10,000 men is in progress.

By Imperial decree the new Boulevard de Strasbourg, with its continuation, the Boulevard du Centre, towards the left bank of the Seine, is to take the name of the Boulevard de Sebastopol.

Four colliers were killed instantly, on Monday, at Oswaldtwistle, near Blackburn, by the breaking of a rope. There was a guard to prevent the rope slipping; but, through some neglect, it was not used.

A man died at Perth a few days ago from the effects of drinking six quarts of porter, which he had swallowed in the course of fourteen minutes—being a wager of a pint per minute for so in a quarter of an hour.

The Belgian Government has decided on according an allowance of 50 per cent on the conveyance by the State railways of alimentary substances destined for hospitals and other charitable institutions.

A monster nugget, exhibiting at New York, and valued at £10,000, was lately attached by a painter for £4, being the amount of his demand for painting a sign-board representing the nugget, and placed over the exhibition room.

The Corporation of Ipswich have taken a decided step towards forwarding the work for providing a new cattle-market. The contract for raising the site selected in the marshes to the required level has received the seal of the Corporation.

The *Italia e Popolo* was seized at Turin on the 27th ult. for the publication of an address to the democrats of Europe, sent to that journal from London.

THE ASSAULT ON THE MALA

-SKETCHED BY J. A. CROWE.—(SEE NEXT PAGE.)

A SSAULT ON THE MALAKOFF.

In our last publication we gave an account of this brilliant affair by our own Correspondent, and we this week give an Engraving of it from a Sketch by our Artist in the Crimea. [illegible] unattended Niel both the [illegible] occasion, Marshal Pelissier and General Niel both [illegible] their reports the gallant conduct of Commandant Ragon, of the [illegible] on the 8th. The *Constitutionnel* now publishes the following [illegible] officer to one of his friends:—

[illegible] doubt, Sept. 11.

[illegible] ly pay this tax you have imposed on me of a [illegible] It was I, Louis Dominique Auguste [illegible] ands, who had the honour of commanding [illegible] at on the [illegible] work of Malakoff. I entered [illegible] ad of the sappers, on jointly with the regiments of [illegible] Zouaves of the First Division of the second Corps d'Armée. We climbed the ditch like ants, dislodged the enemy, forced the lines, and carried the [illegible] with [illegible] precisely French. Our standards planted [illegible] were assisted and vigorously defended for more than six hours [illegible] e honour of remaining [illegible] column [illegible] two carriages and two on our left [illegible] leaving the [illegible] deserved with the blood [illegible] our triumph sufficed to deprive the Russians of the power of [illegible] ed. At midnight, from the top of our conquered work, and [illegible] s of dead Russians, we were witnesses of one of the grandest [illegible] ten possibly be conceived—the town in flames lighted up all [illegible] Dockyards [illegible] ing one after the [illegible] the fire on shore [illegible] s added the successive [illegible] but erics, which [illegible] which the enemy blo[illegible] ad had nothing around [illegible] a routed army [illegible] ssaves regorged [illegible] of their courageous efforts. The first of these explosions [illegible] myself rather too close, caused me some little injury, [illegible] carried away. my sword was bent at the hilt, my left arm and hip bruised, and I received a scratch on my hand just sufficient to [illegible] s a right to say that I had shed blood for the honour of France in the [illegible] triumph. I seal my letter with the seal of a Russian officer, which I obtained in the Malakoff Tower, and it is a valuable [illegible]. I must request you to communicate this letter to my mother and to M. T——; they will be [illegible] of them, and I have now time to write to them, [illegible] and this be [illegible] at immediately. I embrace [illegible]

A Hero.

VICTORY.

Light up your houses, [illegible]
And sullen-voiced cannon [illegible]
The tidings of our triumph. Thanksgiving
[illegible]s like incense: men unused to pray,
[illegible] God for the great tidings of to-day.
[illegible] rejoices; people shout and sing
[illegible]ultant; and the music's purple flood
[illegible]s the wild clash of bells.

We hear—we wait,—
[illegible]ntly—patiently, as women can,
[illegible]calm, white faces, looking for our fate—
Dumbly receiving it. Yet once, oh, man!
One shriek against thy fictions shall have way.
Out on thee, hag! whose name is writ in blood:—
Even VICTORY, the fairest child of WAR.—M. J. [illegible]

[illegible]

PREPARATIONS FOR AN EXPEDITION. Everything around us indicates the intention of putting the army into winter quarters on the site of the present encampment; but if there are signs equally unequivocal as to the time when the enemy are the first to [illegible] themselves actively down to endure the rigours of winter. These signs, insignificant [illegible] separately, [illegible] the aggregate unmistakable—unless our [illegible] are to be [illegible] awful the time in channeling and in frightening [illegible] Just as they are endeavouring to [illegible] extensive fortifications on the north side, and as they ought to intimidate us in days past by [illegible] sweet batteries, barricades, and internal lines of defence. In the first [illegible] [illegible] [illegible]

MEDITERRANEAN ELECTRIC TELEGRAPH.

It will be in the remembrance of many of our readers that about the time last year we drew attention to the [illegible] from Malta of the first instalment of the Mediterranean Telegraph; and we gave a sketch of the cable itself, as well as of the vessel, the *Persian*, which was to convey it to its destination.

The second submarine length has just left our shores on board the *Result*, one of the splendid vessels belonging to that well known firm, Messrs. Green, of Blackwall; and it is with pleasure that we recall attention to the continued progress of this work.

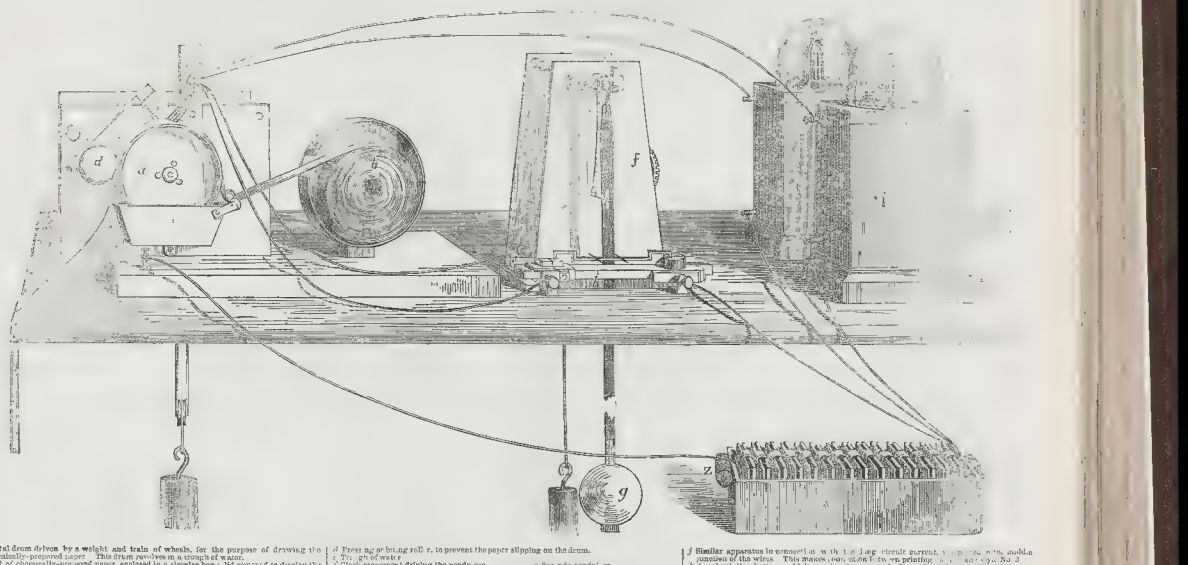
Eight or nine years ago the bare possibility of submarine telegraphic communication, for even a few miles, was a problem: it has now, in '55, become a national necessity; and this not for a few miles only, as if of friendly communication with a neighbour, but even hundreds of miles of sea must not now prevent the receipt of instant intelligence. Not an individual in the nation but must know daily the Crimean news, brief though it be. Experience seems to show—nay, has already abundantly proved—contrary to all our preconceived notions, that a well-made and well-laid cable is of all modes the very safest and most perfect means of establishing and maintaining the electric *rapport*. Its durability is undoubted; its structure is guarded from injury by the very depths in whose bosom it reposes while the storms and convulsions of both the physical and the moral world pass over it unheeded.

The *Times*, in a recent article, presses this point upon our notice, alluding to the interruption that recently occurred in distant parts of the European Line, and urging the necessity, "in the present political aspect of the world," of establishing lines of telegraphic communication "as little as possible liable to be interrupted," and rendering available on the shortest notice the full resources of human power all circumstances, say they:—

It is natural that the public should look with interest to the speedy establishment of the lines completed and contemplated by the Mediterranean Electric Telegraph Company. From Spezzia this company has stretched a submarine cable to Corsica, and thence across that island and the strait of Bonifacio, its scheme is realised as far as Cape Spartivento the southern extremity of Sardinia. Before the close of this month Algeria will be in telegraphic communication with France, and that country and Sardinia have each guaranteed five per cent per annum on the portions of the line in which they are respectively most interested. From Cape Spartivento the company proposes to go to Malta, and, arrived there, to stretch one line of telegraph by Corfu across the isthmus of Greece to Constantinople, and another by Alexandria, Suez, Aden, and the coast of Arabia, to Kurrachee, where communication with the Indian system will be established. For the completion of this extensive route not more than £1,000,000 of capital would be required, and it is confidently asserted that the whole might be finished in two years and a half. To say anything about the advantages which must result from the formation of such lines is unnecessary. Whether they pay or not, it is quite obvious that, even as a matter of State policy, they must shortly be carried out, and as time presses there seems no good reason why this country, so rich and great, and so especially interested in the undertaking, should not at once agree to share its risk with the friendly Powers of France and Sardinia.

The [illegible] cable contains [illegible] conductors, [illegible] consisting of four strands, under the direction of [illegible] in the spot appointed for landing on the Algerine coast, [illegible] 162 miles in one length, and weighing upwards of [illegible] tons, is now to lay down in depths varying from one to two miles and it requires the combination of high nautical and engineering skill to merge it successfully. Mr. Brett, the father of submarine Telegraphs, and the *gerant* of this Company will, of course, superintend the operation. Profiting by the experience gained in the laying [illegible] cable he has made improved arrangements for the [illegible] its perfect success.

Turn we now to the more purely electrical part of the subject. Since the discovery of gutta percha, and its use for covering wire for telegraphic purposes, certain peculiarities have been observed in the manner in which the electric current reports itself in such wires as compared with the habits in ordinary telegraph wires. Upon these phenomena Faraday has lectured at the Royal Institution, and the attention of electricians has been directed to the same point. All that the public has heard upon the subject seems to have been a sort of half-doubt as to the practicability (electrically speaking) of working long submarine length; two minutes have been spoken of in our hearing (we believe Faraday to have said two seconds) as the time required for the arrival of each current from London to New York, via the Transatlantic or rather Subatlantic Line. Again it was said somewhat jokingly that a message sent could actually be received before its arrival (Faraday we believe said "a signal")

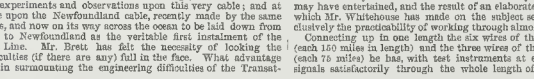


a Metal drum driven by a weight and train of wheels, for the purpose of drawing the chemically-prepared paper. This drum revolves in a trough of water.
b Roll of chemically-prepared paper, enclosed in a circular box; lid removed to display the paper.
c Arm carrying four steel styles, or tracers, of Geneva mainspring, carefully insulated from each other, which press upon the paper. These styles are parallel to each other, and the points are placed in a line directly at right angles to, or across, the slip of paper.
d Pressure bar, being roller, to prevent the paper slipping on the drum.
e Trough of water.
f Clock movement driving the pendulum. *g* Seconds pendulum.
h A "Bunsen" battery of [illegible] cells, somewhat modified and arranged so as to charge the contact, at every beat of the pendulum, from No. 1 to No. 4 [illegible] in succession.
i Reading apparatus, or relay, in connection with the long circuit: this makes connection between the printing battery and style No. 5.
j Similar apparatus in connection with the long circuit current, [illegible] the double junction of the wires. This causes each [illegible] printing style No. 3.
k Local printing battery, which may be of any required number of cells. From the zinc terminal (*z*) a wire goes direct to the frame-work of the metal [illegible] other end of the battery threw wires proceed [illegible] styles, alternating as they [illegible] one of the break pieces (*b*); while from the remaining end of the battery [illegible] wires proceed, carrying the current to No. 1 and No. 3 styles, alternating as they [illegible]

MEDITERRANEAN ELECTRIC TELEGRAPH.—APPARATUS FOR THE AUTOMATIC RECORDING OF THE VELOCITY EXPERIMENTS.

Now it is for the practical elucidation of every important point upon this subject that a gentleman well versed in electric telegraph matters, who is associated with Mr Brett in his undertakings, has been for some time making experiments and observations upon this very cable; and at the same time upon the Newfoundland cable, recently made by the same manufacturers, and now on its way across the ocean to be laid down from the mainland to Newfoundland as the veritable first instalment of the Transatlantic Line. Mr. Brett has felt the necessity of looking the electrical difficulties (if there are any) full in the face. What advantage will there be in surmounting the engineering difficulties of the Transatlantic Line if, on its completion, we meet with an electrical impossibility? We must do Mr Brett the justice to say that he has never believed in the existence of any insurmountable electrical difficulty whatever doubts others may have entertained, and the result of an elaborate series of experiments which Mr. Whitehouse has made on the subject seems to establish conclusively the practicability of working through almost an unlimited length.

Connecting up in one length the six wires of the Mediterranean cable (each 150 miles in length) and the three wires of the Newfoundland cable (each 75 miles) he has, with test instruments at every junction, worked signals satisfactorily through the whole length of 1125 miles. He has retained records—automatic records, we believe—of a very large number of experiments on this subject, which, we understand, he is going to lay in the form of a paper before the British Association at their next meeting. Meantime he has courteously allowed us to give a sketch of a part of his apparatus, viz., that for testing the velocity of the current; and has given our artist a slip of the recording paper wherein one of the velocity experiments for 900 miles was made. This we reproduce in facsimile, exact size. The accompanying note from Mr Whitehouse will explain better than we can do his mode of ascertaining the velocity of a current travelling through any given length of wire.



FACSIMILE OF TELEGRAPHIC AUTOGRAPH.

(To the Editor of the ILLUSTRATED LONDON NEWS.)

SIR,—I can have no possible objection to your illustrating as far as you are able the subject upon which I have been experimenting. It is my intention to lay the results before the British Association at their next meeting, till which time I must reserve all more full description and details elsewhere. I will give you as I promised a short sketch of the mode in which I make my experiments for "velocity." In order to explain the slip which I gave to your Artist.

A slip of moistened chemical paper is kept moving by a train of wheels at a moderate speed over a metal cylinder. Pressing upon the upper surface of this paper on the drum and parallel to each other, are four steel springs or styles, insulated from the drum and in connexion each with its proper wire. Two of these styles, the first and the fourth in order, record the beats of a seconds pendulum upon each side of the slip of paper alternately, the seconds having in this instance been subdivided into fractional parts of one [illegible] by a very simple revolving arrangement.

Two separate magneto-electric currents, "twin-currents," as they may be called, synchronous in their origin, but differing in their destinations, and wholly distinct in their metallic circuits, are sent by one and the same movement of a handle. One travels about twenty feet, is received upon a "relay," or instrument which instantly gives a contact for a local printing battery, and records itself upon No. 2 style; this serves to note the instant when the current got up the long circuit from its journey.

The other current, and of course a much stronger one, is sent through 900 miles of wire, and is received upon a similar "relay" [illegible] the middle junction of these wires, and therefore, at the greater part of the distance from the source of the current. This current actuating the "relay" when it arrives, gives a contact for the printing battery in the same way as the other, and records itself upon No. 3 style after an appreciable interval of time. For 900 miles this interval of time is very nearly 3-12ths of a second, as will be seen by reference to the slip.

I am, Sir, very truly yours, WHITMAN WHITEHOUSE.

NAVAL AND MILITARY INTELLIGENCE.

THE WAR

War Department, Oct. 2, 1855.

Her Majesty has been graciously pleased to approve of the following promotions in the Army:—

BREVET: TO BE FIELD MARSHALS.

General Stapleton Viscount Combermere, G.C.B. Dated 2nd October, 1855.
General John Earl of Strafford, G.C.B. Dated 2nd October, 1855.
General Henry Viscount Hardinge, G.C.B. Dated 2nd October, 1855.

GENERAL ORDER.

Dated Horse Guards, Oct. 2, 1855.

The General Commanding-in-Chief has received her Majesty's most gracious commands, that Lieutenant-General James Simpson, Commander of her Majesty's Forces during the late arduous and finally successful operations, which have led to the fall of Sebastopol, shall be promoted to the rank of General.

The Queen has also been most graciously pleased to command that Colonel Charles Ash Windham, C.B., shall be promoted to the rank of Major-General, for his distinguished conduct in heading the column of attack which assailed the enemy's defences on the 8th September with the greatest intrepidity and coolness, as gallantly brought to the notice of her Majesty in the public despatch of the Commander of the Forces, dated the 9th September, 1855.

By command of the Right Honourable Field Marshal Viscount Hardinge, Commanding-in-Chief. (Signed) G. A. WEATHERALL, Adjutant-General.

BREVET.

Lieutenant-General James Simpson to be promoted to be General in the Army, for distinguished service in the field. Dated 8th September, 1855.

Colonel Charles Ash Windham to be promoted to be a Major-General in the Army, for distinguished service in the field. Dated 8th September, 1855.

THE *Calcutta*, 84, and *Penelope*, 18, at Spithead, are ordered to prepare for sea service. The *Cumberland* is in a forward state of completion and has been put in commission. Lieutenant Chandos Stanhope is appointed to the command.

THE *Urgent* embarked on Saturday last at Portsmouth, Lieut.-Col. Hill, of the 63rd Regiment, 22 officers, two assistant-surgeons, and draughts of the 4th, 18th, 30th, 88th, and the 1st, 2nd, and 3rd battalions of Rifle Brigade, in all 592 officers and men, for the Crimea. She left for the East on Sunday morning, the men loudly cheering as they passed out of the harbour.

THE *Repulse*, a sister ship to the *James Watt*, was successfully launched at Pembroke Dockyard on Saturday evening last, a little before six o'clock. The ceremony of naming was performed by the Hon. Mrs. Archibald Campbell, daughter-in law of the Earl Cawdor. The *Repulse* is one of the new class of ships of 90 guns upon two decks, with an immense pivot one on the upper deck, having also the auxiliary steam screw of 800-horse power, and is a very handsome model. Her principal dimensions are as follow:—Length, between the perpendiculars, 280 feet; breadth, extreme, 58 feet 4½ inches. Depth in hold, 24 feet 6 inches, burthen in tons, 3368; horse power, 600.

IT is said that no fewer than 25,000 horses belonging to the English army are rationed daily in the Crimea. This number, of course, includes chargers, cavalry horses, bât horses, and the animals belonging to the transport establishments.

MR. LYMAN, the celebrated ship-builder at Lymington, in Hampshire, has received an order from the Government to build gun-boats

THE officers of the *Cossack*, taken at Hango while carrying a flag of truce, have been taken on board the *Phlegethon* at Odessa. They were three months travelling from the Baltic to the Black Sea.

Detachments from every depôt in Ireland, whose corps are stationed in the Crimea, are held in immediate readiness to proceed to the seat of war and Malta. The strength of the several detachments will amount to about [illegible] officers and 17 0 non commissioned officers, [illegible]

THE BRITISH SWISS LEGION.—The first regiment, consisting of two battalions, stationed at Dover, is under orders to proceed to Malta, and will very probably take its departure for that garrison within a few days. The second battalion will remain at Canterbury until steamers are got ready at Portsmouth to embark it and the first battalion. The two battalions number 46 officers and 1240 men. Colonel Thomas Sheffield Dickson is named to command the whole of the Swiss force embodied and to be raised; and, it is said, will have the rank of Major-General from the embarkation for foreign service. Nearly [illegible] already completed are reported by the Adjutant-General to [illegible] efficient state, and fit for any service on which they may be employed. Last week a draught of 263 very fine recruits landed at Dover from the central depôt at Schlestadt, which is a beginning of the second regiment. The number of recruits arriving at the central depôt to be enrolled is very great, owing to harvest operations being brought to a close in Switzerland, and it is expected that before the end of this month the two battalions of the second regiment will be completed.

LAST SUNDAY, being the day fixed for the public thanksgiving for the brilliant success of the Allied armies in the East, the troops of the German Legion in camp at Shorncliffe, amounting to about 3000 men, paraded for that purpose under the command of Colonel Woolridge. The different regiments formed a hollow square. The prescribed prayer was read, the "Te Deum" was sung, and a most impressive sermon was delivered by the chaplain. Immediately afterwards the greater portion of the officers of the force accompanied their gallant commander to the Established church at Sandgate, where they joined the English congregation in returning thanks for the victories gained by their brave [illegible]

MR. D. C. Mitchell, of the Inns of Militia, has invented an electric cannon. It is fired without a touch-hole, by means of electricity. The conducting and non-conducting wires are introduced into the cannon during its manufacture, and cut off close to the surface, so that in the event of the gun falling into the hands of the enemy, they would fail to discover that it had been [illegible] The cannon is discharged, having no touch-hole in case [illegible]

NEW BOOKS, &c.

Crown 8vo, cloth, price 3s. 6d., post-free 3s. 10d.

LONDON AS IT IS TO-DAY; WHERE TO GO AND WHAT TO SEE with Two Hundred Engravings
London: H. G. CLARKE and Co., 252, Strand.

THE MAN IS COME.—ELIJAH. Voice of the First, 6d.; post, 7d.
C. M. PEACOCK, Publisher, 19, Canstor-street, Chancery-lane, London, and all Booksellers.

Lately published, 3s 6d.; handsomely bound,
JOY FOR THE SORROWFUL; or, Comfort in Sickness, Calamity, and Bereavement. With passages introduced and introductory, by the Rev. JAMES McCOMBIE, HUSBAY, Afternoon Preacher at the Foundling for Jr. A M PIGOTT, Aldine Chambers, Paternoster-row, and Kennington-park-corner, London

Just published, price 2s.; postage-free on receipt of twenty-six stamps,
PAINTING PHOTOGRAPHIC PORTRAITS, &c., in WATER COLOURS, a GUIDE to. With Coloured Diagrams. By A. N. RINTOUL.
London: J. BARNARD, 336, Oxford-street.

Just published, in handsome cloth, price 3s.
THE AUTHOGRAPHY of a BEGGAR BOY in which will be found related the numerous Trials, hard Struggles, and Vicissitudes of a strangely-chequered life; with Sketches of Character, and Pictorial History of a Period of Fifty Years.
WM. TWEEDIE, 337, Strand

Now ready, at all the Libraries, in 3 vols.,
MRS. TROLLOPE'S NEW NOVEL, GERTRUDE; or FAMILY PRIDE
"A wonderfully interesting and original novel."—Herald
"The PRIEST'S NIECE. By the Author of "Lionel Deerhurst. 3 vols.
HURST and BLACKETT, Publishers (Successors to H. Colburn).

Now ready, at all the Libraries, in 3 vols.,
PERCY BLAKE; or, The Young Rifleman.
By Captain RAFTER.
A highly entertaining story, which presents a graphic picture of military life, in all its varied aspects."—John Bull.

HURST and BLACKETT, Publishers (Successors to Henry Colburn).

QUARTER-DAY at SEBASTOPOL.—The COMIC TIMES, No. 9, Price One Penny, contains—Quarter-day at Sebastopol—Recruiting Literature—The Lodger—The Glasgow Gathering—Very Thoughtful—Original Design for the James's Park Bridge—Lines to a Shoeblack—Mr. Long Stern Swell"—Inchley Papers, No 7—Diamond Cut Diamond—A Fiery upon Words Improvements in Journalism—Elegant Extracts, &c. &c. &c. Novel without a Hero, &c.—Office, 1, Crane-court, Fleet-street, and sold everywhere.

This day is published, price 1s., by post for 14 stamps,
THE ART of TRANSPARENCY PAINTING on LINEN; with Instructions for producing Pancratic and Diaphanic Effects, Painting Decorative Blinds, and the Combination and Transfer of Ornamental Designs, &c. By W. WILLIAMS. With Twelve Illustrations by Charles Bibby, engraved on wood by Linzell.
London: WINSOR and NEWTON, 38, Rathbone-place; and sold by all Booksellers and Artists Colourmen

HUGHES'S READING LESSON-BOOKS.
MR. EDWARD HUGHES, Head-Master of the Royal Naval Lower School, Greenwich Hospital, begs respectfully to direct public attention to his Series of
READING LESSON-BOOKS
well Illustrated, and suited to the Educational requirements of the present day.
The FIRST BOOK, Revised Edition, is now ready, in 12mo (or 448), price 2s 6d
The SECOND BOOK is just published, in 12mo (pp 432), price 3s 6d.
The Books are carefully graduated, so as to lead the pupil, step by step, from the observation of the simplest to the comprehension of the more complex phenomena of Nature. They have been practically tested in the School under the Editor's care, and contain Original Articles by
Allen, Joseph, Esq., R.N.
Chenfey, Henry, Esq.
Connon, Charles W., Esq., M.A.
Craik, George L., Esq., Professor of English Literature, Queen's College, Belfast.
Dodd, George, Esq.
Frankland, Dr., Professor of Chemistry in Owen's College, Manchester
Hughes, Edward, Esq., F.R.S.
Jones, Owen, Esq., F.S.S.
Jukes, J. Beete, Esq., F.R.S., Director of the Geological Survey, Ordnance Department, Ireland
Leathem, Dr., F.R.S., Professor of Natural History, New College, St John's Wood.
Lathum, Dr. Robert Gordon, F.R.S.
Muss, Rev. Robert, M.A., F.R.A.S., First Assistant in the Royal Observatory, Greenwich
Mann, Dr. James, F.R.A.S.
Mitchell, Rev. M., A.M., one of her Majesty's Inspectors of Schools
Patterson, Robert, Esq., President of the Natural History Society, Belfast
Playfair, Dr. Lyon, C.B., Secretary to the Department of Science and Art, Board of Trade
Purnell, Edward, Esq., A.B.
Reid, Hugo, Esq.
Richardson, J., Esq., Curator of the Museum, Marlborough House, Pall Mall
Smyth, Warington, Esq., F.R.S., Professor of Mineralogy, Museum of Practical Geology, Jermyn street.
Tyndall, Dr. John, F.R.S., Professor of Natural Philosophy, Royal Institution, Albemarle-street
Wallis, John, Esq., Elec. Professor of Political Economy, Trinity College, Dublin
White, James Sewell, Esq.
Worsnam, R. N., Esq., Keeper and Secretary, National Gallery
Wyatt, M. Digby, Esq.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

Now ready, Fourth Edition, price 1s. 6d., or, by post, 2s.,
LATERAL CURVATURE of the SPINE, with a New Method of Treatment for securing its removal, without the necessity of constantly-tying Down. By CHARLES VERRAL, Esq., Surgeon to the Spinal Hospital, London
Lou: n: CHURCHILL, New Burlington-street, and of all Booksellers

Fifth Edition, 8vo. cloth, price 3s. 6d., free of postage,
CONSUMPTION SUCCESSFULLY CURED by MEDICATED INHALATIONS, or Remedies locally applied to the seat of Disease through the medium of Respiration. By A. B. MADDOCK, M.D.
H. BAILLIERE, 219, Regent-street.

ECHURTON, BRITISH and FOREIGN LIBRARY, begs to inform his Subscribers that he has JOINED HIS LIBRARY to that of Mr. BOOTH, Bookseller (next the Polytechnic Institution), where Families and Book Societies can be supplied with more liberal terms than any other Library. First Class Country Subscribers of Two Guineas are entitled to Eight Volumes at one time, including the Newest Publications. Town Subscribers from One Guinea upwards.

BOOKS, MUSIC, &c., CARRIAGE-FREE.—A. M. PIGOTT, Publisher, of Aldine Chambers, Paternoster-row, and of Kennington-park-corner, London, sends all kinds, carriage-free, to any part of England, Ireland, and Scotland, on receiving the selling price, in stamps or remittance, with the order

PHOTOGRAPHY.—A complete Apparatus, £3, £5 5s., and £11 11s. Send for a list at GILBERT FLEMING'S, 428, Strand, Author of "First Steps in Photography," price 1s. by post, 7d.

"Sir David Brewster, for this wonderful and beautiful invention, merits the thanks of the community."—Morning Chronicle
THE STEREOSCOPE (Lenses warranted), 3s. 6d. each; very strong, 7s. 6d. each. 10,000 Groups and Views (double), from all parts of the world, 1s. to 5s. each. "The finest we ever saw."—Art Journal. "Heidelberg as real as on the banks of the Neckar."—Literary Gazette. "Weaker of nothing which affords so much pleasure."—Morning Herald.—LONDON STEREOSCOPE COMPANY (Corner of Hanover-square), 313, Oxford-street. A Selected Grade of Instrument. Just out, "The Spanish Dancers," and "Scenes from Pompeii."

THE PHYSIOLOGICAL ERRORS of TEETOTALISM.—The COMMITTEE of the LONDON TEMPERANCE LEAGUE have much pleasure in announcing that a LECTURE, in reply to the Article under the Above Title, which appeared in the "Westminster Review," for the present Quarter, will be delivered in a SARTER-HALL, on MONDAY EVENING, October 8th, by Dr. F. R. LEES, F.S.A., Author of "Essays on Moral and Scientific Aspects of the Temperance Question," "Lectures on the Physiology of Strong Drink" to be taken at Eight o'clock by W. B. CARPENTER, Esq., M.D., F.R.S., the eminent Physiologist. Tickets to the reserved seat and platform, Sixpence each; other parts of the Hall, 3d. each, may be had of W. Tweedie, 337, Strand.

CROGGON'S PATENT ASPHALTE ROOFING FELT; INODOROUS FELT, for damp walls, lining iron houses, and in rolls, 32 inches wide, ONE PENNY per square foot. Also, DRY HAIR FELT, for preventing the radiation of heat and deadening sound; and SHEATHING FELT, for ships' bottoms, on which the copper lies smooth. Samples, directions, and estimates sent by post.—Croggon and Co., 3, Dowgate-hill.

NEW MUSIC, &c.

ENGLAND and FRANCE. A new Patriotic Song. By LOUIS CHRISTINE. Price 2s., postage free.
JULLIEN and Co., 214, Regent-street.

THE RUSSIAN RETREAT. A descriptive Pianoforte Piece. By ALBERT LINDAHL. Illustrated in Colours. Price 2s., postage-free.
JULLIEN and Co., 214, Regent-street.

SEBASTOPOL—A HYMN OF PRAISE—for Pianoforte, by ALBERT LINDAHL, in honour of the great victory gained by the Allies. Beautifully Illustrated in Colours by Brandard. Price 3s., postage-free.
JULLIEN and Co., 214, Regent-street.

SEBASTOPOL is OURS, composed by E. L. HIME. Price 3s., postage-free. This song of triumph for the glorious conquest of Sebastopol is now being sung by Mr Jonghman's every evening at Vauxhall with the most enthusiastic applause
LEWY and HODSON, 63, Oxford street

SEBASTOPOL is WON!!!—A Song Written by the Reverend J. S. B. MONSELL (Author of "What will they say in England?" &c. &c.) The Music by STEPHEN GLOVER. Price 3s., postage free
CHAPPELL, 50, New Bond-street.

THE CONQUESTS of SEBASTOPOL: Grand March. Composed, and dedicated to the Allied Army, by MRS. BEAUCHAMP COLE. Just published, price 3s.
London, D'ALMAINE, and Co., 20, Soho-square.

NEW BALLAD.—MOTHER, IS THE BATTLE OVER, or, Will my Father come again? Words by EDWARD COYLE. Music by BENEDICT NOTH. 2s. This beautiful Ballad is published at the Universal Circulating Musical Library, 86, Newgate-street.

UANITA: a Spanish Ballad by the Hon. Mrs. NORTON. Sung at Brighton with immense success. Just published, price 2s., postage-free.
CHAPPELL, 50, New Bond-street.

D'ALBERTS PALERMO QUADRILLE.—That Edition of this celebrated set of Quadrilles, being a companion to the popular set entitled "ROME." Price 4s., postage-free
CRAPPELL, 50, New Bond-street.

LINDAHL'S MIDNIGHT CHIMES for the Pianoforte, Third Edition, Price 3s. 6d. Also FAIRANT FOUR TA STRUE, as played by the French and English Military Bands at the Entertainment by Albert Lindahl. Price, Solo or Duet, 3s.; the best arrangement by Albert Lindahl. Price, Solo or Duet, 3s.; sent postage free.—CHAPPELL, 50, New Bond-street.

MR. COSTA'S ELI.—ADDISON and CO. having purchased from the Composer the Copyright of the above work, beg to announce its publication early in January, 1856. Price to Subscribers, £1 5s.; non-subscribers, £1 11s. 6d.
210, Regent-street.

JULLIEN and CO.'S MUSICAL PRESENTATION and CIRCULATING LIBRARY combined. Subscribers to this Library are presented with Three Guineas' worth of Music every year, on the most liberal conditions. Prospectuses free on application to
JULLIEN and Co., 214, Regent-street.

KING WITLAFF'S DRINKING-HORN SONG. Words by LONGFELLOW. Music composed, and sung with great applause by H. W. WELSH. Price 2s. Postage-free.
London: JOSEPH WILLIAMS, 123, Cheapside.

G. A. MACFARREN'S LITTLE CLARINA'S LESSON-BOOK for the PIANOFORTE. Parts 1, 2, 3, and 4, price 2s. 6d. each part, postage-free; or complete in One Vol. 8s. "Without exception the most straightforward elementary treatise for young children."—Musical World.
JOSEPH WILLIAMS, 123, Cheapside.

MR. FRANK MORI begs to announce that he has RETURNED to TOWN, and has resumed giving LESSONS in SINGING at his residence, 38, Somerset-street, Portman-square.

PIANOFORTES.—CRAMER, BEALE, and CO have the best of every description, NEW and SECOND-HAND, for SALE or HIRE—201, Regent-street.

HARMONIUMS.—CRAMER, BEALE, and CO. have a large Assortment, the prices vary from Ten to Fifty-five Guineas.—201, Regent-street.

HARMONIUMS at CHAPPELL'S.—The HARMONIUM, by ALEXANDRE is the only Instrument of the kind that remains untuned; from the simplicity of its construction is but slightly affected by change of weather; and is alike suitable for Drawing-room, Chapel, School, or Drawing-room.
No. 1. In oak case, one stop, 5 octaves, 19 guineas.
2. In mahogany case, one stop, 5 octaves, 19 guineas.
3. In oak case, 3 stops, 15 guineas: rosewood, 16 guineas.
4. In oak case, 4 stops—oak, 22 guineas; rosewood, 24 guineas.
5. Eight stops—oak, 28 guineas: rosewood, 30 guineas.
6. Twelve stops—oak or rosewood, 35 guineas.
7. One stop, and percussion action, in oak, 16 guineas.
8. Three stops, percussion action, in rosewood, 25 guineas.
9. Eight stops, percussion action, oak or rosewood, 38 guineas.
10. Twelve stops, percussion action, in oak, 45 guineas.
11. Two stops, percussion action, large size, in rosewood, 45 guineas.
12. The new patent model—15 stops, percussion action, expression (a la main, &c.); the most perfect Harmonium that can be made, in handsome oak or rosewood cases, 55 guineas.
Full descriptive lists on application.
CHAPPELL, 50, New Bond-street.

MUSICAL BOX DEPOT, 54, Cornhill, London, for the sale of SWISS MUSICAL INSTRUMENTS, made by the celebrated Messrs. NICOLE, Frères, of Geneva.—Large snuff boxes, four airs, 14in. long, £4; six airs, 18 in. long, £6 6s., eight airs, 20in. long, £8; and twelve airs 30in. long, £12 12s. Containing selections from the most admired composers, including popular national, and operatic airs, together with hymns and other sacred music. Also a variety of Swiss Musical Boxes, playing two tunes, 9s. 6d. and 18s.; three tunes, 30s.; and four tunes, 45s. each. Printed lists of tunes, &c., may be had gratis and post-free on application.

S. MORDAN and CO.'S MANUFACTURES, 37, City-road, London.
PATENT EVER-POINTED PENCIL.
S. Mordan and Co. caution the Public in purchasing this useful article, that the genuine is manufactured by themselves only in this case. A quantity of counterfeits are constantly pressed on the public, as they yield a greater profit to the salesman, but will be found of no value in use. These remarks apply also to S. Mordan and Co.'s Patent Leads, for replenishing their cases.
FINE ARTS.
S. Mordan and Co. beg to inform the public that they are enabled to supply a genuine Lithographic Lead for the PATENT PENCIL, without a particle of grit, or any other impurity. S. M. and Co have no hesitation in asserting that such excellent pencils is in every respect have never yet been produced; and, in confirmation of this, the highest testimonials from all the first artists, architects, and engineers have been received. The following is an abbreviated List—

Charles Barry, Esq., R.A.	Philip Hardwick, Esq., R.A.
C. L. Eastlake, Esq., R.A.	Sidney Harding, Esq., W.C.S.
I.K. Brunel, Esq., F.R.S.	W. Wyon, Esq., R.A.
Decimus Burton, Esq., F.R.A.S.	Daniel Roberts, Esq., R.A.
Richard Westmacott, jun., Esq., R.A.	J. T. Willmore, Esq., A.R.A.
S. Frost, Esq., R.B.A.	J. C. Wilson, Esq., Head Government School of Design.

S. MORDAN and CO.'S PATENT COMBINATION LITHOGRAPHIC and COPYING-PRESS.
By the aid of the most simple mechanical arrangements, the Patentees have produced a copying press of the most efficient and Portable Printing and Copying Machine, equally we, adapted for the Counting-house, Office, or Study. With this Press every person may easily become independent of his Printer.
The original Sketches is produced at a less cost than the cheapest Lithographic Press in use markets; and in addition to the capability of doing the work of a Lithographic Press, it is as smoothly legible in its case. A quantity of counterfeits are constantly pressed on the public, as they yield a greater profit to the salesman, but will be found of no value in use. These remarks apply also to S Mordan and Co.'s Patent Leads, for replenishing their cases.

THE ILLUSTRATED LONDON NEWS.

No. 765.—VOL. XXVII.] SATURDAY, OCTOBER 13, 1855. [WITH A SUPPLEMENT, FIVEPENCE.

THE PEACE COALITION.

COALITIONS, as the public was so often informed during the Administration of Lord Aberdeen, are not popular in this country. There is a prejudice against them—even when the objects of those who form them are neither discreditable in themselves nor likely to be attended with national danger or disgrace. But if so, what is the amount of unpopularity that is likely to attach to a coalition of which the object is to stop the nation in its career of victory—to allow th enemy of European peace to escape without the full measure of punishment which will keep him quiet for the future; and to dissever the strongest and the noblest alliance ever formed between two great nations? A coalition such as this might be better designated by the name of a conspiracy; not the less a conspiracy because its members talk loudly and openly, and are neither ashamed of being unpatriotic, nor of preferring pelf to honour, and their own inglorious ease to the safety and independence of Europe. With such a coalition this country is threatened. Its founders and original members were Mr. Cobden and Mr. Bright—both warlike men; the one who boasted that Russia could be "crumpled up" like a piece of paper, and the other a runner of perpetual tilts against every body who presumes to differ from his opinion, and who wages a perpetual feud of the tongue against the press, which when it dares to disagree with his consummate wisdom, he cordially detests,—and against the majority of his countrymen, whose opinions he despises. These two were successively joined, to a greater or lesser extent, by Mr. Gladstone, Sir James Graham, Lord John Russell, and others—all warlike men in their way, and guilty, if guilt there be, of the original declaration and slow prosecution of the war against Russia. This embryo of a party, or coalition, has lately begun to develop itself more largely. The monster has assumed limbs and tongue, and there are indications—convincing enough to some, though not to us—that it is about to be provided with a head in the shape of a person no less eminent and gifted than the leader of the Conservative party in the House of Commons.

GENERAL SIMPSON, COMMANDER OF HER MAJESTY'S FORCES IN THE CRIMEA.
FROM A PHOTOGRAPH BY FENTON.

While we believe that the conceit and wrong-headedness of many men who once bore honoured names in the Senate of their country, but who have utterly lost themselves on the question of the war, are quite sufficient to form a political combination for patching up a premature, dishonourable, and illusory peace—we must hesitate in believing that Mr. Disraeli has become of their party. Until his own mouth, or his own pen, tracing his own signature to the confession, shall proclaim to the world that he considers it, at this moment, to be the duty of England and France to offer peace to the Czar on the terms tendered in April last, "we] shall refuse to credit the asser-

THE CHURCH OF PETER AND PAUL, IN SEBASTOPOL, SHOWING THE EFFECT OF THE SHOT AND SHELL.—SKETCHED BY R. A. GOODALL. —(SEE NEXT PAGE.)

tion that a man so distinguished has made shipwreck of a reputation so gallantly won, and of a political position conquered with such brilliant exertion, and held against all comers as chivalrously as a championship in the feudal ages. It is nevertheless singular, when every other public man of note who has lately found, or made, an opportunity of addressing his fellow countrymen, has spoken to them earnestly on the all-engrossing topic of the war, that Mr. Disraeli, in the only public display he has made since the prorogation of Parliament, studiously avoided the subject. While his hearers hung entranced upon his words—when they expected every moment that he would have done with manure and prize ploughmen, and, swinging round in the full majesty of a great oratorical three-decker, would have launched a broadside against the enemies of his country—he remained mute. Not a syllable on the one high topic escaped his lips. From him there fell no word either of praise or blame. He did not, like brave and bellicose John Bright, wash his hands of the guilt or the glory of his countrymen. He did not, like Lord Palmerston—with whom he once agreed that the only true, safe, and dignified policy, was to carry on the war with the utmost possible vigour—speak out eloquently and fervidly on the late triumphs of the Allied arms, or indicate in stirring language, whose echoes yet reverberate through Europe, the work that yet remains to be done for the restraint and punishment of the guilty ambition of the Muscovite. He did not, like Sir Bulwer Lytton, who is, like himself, both statesman and man of genius, utter, with hearty sincerity and eloquent truthfulness, the patriotic sentiments that inspire the minds of all classes of the people, and do his best at this critical period of his country's history, to show that no sacrifices in a noble and a just cause, are too heavy for that nation to make, which desires to retain its place in the vanguard of civilisation. He kept, on the contrary, a remarkable, and, as it seems to us, an unworthy silence. At the same time, there appeared in a weekly journal—of which he is believed to be the founder, which is known to have been—or to be his organ, and to which he is more than suspected to be a frequent contributor—an article distinctly advocating a policy of concession to the Emperor of Russia. It is time, therefore, that Mr. Disraeli should declare himself openly if he do not wish to be misunderstood. There is no necessity that he should disavow the articles in the weekly newspaper with which people persist in associating his name; for statesmen are not compelled to confess whether they do or do not write leading articles; but there is a necessity, if he wishes to stand well with his country, and with the great Conservative party of which he has been the brilliant and by no means unsuccessful leader in the House of Commons, that he should deliver his decisive verdict on the War question. If he do not he will remain under suspicion. His power of usefulness will be impaired, and damage will be inflicted on the credit of the great and patriotic party with which he has so long acted.

It is clear, however, whether Mr. Disraeli do or do not speak out as becomes his position, that if he have resolved to join Mr. Bright and Mr. Gladstone, he will not take the Conservative party along with him. Sir Bulwer Lytton is as much entitled to speak for that party as Mr. Disraeli; and he, we know by his late manly oration, has a heart that throbs in unison with the great heart of England, and will not withhold his support even from political opponents, if they honestly and vigorously carry on the work to which they are pledged to their own country—to their allies—and to the world. Vice Disraeli, abdicated or superseded, Sir Bulwer Lytton would become the leader of the Conservative party in the Lower House; and Mr. Disraeli would become—what Lord John Russell is—a statesman irretrievably damaged; or what Mr. Gladstone is—a man to be admired for brilliancy in debate, but never more to be trusted or followed. The organs of Conservative opinion in the country, however much they may have differed from the statesmen now in office upon other questions—or however bitterly they may have commented upon the management or mismanagement of affairs in the Crimea—have been true to the principle of the war. They have never swerved—never been dilatory—never been lukewarm; but, like true patriots and honest Englishmen, have seen that the War question rose high above all party squabbles and party interests, and concerned, not factions or their leaders merely, but the honour the dignity, and the very existence of the nation. They will not follow Mr. Disraeli if he attempts to lead them towards a coalition with Mr. Bright, the incarnation of all the conceit and cowardice of ultra commercialism; or with Mr. Gladstone, the straw-balancing and straw-splitting statesman whom nature intended either for a Chancery barrister, or for the Superior of a College of Jesuits, and whose mind offers a strange and disagreeable compound of the peculiar talents and qualifications of both. The Conservative party is sound upon the question, as indeed are all the great parties, by whatever names they may call themselves. The outsiders and stragglers, the men of whims and crotchets, the impracticable, who owe and give no allegiance, aided by a few men whose inordinate vanity led them to aspire too high, and who have, consequently, been disappointed, may prate of peace where peace is impossible. Being rejected of all, they may endeavour to form a combination among themselves that shall give them strength and importance; but their effort will not succeed. Mr. Disraeli would, doubtless, be a great acquisition; and they, accordingly, suspecting either his weakness or his ambition, flatter him to the top of his bent, and lime the twig with the honey of soft speeches, and with glorious predictions of the taxes he would have repealed, and of the other great things which he would have done, had he continued Chancellor of the Exchequer. But will they catch the fine bird? That remains to be seen. In the mean time we will not do Mr. Disraeli the injustice to believe it.

THE GERMAN LEGION.—A letter dated "Heligoland, Oct. 5," says: "Besides the 2900 men raised, drilled, and sent to England, the two corps at present in course of formation promise to be speedily completed, under the active superintendence of their energetic officers. The newly-appointed Commandant of the 2nd Rifle Corps, Lieutenant-Colonel the Hon. J. S. Jocelyn, late of the Scots Fusilier Guards, has arrived here, and finds the corps already more than 500 strong, whilst about 400 fine active young men have been enlisted for the 3rd Light Infantry Regiment, under Major Talbot. It was at first intended to stop the recruiting, and to close the dépôt for the winter; but orders have now been received by Mr Major, the Commissary-General, to lay in stores of fresh provisions for 1000 men for the winter.

GENERAL SIMPSON.

ALTHOUGH the course of events in the Crimea since General Simpson has succeeded to the command of the British forces has not materially added to his military renown, this officer is known to have seen considerable service, and to enjoy a high professional reputation. In 1812-13 he served in the Peninsula, and was present at the defence of Cadiz and the attack on Seville. He also took part in the campaign of 1815, and was severely wounded at Quatre Bras. He subsequently held an important command in the Mauritius with great repute as a regimental officer. General Simpson's service in India has also been important. In 1845 he acted as second in command under General Sir Charles Napier, by whom General Simpson was considered eminently qualified for that command; and to this a high estimation of the conqueror of Scinde General Simpson owes more than to aristocratic or political influence.

After the melancholy death of Lord Raglan, and the return of Sir George Brown to England, through ill health, General Simpson was appointed to the command of her Majesty's forces in the Crimea. The result we have already glanced at. But our Commander has his apologists. "We can tell General Simpson," says the *United Service Gazette*, "that however the cowardly hammer the opposition to send reinforcements at the critical juncture, it is not upon his shoulders that the blame is altogether cast. Sir William Codrington has this to answer for; and it will hardly be accepted as a excuse that no amount of troops that the British army could have spared would have held the Redan against the masses at the disposal of the Russians

The Portrait of General Simpson upon the preceding page has been engraved, by permission of Messrs Agnew, of Manchester, from one of Mr Fenton's able photographic pictures now being exhibited in Pall-mall East.

INTERIOR OF SEBASTOPOL.—THE CHURCH OF PETER AND PAUL.

OUR Special Correspondent's latest letters have so minutely described the appearance of the interior of the destroyed city that, as an accompaniment for the Illustration upon the preceding page, we shall only append our Artist's words descriptive of the Sketch:—

"The Church of Peter and Paul, Sebastopol, looks towards the north; the rear of Fort Nicholas is in the background; and in the distance are Fort Catherine and the north shore, held by the Russians. The piers of the stone inclosure are about 45 feet high. Perhaps there is not a ruined building in Sebastopol which shows the destructive effects of shot and shell more than the church of Peter and Paul; and its shattered condition, in association with the sacred character of the edifice, forms a striking episodal picture of the afflicting horrors of war."

The Correspondent of the *Morning Post* thus describes the general appearance of the town:—

Nearly every house must have had some architectural pretension; the rows of pillars and columns are unceasing; and from the visible remains, I should say that it ought to have been one of the prettiest places in the world. The fronts of some houses appeared to be so perfect that, with the aid of a strong imagination, you could almost fancy you were gazing on a town where nothing had happened, and in other parts that you were only visiting the scene of a disastrous fire, and presently you would get beyond the pale of its rage; but, alas! wherever you went, all was stable—never was destruction and desolation were complete—never had men worked more successfully to destroy their own work.

LORD DERBY ON THE WAR.—The leader of the Tory party in the House of Lords is evidently not willing to join the Disraeli and Bright coalition. In a speech he made the other day to the Irwine Town Council, who had been presenting him with the freedom of that borough, he said, "He could not congratulate them on the probability of any approaching conclusion of the war. He did not believe that Russia, even after such reverses, would speedily lay aside its ambitious designs; and, on the other hand, England would never sheathe the sword which she had so reluctantly drawn until the noble and disinterested designs of the Allies had been completely obtained, the independence of Turkey secured, and the schemes of Russia upon Europe and Asia effectually checked."

SIR E. BULWER LYTTON ON THE WAR.—At a meeting on Thursday (at Buntingford) of the Herts Agricultural Society, Sir E. Bulwer Lytton was present as one of the county members, and made a speech chiefly on the war. The hon. Baronet said:—We may be well proud of that matchless army which, maintaining discipline amidst hardships so incredible, and earning renown against such formidable odds, has transferred its encampments to the very fortress of the enemy, and now holds in Sebastopol a materiel guarantee for the rights of nations and the demands of justice (Loud cheers). It is not here, and I hope it will not be anywhere, that I would dwell on what has been urged, I think somewhat hastily, in some of the newspapers in mitigation of our joy at the victory for which we have rendered up our thanksgivings to the Divine Arbiter of human destinies. It is true that we did not storm the Malakoff, and therefore had not as direct and immediate a share in the taking of Sebastopol as the French; but what then? Why, England and France are a single country (Loud cheers), and the glory of the one is the glory of the other. Do you believe there is any Frenchman who would deny us our full share of the half of the laurel-tree which took its roots on the fields of Alma, became the last gale in the storm of battle drifted its leaves towards the ranks of the French? (Hear). Why, in the next turn of the wind those leaves might be drifted towards us (Hear). And now, gentlemen, since you have called me to address you as a member of Parliament, may I claim the right to say one word on behalf of that Assembly? I am sure you will grant me that indulgence, as my observations shall have no reference to politics. You will all remember that the last House of Commons was elected under very different circumstances from those in which we now find ourselves. The majority were united upon a commercial principle under leaders, some of whom, like Lord John Russell and Sir James Graham, had long official experience and very great and justly-deserved Parliamentary renown. Other leaders, like Mr. Cobden and Mr Bright, were conspicuous for the eloquence, the surpassing eloquence, with which they supported popular opinions; while Mr. Gladstone (Hear, hear), a host in himself, combined all the attributes of the most captivating and consummate orator. Well, is it not to the credit of that majority—is it not to the credit of that House, and does it not show the independence of that Assembly, that all the talent, popularity, position, and virtues of those leaders could not rally around them the men they were accustomed to command the moment their followers thought they had separated from opinions from the honour of England and the cause of eternal justice? (Enthusiastic cheering). This much I will say on behalf of the majority, from whom I have often differed. But let me say this on behalf of the minority, with whom I have for the most part acted, and with whose sentiments I am most familiar. I say you cannot misjudge that minority more than by supposing that they, or those who may be regarded as their leaders, are unduly anxious for the transfer of political power. I declare that during the whole of the startling vicissitudes of last Session I saw with sincere admiration their absorbing anxiety to make the safety of the country, the maintenance of the Army, and the honour of the Crown paramount to all other considerations (Cheers). As for myself, as a member of Parliament, I say to you, in my proud position as one of the members for the county of Hertford, that I never will, either from party motives, or, God forbid, from personal ambition, be an instrument to displace any Government which will seem to me firmly and skilfully to maintain the national honour, and finally to conclude our quarrel (Hear, hear). Neither would I, on the other hand, support any Government from whose feeble or faithless hands the sword would drop paralysed, or the olive-branch be dishonoured. (The hon. Baronet concluded amidst enthusiastic cheers).

THE EFFECTIVE STRENGTH OF THE ARMY.—Returns are being prepared showing the number of disciplined and effective men attached to the various cavalry and infantry regiments of the Line stationed within the United Kingdom, and also the number attached to the several dépôts and provisional battalions. Similar returns are ordered to be made up for the Royal Artillery, Royal Sappers and Miners, Royal Marines, the Foreign Legion, Land Transport and Medical Staff Corps, and of those regiments of Militia which have volunteered for foreign service, but which have not as yet embarked. It is understood that this measure has been adopted for the purpose of ascertaining the exact force that can be at once embarked to reinforce the army in the East.

WHAT SEBASTOPOL HAS COST RUSSIA.—Supposing the war destined to continue, it would have been better for her had Sebastopol been carried in 1854 by a *coup de main*. The efforts to reinforce the garrison, and to maintain the army outside, must have been most exhaustive. Every man, every shot and barrel of powder, and every sack of grain delivered to the besieged, must have been transmitted at ruinous cost; and the maintenance of the garrison and the army on the heights must have been as expensive as that of a fortified force on the frontiers of Turkey, Austria, or Poland. The want of roads in Southern Russia, from the clayey nature of the soil, where no stones, or even pebbles, are to be met with for a hundred miles together, the fewness of towns, and the sparse population, all render the collection and transmission of convoys more difficult to Russia than to any country of Europe. It is less easy to create a road in a boggy steppe than to carry one over the Alps. Hence the maintenance of Sebastopol was a perpetual and debilitating drain on the resources of Russia, in men, money, and material.—*Major Hamley, in Blackwood's Magazine*

AUSTRIAN ITALY.—The *Opinione* of Turin says:—"The Austrian Government has seized on the property possessed in Lombardy by the religious corporations suppressed in Piedmont. Austria bases her conduct on what the Sardinian Government did when Joseph II. abolished the convents and monasteries, without bearing in mind that at that period a bona-fide abolition was effected, which is not the case at present. The Sardinian Cabinet is discussing the question with Austria on legal grounds."

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday.

THE principal and most universally-interesting event of the moment is that which, by the new Government regulations, establishes a diminution in the price of meat. In this all classes are interested, and cry where the prosaic details of the subject are canvassed without any one thinking it necessary, or even permitted, to display genteel disgust, generally inseparable from false refinement. *A bas la réjouissance!* that barefaced cheatery so long tolerated by the authorities, and so shamelessly exercised by the butchers on the hapless carnivorous public, by which arrangement the former were permitted, with every portion of meat sold to the latter, to put in so much extra and independent bone, frequently amounting to a quarter of the weight of flesh (with its own quantity of bone adhering), this extra bone being paid for at the same rate as the meat. The very name was an insult to the customer; *réjouissance*, indeed: whom could it possibly *réjouir* but the butcher? and that at the cost of the consumer, who could see small cause of rejoicing in the abuse that obliged him to pay from sevenpence halfpenny to ninepence a pound for bare bones.

On Friday the Empress paid the Exposition the first visit with which she has honoured it since her return from Biarritz. Her Majesty, who was dressed in white, trimmed with lilac, and a lilac bonnet, was looking very delicate. Notwithstanding that she suffers a good deal from her present position, the symptoms are only such as frequently appear under similar circumstances, and present nothing grave or unusual.

Very great regret has been caused in the artistic world by the death of Camille Roqueplan, brother to Nestor Roqueplan, manager of the Grand Opéra. The career of this gifted artist presents a somewhat singular contrast to that of the generality of the confraternity. Camille Roqueplan was not a painter by his own choice; but became so in spite of himself—elected by his genius against his will. Very early in life, this talent becoming apparent, his father, contrary to the wont of the fathers of geniuses, warmly encouraged it, and at eighteen Camille began seriously to study, with a view of adopting painting as a profession. Here the difficulties of the art, the manual obstacles that stand between the student and his conceptions, at first discouraged, and ere long entirely disgusted him from its pursuit. He then commenced the study of surgery, with no better success. From the pencil and the scalpel he turned to the steel pen of the bureau; but, instead of the figures of nought and numbers, it would only trace those of a much more poetic character. The father's patience—as who can wonder?—was exhausted, and the youth was sent back to the studio. After a year of study under Abel de Pujol, the sight of a work of the master—Joseph Explaining the Dreams so threw our aspirant into a fresh paroxysm of despondency, that he declared his intention of trying how the sword would do in the hands that had failed to wield so many other instruments with any success. But the father was inexorable—fortunately; and our *peintre en herbe* was even forced to return to the profession that nature had all along designed him for. During many succeeding years a series of eminently successful works raised and established the confidence and fame of Roqueplan. He was made Knight and finally, officer of the Legion of Honour, and King Leopold also conferred his order upon him. The Duc d'Orleans was one of his warmest friends and patrons. For some time an affection of the lungs had compelled him to abandon his *atelier*, and this disease finally proved fatal, at the age of fifty-two. Camille Roqueplan may certainly be considered as standing high in the small list of painters whose works tended to restore the fallen state of their art at the period when the Restoration was at its close. In addition to his merits as an artist, he was a man whose amenity of disposition and manners—whose intelligence, warmth of heart, and high character, rendered him beloved and esteemed by all who came in contact with him.

Rossini has decided to pass the winter in Paris, where he has taken a charming *appartement* in the Rue Basse du Rempart, where he intends receiving his friends and admirers every Sunday. The health of the illustrious maestro is in a highly precarious state, and his nervous system is more particularly affected. In consequence of this, it is supposed he will avoid all interference with his art, which in his present state is a source of excitement it is desirable he should shun.

Much interest and some surprise has been excited in the theatrical world by the engagement offered to and accepted by Mdme. George Sand, to write a piece in five acts for the Théâtre Français. Report states that Mdme. Sand has stipulated as follows:—that the work shall be entirely freed from the *contrôle*, and shall not be subjected to the examination, or even the observations of the secretaries of the theatre; and that on its being delivered, as she engages it shall be, within three months of the signing of the engagement, the parts shall be allotted and the piece played without alteration or correction of any kind. Furthermore, the sum of five thousand francs, as a first instalment, shall be paid the day the *rôles* are distributed.

We announced last week the disappointment generally felt on the occasion of the opening of the Italian Opera. We may now slightly analyse the merits and defects of the performers, nearly all new to the audience. Angelini (*Mose*) has a remarkably fine voice: he wants energy, ease, and dramatic effect; but the fact of his being a debutant of two-and-twenty, called upon to undertake such a part, may amply account for these defects. Cariou, the tenor, possesses a good voice and a good method, spart a trick of occasionally jerking out a note as if he had received a prick at the moment of uttering it. His appearance, however, is decidedly against him, and his movements and gestures are those of a mincing, affected woman: his love-making, indeed, is perfectly enraging to witness, and induces one to feel much of the impression produced on Miss Betsy Trotwood by the sight of Uriah Heep's contortions. Gurardi, the barytone, is a good singer and a good actor. Fiorentini sang well in the first act; but was, on the whole, very coldly received. A débutante, Mdlle. Pozzi, gives promise—she sings with taste and method, and makes the best of a voice which has clearness, but seems to want depth and richness. To us, however, the *strong weakness*, as an Irishman would say, of the representation, was the chorus, a circumstance easily accounted for, as we afterwards learned, by the fact that its number amounted to *less than half* of that usually employed at this Opera.

CHANGE OF MINISTRY IN GREECE.

Accounts from Athens of the 5th announce that the Mavrocordato Ministry has resigned, and that the King has accepted the resignations. This is owing to the persistance of the King in refusing to have any intercourse with General Kalergi, Minister of War. The motive for the hostility of the King to his Minister is in consequence of a letter written by the latter, complaining bitterly of the injustice done him by the Court, and particularly the Queen, after the services he had rendered to the country, and particularly after having exposed his life in a duel with an individual who had spoken slightingly of the honour of her Majesty. This letter was published, with an extremely laudatory article, in a Marseilles paper, to the great displeasure of King Otho, who, from that moment, positively declined seeing General Kalergi; while M Mavrocordato insisted upon his remaining in the Cabinet, or, as an alternative, tendering his own resignation.

The origin of the letter is this:—General Kalergi was in the habit of paying frequent visits at the house of a lady in Athens the wife of a former Minister—where also the Maids of Honour of the Queen used to visit. The lady in question was, justly or unjustly, disliked by the Queen, and her Majesty commanded her Maids of Honour to cease their visits. The reason for this order is variously stated. Some allege it was on account of the lady herself, others on account of General Kalergi being so constant a visitor. Be this as it may; General Kalergi considered himself offended, and wrote the letter in question.

The King refused to listen to the recommendation of the French and English Ministers. He declared to them that he never would have anything to do with Kalergi; but said that they might propose to him, if they thought proper, a person for the office. This they declined repeatedly, and he as repeatedly refused to admit Kalergi. The result was the withdrawal of the whole of the Cabinet.

The new Min sters, who took the oaths on the 4th, are M. Miaulis, Marine; and M. Smolenzi, War; M. Sillíveric, appointed Minister of Finance, has taken the portfolio of Foreign Affairs until the arrival of M. Tricoupi, who is to be President of the Council.

AMERICA.

The steam-ship *Africa* arrived at Liverpool on Saturday last, with advices from Halifax to the 27th ult., and from New York, by telegraph, to the morning of the 27th. The news of the capture of Sebastopol dispatched from England by the *America*, was received in Halifax a short time before the departure of the *Africa*, and was hailed with extravagant joy.

President Pierce had proceeded upon a visit to Harrisburg, Pennsylvania, to be present at the State fair, which commences on the 25th ult. There is an exciting struggle going on at Washington, between the Free-soil and the secession wings of the Cabinet, as to who shall be appointed to fill the judgeship vacant by the death of Judge Crunch. The candidates for the place are Mr Blair and Mr Redfield, and the latter is backed by the President and the Secretary of War. The approaching Presidential election is one of the chief subjects of editorial discussion. The *New York Herald* says that it will test the Constitution more than any previous contest. "Throughout New England (observes that journal) we must expect to see Nativism postponed to Abolition; in Pensylvania and New York, the recent scenes at Kansas, aggravated by the woful imbecility of the Administration, have fanned the sinking anti-slavery embers into a glow, while in Ohio and a large section of the west, the tendency is obviously treason-ward. To blind ourselves to the breakers towards which the ship of State is drifting would be sheer madness. It is not to be disguised that the Abolitionists have advanced with gigantic strides during the last five years."

The "Address to the People of the United States," from the committee appointed in July last, at the Pro-slavery Convention held in Lexington, Missouri, has been published. It is principally devoted to a denunciation of the emigration from Massachusetts and other States, under the management of societies, whereby the Kansas Nebraska law is rendered a dead letter. Such emigration is pronounced without precedent, dangerous in the extreme, calculated to circumscribe slavery to its present limits, and defeat the true intent of the Nebraska bill. In conclusion, it declares that Missouri takes the same position as the Lexington Convention, whence it will not recede. The rejection of Kansas as a Slave State will be regarded as a gross insult to the South; and the declaration that slavery is incompatible with a Republican form of government an unequivocal step towards a dissolution of the Union.

A great battle took place on the 3rd September, at Sand Hills, near the north fork of the Platte river, between the Sioux Indians and a body of United States troops under General Harney, numbering about 450 men. The battle commenced early in the morning, and lasted several hours. The Indians fought desperately, but were routed. A running fight for some ten miles followed, during which the Indians made a stand, and fought with much gallantry. They were, however, defeated, with the loss of eighty men killed, and fifty women and children taken prisoners. The Indian women fought furiously. General Harney lost six killed and as many wounded. No officers were killed. The Indians engaged in this battle were the Brule and Sioux, the same that massacred Lieut. Gratton's command, and murdered a mail party a short time ago.

The Secretary of State of New Granada has written to the Minister Plenipotentiary at Washington a diplomatic note, which informs him of the public tranquility which the Republic now enjoys, uninterrupted even by the menaced hostilities of Venezuela, or by apprehensions of the movements of Flores, and requires him to have periodical reports sent by the Consuls as to the American consumption of the products of New Granada. There is daily new Gran Cuba or Mexico, beyond the fact that a formidable opposition was organising against General Carrera, the Mexican President pro tempore.

The Czar and his Soldiers.—The Minister of War, Prince Dolgorouki, has been informed that the Emperor, when scarcely arrived at Moscow, sent for Count Orlow to his private cabinet, to know precisely what he would proceed into the Crimea, to inspect, as well as events would allow him, the different corps of the army of the Crimea. It is thought here that the presence of the Emperor will produce a great effect upon the spirit of the soldiers, more or less broken down by the long fatigues, the privations, and by the defeats which have followed all the *rencontres*, in which they had been always promised victory and the extermination of the infidel enemies of Holy Russia. It appears that the resolution come to by the Emperor had not been communicated to any one, not even to the Empress, who has returned here from Tsarskoe-Selo with her children, and the Minister of War was ignorant of it. It is said that, before leaving Moscow, the Emperor ordered the generals of the reserves to make the necessary preparations for their departure, in case it should be required. According to a report generally circulated, a reform of officers of the Guards, the Grand Duke Constantine will not return to St. Petersburg so soon; he will remain in the south, and reside alternately, as events may require, at Odessa and Nicolaieff. It is said to have been in consequence of a short time to withdraw the two divisions of Grenadiers from Finland, as well as the other regiments of the Line, all of whom will march to the south, and be replaced by battalions of Militia; but on the pressing entreaties of General de Berg, who commands in Finland, and who declared that he could not answer for the defence of the coast with undisciplined troops, the measure has been abandoned.—*Letter from St. Petersburg*, Sept. 30.

Our Readiness for Next Year's Campaign.—The circumstances under which we shall enter upon our spring campaign of next year are highly satisfactory. The army at present in and around Sebastopol will have grown greatly in soldiery during that time; well housed, well clothed, well fed, and well drilled during the winter, it may be expected to attain perfect efficiency when we shall again undertake operations on a grand scale. We can increase that force at present there by eight battalions now at home, and by five in the Mediterranean; and we cannot help thinking that of the forty-four battalions now in India and the Colonies we might safely transfer ten or a dozen well-tried corps to the Crimea. The Turkish Contingent is all but ready to take the field; the Foreign Legions are making admirable progress in their training; our fleets will have had nearly three years of war campaigns; and, on the whole, we may expect to see in the spring of 1856 a much larger, and, what England will be found prepared to complete her share of the good work with an army and navy which, in numbers and efficiency, will be completely worthy of her position among nations.

Electioneering in Prussia.—The scanty attendance at the primary elections in the provinces of Prussia shows how very little value the bulk of the nation sets on the political privileges to gain which it is pretended the outbreak of 1848 was perpetrated. The maximum of attendance seems in no instance to have exceeded one quarter of those entitled to vote, while the number of those present in other elective districts varied between that proportion and none at all, the election officials having in some cases had the whole of the premises to themselves. In every part of the province deserters of portend duty it is urged that the pressure exerted by Government through the local officials and the clergy, is too crushing for single individuals to strive against, and that they consequently abstain from expressing their political tendencies with the remark, "It is all of no use—the Government will do what it likes." The clergy have been required by the Government to exert all their influence with the population to bring about the election of Fürst-Metternich candidates, and they have, accordingly, put up prayers in the churches, imploring that the minds of their parishioners may be properly turned by the Divine Spirit, &c. A most striking and impressive example has been set the sluggish (as they call themselves, *gemüthlich*) Berliners by the Nestor of science, Baron von Humboldt, who did not scruple to appear in the meeting of the primary electors by the side of the most illiterate or humblest voter, and give his suffrage for the Liberal candidates. Just as he had written on his voting-ticket the name of these latter, he was approached by a Royal Equerry with the modest request that he would vote for the Kreuz-Zeitung men, whose names were printed on a list he presented, and among them his own: "Baron Humboldt was grieved not to be able to avail himself of the suggestion, having already made his selection," showing him the Liberal names he had written down.—*Letter from Berlin*.

The Oldest General in Europe.—It has long been thought that Marshal Radetzky was the best General in Europe, and we now learn that that distinguished veteran, at the head of the Austrian army, aged ninety-four, who entered the army in 1776, was appointed General of Brigade in 1798, and General of Division in the following year; so that he is a general of sixty-one years' standing, while Marshal Radetzky, aged eighty-nine years, is only of fifty years' standing.

Newspaper Speculation.—The Cheap Press.—A few days ago a man, who has evidently received a good education, but is now reduced in circumstances, came into our office to sell steel pens. He assured us that he lost that day several pounds sterling on a speculation with a popular leader to establish a paper in Liverpool, and failed. Since that time he has been unable to regain his position in society, and is now travelling about the country as a wandering pedlar.—*Leicester Chronicle*.

Fashion among the Fair Democracy.—A correspondent of the *New York Daily Times*, writing from Philadelphia, says:—As regards bonnets, they appear to grow frightfully less, and before winter sets in it is probable that a large rosette fixed on the back of the hair will take place.

OBITUARY OF EMINENT PERSONS.

ARCHDEACON BROOKS.

The Venerable Jonathan Brooks, Archdeacon and Senior Rector of Liverpool, a clergyman who may be fairly ranked among the worthiest and the wisest that have adorned the Church of England, departed this life on the 29th ult. His death, which occurred suddenly at his residence at Everton, has caused the deepest and most general regret in Liverpool and its neighbourhood, where for more than half a century the venerable and excellent Archdeacon enjoyed all reverence and such regard, and where he was, as it were, a part of the place. Every one recognised him as a perfect English gentleman; and as the faultless rector of the parish. All who knew Archdeacon Brooks, or Liverpool, was aware of the boundless estimation in which he was held there. This able and amiable divine was born on the 1st of September, 1775, in Oldhall-street, Liverpool, at the top of which Brooks-street still retains the name of the family. His father was originally a merchant, but subsequently became a porter brewer. The old porter-brewery, a neat and stylish one, will be familiar to many inhabitants of Liverpool. His mother was a Miss Cropper; and, besides the late Archdeacon, there were two other sons, who became Majors in the Army. The Archdeacon received a preparatory course of education at Macclesfield School, under the tuition of Mr. Davies. He was thence removed to Trinity College, Cambridge, where, in 1796, he won Hooper's ovation prize. In 1798 he graduated B.A. His first Curacy was Walton, near Liverpool, whence he went to St. James's parish, in Liverpool, and was shortly afterwards appointed one of the Curates of St. George's parish, also in Liverpool, where he officiated as Curate and Chaplain for twenty-seven years. On the 7th of October, 1826, he was appointed Senior Rector, on the death of the Rev Mr Renshaw—the Rev Augustus Campbell obtaining the appointment of Junior Rector on the 4th of the following month. Soon after the present Bishop's elevation to the see of Chester, Mr. Brooks was appointed Archdeacon of Liverpool. Whilst Curate at Walton he formed an attachment to his Rector's youngest daughter, to whom he was married in 1805 or 1806. They had four sons and three daughters, of whom two sons and one daughter survive: one of the sons, the Rev. Henry Brooks, holds the office of Curate of St. Peter's, Liverpool.

In addition to his clerical duties, the late Archdeacon filled many important positions of public trust. He was the senior magistrate of the county, having been appointed to the commission of the peace in November, 1814. He also presided for a number of years at the great quarter sessions held at Kirkdale, near Liverpool, first as Deputy-Chairman to Lord Skelmersdale, and since that nobleman's death, as Chairman himself. In this judicial office he was, perhaps, assisted by many other chairmen of quarter sessions in England, not a lawyer: his sound reason, general knowledge, and gentle disposition peculiarly qualified him for the Bench: the Bar before him readily always, and the Queen's Bench itself, when appealed to on more than one occasion, admitted the clearness and rectitude of his decisions. The Archdeacon was the founder, and one of the most energetic supporters, of the Provident Savings' Banks, and was for many years prominently connected with the Blue-coat Hospital, District Provident Society, the Blind Asylum, Dispensaries, and other public charities in Liverpool. He was, indeed, one of the foremost men in the town, being looked on by all as what many used to term him, "an incarnation of common sense." The funeral of the Ven. Archdeacon took place at Liverpool, on the 6th instant: it was headed by the Bishop of Chester, and attended by the Mayor and Corporation of Liverpool, and most of the nobility and gentry of the county of Lancaster, of all parties and persuasions. The crowd that thronged at the mournful ceremony exceeded sixty thousand, and indeed, since Mr. Huskisson's, no such funeral has been seen in Liverpool. Only Mr. Huskisson, the Ven. Archdeacon was interred in the great and well-known Liverpool Cemetery.

ADMIRAL SIR SAMUEL PYM, K.C.B.

The death of this distinguished officer occurred at the Royal Hotel, Southampton, on the 2nd inst. His death-bed was attended by his aged brother, the celebrated physician, Sir William Pym. Samuel Pym was the son of Joseph Pym, Esq., of Pixley, Warwickshire, by his wife, a daughter of Thomas Arnott, Esq., M.D., and niece of Sir William Arnott, Bart. He was born in Edinburgh, in 1778, and entered the Royal Navy early in life. He soon rose to distinction. In the spring of 1796 Mr. Pym, then in *La Babet*, witnessed the surrender of the Dutch colonies of Demerara, Essequibo, and Berbice; and on Jan. 16, 1798, having volunteered his services, he took command of two of her boats, went in pursuit of, and succeeded, with only one of them, in capturing *La Desirée*, French national vessel, after a desperate struggle. Pym acquired post rank April 23, 1802; and was subsequently appointed to the *Atlas*, 74, flag-ship, after serving in the Channel, North Sea, and South America, formed part of the force under Sir John Duckworth in the action off St. Domingo, Feb. 6, 1806. In the *Spine*, Captain Pym assisted, under Commodore Rowley, at the capture of the town of St. Paul's, Le de Bourbon, Sept. 21, 1809. In the Adriatic he made prize, July 14, 1814, after a chase of fourteen hours, of the *Henry Gilder*, American privateer, of twelve guns and fifty men. Captain Pym was nominated a C.B. June 4, 1815, and a K.C.B. Oct. 25, 1839, he was advanced to flag rank Jan. 10, 1837; and made a Vice-Admiral Feb. 12, 1847. On Dec. 16, 1841, until Dec., 1846, he filled the post of Admiral-Superintendent at Plymouth. In September and October, 1845, he had command of an extensive Channel squadron. For his conduct in the action off St. Domingo, Sir Samuel Pym was presented by the Admiralty with a gold medal. Sir Samuel married, in 1802, the daughter of Edward Lockyer, Esq., of Plymouth.

SIR ROBERT ADAIR, G.C.B.

The death of the Right Hon. Sir Robert Adair, G.C.B., took place on the 3rd inst., at his house in Chesterfield street. He had reached the advanced age of ninety-two. He had for some time past enjoyed an annual pension of £2000. He was the author of numerous political pamphlets, and also wrote two works—viz., "An Historical Memoir of a Mission to the Court of Vienna in 1806;" and "A Memoir of the Negotiations for the Peace of the Dardanelles in 1808-9." Sir Robert Adair was son of Robert Adair, a distinguished surgeon, by his wife, a daughter of the second Earl of Albemarle. Sir Robert commenced his career as a barrister, being called to the bar at Lincoln's-inn, in 1785; he subsequently became famous as a diplomatist. In 1806 he was appointed a Privy Councillor, and, after he had filled various other diplomatic appointments, his able conduct, when on a special mission at Brussels in 1831, obtained for him the creation of a G.C.B.: he had previously received the Cross of the Bath for concluding the peace between Great Britain and Turkey in 1809. He was also a Privy Councillor. He sat in Parliament in 1802 and in 1806. He married, in 1805, Angelique Gabrielle, daughter of the Marquis d'Hasquincourt.

SIR CHARLES CHAD, BART.

The death of this estimable gentleman occurred a short time since at his seat, Thurxford Hall, Norfolk. Sir Charles was the elder and last surviving son of the late Sir George Chad, of Thickesley, on whom a Baronetcy was conferred 28th July, 1774, and grandson of Robert Chad, Esq., who married Elizabeth Wright of Kilverstone, grand-daughter of Thomas Wright, Esq., by Catherine, his wife, daughter of Sir Charles Barbier, Knight, Secretary to King Charles II. The Baronet, whose decease we record, and with whom the Baronetcy becomes extinct, was born 21st April, 1779, and succeeded 14th June, 1811, Lydia Anne Turnour, second daughter of Edward, second Earl of Winterton. By her Ladyship, who died 2nd March, 1832, Sir Charles had one son, Edward Henry, born 5th September, 1811, who died 3rd July, 1843.

Wills and Charitable Bequests.—The will of William Bradshaw, Esq., of the Auction Mart, and Upper Brook-street, was proved under £160,000 personalty; Lieut.-General Charles Edward Conyers, C.B., and Colonel 99th Foot, £30,000; Colonel Frederick Rodolph Blake, C.B., 33rd Regiment, £12,000; William Bayley, Esq., Banker, Shrewsbury, £30,000; Rev. J. H. Smythe, of Devon, £30,000; Pedro Juan de Zulueta, Count de Torre Diaz, of Devonshire-place, £45,000 personalty in England; Robert Field, Esq., of Pimlico-place, Lieut.-Colonel Commandant of the Royal Artillery, and late Inspector of Artillery at Woolwich, £7000; Lieut.-Colonel Alexander Higginson, late Grenadier Guards, £25,000. George Bowlas, Esq., Solicitor, Lincoln's-inn-fields, £2000; Rev. J. B. Hare, Chaplain, Hospital for Consumption, Brompton, £1000; Rev. Thomas Hare, Chaplain to the Lock Hospital, £1000; Rev. Matthew Hare, Curate of St. Mary-le-Strand, £1000; Rev. Edward Hare, Rector of Hadleigh, Suffolk, £1000; Rev. Thomas Hare, Rector of Stanhope, Durham, £1000; Rev. Augustus Hare, Rector of Alton Barnes, Wilts, £1000; Rev. Francis Hare, Rector of Hurstmonceaux, Sussex, £1000; Rev. Julius Hare, Archdeacon of Lewes, £1000; Rev. Robert Hare, Rector of Stanhope, Durham, £1000; Rev. Augustus Hare, Rector of Alton Barnes, Wilts, £1000; Rev. Francis Hare, Rector of Hurstmonceaux, Sussex, £1000; Rev. Julius Hare, Archdeacon of Lewes, £1000; Rev. Robert Hare, Rector of Hadleigh, Suffolk, £1000; Rev. Thomas

RECEPTION OF VISCOUNT PALMERSTON AT ROMSEY.

LORD PALMERSTON ON THE WAR.

THE Mayor, Town Council, and inhabitants of Romsey presented, on Friday, the 5th instant, a congratulatory address to Lord Palmerston on his return to Broadlands.

It was originally intended to have presented the address on the previous Saturday; but, as the day turned out unfavourable for any open-air demonstration, it was arranged that the presentation should be postponed until the weather was more auspicious. In the early part of the day the rain fell at intervals in copious showers, but towards the afternoon the sun shone out, and the bells of the church rung a merry peal.

The inhabitants of Romsey closed their shops at twelve o'clock, and all business was suspended. The streets of the town were gaily decorated with the flags of the Allied nations, and streamers floated from every conspicuous point of view. Triumphal arches were constructed in the principal thoroughfares of the town, decorated with flowers and transparencies, bearing the motto—"Welcome, Palmerston, the friend of liberty and peace."

At half-past two o'clock, the Mayor, accompanied by the Town Council and principal inhabitants of the place, walked in procession to Broadlands, and, preceded by a band with colours flying, escorted Lord and Lady Palmerston and the Hon. Miss Sullivan to the market-place. The noble Viscount's open carriage having been drawn up in front of a platform erected for the members of the Council and their friends, the noble Lord was repeatedly and enthusiastically cheered. Silence being at length restored, Mr. Francis Taylor, the Mayor, advanced and read the following address:—

May it please your Lordship,—We, the Mayor, Town Council, and inhabitants of Romsey, ask permission to meet your Lordship with our congratulatory welcome on your return to your Lordship's residence here. Your Lordship's ancestors were the constant benefactors of this town and neighbourhood; and while we venture to claim your Lordship as a fellow townsman and as one of ourselves, we also record your Lordship's continuance and extension of similar benevolence, conjoined with that of your estimable and noble lady the Viscountess Palmerston.

On the present occasion we feel it to be our privilege and duty to address your Lordship in your exalted station as the Prime Minister of England—a position which your Lordship was called to occupy at a moment of difficulty and emergency, and in a critical and almost unparalleled conjuncture of affairs. We believe that your lordship's firmness and decision, sustained by the voice and sympathy of the people of England, has tended greatly to produce the recent successful results of the Allied armies in the reduction of the fortress of Sebastopol.

And we earnestly pray that your Lordship's councils may be so guided that ultimately the blessing of an equitable and durable peace may issue from your Lordship's administration, and be accompanied with those civil and social rights secured to other nations, which shall place them beyond the reach of despotic power, and prove their best armament and their only true safeguard.

The noble Lord's speech, in reply, will be found at page 460 of the Supplement published with the present Number.

We have engraved the scene of his Lordship's reception at Romsey; and the East Front of the venerable Abbey Church, which is now in progress of repair.

EAST FRONT OF THE ABBEY CHURCH, ROMSEY.

BARON PROKESCH VON OSTEN.

Baron Prokesch von Osten—a Field Marshal in the Austrian service, and a statesman who, in conjunction with Count Buol, represented Austria at the famous Conferences at Vienna, in April last, when Lord John Russell and M. Drouyn de Lhuys went so wofully wrong on the "Four Points" was in early life the tutor of Napoleon II., commonly known by his Austrian title of Duke de Reichstadt. His partiality for that Prince, the favourite grandson of the Emperor Francis is believed to have extended itself to the whole of the Bonaparte family; and he is now an acknowledged admirer of Napoleon III. and supporter of his dynasty.

Baron Prokesch shares the opinions of Prince Metternich, of Count Buol, and of the late Prince Schwartzenberg; and is decidedly opposed to the aggressive policy of Russia. The fact oozed out in 1848 by the publication of a letter which he addressed to the unfortunate Count Latour during his embassy at Athens, a letter which established him in the eyes of the world as an opponent of Russian policy at that time. It is not so certain that he is as prejudiced against this country as some of the German papers assert, or that he considers France would do better if she sought a "peace-alliance" with Austria instead of her present war-alliance with England. However this may be, the recent arrival at Paris of this distinguished diplomatist threw the Russian party in Vienna into a state of alarm, and created a considerable amount of curiosity both in Paris and London. It is stated that the Baron was the bearer of important propositions from Austria—propositions which, if accepted by the Western Allies, would have been presented to Russia as an ultimatum. Whether he undertook any such mission is unknown, except to himself and the Emperors of France and Austria; but it is certain that he was received by Napoleon III., and that the two personages expressed themselves mutually satisfied with each other. "On the 28th September," says the *Times* Correspondent at Vienna, "Baron Prokesch arrived at Frankfort from Paris. The statesman in question still has the rank and title of President of the German Bund, but it is well known here that he is to go to Constantinople at the end of this month as Austrian Internuncio. In a day or two Baron Prokesch will leave Frankfort for Vienna; and, on his arrival here, the appointment of Count Rechberg to succeed him as Austrian Minister Plenipotentiary and President of the German Diet, will probably be officially made known. In 1849 Lord Redcliffe used all his influence with the Porte to prevent the Hungarian refugees being delivered up to the Austrian authorities, and the latter were never able to forgive him for having deprived them of the satisfaction of being revenged on their enemies. This ancient grudge is one of the principal reasons why Lord Redcliffe's (reported) recall has given such extreme satisfaction here; but Austria is also well pleased that her diplomatists will no longer have to cope at Constantinople with such a redoubtable antagonist. It is fortunate for Baron Prokesch that he has to make his début at Constantinople at such a moment. If Lord Redcliffe had remained, the ambitious Austrian would, *nolens volens*, have had to play second fiddle; but now his great knowledge of Eastern affairs will give him a decided advantage over his diplomatic brethren."

It may be interesting to mention that the accompanying portrait of Baron Prokesch Von Osten is copied from a photograph by Miller, of Vienna. The Baron sat for it during the Conferences in April last, expressly for the Illustrated London News.

Baron Prokesch von Osten.—From a Photograph by Miller, of Vienna.

SEBASTOPOL REJOICINGS.—PROCESSION AND FIRE-WORKS AT BLACKHEATH.

Whether the Blackheathers are a benighted or an obtuse people, it is not for us to determine, nor need we wait to inquire how long it takes to impress them with the full significance of any stirring national event. Certain it is, that when most people had ceased to speak of the fall of Sebastopol, and were looking forward to the final triumph of the Allied army in the East, by the complete expulsion of the Russians from the Crimea, we were startled by the announcement that the loyal people of Greenwich, Lee, Lewisham, and Blackheath would, on Thursday, October the 4th, by a grand allegorical procession during the day, and a brilliant display of fireworks at night celebrate the downfall of the Russian stronghold.

The morning was dull and cheerless, and at noon the rain fell in torrents, but nothing could damp the ardour of the performers. They had, after much deliberation, resolved on exhibiting themselves, and they did. The flags intended to flutter triumphantly in the breeze, turned weepingly round their several staffs, while the drenched representatives of victory made but a sorry appearance. Towards evening the rain ceased, and the stars began to glimmer sleepily through the watery clouds, while streams of people, by railway, by omnibus, and cart, set steadily in for the broad level of Blackheath. Soon after dusk, squibs, crackers, and rockets began to hiss and splutter through the village, which was creditably illuminated, and flags waved from almost every house.

The greatest excitement prevailed in the neighbourhood of a huge pile of brushwood, surmounted by a mysterious conical structure, covered with a white sheet. What it contained was the subject of much speculation some thinking that it ought to be the effigy of the Emperor, others suggested his ancient Darkness as more comprehensive. Both were incorrect: for no sooner had the tongue of flame licked off the flimsy veil than it exposed a ricketty skeleton framework, which, a native wit informed us, was meant to show the hollowness of diplomacy, and that nothing but a vigorous fire could and would exhibit Russia in her true light.

We have seldom witnessed anything more impressive than the scene spread before us and around us, as immediately after the torch was applied to the combustible materials a dense volume of smoke was succeeded by a bright and ruddy glow of light, illuminating the faces of some 20,000 or 30,000 people, swaying to and fro, like a chafed sea; as the flame rose or fell, the faces were bright or dark: now they seemed a host of happy and contented beings, and anon, when a shadow fell, they looked like a congregation of fiends. Squibs and crackers were flung about in all directions; and although some danger was apprehended, yet we are not aware that any accident occurred. The rocket practice was truly magnificent, and for two hours a shower of fire seemed to rain as far as the eye could reach.

The Screw-Steamer "*Azoff*."—This vessel, which has just sailed for the Crimea with about 350 men of the Army Works Corps, and 600 to 700 tons of cargo, besides 300 tons of coal, and 3000 gallons of water, is probably the strongest steam-vessel afloat. She was designed and built by Mr. Bourne, of Glasgow and Greenock. The most important characteristics, probably, of the *Azoff* are the smallness of the space taken up by the machinery, and her small consumption of fuel. She is propelled by a single engine of 180-horse power, and realises a speed of about fifteen miles an hour. The engine, however, which imparts this high rate of speed, does not, exclusively of the boilers, occupy a space of more than twenty measurement tons in the vessel, so that although the model of the vessel is a fine one, her carrying capacity is at the same time large. The consumption of fuel in the *Azoff* is necessarily moderate since the steam is worked in the engine very expansively, and it is well known to engineers that the larger extent to which the principle of expansion can be carried the greater will be the economy of fuel. There are other expedients of economy in the machinery, which want of space prevents us from noticing here. The machinery, however, we may say, is the most compact and simple yet put into a screw steam-vessel. It has fewer working parts than any other; those parts are all easily accessible; and the length of the stroke is equal to the diameter of the cylinder, so that the radiation of heat from the surface of the cylinder is reduced to a minimum. There is no question whatever, in our apprehension, that machinery of this construction must come into use, since if, on any given line, two vessels be put which are in all other respects the same, but the one is supplied with compact and economical machinery, and the other with the machinery of the usual cumbrous kind, the economical vessel can, it is clear, run the other vessel off the station and secure the trade to herself. Persons, therefore constructing steam-vessels, should pause before they put the old-fashioned machinery into them lest they should find their vessels incapable of competing with more economical rivals, and since the antiquity of the machinery is a fault which cannot be corrected without discarding it altogether.

Nicolaieff and the Way to It.—Sailed from Odessa in a Russian steamer. The distance to Nicolaieff is about eighty miles. The entrance to the Liman river is shown by a light-vessel, which we left on our right hand. The channel is buoyed by red on one side and white buoys on the other. Ochakoff is on the left, and appears to have no other defence than a three-gun mud battery; opposite to it is a battery of twenty-one guns. The passage did not appear to be difficult to find. We passed the *Selafiel*, a large 84-gun ship. They were warping her through a soft mud at the rate of a cable's length in twenty-four hours, she drawing twenty-two feet abaft; generally there was twenty-one feet of water, but in many places not more than seventeen feet. About fifteen miles above Ochakoff the Dnieper (ancient Borysthenes) and Bug (ancient Hyparus) rivers fall into the Liman. We anchored for the night in the latter. After rounding the peninsula upon which Nicolaieff stands, we left the Bug and found the Admiralty House and dockyard a short distance from the mouth of the Ingul river, which is very narrow and shallow at the entrance. The *Ouriel*, a new 84, similar to the *Selafiel*, was fitting at a building establishment at the mouth of the Ingul. Off this place is the road where ships anchor preparatory to going down the river or to the dockyard. The dockyard is on a large space of ground, the buildings far detached from each other. There is no dock, and the slips are very imperfect. There are two 84's building, and another just laid down. A 50-gun frigate, a corvette, and the *Twelve Apostles* three-decker have just been launched. Several smaller vessels and a steam-boat have been also commenced. The model-room has many objects of interest in it, &c.—*Extract from a Journal of the late Surveyor of the Navy.*

Sardinian States.—The *Corriere Mercantile* of Genoa of the 5th inst., states that the new contingent for the Crimea, formed from the different regiments composing the garrison of that city, is now complete, has been passed in review, and has received winter clothing. The Minister of War, it adds, has made arrangements for receiving wounded or sick soldiers from the Crimea in the military hospitals of Genoa, Turin, and Allessandria, and for sending those who require to recruit their strength to Turin, Pignerolles, Moncalieri, Monto, and other healthy places.

Bonfire and Fireworks on Blackheath, to Celebrate the Fall of Sebastopol.

CALENDAR FOR THE WEEK.

SUNDAY, Oct. 14.—19th Sunday after Trinity. W. Penn born, 1644.
MONDAY, 15.—Murat shot, 1815.
TUESDAY, 16.—Houses of Parliament destroyed by fire, 1834.
WEDNESDAY, 17.—Sir Philip Sidney killed, 1586.
THURSDAY, 18.—St. Luke the Evangelist.
FRIDAY, 19.—Dean Swift died, 1745. Henry Kirke White died, 1816.
SATURDAY, 20.—Battle of Navarino, 1827.

TIMES OF HIGH WATER AT LONDON-BRIDGE,
FOR THE WEEK ENDING OCTOBER 20, 1855.

Sunday.		Monday.		Tuesday.		Wednesday.		Thursday.		Friday.		Saturday.

LIST OF ENGRAVINGS
IN THIS WEEK'S "ILLUSTRATED LONDON NEWS."

SKETCHES FROM SEBASTOPOL: (By our Special Artists, Messrs. Crowe, Goodall, &c.)
The Church of Peter and Paul, in Sebastopol, showing the effect of the Shot and Shell... ... ... *page* 425
Portrait of General Simpson, Commander of her Majesty's Forces in the Crimea (from a Photograph by Fenton) 425
Departure of the Naval Brigade for the Fleet, Sept. 10. 432
The Theatre in Sebastopol 4 32
Interior of Part of the Malakoff, Sept. 9 (Page Cut) 435
Remains of the Creek Battery 4.7
Site of Fort Paul 447
The Alliance Ribbon, in the Paris Exhibition 448
Watch found in Prince Menschikoff's Carriage, after the Battle of the Alma 448
Admiral Dundas making Night Signals off Cronstadt (sketched by J. W. Carmichael) 448
Gun Experiment in a Russian Prize Boat before Cronstadt (sketched by J. W Carmichael) 448-449
Cutting-out Expedition in the Bay of Koivitska, Finland (sketched by an Officer of the *Nile*) 449
Rifle School of Musketry: Aiming Drill 452
Position, Kneeling and Standing, when Firing 462
Judging Distance Drill 453
Capt Grant's Permanent Cooking Kitchen at the Camp, Aldershott ... 453
New Method of Cocking in the Open Field, by Capt. Grant 453
Bonfire and Fireworks on Blackheath, to Celebrate the Fall of Sebastopol ... 429
Portrait of Baron Prokesch Von Osten (from a Photograph by Miller, of Vienna 429
Reception of Viscount Palmerston at Romsey 428
East Front of the Abbey Church, Romsey 428
Portrait of Mr. Thackeray (from a Print Engraved by Holl from a Drawing by Laurence) 436
Silver Testimonial Presented by the Westminster Scholars to the Dean of Christ Church, the Rev. H. G. Liddell 436
Marble Bust of James Montgomery, the Poet, presented to the Sheffield General Infirmary 436
Her Majesty's Palace at Balmoral—Photographed from the North Side of the Dee 436
Trees, General View of 440
The Roman Pashe at 440
Paris Nigra, at 441
Grouse Shooting in Nova Scotia 441
The *Ocean Monarch* of Liverpool, Built at Quebec 441
Inauguration of the King of Portugal:
His Majesty Receiving the Keys of the City and Homage of the Troops, at Lisbon (Page Cut) 444
Illumination and Fireworks at Oporto 445
Portrait of the Right Hon. M. Talbot Baines, M.P. 445
The "Brunrice Church-rate Contest" Testimonial, presented to Mr. S Courtauld 445
The Service Court, in the Paris Universal Exhibition 456
Hercolaneum from an Original Sketch 456

*** Next Week we shall engrave several Sketches of the Interior of Sebastopol, received from our Artists and Correspondents.

STAMPED COPIES of the ILLUSTRATED LONDON NEWS, Price 6d., free by post during fifteen days, in any part of the United Kingdom.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, OCTOBER 13, 1855.

"WHY spare Odessa?" has long been a popular cry. It will be seen by the curt but pithy announcements of the electric telegraph that Odessa is to be spared no longer, and that its bombardment by a large naval force has already commenced. No one in any part of Europe will be surprised that the Allied squadrons have been dispatched on this enterprise; the only surprise being that they did not destroy or capture the place at the time when they chastised it for the truly Russian exploit of firing upon the stranded and helpless British ship the *Tiger*. But the hour of retribution has come. The Russian fleet in the harbour of Sebastopol has paid the penalty for the brutal massacre of Sinope; and Odessa has either paid, or will speedily pay, the penalty for the destruction of the *Tiger*, and for its misfortune, rather than its crime, of being the principal commercial emporium in the southern dominions of our enemy, and, as such, the feeder of his armies, and one of the bulwarks of his power. The Czar himself paid the place a visit but a few days before the Allied squadrons dropped anchor before it, and saw in the "fear-pale faces" and averted looks of the inhabitants, that Odessa hated the war, and had neither gratitude nor admiration, even if it had loyalty, to bestow upon him who inherited hostilities along with his crown, and who seems to have as little inclination to renounce the one as to forego the other. Moscow received him with exuberant acclamations; but Odessa with ominous silence, only broken by the spasmodic applause of functionaries and officials. The dark shadow of the approaching bombardment hung even then over the devoted city, and it is to be regretted that the Czar did not await within its boundaries to be an ear-witness of the horrors which his father provoked, and which he has perpetuated, and learn at the same time the invincible might of the Powers opposed to him. Perhaps—although recent accounts represent him and his Imperial brothers to have proceeded to Nicolaieff, a hundred miles further to the east—he may have returned to Odessa, only to behold, and then to escape from, its destruction. It would be a remarkable episode in the war if such were the case, and would, to all future time, point the moral and adorn the tale of ambition like the flight of Charles XII. after Pultowa, or the retreat of Napoleon from Moscow. Possibly, before this sheet reaches the hands of our readers, all speculation upon the subject may have been rendered useless by the precise information of the electric telegraph; but, in default of such information, we cannot predicate a lengthened resistance on the part of the garrison and people of Odessa. It is not, as Sebastopol was, a city of soldiers and functionaries, but of peaceable merchants, to whom the war has brought neither advantage nor glory—but, on the contrary, loss, ruin, constant danger, and humiliation. In addition to this, the population cannot even be said to be Russian; but is, for the most part, foreign, and principally of German, Greek, or Jewish extraction. The "Holy Ledger" is a greater object with them than "Holy Russia;" and this class would certainly not prefer to see their city "a heap of blood-stained ruins," rather than consent to its surrender, as Prince Gortschakoff did at Sebastopol. But whether the city surrender at discretion, or be destroyed by the fire of the Allied squadrons, it is certain that the popularity of the war among the inhabitants is not likely to be increased by the events of which they have been by this time both the witnesses and the sufferers; and that the influence of the Allies over all the uneasy neighbours of Russia, from Finland to Persia, and over all the wavering subjects, attached by conquest and not by love, to the Imperial Crown, will be greatly extended—to the strengthening of the Allied cause, and to the weakening and disparagement of that of Russia.

THE Emperor of the French has formally disavowed, through the official columns of the *Moniteur*, all participation in, or encouragement of, the designs attributed to the family of the late King Joachim Murat on the throne of Naples. Although the almost insane conduct of King Ferdinand shut him out from the sympathy of Europe, as well as from the respect—we will not say the allegiance—of his own subjects, it was clear that any countenance given either by France or England to a pretender to his throne would not only have been impolitic, but in the highest degree improper as well as dangerous. If the Neapolitans be dissatisfied with their King or their Government, it is for them to take the remedy into their own hands,—and for the rest of the world to stand aloof. The true policy for this country is non-interference in the domestic affairs of others, and the policy of Great Britain is also that of France. If in one part of Europe more than any other, the duty of the French Government is most precise and binding—it is in Italy; and we therefore see with pleasure the rebuke that Napoleon III. has though fit to administer to his unwise connections and relatives of the Murat family. If the Neapolitans and Sicilians choose of their own free will to be governed by a Murat, they have as much right to agitate for that object as England had to expel James II., or France to elect the present Emperor; but neither France nor any other country has the right to interfere. At the same time King Ferdinand should see in what a dangerous position he stands, and what a moral volcano—a million times more fiery than his own Vesuvius—is kept in danger of eruption by the misgovernment of which he is the representative as well as the agent. If he sees this in time, his throne and dynasty may yet escape from the manifold perils that surround him; but if the disclaimer of Napoleon III. of all participation with the Muratists should lead him to believe that he runs no risks, and that he is free to act as badly as he pleases, by the removal of this cause of alarm, he will but march from wrong to wrong—from peril to peril—until the consummation; —that nothing can prevent but a total reform in his mode of Government.

In connection with the general question of Italy, we see it mooted in some of our own journals that the British Government should interfere to prevent the dissemination of the incendiary documents issued from London—one of which more especially calls for notice, bearing, as it does, the names of Ledru Rollin, Mazzini, and Kossuth. With all deference to the opinions of these journals, and to the source whence the hint is supposed to emanate, we think the British Government would be unwise to meddle with this triumvirate. Their long-winded proclamation will do no mischief. It does not carry with it the power either to inflame the passions or to convince the reason of those to whom it is addressed. Mazzini is a great man, and he only injures himself by association with M. Ledru Rollin —the representative of a policy which is emphatically condemned by the French people. What has the Italian patriot to do with Socialism? In the same way, M Kossuth, though far less than Mazzini, is infinitely greater than the French exile, and should avoid contact with him, if he desire to recommend the cause of his country to sensible and practicable men. The conjunction of the three shows their mutual weakness; and if the British Government be wise, it will allow them to write as many more such proclamations as their last as it shall please them to put their names to. For the regeneration of Italy, M. Mazzini may yet be necessary; but if he do not avoid his present company, there is another Italian patriot—Daniel Manin, the heroic defender of Venice, who speaks with more judgment and wisdom than he does, and who, seeing great ends before him, and not shutting his eyes wilfully to the only means by which they can be accomplished, may be called upon to co-operate in the work, for which M. Mazzini will have unfitted himself, by his alliance with Socialists and Red Republicans.

THE 7th and 8th Vict., cap. 32—being an Act to Regulate the Issue of Bank Notes, and for giving to the Governor and Company of the Bank of England certain privileges for a limited period—expired on the 1st of August in this current year; and it is now competent to the Government, on giving twelve months' notice, and repaying the debt it owes the Bank, to put an end to the exclusive advantages it now enjoys. In reference to this subject the Town Council of Nottingham held a preliminary meeting on the 10th of September, and adopted the following resolution:—"That the Act of Parliament regulating the Bank of England affects in a most material manner the commercial and manufacturing interests of Great Britain; and that a Committee be appointed to consider the propriety of petitioning Parliament against the continuance of the exclusive privileges now enjoyed by the Bank of England, and to report thereon to a subsequent meeting of this Council." Mr. Thackeray, the present Mayor of Nottingham, and Messrs. Felkin, Smith, Wadsworth, Steegman, North, and Parsons, were selected members of the committee. The policy of a similar movement is now being actively discussed at Derby and Leeds; and the necessity of a new war loan, the pressure in the Money-market, and the violent fluctuations in the rate of discount, will probably induce other towns to examine the theory and practice of our monetary system. The division of the Bank of England into two departments, one of Issue and the other of Banking, is generally condemned, and certainly it gives a very delusive view of its real strength to those who are not completely conversant with the nature of that machinery and with the mode of its operation. The Bank is allowed to issue fourteen millions on the debt due to it by Government, without any metallic basis whatever. Suppose the total issue of notes to be twenty millions, in that case six millions of bullion are unavailable for any other purpose than the payment of notes in excess of those fourteen millions. As Mr. Charles Wright, the eminent Nottingham banker, has forcibly observed, "the public labour under the fallacy of supposing, when they see the Bank has ten millions in her coffers, that she has ten millions to dispose of. No such thing. When the circulation of notes is twenty millions, and the entire stock of gold ten millions, the available surplus is only four millions—four millions to provide for all the wants of the country, ordinary and extraordinary." What happened in the panic of 1847? The total deposits on the 30th of October in that year, at the Bank of England, were £14,500,000; the deposits of the London bankers being more than £2,000,000 at the same time. In reference to this state of things the following important evidence was given by the Governor and Deputy-Governor before the Lords' Committee, who condemned the Act of 1844:—

You had only £1,600,000 in the banking department for the payment of your liabilities? Yes

If anybody had called upon you for anything beyond that million and a half you must have stopped payment? Yes, we must.

At that time if there had been no separation between the two departments, and the Bank of England had been conducted on its old principle, instead of being within one million and a half of stopping, there would have been nearly £8,500,000 of treasures in your vaults? We should have had £8,500,000 in our vaults.

It was under these circumstances that a Treasury Order was issued authorising the Bank of England to violate the law; and the Act of 1844, which had caused all the mischief, was suspended, and that suspension was its condemnation. What has happened once may happen again; and with the evidence before us, it must at least be conceded that the division of the Bank into two departments is unwise, because it is unsafe. When experience pronounces a verdict adverse to theory, the course of a statesman is clear; and it is discreditable to persevere in a system which brings the same establishment to bankruptcy in one department, while it is solvent in another.

It may be presumed that Nottingham, after mature deliberation, will put forth some distinct programme of monetary policy; and it is to be hoped that its Committee will act on the undeniable principle that money, or legal tender, is no more than a token of value, and marker of price. Adam Smith compares it to a "highway, which, while it circulates and carries to market all the grass and corn of the country, produces itself not a pile of either." As highways are extended, as the commodities to be distributed are increased, so a sound currency ought to be expansive. Reflection teaches us that it is not money that calls out trade, but it is trade that calls out money; and when this latter call is not obeyed, trade is strangled. Then working men are driven into compulsory idleness; and, when wages cease, sedition begins. The wise Conservative, who wishes uninterruptedly to preserve order, will follow the advice of David Hume. "In every kingdom," says that profound thinker, "into which money begins to flow in greater abundance, everything takes a new face; labour and industry gain life; the merchant becomes more enterprising, the manufacturer more diligent and skilful, and even the farmer follows his plough with greater alacrity and attention. The good policy of the magistrate consists only in keeping it, if possible, still increasing, because by that means he keeps alive a spirit of industry in the nation, and increases the stock of labour, in which consist all power and riches." But this advice cannot be acted upon with gold; it can only be acted upon with national money, designed exclusively for the use of the home trade—valuable among ourselves, while valueless abroad, and therefore perfectly secure against exportation.

The subject has been discussed at greater length in other columns of this day's impression, to which we refer our readers.

THE COURT.

The Queen and the Prince Consort, with the members of the Royal family, are enjoying the most perfect health in their Highland home. The continued prevalence of fine weather has induced her Majesty to delay her return southwards until the 17th inst., and the Court will not reach Windsor Castle until Thursday next at earliest.

The Earl of Aberdeen and Sir Edward Landseer have been among the guests honoured with her Majesty's hospitality during the past week; and Sir George Grey is now the Minister in attendance on the Sovereign.

The Prince Consort has enjoyed the sport of deer-stalking almost daily; and several stags have fallen to his Royal Highness' unerring rifle. On Tuesday last the Queen accompanied her Royal Consort to Balloch-Buie, when the woods were driven for deer.

A wet day prevented the Court from attending Divine service at Crathie on Sunday last.

THE EMPRESS OF THE FRENCH.

The *Moniteur* of Thursday officially announces that her Imperial Majesty the Empress of the French has entered the fifth month of her pregnancy.

His Royal Highness Prince Frederick William of Prussia, who has been staying at Claridge's Hotel (late Mivart's) since his return from Balmoral, left town on Tuesday evening for Berlin. His Royal Highness travelled *viâ* the South-Eastern Railway to Dover, and proceeded thence in the mail packet to Dover.

Her Royal Highness the Duchess of Kent will leave Abergeldie, on Monday next, for Frogmore, intending to pass one night *en route* south.

Lord and Lady John Russell have returned to Pembroke Lodge Richmond-park, from visiting the Duke and Duchess of Bedford, at Woburn Abbey.

The marriage of the Lady Charlotte Elliot, daughter of the Earl of Minto, with Mr. Melville Portal, M.P., took place, at St. George's Church, Hanover-square, on Tuesday.

APPROACHING MARRIAGE IN HIGH LIFE.—The gallant Sir Thomas Trowbridge is about to lead to the altar Miss Louisa Gurney, daughter of Daniel Gurney, Esq., of Norwich, and sister of the late Hon. Mrs. W. Cowper.

His Excellency M. de Persigny, the French Ambassador, and Madame de Persigny, accompanied by his Excellency the Marquis d'Azeglio, the Sardinian Ambassador, the Countess de Lavradio, the wife of his Excellency the Portuguese Minister, and a party of gentlemen connected with the French Embassy, visited, on Thursday, the printing and engraving offices of the ILLUSTRATED LONDON NEWS in Milford-lane, Strand. The distinguished party were shown over the various departments of the establishment by Mr. Ingram, with all of which they expressed themselves both interested and gratified. They were afterwards shown a very large collection of original drawings and sketches made by Mr. Carmichael in the Baltic, a large portion of which have appeared in the ILLUSTRATED LONDON NEWS; and also a similar collection of the drawings of Mr. J. A. Crowe, Mr. E. Goodall, and Mr. C. Guys, sent from Sebastopol, Balaclava, and other places in the Crimea.

THE medical profession has sustained a severe loss in the person of M. Majendie, late physician at the Hôtel Dieu, &c., who died recently of a disease of the heart, from which he had been long suffering.—*Galignani.*

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS

TAKEN DURING THE WEEK ENDING THURSDAY, OCT. 11.

Month and Day.	Corrected Reading of Barom. at 9 A.M.	Thermometer: Highest Reading	Thermometer: Lowest Reading	Mean Temperature	Departure of Temperature from Average.	Degree of Humidity.	Direction of Wind.	Rain in Inches.
	Inches.	°	°	°	°			Inches.
Oct. 5	29.354	63·2	49·8	54·4	+ 2·0	91	S.W.	0.12
" 6	29.321	65·2	47·0	56·2	+ 3·0	86	S.W.	0.63

" 11	29.646	58·3	42·4	49·2	− 0·6	92	W.S.W.	0.03

Note.—The sign + denotes above the average and the sign — below the average. The numbers in the seventh column are calculated on the supposition that the saturation of the air is represented by 100

The reading of the barometer decreased from 29.33 inches at the beginning of the week to 29.24 inches by the 7th, increased to 29.49 inches by the 9th, decreased to 29.45 inches by the afternoon of the same day, increased to 29.70 inches by the 10th, and decreased to 29.60 inches by the end of the week. The mean for the week, at the height of eighty-two feet above the sea, was 29.45 inches.

The mean temperature of the week was [illegible] being 1·1° above the average of the corresponding week during thirty-eight years.

The range of temperature during the week was 26°, being the difference between the highest reading of the thermometer, 63·2°, on the 6th, and the lowest, 42·2°, on the 10th.

The mean daily range of temperature during the week was 16·2°. The greatest was 23°, on the 8th, and the least, 10·3°, on the 10th.

Rain fell during the week to the depth of rather more than 1 inch.

The Weather throughout the week was dull and cheerless, and the sky cloudy, with the exception of the evenings, which were generally clear and fine.

JAMES GLAISHER.

Lewisham, October 12, 1855.

HEALTH OF LONDON.—During the week ending last Saturday 1,[illegible] births and [illegible] deaths were registered in London. The births were 71 less and 7 more than the average of the ten corresponding weeks of the preceding ten years. The deaths during the week were 488 more and 60 less than the average. Of the deaths registered in all London during the week were 488 males and 460 females. [illegible] were registered healthier than it was in September. No doubt were registered during the week as being caused by cholera, while the diarrhœa and deaths are[illegible] attributed. To zymotic diseases, [illegible] being ascribed, 34 hooping-cough, [illegible] To the [illegible] of disease, 165 deaths—117 being [illegible] respiratory organs, [illegible] To diseases of the heart, 30. To old age, [illegible] To violence, privation, cold, and intemperance, 24 deaths are attributed.

THE ROLLS COURT.—Orders have been issued to the superintendent of the works connected with the erection of the extensive building now in course of completion adjoining Fetter-lane, to have the leading apartments ready for occupation by the 24th of the present month.

METROPOLITAN INDUSTRIAL REFORMATORY.—A number of the friends and supporters of this benevolent institution met on Tuesday evening, at Grove house, Brixton-hill, upon a very interesting occasion —the object of the institution is to afford protection, guidance, and instruction to a certain number of boys and young persons, who may have given satisfactory tokens of their sincere disposition to abandon vicious and criminal practices. At the present time not fewer than nine of these youths who have almost attained the age of manhood, are prepared to go forth into the world; and, as they are on the eve of departure to one of the distant colonies, it was thought proper to invite the parents of the institution, upon this occasion, to bid them farewell. Several clergymen and others, who have been accustomed to take an interest in the operations of the Reformatory, were present.

PROPOSED LABOUR TEST IN ST. PANCRAS.—At a meeting of the parochial authorities of St. Pancras, held in the Vestry Hall, King's-road, Camden Town, it was unanimously resolved that the report recommending the immediate application of a labour test be adopted.

HUME'S MONUMENT.—A meeting of the Working Men's Committee was held at the Adelphi Coffee-house, Clerkenwell-green, on Wednesday evening. The deputation to Sir Benjamin Hall reported that at the right hon. gentleman entered warmly into the subject, placing his services at the disposal of the committee, and expressing a desire to see the working classes prove they held the memory of their steadfast friend, Joseph Hume, in estimation, by subscribing their share in the general fund. Any individual, not connected with the working men's committee, upon this occasion, to bid them farewell. Several clergymen and others, who have been accustomed to take an interest in the operations of the Reformatory, were present.

PROPOSED LABOUR TEST IN ST. PANCRAS.—At a meeting of the parochial authorities of St. Pancras, held in the Vestry Hall, King's-road, Camden Town, it was unanimously resolved that the report recommending the immediate application of a labour test be adopted.

HUME'S MONUMENT.—A meeting of the Working Men's Committee was held at the Adelphi Coffee-house, Clerkenwell-green, on Wednesday evening. The deputation to Sir Benjamin Hall reported that at the right hon. gentleman entered warmly into the subject, placing his services at the disposal of the committee, and expressing a desire to see the working classes prove they held the memory of their steadfast friend, Joseph Hume, in estimation, by subscribing their share in the general fund. Any individual, not connected with the working men's committee, upon this occasion, to bid them farewell. Several clergymen and others, who have been accustomed to take an interest in the operations of the Reformatory, were present.

LECTURE TO THE WORKING CLASSES.—On Tuesday evening the Rev Professor Trench delivered a lecture on Political Geography to the working classes of the parish of St. Martin-in-the-Fields, at the Northern Schools, Castle-street, Long-acre. This institution has a library and reading rooms, and gives elementary instruction in drawing, and French and German, during the evenings. Professor Trench was frequently applauded by his audience as he alluded to those portions of the map of Europe in which the civilisation of the West is contending with the despotism of the North. He pointed out the geographical advantages of Ancient Greece, by her abundant means of communicating with the rest of the world, and receiving into her harbours foreign commerce; whilst for aggressive warfare her advantages were very superior. The vast importance of Constantinople to any European Power, and especially to Russia, could she have obtained it, was pointed out, and was listened to with marked attention. The importance of long ranges of mountain ridges as means of defence to Spain and Switzerland, and of the value of rivers and long lines of coast, were illustrated from history, with the aid of maps. The learned Professor pointed out the geographical advantages of England, and alluded to the Straits of Dover and the English Channel as barriers afforded by nature against invasion. He contrasted the positions of England and France during the respective reigns of Napoleon I. and Napoleon III., observing that the alliance of the Western Powers showed "how stout foes" might, by a sound policy become "stout friends," and advance the civilisation and happiness of the world.

ST. PANCRAS PREVENTIVE AND REFORMATORY INSTITUTION.—The governors and patrons of this institution, who only commenced their labours in December, 1852, have already found such favour in the eyes of the public as to be able to lay the foundation of a permanent building to accommodate the objects of their solicitude. This building, which is intended to accommodate 100 inmates, is situated in the New-road, a few yards from Gower-street, and will afford a home, instruction, and support to the poor outcasts for whose benefit the institution is especially intended. The ceremony of laying the first stone was performed on Tuesday by Lord Robert Grosvenor, assisted by the Rev. Canon Dale, Vicar of St. Pancras. A vote of thanks to Lord R. Grosvenor was carried. Lord B. Grosvenor, in returning thanks, expressed the peculiar satisfaction he felt in inaugurating an institution like that which they were then establishing. The question had arisen whether this object ought not to be carried out by the legislature of the country (A voice, "Certainly"). He entirely coincided with the gentleman who had just spoken, but legislative measures would take some time to mature, and in the mean time what was to become of the criminal population? Reformatory institutions had been established with great success in the midland counties, and the promoters already congratulated themselves on the fact that they had saved from future crime 75 per cent of the whole criminal population. There even small institutions presented similar gratifying results, as out of 51 inmates that had been admitted since its establishment, only one had been dismissed for misconduct, while seven had left, being unable to endure the discipline. All the rest had been completely reformed and restored to society.

ACCIDENT ON THE SOUTH-EASTERN RAILWAY.—On Wednesday morning, about twenty minutes past six o'clock, as the first Crystal Palace train was being shifted from one tram to another, through some mistake of the switchman, the train, instead of being started on the main line, was sent on a side track, which stopped short the Colleges-street. When the mistake was discovered by the engineer, it was found to be too late to stop the train before it came to the end of the side line, and the engineer and stoker jumped off the engine, and left the train to its fate. The result was, that as there was no stop on the trams, the wall at the end offered no resistance, and the engine fell into College-street, carrying with it the tender, break, and one first-class carriage. The engineer immediately descended into the street, and turned the steam off, and means were then adopted for removing the carriages. No person was injured.

EFFECTS OF THE LATE HEAVY RAINS ON THE FLEET SEWER.—The heavy rains which visited the metropolis last week have materially injured the works in operation for the formation of a new sewer from Clerkenwell to Farringdon-street. Soon after the storm on Thursday week a torrent of water from Highgate, Hampstead, and Kentish Town flowed into the Fleet river. At the lower part of Saffron-hill there was not sufficient space in the sewer for the transit of the water, and it consequently overflowed into the adjoining street, carried away a temporary bridge in Castle-street, and also damaged the foundation of a portion of the sewer. It is feared that, in the event of any violent storm, the new sewer will not have sufficient diameter to carry off the water from the northern parts of the metropolis.

CITY OFFICER OF HEALTH.—On Tuesday afternoon a General Court of Commissioners of Sewers for the City of London was held at the Guildhall, for the purpose of electing an officer of health in the room of Mr. Simon, who has been appointed medical officer to the General Board of Health under its new constitution. Mr. Deputy Peacock presided, and there was a very full court. For the appointment, which is worth £600 a year, seventeen gentlemen presented themselves as candidates. It was arranged that, in the first instance, a show of hands should be taken for the candidates individually; and that the two who received the largest number should be put to the poll of the general body. The show of hands having placed Mr. Letheby and Mr. Odling highest on the list, the votes of the Commissioners were then separately taken for those two, and Mr. Letheby was elected by a majority of 16.

DEMONSTRATION IN BONNER'S-FIELDS.—On Sunday afternoon last, upwards of 1000 persons congregated in Bonner's-fields, to protest against the encroachments on Victoria-park. The meeting had been called for the preceding Sunday, but was then prevented by the unfavourable weather. Several of the police were in attendance, but did not interfere with the proceedings. The assembly was chiefly composed of respectable and well dressed persons, and a great deal of enthusiasm was manifested. Messrs. Freestone, Matson, and Linwood addressed the meeting at some length, and a resolution condemnatory of the encroachments was submitted and carried unanimously. Mr. Linwood stated that another demonstration would be made on the following Sunday week, and advised the people to come up, not only in their thousands, but in their tens of thousands.

CHURCH, UNIVERSITIES, &c.

FRENCH INDEPENDENT CHURCH, JERSEY.—A new church has just been built for the French congregationalists, in Hallcett-place, St Heller, on the old edifice upon the same site having become so dilapidated as to require removal. The new church is built in the Gothic style of the Early Decorated period, and the principal front is faced with fine native granite, in random masonry; the dressings being of Caen stone. The pulpit is also of Caen stone, richly sculptured by Boulton, of London; the windows are filled with stained glass by Ravers; and the interior is lighted by a gas chandelier of seventy-two jets. The church will seat 700 persons, and has cost £2200. The architects are Messrs. Poulton and Woodman, of Reading; the contractor is M. Le Cornier of St. Heller.

LAYING THE FIRST STONE OF CANONBURY CHAPEL, ISLINGTON.—In consequence of the deficiency of church and chapel accommodation in this locality, the Committee of the London Congregational Chapel Building Society have recently purchased an eligible plot of freehold land at St. Paul's-road, Highbury, whereon to erect a chapel. On Tuesday the foundation-stone was laid by H. Spicer, Esq., in the presence of a large assemblage of gentlemen. The chapel will be a very neat edifice in the Gothic style of architecture

REMOVAL OF LAMPETER COLLEGE TO BRECON.—It is now understood that, in pursuance of the provisions of an Act of Parliament passed last Session, the St. David's College at Lampeter will in due course be removed from that town, and united or associated with the College of Christ at Brecon. The enactment made provisions for the future regulation, management, and permanent endowment of the Christ College, Brecon, and it also gave permissive powers to unite the same with St. David's, Lampeter, and remove the latter to Brecon.

ELECTION OF VICE-CHANCELLOR OF OXFORD UNIVERSITY.—The annual election of Vice-Chancellor took place on Tuesday afternoon, in the Convocation-house, Oxford University, when the Senior Proctor read a letter from the Chancellor (Lord Derby) nominating the present Vice Chancellor (the Rev. Dr. Cotton, Provost of Worcester College) for the fourth time. The nomination was confirmed by the Convocation, the Vice-Chancellor took the usual oaths of office; after which the books, keys, and seal belonging to the University were handed to him. The Vice-Chancellor then delivered the usual Latin oration.

MESSRS. STRAHAN, PAUL, AND BATES.

This case came on at the Bankruptcy-court, before Mr. Commissioner Evans, on Tuesday. The bankrupts were in the building, but were not introduced to the court. The accounts, which are in the course of preparation by Mr. Turquand, not being ready, an adjournment became necessary, as a matter of course. The debts and liabilities are computed at between £700,000 and £800,000; the assets at about £100,000, of which £44,000 are realised. Mr. Lawrance appeared for the assignees; Mr Bagley, Mr. Linklater, and Mr. Columbine, for creditors. Mr. Lewis appeared for the bankrupts.

Mr Weston, of George yard, Lombard-street, bill-broker, tendered a proof on a bill of exchange for £2500. He said he had given £2000 for the bill about three weeks before the bankruptcy, and it was agreed that the bill should be forfeited if not paid on a certain day. The name Richard Critchley on the bill was that of an agent, and worth nothing. He had discounted chiefly on the credit of the bankrupts Critchley had acted as agent for Gandell Brothers, and had told him he was not worth a penny. Critchley lived at Manchester, and was in the receipt of a salary. The bill was drawn by him on the bankrupts, and indorsed by him and Gandell Brothers. The proof was ordered to stand over, after Mr. Lawrance had remarked that Messrs. Gandell were indebted to the bankrupts' estate upwards of £300,000, part of which was in respect of liabilities similar to this bill of exchange. The assignees desired to subject all claims to the fullest investigation. Another proof was tendered by Mr. E N. Prior, colonial broker, of Great Tower-street, upon a similar bill, except that Gandells were the drawers and the bankrupts were the acceptors. Mr. Prior was sworn. The next proof tendered was one by Francois Guillaume, of Paris, upon bills amounting to £2041, and of which Gandells were the drawers. It was also ordered to stand over for the production of books.

Mr. Bagley appeared for Miss Burton, daughter of a deceased General in the Royal Artillery, who had proved for £890, but who had a claim against the estate for £2000 in respect to some Dublin Bonds which had been misappropriated She proved against Halford and Co., with whom alone she had any dealings, knowing nothing of Strahan and Co. Now, the bankrupts had been made cognizant in both companies, as navy agents and as bankers. His application was that distinct accounts might be kept of the assets of Halford and Co., and those of Strahan and Co., with a view to the subsequent distribution of the assets in accordance with the ordinary principle of bankruptcy, making each estate bear its own burden. He had been informed that distinct accounts had been kept by the two houses, and no difficulty could arise. He could see that there could be no difficulty at all in thus keeping a separate account of each estate, but he could not accede to the application, as it would be holding out hopes to that particular class of creditors which could never by possibility be realised. The same persons constituted the partners in both firms. Strahan and Co. had two places of business—one in Norfolk-street, the other in the Strand. There were no other partners than the Norfolk-street, therefore there could be no separate rights affecting a particular class of creditors. The moneys were dealt with indiscriminately. It was precisely the same as a transfer or the production of books in Chancery and the other in Regent-street. Mr. Bagley said he had no doubt, from reason, analogy, and decided cases, he should be able to satisfy the Court that Halford and Co.'s creditors were entitled to Halford and Co.'s assets. The point was reserved for a private sitting. The two firms were in the habit of drawing on each other. They had different books, and different papers, and different cash accounts. Should it be decided that in accordance with the ordinary principle of bankruptcy, making each estate bear its own burden, he had been informed that distinct accounts had been kept by the two houses, and no difficulty could arise. Mr. Lawrance said

DEPARTURE OF THE NAVAL BRIGADE FOR THE FLEET, SEPTEMBER 10.—SKETCHED BY J. A. CROWE.

DEPARTURE OF THE NAVAL BRIGADE.

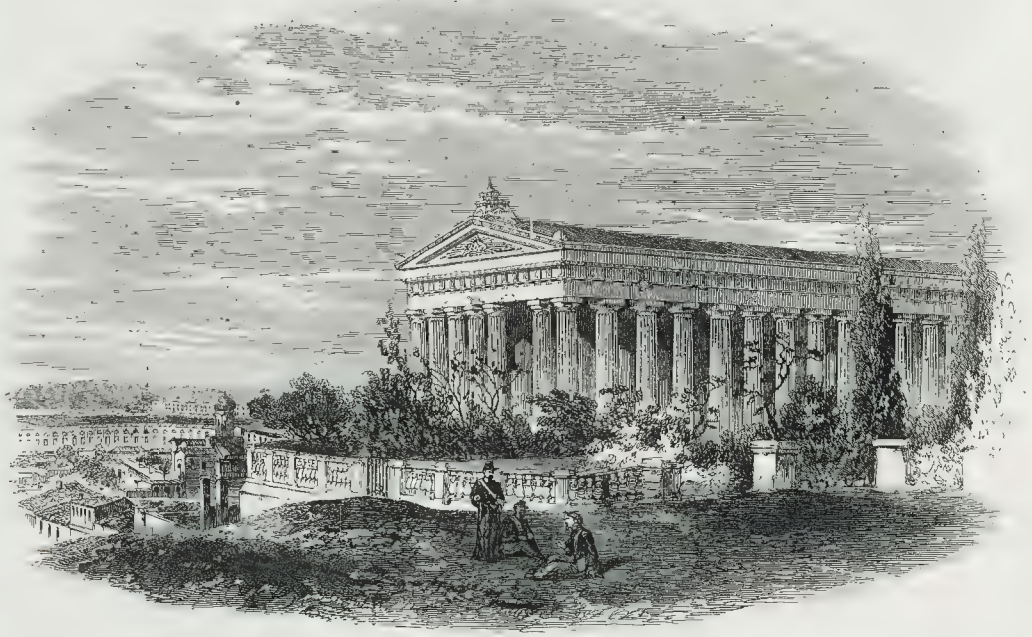
The scene represented in this sketch took place on the 17th ult., when the jolly tars who had played so gallant a part in the siege operations took their departure for Balaclava, amidst the enthusiastic cheers of a crowd of their comrades who had assembled to bid them farewell. The universal feeling among our men was one of regret at losing the company of so merry a band. A little too reckless they might sometimes be, perhaps; but every body admired their bravery, their invincible good humour, and the marvellous aptitude they displayed in adapting themselves to whatever circumstances they happened to fall in with. In this respect our landsmen might have derived some useful lessons from the Naval Brigade. Now that the siege is over, and that the services of the fleet are likely to be required, the Brigade has been disbanded for the time. Under their old flag they will, no doubt, make some noise before long, if the Russians will only give them an opportunity.

INTERIOR OF SEBASTOPOL—THE THEATRE.

This was one of the finest public buildings in Sebastopol; and, in spite of the twelve months' bombardment, it still presents an imposing appearance. The following description of that part of the city in which it is situated is given in a private letter from a Captain of Zouaves:—

Sebastopol, Sept. 15.

Yesterday, after dinner, I mounted on horseback with the intention of visiting Sebastopol thoroughly. I entered by the ravine of the English; and, leaving on my right the docks, the barracks, the arsenal, the military town, a which extends under the Great Redan and Malakoff, I bent my way to the city, properly so called. There may be seen a great number of public monuments not without elegance, and of citizens' houses, of very fine appearance, side by side with the most wretched huts. There are some streets wide, and with side-paths, but all very badly macadamized. Lighting with gas is still unknown to Sebastopol; lamps are the only things—that is to say, frightful-looking lanterns, supported by round posts, ornamented with black and white streaks. The theatre is rather a fine structure, remarkable for its peristyle and a colonnade which runs round it. Near the theatre is a library; and a little lower down and in a direction towards the sea, near the fine Fort St. Catherine, which commands the roadstead, extend vast catacombs. You reach the upper part of the city, which has a fine promenade planted with trees and forming a terrace, by a double flight of steps of stone, and on a vast scale



INTERIOR OF SEBASTOPOL. THE THEATRE.—SKETCHED BY E. A. GOODALL.

INTERIOR OF PART OF THE MALAKOFF, SEPTEMBER 9.—SKETCHED BY J. A. CROWE.—(SEE NEXT PAGE.)

THE INTERIOR OF THE MALAKOFF.

The Malakoff as it looked on the 9th, the day on which the Russians were retreating from Sebastopol Such is the scene depicted by our artist in the Crimea. The French soldiers are busily employed carrying off the wounded, of whom there must have been an awful number on the spot where the final struggle took place on the previous day. On the crest of the hill, towards the left, a small group of spectators is clustered round the Imperial standard, looking down upon the city which has cost so many lives. One may easily fancy what their feelings must have been as they gazed upon the burning ruins, and saw the last of the Russian army march sullenly across the bridge, as if loth to surrender a fortress in defence of which they had struggled so bravely.

THE HEROES OF THE REDAN.

A letter from Paris, in the *Edinburgh Convant*, enters at some length into a vindication of the bravery displayed by the English soldiers who took part in the capture of Sebastopol. Mr. James Aytoun, the writer of the letter, says the general opinion of military officers in France is, that the success of the 8th September was as much owing to the heroic resistance of our soldiers as to the troops employed directly in the taking of the Malakoff. Having seen and conversed with a number of military men in Paris, he gives what he says is the universal opinion on the subject.

After stating that the Malakoff was the key of Sebastopol, and that, consequently, everything else was made subordinate to the taking of that fort, he goes on to show what the plan of the Allied Generals was.

On the 8th of September the approaches to the Malakoff were quite sufficiently close to warrant the assault. The French were at less than twenty-five yards from the fortification, nearly every gun was silenced, the walls around the fort had been nearly levelled by the play of the artillery, and the French had nothing to do but to walk into the fortification, fighting their way of course, but without the necessity of an escalade. On the other hand the trenches in front of the Great Redan were more than 200 yards from the walls; while the batteries of the fort were in activity. Looking at the state of things, General Pelissier said to General Simpson—"I can easily, from the position I occupy, take the Malakoff; but the difficulty is to hold it, before I can bring my reserves and artillery into action, and prepare it for defence. If I surprise the Russians, which I hope to do, and take the fort by a *coup de main*, they will return in such force that the small number of men who mount to the assault will be overwhelmed and driven back as on the 18th of June. I do not expect that the Redan can be taken by you You are not in a condition to do so; but it is absolutely necessary that a diversion should be made in our favour after our first success, to give us time to breathe and to bring up our artillery and reserves. All I ask for this is one hour, and I will undertake to keep possession of the Malakoff Make your assault, and give us, if possible, that length of respite. Throw away as few men as possible; but engage the Russians for at least an hour, and Sebastopol is ours." Such is the conversation supposed to have taken place betwixt Pelissier and Simpson; and Mr. Aytoun says he is informed upon good authority that private letters from French officers in the Crimea upon good authority that private letters from French officers in the Crimea fully confirm that the purport of what he has here stated was really said by General Pelissier.

This was exactly in accordance with the tactics of the great Napoleon, who was in the habit of sacrificing a certain number of men in order to secure the object in view. Napoleon was in the habit of saying to a Colonel of a regiment, without mincing the matter, "Allez-vous faire tuer, vous et votre regiment," when he sent a devoted corps to the attack of a redoubt or a position which there was not the slightest chance of taking, and that in order to facilitate the success of another part of the army. And the corps of General de Salles, who attacked the Central Bastion, and was repulsed, was placed in the same position as the English, except that the work it had to do was not quite so desperate. The devoted band which attacked the Redan, as well as the French under de Salles, were the forlorn hope—*les enfants perdus*—of the Allied armies. And what was the result? Notwithstanding all the force brought against them our poor fellows occupied the place, and held the Russians in check—not for an hour, as stated by Pelissier, but for nearly double that time—and that against immense masses of the enemy; for after the surprise of the Malakoff the greater part of the Russians engaged there rushed to the Redan, to share in the repulse of this handful of English. After a desperate and heroic defence against such immense odds, the devoted band of British were pushed almost by physical pres-ure out of the Redan, and the greater part annihilated.

While the English troops were thus sacrificing themselves, the French in the Malakoff were comparatively free from attack, for the great assaults of the Russians to retake the fortifications only commenced about half-past two Pelissier had, then, double the time of respite he asked from General Simpson; and during this interval the French had made the most of their time. The approaches on the French side were levelled, so as to allow the entrance of artillery and the rapid advance of the reserves. A number of field-pieces by this means were brought up and placed in battery, and the Imperial Guard were entered for the defence, in addition to the troops employed in the assault. The cannon of the Russians were turned against the enemy, and the place in a manner fortified against the Russians themselves. After this, as Pelissier said, the Malakoff was secure, and could not be retaken. It is true, after the Russians had finally repulsed the English, but not till then, they returned to the assault of the French in the Malakoff; and they brought their whole army to this operation. But it was too late. This attack was desperate and courageous in the extreme; but they failed, after immense slaughter on their part, as well as that of the French. Such, however, was the desperate and powerful nature of their attack, that the French universally admit, with the greatest frankness, that had the assaults of the Russians been made immediately after the first French success, before they had time to fortify themselves, the French would have been certain to have been driven out of the Malakoff, and the affair would have ended as it did on the 18th of June. The French are, therefore, right in saying, that the English, by their heroic resistance in the Redan, are entitled to as much credit and honour for the final reduction of Sebastopol, as are those who were employed directly in the capture of the Malakoff.

Scarcity of Lodgings in Balaclava.—There is not yet one house in Balaclava where you can get a bed by payment for the night or week, and people are too often detained there on business; so that you then have to pay for a shake-down from some tradesman with whom you deal, or to cast about for some jolly English skipper looking over the bulwark of his ship, make your case known, and throw yourself on his hospitality. I never knew such a request denied; every one knows the sailor's heart; but still, habit at home makes us call out for the establishment of an hotel at Balaclava. It is painful to be always asking favours. There are places enough in the port of Balaclava or at Kadikoi, where you can dine and drink—Oppenheim's, at the latter place, being the most ratsum of all, by all, the great desideratum is a bed, and as yet that comfort is not to be obtained, though you offer a guinea a night for it. This is bad enough for old hands; but to the stranger, on first landing, it is a deprivation that hardly strikes him before as he is too often after sight-seeing, never thinks of asking for a bed till he has leisurely demolished a seven o'clock dinner. For a day or two he may possibly go back to the ship that brought him up (though passengers are always in the way when discharging cargo), and after that he must trust to his friends in Camp, and then and there, with a spare blanket, a rug, and a cloak, with his own clothes for a pillow, he must be content to consider himself in clover, fleas and other insects permitting, of which there are here species enough to puzzle the most 'cute entomologist of the most learned society in Frankistan.—*Letter from the Camp, Sept. 28.*

Hints to Amateur Travellers.—As it is rumoured here that a great many amateurs are coming out to the Crimea before Christmas, it may be as well to remind them, through your columns, of a few of the regulations necessary to be attended to. First of all, they must take care to be provided with a foreign-office passport from Downing-street, and to this they should obtain the visé both of the Austrian and French Ambassadors in London—particularly the former—or they cannot return home *via* Trieste and Vienna, a route to many travellers far more agreeable than the winter. Arrived at Constantinople, they must produce this passport at the British Consulate at Pera, a nice little uphill walk of nearly two miles from the bridge over the Golden Horn, near which their steamer will be moored immediately on her arrival in port. But let them not be persuaded to disembark at or near this bridge, which leads to the most filthy streets of Galata; rather let them order the caïque to land them at Tophana, nearer the mouth of the harbour, whence the route to Pera is cleaner and altogether better and less steep and crowded than that from the bridge. Having again received their passport at the English consulate from Mr. Ward, who is ever ready to lend a helping hand before ten in the morning, let them, if they desire a passage to the Crimea in an English transport (rather than pay four or five guineas in a passenger steamer), apply at the British naval office, at Monumbane, close to Tophana, where, if they make out a sufficient case for such a favour being granted, Captain Powell, R.N., will forward their application to the Admiral, and, after the lapse of a few days, when a vacancy can be found for them, they will be instructed by him to join some particular ship, and to present an order to her captain. Nothing is charged for the passage, but the messing amounts to 15s. a day each passenger, and the only additional expense is a steward's fee, with a trifle to "boots" and "bed-maker." If possible, the English traveller should arrange to be landed at Balaclava, not Kamiesch—they are distant from each other, by land, eleven miles.—*Letter from the Camp, Sept. 29.*

THE WAR IN THE CRIMEA.

(From our Artist and Special Correspondent.)

Camp, Sebastopol, Sept. 29, 1855.

The hostile armies of the Allies and Russians intend, I believe, to remain quiescent until spring. Whilst the English and French Generals are preparing to winter in their present positions, Prince Gortschakoff appears determined to withdraw into winter quarters in such a direction as may enable him to secure easy supplies of provisions for his exhausted soldiers. That the Russians, to the number of 120,000 men, should resolve to await the coming of spring on the high plains of Mackenzie's Farm, and maintain a strong force for the defence of the north side of Sebastopol, few of our officers believe; for the soldiers would have to encamp without protection from the rigour of the coming winter, many of them exposed to the open air, whilst the rest would have no better protection than tents, distant from the sources of supply, and all must labour under the certain disadvantage of interrupted communications from the impassable state of winter roads. This belief is strengthened by the result of careful surveys made of the Russian encampment visible from the shores of Sebastopol harbour and the heights above them. The white square tents pitched in the underwood of the northern heights, and stretching to the furthest southern spits towards Mackenzie's Farm have diminished in number, and many huts of boughs and leaves appear to be abandoned. Notwithstanding this, the activity of the remaining force is great; and working parties of considerable size are visible during the day on the buildings said stores of the northern shore, busy removing the remnants of provisions or ammunition saved from the grasp of the Allies, or heaped together for the defence of Sebastopol. Similar activity is noticed in the parties told off to finish the numerous redoubts which on all sides rise up and show rows of embrasures o pen-mouthed against the southern shore. Already have the troops quartered in Sebastopol, by General Simpson's order, been withdrawn, to save them from the occasional fire which sweeps the exposed town east of the Dockyard; and artillery and engineers alone remain to take such steps as may counterbalance the possible attempts of the enemy. The number of the Russian works on the north side, and the withdrawal of some troops on our side, are not, however, to be assumed as betraying alarm at the probable outbreak of a bombardment; for the activity of the enemy is considered merely as necessary to give time for stores to be withdrawn, and to ensure the safe retreat of the vanguard and centre of the Russian army. Had this opinion not existed strongly in the minds of the Allied Commanders, the northern works would have been attacked ere this, and Forts Constantine and Catherine been battered down. An attack contemplated by the fleet upon the former on the 11th inst. was countermanded, after all preparations had been made to bring the ships, and the mortar-vessels, and all the boats laden with rockets. It was on that day that the Russians requested and obtained an armistice for the removal of their wounded. Since then the attempt was not renewed, the fleet having been dispatched with troops to Eupatoria, where it remained absent four days.

In the meanwhile neither French nor English have remained idle in Sebastopol, and batteries have been erected which may at any moment destroy Fort Constantine and Fort Catherine, and act upon the numerous earthen redoubts erected at various intervals between the extreme southern spit and the Star Fort, with its line of fortifications stretching across from sea to harbour. The flanks of the old Wasp Battery, celebrated for its annoyance of our ships on the 17th October, have been enumbered by a line of works at an obtuse angle to it. A high projection, midway between Constantine and Catherine, has been armed with a mortar battery at the water's edge; whilst the old six-gun battery built there last year to face the Mount Sapoune works, has been maintained, and another built in its rear, facing the west of Sebastopol. At the foot of Fort Catherine, and to its proper right, another line of mortar works has been built and brought into play; whilst on a knoll behind the fort, a circular redoubt fires at once upon the western side of the Arsenal Creek and the Dockyard buildings, in our occupation. The Catherine Fort looks with one of its faces straight down the Arsenal Creek, whilst the other points towards the harbour's mouth. A large low work to the proper left of the fort is armed *en barbette* with guns facing in all directions; and to the left of it again is a water-side battery, of which some embrasures have been opened against the Karabelnais suburb, many streets of which are enfiladed by the circular redoubt just mentioned.

The Karabelnais, indeed, is one of the most exposed parts of our possessions, being low down and sloping to the water's edge. Orders were given to destroy it a few days since, and all available means of transport diverted to the purpose of removing planks and rafters to be used in hutting our troops. The various roads from Camp to Sebastopol were, consequently, crowded for a time with carts of every shape, with bat horses led by soldiers or camp-followers. The Karabelnais was covered with the dust of its own ruins as crowds of men succeeded each other in pulling down houses and huts. The streets were encumbered with carts, from which planks and beams projected in the strangest way. All this in view of a Russian earthwork, of which the embrasures were open, and ready to all appearance for destroying everything before it. Guns or platforms were wanting, probably, and till the 25th no attempt was made to molest us. On the evening of that day, however, a gun was got up and opened on the streets, from which a few of the latest arrivals were forced to make a precipitate retreat. In the meanwhile vast numbers of planks have been brought to Camp, and distributed amongst the regiments of each division. Whilst this dismemberment took place, the mixed commission was busy in making out the number of guns and quantity of ammunition captured from the Russians; and yesterday the amount counted rose to 3382. This includes not only the sound cannons, of which many were spiked by the Russians in their retreat, but those which were found in redoubts damaged by our fire. The labour of gathering these together has been not only a tedious but a dangerous one, on account of the magazines which remain in the batteries in unknown positions. The Russians, who inveighed so severely against the use of uncivilised missiles in civilised warfare, did not hesitate to leave infernal machines behind to effect the destruction of unsuspecting bodies of men working in the abandoned batteries; and, although many of these machines were discovered in time to avert the consequence of their explosion, others have been accidentally trodden on, and led to serious loss of life.

Yesterday, as I was sketching in the west of Sebastopol, an explosion shook the buildings around and reverberated through the roofless and untenanted edifices of the place. The Arsenal Creek was filled with a heavy black smoke, and showers of large stones fell into the water, lashing it for a moment into sheets of foam. The centre of the fire was a battery on the left flank of the Creek Battery. This was one of the works erected by the Russians to sweep the approaches of the Woronzoff road; it was built of stones taken from the houses around it, faced with earth externally, and without a ditch. The magazine was in the foundations of a house which had once stood there, and was not known to exist. The Russians had placed a *fougasse* over it, and an accidental tread upon a wooden peg driven into the earth broke a glass tube of inflammable matter which communicated with the powder below. At the moment of the explosion one of Captain Martin's working-parties, consisting chiefly of riflemen of the Second Battalion, was busy numbering the guns in the battery. One of them trod on the *fougasse* and exploded the magazine. Three of the men in the work were blown to atoms, and a large number were buried in the ruins; whilst sad havoc was at the same time committed on parties of workmen leading mules along the road close by. Two soldiers of the guard in the Creek Battery were killed by stones projected with great violence into the air, and launched with fatal force upon them. Several mules and horses were killed in this same manner, and every point within 200 yards of the spot was visited by the terrible shower. The crater left by the explosion was about twenty feet deep and twenty wide; and in its crumbled sides were found some of the wounded, who were speedily conveyed to hospital.

The catastrophe having made known the means by which the fire was ignited, a search was instantly made in a battery close at hand, where a small square place, marked out by four sticks, betrayed the spot in which another *fougasse* was laid. A guard, consisting of a few men of the 88th, was instantly marched to the spot, and the place closed to all ingress. That all the Russian works were mined in the same manner, and equally liable to explosion, is I now believe certain; and it is perhaps, owing only to the cutting off the communication between the explosive substance and the mines that the danger has been avoided. The Central Bastion was filled with infernal machines, the whole of which were not found out until, having exploded and killed five men, a diligent search was made, which produced the discovery of upwards of a dozen of a similar nature. Those which had been laid in the Malakoff were also discovered—and, if the story be true, somewhat providentially. In the height of the action of the 8th a number of the Russians took refuge in the basement of the Round Tower, which the Russians took refuge in the basement of the Round Tower, which was loopholed, and enabled them to fire steadily on their assailants. The French Generals having captured the body of the work, called on these men to surrender, but they refused; and, as their fire continued, orders were given to set fire to some gabions, and smoke them out. This order was but partially carried into execution, when fears arose lest the fire, increasing, might ignite a powder-magazine, and exertions were instantly made to extinguish it by throwing earth on the burning wood. In doing this the soldiers laid bare four wires, which they instantly cut, and afterwards discovered that they led towards a mine completely charged. Thus the lives of hundreds of men were saved, and the Malakoff preserved intact.

The scene of the explosion leads me naturally to a more accurate description of the Creek Battery and its neighbourhood than I have hitherto given you. It is a large battery erected on the bank of the Arsenal Creek, covering the whole gorge from the hills on each side. Of this work and its site I sent you a sketch last week. It is built in the most perfect manner, of solid earth, with strong abutments and traverses of stone and sand. The embrasures were all formed with iron tanks filled with earth, and the outer faces with large gabions. A round beam crossed the summit of each embrasure, from which depended a mantelet of rope, neatly and powerfully put together; whilst on each side a small circlet of ropes, through which was a hole for the sight, rendered all but the muzzle of the gun concealed from view, and made the artillerymen safe from musketry. The guns were large ones the Naval Arsenal, mounted on ships' carriages. The parapet was twelve feet high, and fitted with a *banquette*, or stand for infantry, to which the soldiers might mount by well-constructed ladders, in order to fire over the parapet. The traverses and abutments were all hollowed out into shell-proof lodgments, a part of which were for the men, and the rest for magazines of ammunition. At each side of the battery passed a road the first leading from the Dockyard buildings into the Woronzoff road; the other from the Woronzoff road into the west of Sebastopol. On the hill side, at the proper left of the Creek Battery, was the work of which the magazine exploded, and on its proper right a similar work: these redoubts connecting on one side those which were the prolongation of the Redan defences, and on the other those called by us the Flagstaff Battery. In front of them stretched the vale, which seems to be subject to overflow from the waters of the creek, or those which meet here from the ravines of the Woronzoff road and those of the Valley of Death. The Arsenal Creek in truth was the natural outlet of the waters of these and two other ravines which branch into the Valley of the Shadow of Death—the first to the west of the Tzard Division, and the other still more westward and running from the English head-quarters. You have more than once illustrated pictorially the Valley of the Shadow of Death, chiefly at those points in which the most telling masses of shot exhibit the violence and continuity of the Russian fire. All these ravines which in their highest parts are gently sloping, become precipitous as one descends, and their rugged sides are varied as the spurs approaches their common outlet by trees and houses ensconced in nooks beneath the rocks, where every inch of earth has been made fertile by the running streams, and is formed into inclosures, in which pretty gardens are laid out. Nothing can be more picturesque than the windings of the ravines, of which the sides at one moment rise like barriers, apparently impassable; whilst at their base, a path, often damaged by the passage of torrents, winds round, opening out their views equally picturesque and plesant

It was down the Valley of the Shadow of Death that the brigade of General Eyre moved on the 18th of June, to favour by its diversion the French and English attacks on the Redan and Malakoff. As the column wound round the sinuosities of the rocks, in the holes of which were to be seen artillerymen securely ensconced at considerable heights in magazines formed in the solid stone, they slowly progressed to a point where the precipitous cliffs receded, and they entered the bottom, studded with farm-houses dilapidated by the effects of Russian shot. Most of these, unroofed and partially demolished, were surrounded with orchards and gardens—the first unpruned, the latter untrimmed, and exhibiting a rank and tall vegetation, telling of many months of desertion. Still, though tenantless of their old and peaceable agriculturists, these houses were not destitute of more dangerous holders, the dilapidated walls and luxuriant trees concealing in their recesses bodies of hostile Russians, where lurked havoc in our companies, whilst they securely lay in concealment supported by their artillery in the heights of the Garden Battery. Onward, however, the gallant brigade of General Eyre pushed its way, maintaining its formation with difficulty in the lanes into which the ground was cut, but driving the enemy from house to house, until one more spacious than the rest was occupied and held. A pause ensued at this spot, a picturesque and beautiful one, where some wealthy inhabitant of Sebastopol had of old withdrawn to enjoy a summer repose, far from the dust and formality of the soldier-ridden city. A band of young officers crowded in there, and for a time amused themselves amidst the remains of some furniture and portions of a wardrobe. A shell soon burst there, however, killing some, maiming others. But this was a passing episode. The Russians having been driven from their houses, the brigade pushed on nearer and nearer to the guns of the Flagstaff Battery, so near that their guns could scarcely bear on them, and they entered the flat alluvial ground in front of the Creek Battery. Here dreadful havoc ensued, the Russians keeping up a rolling fire of musketry from the heights on each side of the ravine, whilst our men advanced and entered the Creek Battery, in which but few men were found. There they paused and listened. The roar of artillery and musketry, which told them by its intensity that the fierce fight was kept up on the eastern portion of Sebastopol, had suddenly ceased, and, overjoyed, the brave remains of the British at the Creek, rejoiced that the city had fallen. Messengers, however, soon arrived to undeceive them. They continued to hold their ground in the outlet of the Valley of the Shadow of Death till night closed in and faded again. The weary with fatigue and loss, they returned, sad and dejected at the useless result of so much bravery.

The Woronzeff road ravine, which runs in at the Creek, is broader than the others and not so picturesque; there are no trees and houses in it until it opens into the expanse before the Great Battery. At no great distance up was the line of chevaux-de-frize, where English and Russian kept watch at a distance of 200 yards apart; the latter safely ensconced

in a large stone house, to which they brought field-pieces at night. Here are now encamped an English picket and parties of workmen, busy rebuilding the road, and making ditches along its sides to form water-courses for the torrents which sometimes run down after violent storms.

From the Creek Battery the Woronzoff road follows the sides of a steep decl vity which dips into the waters somewhat abruptly, and forms the site of the fashionable Sebastopol. The road is cut out of the rock, and rendered safe for carriages by a thick parapet of stone. Terrible signs of our cannonade were visible there, the ground being strewed with our shot and shell, whilst the buildings above were perforated, unroofed, and ruined. The parapet itself had been broken down in many places, and must then have afforded glimpses of the Russian reliefs, as they passed down to the trenches under the guns of Gordon's and Cameron's Batteries. Through these gaps, too, the eye roamed into the depths below, where great numbers of guns and shot, anchors, chains, blocks, and even boats, lay pell-mell on a narrow beach. At the top of the ascent was an uninterrupted view of Fort Catherine and the ground behind it, and then the road turned to the left, entering the main street of Sebastopol, the southern end of which is closed by a heavy stone battery. In every by-street leading from this main thoroughfare were guns laid and embrasures formed across the streets, as if the most desperate resistance were intended, in what was considered the most vulnerable part of the city—that to which the French were opposed, and the western side. On the right of the main street were several large edifices, one of which, in particular, towered over the others: being built of stone, in a good style of architecture. It was particularly damaged by fire, and is now known to have belonged to the contractor who excavated the ground for the dockyard. On the left of the same street was the church of St. Peter and St. Paul, of which I have sent you a drawing. It had been much damaged by shot, which destroyed two or three of the columns, and almost all the stone railing. Numerous shops lined both sides of the streets, and were known not by their fronts, which are similar to those of ordinary habitations, but by the names written up above the door, coupled with the trade of the indweller. On a high ground more west of this was the Governor's house, entirely destroyed and reduced to a skeleton by fire. Further on, and nearer the extreme point which is filled up by Fort Nicholas, was a theatre, a large edifice with a rotunda supported on columns in front of it; and in an open space a lighthouse, with a clock having inscribed on it, "Barraud, London." Then the Greek church, which formed, by its mushroom steeple, a landmark in the distant view of Sebastopol; and lastly several buildings adorning the water's edge, over which frowned Fort Nicholas. Very little that was valuable was found in this part of the town, as all the houses had been destroyed by fire. Their outer proportions, however, were in some instances preserved, which enables me to give you a tolerably fair idea of the town, in a Sketch from the ruins of Fort Paul. More of the state of the edifices, and their character, I shall give in a future letter. I pause, not to make you too weary

There are few incidents connected with the war to relate. The *Agamemnon*, which has returned from Kertch, reports a skirmish between a detached party of the 10th Hussars and 300 Cossacks. The party consisted of thirty men detached on a reconnaissance. They unfortunately lost their way, and night overtook them. They stopped in a village, where horse and man took rest. This, however, was fatal to the security of the detachment, which at daybreak was found surrounded by 300 Cossacks. The little band, undismayed by the disparity of numbers, cut its way through with the loss of one man, and then retreated. In the pursuit which followed they had to repulse several attacks, which deprived them of thirteen more of their number, who were either killed or wounded, the latter being made prisoners

Another cavalry engagement is announced to have taken place at Eupatoria, where the fleet recently took General D'Allonville's brigade. Details I cannot give you, but success is said to have been, as of late, on our side.

General Markham's health, which has been failing since the affair of the 8th inst., has become too weak to permit of a further stay in the Crimea. The General and his Aides-de-Camp have, therefore, taken their departure this morning for Balaclava, where they are to embark in the *Robert Lowe*, for Constantinople. General Markham is succeeded in his command by Brigadier-General Garrett.

The Duke of Newcastle starts to-day in the *Highflyer*, for Circassia, where he intends to see all he can, and even journey inland as far as possible. He will be accompanied by Mr. Simpson, to illustrate the journey.

Although our Correspondent's letter from the Crimea comes no later down than the 26th ult., we have very little information to add regarding the operations of the Allies since that date. It appears that the Russians, and the Allied troops charged with the occupation of Sebastopol, redouble their fire, and increase their fortifications on the north and south sides of the harbour.

The *Journal de Constantinople* affirms that the Commander-in-Chief of the Turkish troops encamped on the Danube has received orders to prepare provisions for 40,000 or 50,000 French troops, who may be expected in Silistria by the end of October. Turkish cavalry reinforcements are being conveyed from Varna to Eupatoria.

Admiral Stopford is about to leave the Crimea with four ships of the line and two steamers, to enter the Mediterranean, and, it is said, to cruise in the Bay of Naples.

DESPATCH FROM GENERAL SIMPSON.

War Department, Oct. 11.

Lord Panmure has this day received a despatch and its inclosures, of which the following are copies, addressed to his Lordship by General Simpson:—

Sebastopol, Sept. 29.

My Lord. Since my last despatch the troops have been employed to the number of 9500 men, daily in making the road from Balaclava to the Camp; and as, after a few hours of rain, the whole distance is converted into a mass of deep mud, the work that has to be performed from this reason, as wel. as the great distance that the stones have to be transported, render it one of great labour and difficulty.

Large fatigue parties are daily employed in the town, dismantling and conveying timber and other materials from the ruins of the buildings, and I hope, by this means, to get a considerable portion of the troops under cover previous to the commencement of the bad weather.

The enemy have been firing from their batteries on the north side at the working parties in the town, and, although causing some little annoyance, they have not prevented the work being carried on, and, I am happy to add, had one man killed and some wounded are the only casualties occasioned by their fire.

I regret to have to report to your Lordship that, owing to the explosion of a Russian magazine, on the 27th instant, one officer and nineteen men were wounded. I ordered an investigation to be made, and from the report I have received, the origin was the explosion of a hidden *fougasse*, a number of which have been dug up in various parts of the town and batteries.

The invention of the machine is peculiarly Russian.

I have received a letter from Lieutenant-Colonel Ready, 71st Regiment, commanding her Majesty's troops at Yenikale, reporting the proceedings of a trifling affair, in which a detachment of the 10th Hussars, in company with the Chasseurs d'Afrique, were engaged on the 21st inst. with the Cossacks.

Colonel d'Chmost, commanding the French troops at Kertch, received information that the Cossacks were collecting and driving away all the arabas from the neighbourhood, and, as he determined to endeavour to prevent this, he invited the assistance of the English cavalry to co-operate with the Chasseurs d'Afrique. For this service Lieutenant-Colonel Ready ordered two troops, commanded by Captains the Hon. F. FitzClarence and Clarke, of the 10th Hussars

The Cossacks were supposed to have assembled their arabas at two villages, named Koss-Serai Min and Sut Ali, equid.stant from Kertch about 16 miles, and from one another, 6j. Captain FitzClarence's troop was ordered to the first village, and Captain Clarke's to the latter. At each of three villages they were to join a troop of the Chasseurs d'Afrique, who had preceded them. On arriving at Koss-Seral Min, Captain FitzClarence found both troops of the French Dragoons, and immediately sent off an order to Captain Clarke to join him that night, the letter was unfortunately not delivered until the following morning. In complying with this order, Captain Clarke, whose troop consisted only of thirty-four men, fell in with a body of about fifty Cossacks, which he immediately charged and pursued, but, as they were soon reinforced by upwards of 300, he was forced to retire upon the village, with a loss of his sergeant-major, farrier, and thirteen men taken prisoners.

Captain FitzClarence's troop, with the Chasseurs—the whole under the command of the officer commanding the French troops—having seen a large body of the enemy, skirmished with them at some distance, and moved in the direction of the village of Serai Min; where, after having joined Captain Clarke's troops, the whole then commenced their march upon Kertch.

After about the distance of half a mile from the village they were attacked by a large body of Cossacks, who were, however, beaten back by repeated charges. The loss of the 10th Hussars consisted of 2 privates, supposed to have been killed: 1 wounded, 1 troop-sergeant-major, 1 farrier, 13 men, 15 horses, missing.

From information that has since been received, the Cossacks were supported, within a quarter of an hour's march, by eight squadrons of Hussars and eight guns.

Colonel Ready informs me that nothing could exceed the coolness and courage of the troops in the presence of such overwhelming numbers of the enemy, who were only kept at bay by their steady movements.

I have the honour to inclose the list of casualties.

The health of the army, I rejoice to say, is excellent

I have, &c.,
JAMES SIMPSON, General Commanding.

The Lord Panmure, &c.

RETURN OF PRIVATE KILLED FROM SEPT. 9 TO 27 3rd Foot. Private Henry Best, in Sebastopol

RETURN OF NON-COMMISSIONED OFFICERS AND PRIVATES WOUNDED FROM SEPT 9. TO 27, INCLUSIVE.—4th Foot: Sergeant John Clarkson, slightly. Lance-Sergeant John Wicate severely. Private Timothy Roach, dangerously, William James Thompson, Thomas Hartnell, John Bates. Thomas Dunn severely; Henry Luther, John Kennedy, William Heaton, John Clarke George Wilks, Samuel Rhinney, Abraham Yates, William Boyton, John Ridley, William Moore, John Forster, slightly. 68th. Private Charles Callaghan, slightly, by a shell

THE ALLIED FLEETS AT ODESSA.

News of the bombardment of Odessa has been anxiously looked for since Tuesday, the Telegraph having announced the departure of a large squadron of the Allied fleet from Sebastopol on the evening of Sunday last, and, as it had sailed northward, the belief was that destination was Odessa. This supposition was confirmed by a telegraphic message from Nicolaieff, dated Monday, October 8, to the following effect:—"Paris this morning a squadron of the Allied fleet, consisting of nine line-of-battle ships, twenty eight steamers, nine gun-boats, and three floating batteries, cast anchor off Odessa

With such a naval force there can be little doubt as to the success of the contemplated operations. It was expected that the bombardment would commence on Tuesday last.

THE CZAR'S JOURNEY OF INSPECTION.

The accounts from Russia relating to the Emperor's journey to the south have been very meagre since he left Moscow. A Berlin paper speaks of his having been at Nicolaieff on the 27th, where he is said to have found the stores of arms and ammunition all that could be desired. A letter from Odessa, of the 29th ult., says—

As soon as he Majesty reached Nicolaieff, the engineer and builder, Lieutenant Volokeff, was summoned by telegraph, and he received orders to construct round the town several redoubts (five, it is said), with 360 guns for the whole. 50 gun-boats are to be built with all speed by workmen brought from Cronstadt, who will be under the personal inspection of the Grand Admiral Constantine. Each of these boats is to be armed with two or four guns of long range. The latter have already been brought from the arsenal at Keff. The newly-built frigates *Vyest* and *Tiger*, are already armed, and have been examined and approved by the Imperial family

The Arsenal contained prod gious supplies of matériel of war, which had been collected there during the last ten years, but a great part must have been sent to Sebastopol during the war No. 5 of it 121 versts from Odessa. 339 from Simpheropol, and 401 from Sebastopol.

On the 27th the Grand Duke Constantine left for Sebastopol, and it is said that he will be accompanied on the north side by Prince Gortschakoff, with whom his Majesty wishes to consult on the future conduct of the war. According to another dis, the plan of the Russian Commander-in-Chief is to withdraw from the north side of Sebastopol, and to defend the Crimea, by taking up a position between Bagtcheserai and Eupatoria.

THE WAR IN ASIA.

The latest intelligence from Kars is rather discouraging. The Russians had returned to the assault with greater success, and succeeded in establishing themselves in a position very close to the town, enabling them to hem in and still further annoy the defenders. The garrison began to suffer, was in want of several stores of the most essential nature, and was calling with tears and voice for relief.

The *Invalide Russe* of September 30th publishes a report from General Mouravieff, in which the latter says that, on Sept. 11th, he gained a battle against 8000 Turks, and made prisoner the gallant Ali Pasha. He presumed to have taken four guns and three colours. The despatch says that 400 Turks were killed.

The *Gazette du Midi* gives the following details as to the respective situations of the Turks and Russians in Asia:—

Omer Pasha has collected about 15,000 men at Batoum, and it is intended to triple that number by draughts from the garrisons of Widdin, Rustchuk, Schumla, &c., and by further contingents from the Turkish capital. It is high time that the generalissimo should be on his march, if he wishes to prevent Kars and Erzeroum from falling into the hands of the enemy. It will be very difficult for him to march from Batoum on Kars, as he will have several rivers and other difficult passages to cross, but he could easily reach Artwin in three or four days, by availing himself of the river Tcherek for the conveyance of his supplies; and from that place he would menace the line of retreat of General Mouravieff, who must necessarily fall back, if he wishes to cover Georgia and Mingrelia; but Omer Pacha must hasten his movements, as the corps which defend Kars is reduced to great extremities. According to a letter recently received, written by a superior officer, on whom reliance may be placed, the soldiers are all on half rations, and having no more bread are supplied with biscuit. Even on this fare they have not more than will last for a month. At the enemy's Asiatic camp have been sent away for want of forage, and the four squadrons of the troops of Arabistan, which remain, are obliged to go out every day and face the enemy's cavalry, and thus procure a little forage at the price of their blood. The army of Kars is now composed of about 16,000 men, who have received no pay for the last two years, and who are almost without ammunition, clothing, shoes, or military chest. There are with it scarcely any medical men worthy of the name, and no medicines of any kind; and yet the brave feelings of these men keep them firm to their post. It would be unpardonable for such men to be any longer abandoned. The interior of Asia has been entirely ravaged, and it would be impossible to raise a levy, as there are no young men left. The Russians have lately received three pieces of heavy siege artillery; they have eight others at Soubatan, a few leagues from Kars; and also expect some from Alexandropol. Their intention appears to be to do the unfortunate garrison of Kars the honour of a siege *en règle*.

We learn from Constantinople, Oct. 2, that part of the *corps d'armée* of Omer Pacha, which is already at Batoum, has received orders to advance and attempt all that may be possible to raise the blockade of Kars.

THE BALTIC FLEET.

A letter from Rear-Admiral Penaud, dated Nargen, October 2, gives an account of an expedition carried out in the Gulf of Bothnia by the corvette *d'Assas* and the English steamers *Tartar* and *Harrier*. These vessels destroyed eleven Russian vessels anchored at Biornaborg, one of which was a steamer, and eight other vessels in the fiords. The prizes are of the aggregate burden of 2500 tons

THE FRENCH EMPEROR AND THE MURATISTS.—A rather significant disavowal has been put forth by the French Government of the letter lately circulated in Naples, purporting to proceed from the son of the late King Murat. The disavowal talks disrespectfully of "certain pretensions," and emphatically repudiates all "underhand proceedings" regarding them. The document must be held as indicating that the French Emperor is opposed to all interference in Italian affairs, at least on the revolutionary side, and that the letter disavowed is known to the French Government to have been genuine and meant in earnest, on which points it was, on the face of it, open to great suspicion.

MEDAL TO COMMEMORATE THE IMPERIAL ROYAL VISITS.—A beautiful medal has just been struck by commission of Messrs. Hunt and Roskell, in honour of the visit of the Emperor and Empress of the French to London, and of Queen Victoria and Prince Albert to Paris—an important and interesting event for a medallic commemoration. The dies were executed by Mr. L. C. Wyon; and the inscriptions were selected by Mr. Hawkins, of the British Museum. The medal is the size of a crown-piece. The effigies are in high relief, and are highly-characteristic portraits. The *obverse* bears the busts of the Emperor and Empress of the French; legend: NAPOLEON III. IMPERATOR * EVGENIA IMPERATRIX. ANGLIAM INVISYNT APR. MDCCCLV. *Reverse*: Busts of her Majesty and Prince Albert; legend: VICTORIA REGINA * ALBERTVS PRINCEPS. GALLIAM INVISYNT AVG MDCCCLV.

IN addition to the military decorations already announced as having been conferred on British officers attached to the head-quarters of the armies of our allies, we have to state that the Companionship of the Bath has been awarded to Colonel Simmons, of the Royal Engineers, who shared in the campaigns on the Danube, and the value of whose services as British Commissioner with the Turkish army has been repeatedly evinced.

THE THEATRES.

PRINCESS'.—The announcement that the Princess' Theatre is to be reopened on Monday, the 22nd inst., will be received with satisfaction. The programme of the evening's entertainments consists of a new piece called "Don't Judge by Appearances," "King Henry VIII." (terminating with the Death of Queen Katharine), and "A Game of Romps"—the performance of which was temporarily suspended owing to the success of "Louis XI." and other novelties. The unparalleled run of a hundred nights which the gorgeous pageant of "Henry VIII." achieved last season is an event that will not be easily forgotten by the lovers of the drama. The good judgment of Mr. Kean in resolving for the future to omit the fifth act of the tragedy—though it may be derided by those worshippers of Shakspeare who will neither have his works abridged nor amended -will, we think, be approved by the majority of play-goers: for, whatever may have been the case in the days of Queen Elizabeth, the fourth act is the natural climax of the story, and all interest ceases with the deaths of Wolsey and Queen Katharine. Mr. Kean deserves well of the public both as an actor and a manager. In the latter capacity he is certainly the most enterprising of his contemporaries. Undertakings which would have seemed impracticable to other managers, he has triumphantly effected. The dream of Queen Katharine, for instance, which was hitherto left to the spectator to imagine, has, in Mr. Kean's version, been made palpable to the sight. The "heavenly guests," of whom the waking Katharine speaks to her attendants, descend, their white wings spread abroad, their hands outstretched amid the most solemn silence. It would seem as if the spectators were impressed with a sense of religious awe while the Angels are beckoning. An idea of sacrilege is associated with the bare notion of giving vent to vulgar applause in so celestial a presence; for not until the glorious group has entirely disappeared is the admiration of the spectators able to declare itself. We augur for Mr. and Mrs. Kean an enthusiastic reception on their opening night, and anticipate from their judgment and liberality many other Shaksperian revivals as splendid as "Henry VIII."

DRURY LANE.—On Wednesday Mr. Charles Mathews made his bow to the audience in a comedy partially new, in three acts. The piece is, in fact, a modification of Mr. Poole's "Wealthy Widow," under the title of "Married for Money." It is more remarkable for the excellent manner in which it was acted than for its positive novelty. *Mr. and Mrs. Mopus* were represented to the life by Mr. C. Mathews and Mrs. Frank Matthews—the submissive husband, who had married an ancient widow for her fortune; and the overbearing, yet jealous domestic *Juno*, who would keep her young husband in leading-strings. At length the latter recovers his liberty by losing it. Arrested for an old debt, to an old sweetheart, which his still older wife has to pay, he gets drunk in prison, and returns home overflowing with love, gratitude, and independence. The result is that he becomes master at home. This scene was managed by Mr. Mathews with first rate art; and, indeed, was the most skilful interpretation of inebriety that we have witnessed on the modern boards. Mr. A. Cowper was excellent in *Sir Robert Mellowboy* an old man who is converted from his *penchent* for the charming and juvenile *Matilda* by the experience he has gained in the family of *Mopus* of the conditions of domestic infelicity. The young lady herself was well impersonated by Miss M. Oliver; and Mr. Rowsby, as her lover, *Roy Rowland*, was, as usual, a dashing specimen of the class. The piece would perhaps bear curtailment, but there is no doubt of its being a permanent success. We again witnessed the performance of "Nitocris" (a notice of which will be found at page 401), and have to report that many of the scenes omitted on the first night have been advantageously restored, and that the drama in its more complete form has now a fair chance of lengthened success.

ADELPHI.—We congratulate the public on the return of Mr. Hudson, the Irish comedian, who, as a substitute for the late inimitable Power, is the best of his successors. His *Rory O'More*, which he is now performing, is well worth a visit; it is rich in the most salient points, and frequently reminds us of his great exemplar. New engagements have been made—among them Miss Eliza Arden and Miss Kate Kelly. We much regret the secession of Miss Woolgar from the boards.

STRAND.—Miss Prescott Warde, the niece of the once-celebrated tragedian, appeared on Monday in "A Day in Paris," and went through the series of transformations required with success. The lady had taken the theatre for a week, and, we hope, has found it answer her purpose.

LIVERPOOL.—At the Amphitheatre, on Monday, Miss Edith Heraud made her first appearance, and was well received by her new audience. The play was "Wife or No Wife," and the local papers speak highly of her performance of *Gymgia*. "We must confess," says the *Daily Post*, "to seldom having seen a first performance before a new audience so completely successful. The play is a new one, and abounds in some striking scenes and situations, to which the gifted daughter of the Author did not fail to give due effect. Her style is quiet and graceful, with sufficient energy to become impassioned when her text demands it, and sufficient judgment never to allow passion to swell into the excess of rant."

THE POLYTECHNIC INSTITUTION.—The sixth course of Monday evening lectures to the industrial classes commenced on Monday last with a lecture, by Mr. Jacob Bell, on the Adulteration of Food. Admitting the existence of adulteration in most articles of food, Mr. Bell said that the extent of the practice had been very much exaggerated, and much unnecessary alarm thereby caused to the public. Absolute purity, chemically speaking, he believed to be impossible of attainment; but there were few articles of food which, in his opinion, could not be obtained in the highest state of purity that is possible or desirable, if the public would pay a fair price, and deal only at shops of established respectability. Mr. Normandy rose at the termination of the lecture, and stated that he was the witness whose evidence concerning the quantity of alum in bread had been directly called in question; and he contended that, when one chemist had actually found alum in bread, and another had not, the balance of evidence was in favour of the former. The lecture-room was densely crowded.

MR. W. M. THACKERAY.

(With a Portrait, copied, by permission, from a print, drawn by Samuel Laurence; engraved by Francis Holl. Published by Smith, Elder, and Co. Cornhill.)

THE likeness which we engrave this week of Mr. Michael Angelo Titmarsh, *alias* Mr. William Makepeace Thackeray, is considered by his friends as a very characteristic portrait of the great novelist. It is not, we must confess, altogether true to his present appearance; for it wants a moustache, becoming addition to the upper lip, to the shape of a black moustache, that contrasts most admirably with a head of silver grey; but it is like the man, and will be welcome to his many admirers.

Mr. Thackeray was born, we believe, in Calcutta, in the year 1808. He was educated at the Charter House (the Grey Friars of his latest novel) and at Cambridge. At the Charter House he is reported to have thought more of Addison and Steele than of Homer and Virgil. He left, however, a good classic; and retains a liking for the great writers of Greece and Rome in their own language.

Born to a handsome competency, he was, when still young, thrown by the remissness, of others, on the world at large. What Mr. Thackeray lost was a gain to the public; for this deprivation we should probably never have heard of Mr. Michael Angelo Titmarsh. The "Court Guide" would still have given a house in a handsome square in London, as the residence of Mr. William Makepeace Thackeray, but no one would point to it as the residence of the author of "Vanity Fair," of "Esmond," and of "The Newcomes." We should have seen the men in livery at the door, but should never have heard of "Jeames" or "Becky Sharp."

Mr. Thackeray first became distinguished as a writer about the year 1833. He was then one of the staff of admirable writers who gave life and vigour to the pages of *Fraser's Magazine*. It was evident at once that a new writer of great originality of thought and manner had appeared; and some were found who foretold then early the high rank which he was destined to hold among English authors.

The reputation he obtained as a writer in *Regina* (as *Fraser* still continues to be called) was enlarged materially by his contributions to *Punch*, and especially to the "Snob Papers." The imitations of living novelist, or the articles of the "Fat Contributor"

Nothing was now wanting to complete his reputation but a sustained story, and this was soon found in the far-famed "Vanity Fair," a work that will retain its position among the best English novels. His high reputation was confirmed by "Pendennis"—shaken a little by "Esmond"—but re-strengthened and enlarged by "The Newcomes." It now stands beyond danger—almost beyond cavil.

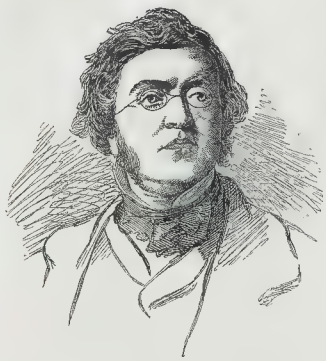
When the author of "Vanity Fair" was announced to lecture on some of the English Humourists, the "town" was delighted. The lectures themselves were attended by the best authors, the best judges, and by the pick of the fashionable world. When printed they confirmed the praises awarded them; and when delivered in America drew dollars sufficient to

have carried on the credit of Sir John Dean Paul for at least a month longer.

On the day on which our paper appears Mr. Thackeray sails for New York—

To tell all the Yankees about the Four Georges,

as an excellent writer—"A Friend of the O'Mulligan"—has said in a song written for the recent dinner to Mr. Thackeray, over which Mr.



W. M. THACKERAY, ESQ.—FROM A PRINT ENGRAVED BY HOLL FROM A DRAWING BY LAURENCE.

Charles Dickens presided. From this song we have been permitted to note the concluding lines:—

I'm tould there's a banquet performing somewhere,
That a warm-hearted party assembles to hail him,
And a world-honoured gentman is taking the chair.
I'd like to be present—I'm fond of such orgies,
And, since he's about to be crossing the surges,
To tell all the Yankees about the Four Georges,
Fore George! there's a sentiment I would declare:
I'd say, "Fill a glass to the sworn foe of Quackery:
May his ship be helped westward by Ariel and Puck;
Here's health, fame, and gold to our guest, William Thackeray
And, in token, we give him this Horseshoe, for luck."

The table at which the dinner was given was in the shape of a horseshoe.)

BALMORAL PALACE.

We are enabled, by a photographer who has just returned from the Highlands, to present to our readers the accompanying general view of the Royal Palace, taken during her Majesty's recent sojourn.

The view is taken from the north side of the Dee, along which runs the public road, and immediately under the hill on which stands the parish church of Crathie. The south side of the Dee on which the Palace is built, is faced, for a considerable distance, by granite. A beautiful lawn extends from the river to the new Palace, and forms a fine contrast to the dark mountains with which it is backed. The style of the Palace is that of the old Baronial Scotch edifices, suited to a climate in which winter is so tempestuous and severe. There is no display or effort to raise a Windsor Castle on the Dee. It is in perfect keeping with all that may be seen without, or witnessed within, and so far a type of the Queen's Scottish life.

On Sunday her Majesty appears in the parish church, the chief parishioner, a devout and interested worshipper and hearer. On week days she enjoys the magnificent mountain scenery, breathes the fresh air, or ascends Lochnagar, as far up as the Red Deer, in summer, or visits her tenantry, and sees that their shielings are in good repair, and their children sent to school. If all the Lairds of the South and chiefs of the North followed her Majesty's example, the Highland regiments would have more recruits, and the emigration agents fewer followers.

THE LIDDELL TESTIMONIAL.

This elegant Vase has lately been presented by the Westminster boys as a token of respect and regard to the Dean of Christ Church (Rev. H. G. Liddell) on the last occasion of his appearing as Head-master in the School. The Captain, on behalf of the Queen's scholars, expressed their regret at parting with so able and distinguished a master, who during nine years had won the affection as well as commanded the respect of all. The Head Town Boy, as representing those not on the Foundation, spoke to similar effect, and congratulated Mr. Liddell on assuming a higher position, and one that would give wider scope for the exercise of his powers and influence. The Head-master concluded a most feeling and impressive reply by saying that, highly as he should always prize this substantial and very beautiful token of the boys' good-will, there was one mark of remembrance on which he should set still higher value, and that would be their giving practical evidence to his successor that they had been taught to revere what was right, and the maintenance among them

SILVER TESTIMONIAL PRESENTED BY THE WESTMINSTER SCHOLARS TO THE DEAN OF CHRIST CHURCH, THE REV. H. G. LIDDELL.

of the character for truth and straightforwardness which had distinguished Westminster School. In the evening the whole School were entertained at supper by the Dean and Mrs. Liddell, when the health of both was proposed by the Captain and acknowledged by enthusiastic cheers.

The Vase is of classic design, and has been beautifully executed in silver by Messrs. Hunt and Roskell. It bears the following inscription:—

Viro Admodum Reverendo Henrico Georgio Liddell, A.M., Nuper Scholæ Regiæ Westmonasteriensis Archididascalo Nunc Ædis Christi Apud Oxon: Decano Hoc Quantulumcunque Grati Animi Monumentum. D.D Discipuli Tum Regii Tum Oppidani VII. Id., Aug. MDCCCLV.

BUST OF JAMES MONTGOMERY.

On Wednesday, at the annual meeting of the Sheffield General Infirmary a marble Bust of James Montgomery, the justly-esteemed patriot, philan

MARBLE BUST OF JAMES MONTGOMERY, THE POET, PRESENTED TO THE SHEFFIELD GENERAL INFIRMARY.

thropist, and poet, was presented to that institution by Wilson Overend, Esq., Deputy Lieutenant of the West Riding of the county of York, acting in behalf of the subscribers, who have thus realised a laudable determination to place an appropriate memorial of their revered townsman in the board-room of the noble hospital which had for so many years been the scene of his charitable labours as Chairman of the Governors.

The bust has been executed by Mr. William Ellis from an original model, the result of several sittings with which Mr. Montgomery only a short time before he died kindly favoured the artist. He therefore represents the Christian poet, as will be seen from our Engraving, at a late period of his life; and it is considered, both as a faithful likeness, and as a work of art, to do great credit to the ingenious sculptor, who was, we may add, originally a pupil in the Government School of Design at Sheffield.

HER MAJESTY'S PALACE AT BALMORAL.—PHOTOGRAPHED FROM THE NORTH SIDE OF THE DEE.

INTERIOR OF SEBASTOPOL.—REMAINS OF THE CREEK BATTERY.—SKETCHED BY E. A. GODDALL.

THE CREEK BATTERY.

THE Sketch our Artist has given represents the French at work destroying the Creek Battery, looking towards the Cemetery. The following description of this spot occurs in a letter from a young Artillery officer to his sister:—

Yesterday I spent a solitary Sunday in the old, and now almost deserted, trenches, and possibly, whilst you were walking home from church through Richmond-park, I was stretching my legs on the top of the parapet; for the enemy being gone, there is a peculiar feeling of satisfaction, if not of exultation, that we can now stand on the top and in front of a parapet over which, and from behind which, three weeks ago, we dared not show our heads. I rambled down into the suburb where the Cemetery, which we took on the 18th of June is situated—it is very green and pretty, although the adjacent houses are in ruins, and there is a shady lane running through the centre; and as I lay down on the slope of the ravine overlooking it, and along the Creek, with the still threatening-*looking* batteries of the Barrack, the Garden, the Tower, and the Creek, exhibiting their now toothless jaws at me, I could not help moralising little over a scene naturally so beautiful and picturesque, now so frightfully scarred by the action of man's evil passions; and I fancied to myself the different aspect it wore some two years or less ago, when probably a Russian or Tartar peasant might have been observed peacefully cultivating his plot of ground, which now, instead of herbs and vegetables, bears piles of shot, while perhaps his Xantippe—for his wife was of course a *tartar*—was bestowing needful correction on the little Tartars for naughtily breaking down the rose-trees, or being guilty of other juvenile offences. How far my reverie might have carried me I know not, but I was roused from it by the noise of a dispute about right of way through our now useless lines between a very stubborn Englishman and a not less persevering Frenchman, so I returned through a vineyard situated on the slopes of a ravine, now deserted, except by hawks and similar occupants, who showed that in some things instinct is superior to human reason, for they were not quarrelling about rights, but were busily ransacking its products without interfering with each other. When I got back to the batteries, I found a few of our gunners playing at the game of nine-holes with Russian grape-shot, the duty of those gunners being—what do you think?—that no enterprising thief should run off with such trifles as a 32-pounder or heavy 68

ANECDOTES OF PRINCE GORTSCHAKOFF.—Among the foreign generals who attended at the funeral of the Duke of Wellington was one past the prime of life but distinguished by the energy and firmness which his countenance expressed. In the interval which preceded the arrival of the funeral car this foreigner was observed to be strangely occupied. He passed along the line of soldiers chosen from the various regiments, and, turning up their trousers, attentively examined the make of their shoes. "What is the matter, Prince Gortschakoff?" said some one. "It is said at home," returned the Russian, "that your Guards are fitted with strong and well-made shoes, but that those of the Line are inferior. I wished to learn the truth of the matter, and therefore examined them. There does not seem to be any difference." This minute disciplinarian was but an imitator of his master, who, with his own Imperial hands, would well say—" A quarter of a century before he had carried on war in Poland with fearful severity." The case was this—he proposed to his prisoners on all occasions the alternative of the Russian service or the knout. Once a body of 2000 insurgents were defeated, and took refuge in the Austrian territory. The Austrians disarmed the , and sent them to Gortschakoff. He gave them the usual choice of entering the Russian ranks; they desperately refused. It is said that the General was present at the execution which followed. The flogging lasted many hours; ten died under the lash; seven more yielded after terrible tortures, and were borne to the hospital. Gortschakoff stated his determination to go through the whole number, if the execution lasted a month. The Poles then bowed the head, and were draughted into the Russian legions.

INTERIOR OF SEBASTOPOL.—SITE OF FORT PAUL.—SKETCHED BY J. A. CROWE.

NATIONAL SPORTS.

THE Irish racing men are at last beginning to think of putting the shutters up in their weighing-houses and grand stands for the winter, and finish their Curragh season with a four-days' meeting, which commences on Tuesday next. Artillery (3 lb. extra) is in the betting at 5 to 2 against the Derby, and as it is worth £260 clear, and his riders have very little present chance of hedging their Derby money after his Champagne defeat, it is not altogether improbable that he may cross the water. There is some rumour that he is to be matched against Vandermeulin for a thousand a side A.F., the day after the Two Thousand; and Mr. Carke is in such high feather after winning the Cesarewitch in a canter with his great coarse horse Mr. Sykes, the produce of his Sir Tatton Sykes, that he is not like to run him for the Cambridgeshire on the same terms, as he pointed out last week, so much the best of the weights, that he fairly scattered his field, and broke down King Tom again, in his one weak sinew, near the Bushes. The running of Crown Pigeon, who was turned out of Lord Derby's lot, is making him a great favourite for the Cambridgeshire, where the distance will suit him better than it did in the Cesarewitch. Warwick has a day's flat-racing on Tuesday, and several steeplechases on Wednesday; while Wednesday and Thursday will be devoted to a merry little meeting under Lord Zetland's auspices at Richmond. His Lordship's Tyritus is in one race for the "Grey Stone in," and Zeus will no doubt do battle with Mirage and Mangmessein another, while Fandango now receives 14 lb. from Neville in the Handicap, instead of only 5 lb., as at York. Yorkshire's great Coursing Meeting begins on Tuesday, over Lord Londesboro's preserves near Market Weighton, and will last till Thursday afternoon. Bendrigg (Open) is also fixed, under Lord Bective's auspices, for Tuesday and Wednesday, and Ardrossan Saturday. Sir Hedworth Sutton will, it is said, leave the Quorn country at the end of the season; but the peculiar time chosen for the announcement invests it more with the character of a pungent hint to the "scarlets" to support him better than they have done hereto

Mr. Joh Stanley's horses in training are advertised for sale; but he has had so much luck with a very moderate lot this season, that we conclude he only means to get rid of the worst, and learn the public estimate of Mary Copp and Porto Rico. The latter, or as he is now to be called, had a mere cat ter for the Clearwell, Alice Hawthorn's son Fundoo being third. The October entries are not very great; and the Black Duck Stakes for 1858 has only three mares entered, two of them Mr. Crawford's, with Newminster and Teddington, and The Dutchman's sire. The Doncaster Hopeful stakes is as lucky as ever, with sixty-three subscribers, and Lord Zetland is stronger in his yearlings than usual, as he has four by Voltigeur, in whose stud success he is not a little interested. De Clare who was bought in at a high figure (we were told 1,000 guineas!) at Doncaster, is also for sale, with some more of Lord Derby's. Marlow the jockey expects to leave Epsom shortly, and to ride again next year. Mr. Parr's Robgill had a strong effort made against him by the "noblers" on Friday, and they had taken out the whole of his stable window before they were discovered. Saucebox cut up most ignominously in Scotland two days before, through the heavy ground, which is utterly unsuited to him, and confirms us in our statement that were once fi e ground came into racing order, with the Autumn rains, Mr. Parr would take care not to repeat his one thousand guinea challenge to Rifleman. A strange match has just been decided at Longchamps in favour of a Spaniard, who matched himself to run for seven consecutive hours against any number of horses, none of which were to be considered as his victors, unless they covered a greater distance by one fourth in the time. Only one horse out of eight, owing to breaking down, had any chance with him, but eventually the last one met with an accident, and he was declared the winner after going only thirty-one miles, which occupied him, running and walking, six hours ten minutes

Pheasant shooting is said to be very good, and the first woodcock of the season is reported "down." Although Lord Stamford has made as good a bag as ever, we have heard of no such feats as sir Richard Sutton's, when Le shot 112 brace of partridges in six hours and a half, or as Mr. Osbaldeston's, when he killed 97 of those birds at one time with shots: A good clerical shot has lately brought down 36 landrails. A pike of 20 lb. weight has been captured, 14 inches in length by 19; and a badger, one of the last of its race, has been dug out in the Lowther rocks, near Doncaster, after being marked to a tree by the hounds. Boating men are still loth to resign the oar, and on Monday the Feathers Club have some four-oared races, on the Thames, for the Salter Tankards, and Bristow and Cuddis meet in a sculler's race.

NEWMARKET SECOND OCTOBER MEETING.—MONDAY.

Produce Match Aastor received forfeit from Brown Bess filly.
Sweepstakes of 100 sovs. each.—Mary Copp walked over.
Fifty Pounds.—Orlando, 1, Maid of Trumpington, 2.
Sweepstakes of 50 sovs. each.—Habena walked over.
Match.—Tyne, 1. Barba colt, 2
Fifty Pounds.—Ostrogoth, 1, Saucebox filly, 2. Sandbag filly, 2.
Handicap Sweepstakes. Para, 1. Physalis colt, 2.
Sweepstakes of 10 sovs. each.—The Assayer, 1. Curious, 2
Match, 200 sovs.—Granthis, 1. Sir..., 2
Match, 200 sovs.—Mr. ss received forfeit from Brown Bess filly.

TUESDAY.

Handicap Sweepstakes Saraband, 1, Triton, 2.
Clearwell Stakes.—Porto Rico, 1. Mangostein filly, 2.
Cesarewitch Stakes —Mr Sykes, 1. Crown Pigeon, 2.
Grand Trunk Stakes.—Mangostein, 1. Bonnie Mary, 2
Sweepstakes of 10 sovs.—Exchange walked over.
Royal Stakes (...) Caret, 2
Sweepstakes of 5 sovs.—Lucifer, 1. Anglo Saxon, 2
Produce Match, [illegible] Bow received forfeit

WEDNESDAY.

Sweepstakes of 50 sovs. Sirius walked over.
Oatlands Plate.—Robgill, 1. Reebuck, 2
Belated Stakes.—Theseus, 1. Melissa, 2
Match, 100 sovs.—Para, 1. Comfort, 2
Handicap Sweepstakes of 15 sovs.—Flying Duchess, 1. Jane Shore, 2.
Handicap Sweepstakes of 10 sovs. Lizzie, 1. Falcon, 2.
Town Plate.—Wenlock, 1. Kitefl er, 2
Sweepstakes of 10 sovs. 1da, 1. Imposture, 2

THURSDAY.

Sweepstakes of 10 sovs. Pleasaunce, 1 Ceres, 2
£100 Plate. Mr. Sykes, 1. Gamekeeper, 2.
Bretby Stakes.—Kalipyge, 1. Flying Duchess, 2
Sweepstakes.—Dick Andrews, 1. Ostrich, 2
Sweepstakes. T.Y.C.—Impostume, 1. King Chat, 2

THE DUKE OF CAMBRIDGE AT LIVERPOOL.—On Tuesday night the Mayor, Mr. J. A. Tobin, gave a splendid banquet, at the Town-hall, to his Royal Highness the Duke of Cambridge. The toasts were introduced by the Mayor in several short and appropriate speeches. The Duke of Cambridge, in replying to the toasts which included his own name, said he had been much gratified at one passage in the speech of his worthy friend the Mayor at the Town-hall that morning, when his worship had stated that, although Liverpool commenced born of Liverpool, was deeply interested in a return of peace, one sentiment alone pervaded the whole community—namely, a determination to persevere in the war in which the country was engaged, at all hazards and at every sacrifice, until its objects were attained (cheers). In that sentiment he entirely coincided; and he had a strong opinion that a peace concluded at the present moment would not be an honourable, durable, and lasting peace. Until such a peace could be concluded he was for carrying on the war with all possible vigour and determination, and he was gratified to find that this also was the opinion of the inhabitants of Liverpool (Cheers). The Mayor also referred to the great trade of the city—If in that they [illegible] were peace must be so essential to their prosperity, a warlike spirit was now found to pervade, was it to be attributed to a love of war? No; it owed its origin to the conviction in the heart of the people that we were engaged in a good cause, and were fighting the battle of civilisation and of freedom against the dark designs of the both" (Cheers).

NEW UNIFORM FOR THE NAVY.—The *Morning Herald* says:—"In future epaulets are to be dispensed with in all branches of the service, and certain distinctive insignia will be placed upon the collars and cuffs of the coat, which will partake somewhat of the loose character of the frock now only introduced into the Army. We are added that the first step on the part of the Admiralty will be received with satisfaction, and all who have served in the Navy well know the expense of purchasing epaulets, and the trouble of keeping them in order on foreign service. God knows it is not to be entirely done away with, and the report which was lately circulated to the effect that the full portion of the service was to have silver lace is quite untrue. There will be no distinction made."

THE testimonial to Sergeant Brodie, originated at Canterbury, is progressing satisfactorily. Lord Shaftesbury, sending a subscription of £5, "rejoices" to learn that a testimonial is about to be presented to Sergeant Brodie.

IT has been decided, says the *Birmingham Journal*, that the [illegible] Albert to Birmingham, for the purpose of laying the first stone of the building of the Birmingham and Midland Institute, will take place on Thursday, the 22nd of November. The hour of the Royal Highness' arrival has not yet been fixed; but twelve o'clock is the probable time at which he may be expected to reach the Great Western Station, Snow-hill.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

ALTHOUGH the Bank Directors, by raising the rate of interest, have succeeded in checking the outflow of bullion to the Continent, and notwithstanding that the exchanges have become favourable for a return of gold to this country, great heaviness has prevailed this week in the market for all national Securities, and prices have further receded to some extent, yet there was a decided rally in them late on Thursday. The late operations of the Bank of England—as has been remitted to Paris this week. The system here referred to from the fact that most of the bills were taken to the Bank of England and there discounted—has swelled the amount of Securities to over £31,000,000 and decreased the reserve of notes to a comparatively small sum; but we may now look to a considerable decrease in the amount of Securities held, as the Directors—by way of preservation—have come to the determination to throw a certain class of foreign bills until the stock of bullion becomes much larger than it now is. We are told that the whole of the four millions of gold have been obtained without the aid of other than bonâ-fide commercial paper. We however, are inclined to doubt this statement; because we can scarcely believe that England should *suddenly* find itself indebted to France the whole amount in question. Moreover, a sales of Government Stock on account of the Bank were effected on Monday, and the supply of stock in the hands of the jobbers became, therefore, in convenient y large. The market was heavy in the extreme, and the Three per Cents, were [illegible] to clear £30,000,000 were drawn from London by persons of business. India Bonds marked 3s., and Exchequer Bills, 1s. to 5s discount. There were a few transactions in Exchequer Bonds, at 98¾ £ for both series. On Tuesday even lower rates were quoted for Consols, viz., 87 down to 86¾—closing at 86⅞. At one time Consols for the next Account were 86¾ £. India Bonds realised 2s.; Exchequer Bills, 2s. to 5s discount: at these prices large parcels changed hands. Bank Stock, for Account, was 213. Exchequer Bonds were done at 98¾ £ ¾. There was little or no improvement in the market on the following day. The Three per Cent Consols, for Money, were sold at 86⅞; and for the Account, 86¾. India Bonds sold at 2s.; Exchequer Bills, 2s. to 5s. prem. Bank Stock [illegible] to 212; Exchequer Bonds, 98¾ £. On Thursday the Stock Market was very excited in the early part of the day, under the impression that the Bank Directors would further advance the rate of interest: but when it became known that no change would be made in it this week the Market rallied, and the Three per Cents, for transfer—which were at one time 86¼ to—advanced steadily to 86¾ and 87. The last quotations for the November Account were 87⅛. The New Three per Cents marked 98½ ⅜; and the Reduced, 93¾ up to 93⅞. Exchequer Bills, 7s. to 3s. dis.; Bank Stock, 207 ex div.; India Stock, 228.

Although strong support, by means of large operations for money, has been given to some Foreign Securities—especially Turkish—the market has been anything but active, and prices have continued to give way: Brazilian Five per Cents have sold at 93¾ Ditto, Four-and-a-Half per Cents, 83; Buenos Ayres, Six per Cents, 53; Mexican Three per Cents, 20¾; Peruvian Four-and-a-Half per Cents, 73; Sardinian Five per Cents, 84½; Spanish Three per Cents, 37½; Ditto, New Deferred, 19; Turkish Six per Cents, 82¾ to 80¾; Ditto, New Scrip, 4¾ dis; French Rentes, Three per Cents, for the Account, 68¾ to 68¼; Ditto, Four-and-a-Half per Cents, 94½; Dutch Four per Cents, 93¾ ex div.; Russian Five per Cents, 96¾; Grenada One-and-a-Half per Cents, 6⅝.

The imports of bullion have been about £30,000 in silver from Belgium, £48,285 from Australia, £111,000 from New York, and £10,000 from other quarters. Over £38,000 has been shipped to the Brazils. Bar silver has sold at 61½d. per ounce, being a decline of ½d.

The market for Joint Stock Bank Shares has been heavy, and prices have given way. The sales for money have been numerous: Australasia have realised 85 ex div., City, 53; Chartered of Australia, 6¾; London Chartered of Australia, 19½; London and County, 29; Oriental, 11; Union of Australia, 61; Ditto, New, 7¾

All Miscellaneous Securities have been dull, and further depressed rates have been reported:—Australian Agricultural, 29½; Australian Royal Mail, 43; Berlin Waterworks, 6⅝; Canada Company's Bonds, 137 to 133; Ditto, Government Six per Cents, 115; Crystal Palace, 1,000, Deferred Annuities, 5; East and West India Docks, 120; General Steam Ship Company, 15; London Docks, 100; Mexican and South American, 6¾; Peel River Land and Mineral, 2½; South Australian Land, 36; Van Diemen's Land, 38½; Australian Docks, Canal, and Waterworks Shares so few transactions have taken place that the quotations are almost nominal.

There has been very little doing in the Railway Share Market, and prices generally have ruled lower. The total "calls" for the present month now amount to £686,516. The following are the official closing prices on Tuesday:—

ORDINARY SHARES AND STOCKS.—Aberdeen, 23½; Caledonian, 78¾ ex div.; East Anglian, 12; East Lancashire, 69; Edinburgh and Glasgow, 49¾ ex div.; Great Northern, 85¾; Ditto, A Stock, 118; Ditto, B Stock, 113; Great Southern and Western (Ireland), 100; Great Western, 54¾; Lancashire and Yorkshire, 76; London and Brighton, 94½; London and North-Western, 91⅞; London and South-Western, 91; Manchester, Sheffield, and Lincolnshire, 25; Midland, 64¾; North-Eastern—Berwick, 68; Ditto Extension, 11¾; Ditto N. E Purchase, 81; Ditto Leeds, 13; North Staffordshire, 9¾; Oxford, Worcester, and Wolverhampton, 25; Scottish Central, 100 ex div.; Scottish Midland, 74 ex div.; South Eastern, 65¾; Vale of Neath, 19

LINES LEASED AT FIXED RENTALS.—Manchester, Buxton, and Matlock, 2½; Preston and Wyre, 5.

PREFERENCE SHARES.—Eastern Counties Extension Five per Cent, ¾ prem.; Great Northern Four-and-a-Half per Cent, 99¾; Oxford, Worcester, and Wolverhampton, 100¾

FOREIGN.—Antwerp and Rotterdam, 7⅞; Belgian Eastern Junction, 2⅜; Dutch-Rhenish, 10½; East Indian Five per Cent, 22; Ditto, Extension, 10½; Grand Trunk of Canada, 15½; Great Luxembourg, 4¼; Royal Swedish, 3

Canada Shares, 20½; Ditto, New, 7; Paris and Lyons Bonds, 44½; Royal Swedish, 3

We have very little business to report in Mining Shares. On Thursday, Brazilian Imperial (Cocaes and Cuiaba) were done; at 3; and St. John del Rey, 28.

Friday Afternoon.

We have had an improved feeling in the Consol Market to-day, and prices have advanced about ⅜ per cent. The Three per Cents, for Transfer, have been 87¼ ⅜; and for the Account, 87⅜. The New Three per Cents are 87½; and the Reduced, 93¾ ex div. Bank Stock, 207 ex div. Foreign Bonds and Railway Shares are tolerably active

THE MARKETS.

CORN EXCHANGE (Friday). A very moderate supply of English wheat has been received up to our market a week, coastwise and by land carriage. To-day the supply of samples was small, nevertheless the demand for most kinds was rather limited, and prices scarcely remunerative. The imports of Foreign wheat have been only 3,401 quarters. We had a slow inquiry for barley, at drooping prices. Oats and pease ruled dull, and the quotations were nominally unchanged. Flour was rather more plentiful, and the currency was [illegible] Arrivals of grain were tolerably active. The supply of barley was [illegible] The demand for that grain was heavy, at barely stationary prices. There was a good sale for malt, at full quotations. The oat trade was firm, but no advance took place in prices. Beans, peas, and flour as on Monday

Arrivals this Week.—Imperial: English wheat, 1750; barley, 1646; malt, 1469; oats, 210; flour, 916. Irish: oats 2260. Foreign: wheat, 1610; oats, 10,389; flour, 4150 sacks.

English.—Wheat, Essex and Kent red, 42s. to 45s.; ditto white, 43s. to 46s.; Norfolk and Suffolk red, 37s. to 39s.; rye, 30s to 32s.; grinding barley, 24s. to 25s.; [illegible] ditto, 28s. to 30s.; Lincoln and Yorkshire ditto, 30s. to 32s.; distilling ditto, 30s. to 32s.; malt, 72s to 78s.; brown ditto, 68s. to 66s.; Kingston and Ware, 78s. to 79s.; Chevalier, 78s.; Yorkshire and Lincolnshire, 70s. to 74s.; oats, 19s. to 22s.; Lincoln and Yorkshire potato, 22s. to 24s.; Youghal and Cork, black, 25s. to 27s.; [illegible] white, 26s. to 28s.; Sligo and Limerick, 24s. to 25s.; Londonderry, 25s. to 26s.; beans, old, 30s. to 32s.; new, 28s. to 30s.; Lincoln and Essex, 30s. to 32s.; pigeon, 32s. to 34s.; harrow, 28s. to 30s.; Egyptian, 28s. to 30s.; peas, maple, 30s. to 32s.; white, 30s. to 32s.; boilers, 32s. to 34s.; grey, 30s. to 32s.; Irish, white, 30s. to 32s.; Scotch, 30s. to 32s.; flour, per 280 lbs., 40s. to 45s.; per barrel, 20s. to 23s.

Seeds.—As yet, scarcely any business has been transacted in clover seed. Tares are very dull and lower. In other seeds no change can be taken place.

Linseed.—Baltic crushing, 52s. to 53s.; Mediterranean, 52s. to 53s.; hempseed, 44s. to 45s. per quarter. Coriander, 16s. to 20s. per cwt. White mustard seed 11s. to 15s.; brown, 9s. to 10s. per bushel. Rapeseed, £24 to £26 per last. Linseed cakes, £11 5s. to £11 10s. per ton. Canary, 58s. to 61s. per quarter. Hempseed, £16 10s. to £6 15s. per ton. Canary, 58s. to 63s. per quarter.

Provisions.—Irish butter is in good demand in the metropolis are from 106s. to 112s.; of household, 104s. to 108s.; and of ordinary, 100s. per cwt.

Imperial Weekly Averages.—Wheat, 7s. 6d.; barley, 37s. 0d.; oats, 23s. 7d.; rye, 35s. 10d.; beans, 40s. 10d.; pease, 41s. 0d.

The Six Weeks' Averages. Wheat, 7s. 11d.; barley, 38s. 8d.; oats, 23s. 7d.; rye, 41s. 6d.; beans, 42s. 4d.; peas, 42s. 8d

Scottish Grain sold last week: Wheat, 1,241; barley, 21,568; oats, 16,493; rye, 1355 beans, 3270; peas, 369 quarters.

Irish Grain sold last week: [illegible] sold this week. About 9160 changed hands, [illegible] fully previous rates. Common sound

Wool.—There has been less activity in the trade this week, and prices have given way from 6d. to ½d. per cwt. Fleeces have changed hands at from 9½d. to 17s. 6d. per tod. Hogs, 10s to 20s.; Mauritius, 37s. to 40s.; Bengal 45s. 6d. to 49s. per cwt. Refined goods are heavy at from 23s. 6d. to 26s. per cwt.

Coffee. The demand for good ordinary native Ceylon has been steady, at from 50s to 52s. per cwt. In other kinds very little doing, and quotations are nominally unchanged.

Rice.—We have less activity in the demand, and the quotations have fallen 3d. per cwt. Bengal has sold at from 11s. 6d. to 12s. per cwt.

Provisions. Fine parcels of both Irish and foreign butter are in good request at very full prices, but inferior qualities are offered slowly at barely late rates. The best Irish is worth 112s to 114s. per cwt. There is a moderate inquiry for bacon at last week's currency. Hams and lard are firm. In other articles of provisions very little is doing

Tallow.—The demand is less active, yet prices rule very high. P.Y.C., on the spot, is quoted at 45s. 3d. to 46s. 6d. and 46s.; and, for the last three months, 46s. 6d. to 47s. per cwt.

Oils.—Linseed oil is dull and drooping. The present quotation, on the spot, is 42s. 6d. per cwt. Rape is selling at from 38s to 39s. Turpentine is brisk, and American spirits are worth 40s to 41s per cwt.

Sports.—Another Government contract for 100,000 gallons of rum having made its appearance, the market is brisk, and prices have an upward tendency. Proof forwards, 2s. 5d. to 2s. 6d. per gallon. Brandy is quite as dear as last week. Malt spirit, 10s. 9d. cash. In reference to brandy, Messrs. Hooper and Co observe,—"The present year's vintage (now about) France is small, and, as compared with her neighbours most backward and small they obtain two or three abundant vintages, high prices [illegible] The one and brandy must continue; but we are informed, on very [illegible] vintage will not be quoted. The stock of genuine brandy on the [illegible] prices while the [illegible] Gale and [illegible]

Hay and Straw.—Meadow hay, £3 10s. to £6 6s., clover ditto, £4 10s. to £6 10s.; and straw, £1 8s. to £1 12s. per load.

Wool.—Over 26,000 bales of Colonial wool will be offered at the public sales, which commence next week. In the private markets scarcely any business is doing, and prices show a downward [illegible]

Potatoes. The supplies are good, and a steady business is doing at from 70s. to 95s. per ton.

Coals (Friday).—Hasting's Hartley, 19s. 3d.; Redheugh Main, 17s.; Eden, 21s. 6d.; Tanfield, 18s. 6d.; Lumbton, 19s. 3d.; Stewarts, 20s. 6d., South Hardspool, 22s.; Waltworth, 21s. 6d.

Hops (Friday). We have a large quantity of new hops on sale here in excellent condition. The duty is now fixed, and really fine parcels are worth £6 6s. to £7 7s. per cwt., £30,000. The imports are 35 bales from Hamburg. Mid and East Kents, £5 5s. to £6 10s.; Weald of Kents, £4 10s. to £5 15s.; Farnhams, £6 6s. to £7 7s.; Sussex, £4 4s. to £5 5s.

Metropolitan Cattle Market (Friday). A very limited supply of beasts was on sale to-day's market, in fairly inferior condition. For most breeds a steady demand, and, in some instances, prices were 2d. per 8lbs. higher than on Monday. With sheep we were scantily supplied, but the numbers of trade were in full proportion. The show of calves was very mod rate, and the veal rade was sensitive. Prices had an upward tendency. Pigs sold steadily, at very full currencies. Milch cows sold steadily, at from £14 to £19 5s. each, including their [illegible]

Per 8lbs. to sink the offal:—Coarse and inferior beasts, 3s. 4d. to 3s. 6d.; second quality ditto, 3s. 8d. to 4s. 2d.; prime large oxen, 4s. 4d. to 4s. 6d.; prime Scots, 4s. 4d. to 4s. 10d.; coarse and inferior sheep, 3s. 6d. to 3s. 8d.; second quality ditto, 3s. 10d to 4s. 0d.; prime coarse-woolled sheep, 4s. 4d to 4s. 6d.; prime Southdowns, 4s. 10d. to 5s. 0d.; large calves, 4s. 0d. to 4s. 10d.; prime small ditto, 5s. 0d to 5s. 4d.; large hogs, 3s. 10d. to 4s. 0d.; small porkers, 4s. 6d. to 5s. 2d.; suckling calves, 22s. to 28s.; and quarter-old [illegible] 5s. each. Total supply: beasts, 540; cows, 120; sheep, 4590; calves, 390; pigs, 270. Foreign: beasts, 180; sheep, 360; calves, 60.

Newcastle and Leadenhall Cattle. We had a moderate demand for each kind of meat, at full prices.

Per 8lbs. to the carcase:—Inferior beef, 3s. 8d. to 3s. 6d.; middling ditto, 3s. 8d. to 3s. 10d.; prime large ditto, 4s. 0d. to 4s. 2d.; ditto small ditto, 4s. 4d. to 4s. 6d.; large pork, 3s. 10d. to 4s. 4d.; inferior mutton, 3s. 4d. to 3s. 8d.; middling ditto 3s. 10d to 4s. 2d.; prime ditto, 4s. 4d. to 4s. 8d.; veal, 3s. 10d. to 5s. 0d.; small pork, 4s. 6d to 5s. 4d. KINAHAN'S LL WHISKY. This celebrated Old Irish Whisky is highly recommended as the most delicious and wholesome spirit, either for mixing or for medicinal purposes. It is perfectly pure, very mild, and, being mellowed with age, does not produce those fiery or heating qualities as much objected to in other spirits. Can be obtained in sealed bottles, as 6d. each, at all the respectable Retail Houses in London and Country, and the appointed Agents in the principal towns of England, or, wholesale, from KINAHAN, SONS, and SMYTH, 8, Great Windmill-street, Haymarket.

SMORDAN and CO.'S MANUFACTURES, 29, City road, London
PATENT EVER-POINTED PENCIL.
S. Mordan and Co. caution the Public in purchasing this useful article to see that the Patentee's name be stamped legibly on the case, as many of counterfeits are composed of the case only, as they yield a trifling profit to the salesman, but will be found of no service to buyers. These remarks apply also to S. Mordan and Co.'s Patent Leads, for replenishing the same.
PATENTS.
S. Mordan and Co. beg to inform the public that they are enabled to supply a perfect Gold Nibbed Lead DRAWING PENCIL, without a particle of grit, or any other impurity. S. M. and Co. have no hesitation in asserting that such pencils will be found in every respect above ever yet been produced; and in confirmation of this the highest testimonials from all the first artists, engineers, and draughtsmen have been received. The following is an abbreviated list.

Charles Barry, Esq., R.A.	[illegible]
T. L. Donaldson, Esq., R.A.	[illegible]
T. K. Hervey, Esq., F.R.S.	Copley Fielding, Esq., F.W.S.S.
Clarkson Stanfield, Esq., R.A.	W. Tyrone Power, Esq.
Richard Westmacott, jun., Esq., R.A.	David Roberts, Esq., R.A.
F.R.S.	J. T. Watson, Esq., R.A.
H. C. Wilson, Esq., Director of the Government School of Design	

S. MORDAN and CO.'S PATENT COMBINATION PENCIL-CASE and COPYING-PRESS.
By the aid of the above most mechanical arrangements, the Patentees have succeeded in producing a most effective and Portable Printing and Copying Machine, well adapted for the capability of taking the work of a lithographic Press. It is an exact and easy-to-Copying Press, as that it may be said that this Author manifestation is issued by the Patentees.
It can be purchased of all the leading Stationers and Bookmakers.

BY HER MAJESTY'S ROYAL LETTERS PATENT for a valuable and extraordinary Improvement in the most powerful and brilliant TELESCOPES, Camp, Reconnoitering, and Perspective Glasses, to know the distances, at Hours, S and S. SOLOMONS', Opticians, 39, Albemarle-street, Piccadilly, opposite the New Hotel. The most extraordinary discovery ever made. From 3½ to 6 inches, with an extra eyepiece which [illegible] The Gongora with the [illegible] Achromatic Lenses, and the double stars. With the same Telescope [illegible] reminiscence from Dover and Calais, a distance of 21 miles, and on a from sixteen to twenty-five miles, for the watchful perhaps, and are of great real safety, with increasing power. The Royal Exhibition, 1851.—Messrs. S. and S. Solomons' powerful Telescope gives the most of a warship, by which a person can be seen and known one mile and a half distant; every scenery and ships are clearly seen at [illegible] to [illegible] Also [illegible] for assisting, double-sighting, perfect to sportsmen, gentlemen, gamekeepers, and tourists. Sold by all respectable Grocers, Druggists, and others in town and country, in Packets of 6d. and 1s.; and Family Canisters, at 2s., 5s., and 10s. each.

SUBSCRIPTION.—The sudden death on the 18th of September last, of Mr. SAMUEL COLLINS, who was for many years on the staff of the ILLUSTRATED LONDON NEWS, as Assistant Publisher, has left a Widow, 38 years of age, in delicate health, and six children almost entirely destitute of the means of support.
The family consists of four boys, aged respectively seven, nine, eleven and thirteen years; and two girls, two and five years old—the latter being a cripple.
These distressing circumstances have induced the friends of the deceased to commence a subscription for the purpose of purchasing an Annuity, or otherwise providing, for the support of the unprovided family.
The following Gentlemen have most kindly consented to receive Donations—
HERBERT INGRAM, Esq., 198, Strand (who will act as Treasurer).
THOMAS N. STOKES, Esq., 12, Cannon-street.
FREDERICK WEST, Esq., 3, Charlotte-row, Mansion-house.

A TRAVELLING LETTER,

APROPOS OF TREVES, AND OF THE KING OF PRUSSIA'S VISIT TO IT.

From Miss Fanny Jackson (now on the Continent) to Miss Julia Mornington, of Mornington House, Mornington Crescent, London.

THE ROMAN BATHS.

H! dear Julia, what do you think? I have just seen a German King. I'm in such a flutter, I can hardly write. I'm so happy, you don't know. If I could only see a Sultan now, think I should die happy!

You must know, dear, it was quite by accident. We had just been up the Moselle, which is a kind of pocket Rhine, a beautiful drawing-room tea-urn of a river, or you may call it a little hot-house of a ruin, filled with most beautiful grapes,—and we were going on our way to Paris through Trèves, where we heard by the merest chance—but stop, I must tell you first something about Trèves. It is the oldest place, I think, I ever was in. It is much older than Chester, or Canterbury, or Bishopsgate-street, or Westminster Abbey, or any body you know. They do say it is 1300 years older than Rome, but I cannot tell, and I confess I do think it is extremely rude for people to trouble their heads about any such ridiculous thing. Why can't they leave a person's age alone? However, there is no doubt of its antiquity. Some of the monuments are so old that they are obliged to be propped up with post and pillars, that look like crutches they are leaning upon to prevent them falling. Most of the houses have their ages ticketed upon them in large letters of rusty iron, and you cannot tell with what supreme contempt a crumbling old house, just tottering on the verge of the dust-cart, looks down scorningly upon some juvenile upstart of a building that is nearly bent double with age at its side, simply because it has the impudence to be a hundred years younger than itself. It frowns blackly, as though it would like to crush the "bold young thing" with its contempt if it could—and I have no doubt it will, some day, when it can't stand any longer. The whole place is stuffed full of antiquities, just like a curiosity shop. Cousin Charles (who is with us, and he's a sad teaze!) calls it "Wardour street on the Moselle." He's wrong, dear, for there's not an antiquity in it that's not strictly genuine—with the exception, perhaps, of a few relics in the churches that are kept carefully under lock and key, for the moths and the Jesuits to play with. You can clearly see that the age of every monument has been the slow, venerable growth of years, and you respect it accordingly. It has not been the result of any early break out in youth, or brutal ill-treatment in after years. The statues have not been cut and trimmed and curled by some antiquated Truefit, to suit the fashion of any particular mediæval rage. Their well-worn features have not been branded into premature old age by hot irons, nor has the chisel been brought into play to mimic the caverns and pits of decay such as are generally produced, alas, by the gnawing tooth of time. Every wrinkle on the ancient face of the city attests its own age, and the deep furrows that run down its hollow cheeks are decidedly not furrows that were turned up only yesterday.

Such is Trèves, Julia, seen through an old pair of spectacles. There is undoubtedly, the Roman character legible, as far as I can read it, in a large, bold handwriting on almost every wall, as though Cæsar himself had held the pen that had written it. You wander through Roman history as you walk through the Roman-bricked town. Occasionally, Tacitus darts out from under a dark gateway, that is trembling with the weight of many hundred years upon its back, and explains it to you; or, a little further on, you are met by Cæsar, who, with the "Commentaries" in his hand, acts in the most obliging manner, as your cicerone, and describes to you all the wonders of this history-haunted city that has so often resounded with the tramp of his victorious, short-skirted, legions. The pavement under your feet—the portico over your head; the noble arches that rear their arms on high to allow you to pass under them (as though, formerly, the long strings of dales to which they belonged had been fond, on moonlight nights, of playing at thread-the-needle), are all the works of hands thousands of ears ago. The very hotel in which we are stopping was an old justice house; and perhaps from the room in which the waiter is bringing in, now, our hot chops, Christians and heretics were cruelly led away to the burning stake. Charles says, "There is not a pebble the little boys throw at one another but what is an antiquated missile several hundred years old;" but there's no knowing, dear, when to believe him. As you pass cross after cross, as some monument still more decrepit than the last, and with the moss of centuries upon its head, breaks upon your view, you feel, dearest, as though you were strolling through the deserted tomb of the past, and a cold shudder comes over one. It is a kind of midnight churchyard feeling. You hear a rustling sound, you fancy it must be the ghost of some Roman gliding in his togs hurriedly by; but no, it is only some fat pulled-in German, puffing asthmatically as he attempts to run to put a letter in the post. In truth, the dress of the moderns but ill assorts with the ancient buildings amidst which they move about like so many living anachronisms. It struck me, dear, as superlatively ridiculous, seeing ladies, with broad-brimmed bonnets and gay parasols, walking about full-dressed in the Roman baths; and gentlemen, with Gibus hats and Paris paletots, fencing with their gold-headed canes in the amphitheatre! As for myself, I felt as if, properly speaking, I ought to have been dressed like Rachel as *Camille*; but cousin Charles laughs at me. He says, "I'm all soul, like a Roman shoe," and he wonders I don't wear sandals.

TREVES.—GENERAL VIEW.

Trèves, Julia, is composed of two parts—the Old and the New; but the old part, as with a Stilton cheese, beats the new completely hollow. So cousin Charles says. The two don't mix well, dear—any more than old and young women. Formerly the priests had absolute sway here. You don't see many of them about now; though, judging from the number of churches, there must be a plentiful number left still. Probably they stop at home, as they find they can do more work plotting quietly in their own ecclesiastical arm-chairs. The few you do meet look crest-fallen, moody and dispirited. There is a dissatisfied air about them, as though they did not like being servants in a place of which they had been formerly masters.

PORTA NIGRA, TREVES.

GROUSE-SHOOTING IN NOVA SCOTIA.

GROUSE SHOOTING IN NOVA SCOTIA.

THE accompanying sketch illustrates the mode of shooting the Ruffed Grouse as practised in many parts of Nova Scotia. There are only two species common to this small part of the American continent, viz., the Ruffed and the Canada Grouse, which are generally termed partridges; though, properly speaking, there are no partridges to be found in America. The same may be affirmed respecting the rabbit, which, in its conformation and habits, has a close resemblance to the hare of Britain, differing only in size and a few other minor particulars. As the Ruffed Grouse is the only variety fit for food, great numbers are killed in the shooting season, which commences on the first of September, though the birds have not attained their due size and weight until the middle of October. The pursuit of this esteemed bird differs materially from the mode of shooting practised on the moors of Britain, where, in the absence of trees, the game is killed on the wing, which requires a great degree of expertness in gunnery. Probably an English sportsman would call our method mere child's play, as the veriest tyro could shoot birds in the way represented. However simple the mode may appear in the view of a real sportsman, still it is attended with no small difficulty, as success in bagging the greatest number of birds entirely depends on the nature of the cover in which they are found; sometimes the whole flock are effectually lost in low alder swamps, where the most practised eye fails to discover the birds when hid among the branches of close and thick wood, where they remain perfectly still and concealed; the only intimation of their presence being the loud whirring noise which startles you when they fly from a branch above your head. Much, however, depends upon a practised eye; as it is well known some individuals readily detect birds in situations where others entirely fail.

Wilson, in his remarks on the habits of the Ruffed Grouse, says:—"They are seldom seen in coveys of more than four or five together, and more usually in pairs or singly." This observation is not strictly correct; as six or seven birds have frequently been shot out of a covey of ten or twelve, without moving from the spot where the dog has put them up. They are likewise seldom seen singly, or in pairs, until late in the season, when the swamps have become saturated with water. Allusion has also been made to the mode which should be adopted in killing these birds, viz., that of "shooting those on the lowest branches first." This is too deliberate a method ever to be generally adopted, as the greater number of sportsmen do not take time to consider how the birds are situated; and the flock are not always to be found perched on the same tree, but generally scattered in all directions. Reference has also been made to their habit of concealing themselves in the snow, in order to elude the sportsman: this practice I have never found them exhibit, as they invariably take wing when closely pursued either by man or dog. They, however, sometimes contrive to hide by creeping into holes or under a fallen log, which they do especially when wounded, and are only to be recovered by a good dog. Among the many varieties of dogs for hunting grouse, I should prefer the water-spaniel, which, though slower in his movements than many of his fraternity, is eminently gifted for his fine

"THE OCEAN MONARCH," OF LIVERPOOL, BUILT AT QUEBEC.—(SEE NEXT

scent and sagacity, and is likewise capable of enduring a great amount of fatigue, if liberally supplied with water, which is an essential element to his comfort and success.

The favourite feeding place of the Ruffed Grouse are open and grassy spots, such as old and unfrequented paths and byways, abounding with tender grasses and sorrel. When the ground becomes covered with snow, the birds seek the groves of beech and birch, in order to feed upon the nuts of the former and buds of the latter.

Notwithstanding the absence of all restrictions in the shape of game laws, Grouse are still to be found very numerous in many localities; though, ere long, like the aboriginal inhabitants of the country, they must retire before the white man the effects of whose axe and the devastation of whose fires are yearly making inroads into the most remote parts of the forests.

THE SHIP "OCEAN MONARCH," OF LIVERPOOL.

THIS noble ship presents another instance of the rapid strides towards perfection now being made in shipbuilding, and more particularly in the British colonies of North America. In her are united many of the great desiderata of merchant shipping of the modern schools—viz., great capacity for cargo, light draught of water, commodious deck-space, and good height between decks for passengers or troops; and the great point of all in these days of clipper ships—speed. The *Ocean Monarch* presents the happiest combination of all these essentials. This vessel was built at Quebec last year, by Baldwin and Dinning, for her present owner, Charles E. Levy, Esq., and is of the following dimensions:—Length, 247 feet; beam, 43 feet; depth of hold, 22½ feet; height between decks, 8½ feet; length of poop, 26 feet.

Her Commander, Captain Lawson, has recently completed with the *Ocean Monarch* the fastest passages out and home on record; and, considering the many difficulties encountered on both passages, this voyage stands pre-eminent as the greatest achievement yet accomplished by any of the clipper ships, and surpasses the best of the Australian voyagers. By extracts from the log, we find the *Ocean Monarch* left the Liverpool light-ship on the 11th of November, at midnight; crossed the Equator in 33 W. longitude on the 5th of December, twenty-four days after leaving Liverpool; thus, up to this point, coming nothing very remarkable, in consequence of many westerly gales in and near the Channel. On the Line she entered upon the great racing ground of the American Californian clippers, which lies between the Equator in the Atlantic, and the parallel of 50 south lat. in the Pacific Ocean. From the Line to 50 south lat. in the Atlantic, she ran in twenty-one days round Cape Horn. Here her onward career was checked; she met with severe westerly gales, that materially retarded her progress for many days, she, however, crossed the parallel of 50 south lat. in the Pacific on the 5th January, being then only thirty days from the Equator, eleven days from the same parallel in the Atlantic—thus beating the whole of the American clipper passages recorded by Lieut. Maury in his valuable work on the "Winds and Currents of the Ocean" (last edition of 1854). Jan. 26, Captain Lawson anchored off Callao, having accomplished the quickest passage that has ever been made (sixty days).

After taking on board a cargo of 2500 tons of guano, she had an excellent opportunity of testing her speed when deeply laden, in a race with two splendid American clippers, similarly laden, the *John Stuart*, Captain Ellery, and the *Black Warrior*, Captain Murphy, both of which left Callao, March 29th, for New York; the *Ocean Monarch* following on the 4th April, at noon, let these two ships round Cape Horn by twelve hours, and beat them seven days between Callao and the Equator; and accomplished the home run to Cork in 80½ days. Her heaviest log homeward was 333 miles in 48 successive hours. Her crew consisted of thirty-seven hands, all told.

FRENCH ALLIANCE MONUMENT AT BOULOGNE.—The municipal council of this place have unanimously resolved upon the erection of a monument to commemorate the landing of her Majesty at Boulogne, on her recent visit to the Emperor of the French, and have called upon the neighbouring districts for their contributions towards the expense of the projected memorial. It is proposed that the monument shall be erected as near as possible to the spot at which her Majesty landed on the shores of France, and that it shall be of somewhat similar proportions to the column erected in the memory of Napoleon I. when he reviewed his grand army on the heights of Boulogne, and distributed the medals and decorations to those deemed deserving of them. At the special meeting of the municipal body, the following resolutions were unanimously agreed to:—1st. That a monument be erected on the port of Boulogne to perpetuate the memory of the arrival of her Majesty the Queen of Great Britain coming to visit France, and to cement the bonds so happily contracted between the Sovereigns of both countries. 2nd. That a commission, to be named by the Mayor, subject to the approval of the superior authority, shall determine upon the place and character of the monument. 3rd. That a national subscription be opened, to defray the expense of such a monument. 4th. That the city of Boulogne, happy and proud of the sign as a favour of which it has been the object, shall contribute the sum of 12,000 fr. 5th. That the resolutions agreed to on this subject be transmitted to the Emperor Napoleon III. for his approbation." The Emperor is expected here in a few days. When the harvest is entirely off the ground great military operations are to take place here under his Majesty's inspection.—*Letter from Boulogne, Oct. 3.*

THE CORONATION OF THE EMPEROR OF AUSTRIA.—The German papers have recently informed the public that the coronation of the Emperor Francis Joseph will speedily take place, but the authenticity of the intelligence may be questioned. Austria has been declared to be one and an "indivisible" empire; and if its Sovereign is crowned, it can only be as Emperor of Austria. The Hungarians have a superstitious reverence for the crown of St. Stephen; the Bohemians have a strong prediction for the crown once worn by St. Wenceslaus; the Lombardo-Venetians have their iron crown, which is said to be made of the nails taken from the cross on which the Saviour was crucified—but Hungary, Bohemia, and the Lombardo-Venetian provinces no other enjoy any exceptional privileges, and therefore these symbols of royalty must already remain undistributed in their respective shrines. In the Vienna *Schatzkammer* is the Imperial crown which once pressed the brows of Charlemagne; but it need hardly be said that if the Emperor of Austria should use it at his coronation there would be a tremendous hubbub in Germany. The probability is that his Majesty will continue to reign without being crowned as Emperor of Austria, as was the case with his ancestor, the late Francis I., or that he will delay his coronation until the difference between an Hungarian and a German, and an Italian and a Bohemian, has become somewhat less marked.—*Letter from Vienna.*

PASSPORTS IN AUSTRIA.—It is related that the Ministers are endeavouring to persuade the supreme police to make some alterations in the passport system. As things are now, travelling by railroad in Austria is the extreme of misery. The traveller who has, perhaps, been in a railway carriage two or three days or nights, and is consequently half-dead with fatigue, has no chance whatever of being refreshed by a good sound sleep, as he is continually occupied with his passport. The official but of paper, to which our countrymen have such a deeply-rooted aversion, must be produced five several times between Bodenbach and Vienna, as often between Pesth and Vienna, and two or three times between Pesth and Vienna. The passport system is not perfect in Prussia, but it is infinitely better managed than in Austria. The authorities at Minden are famous for nabbing people who have urgent private reasons for wishing to change their place of residence, but they cause little or no inconvenience to the respectable traveller, who merely has to show his passport as he passes into the refreshment-room.—*Letter from Vienna*

UKASE OF THE EMPEROR ALEXANDER. The Emperor Alexander has issued the following ukase: "Every month of actual presence in the garrison of Sebastopol on the north side and in the forts shall be considered equivalent to a year's service, and ensure the following privileges:—1st, Generals, Staff and superior officers, and all civil officers in the civil service, to wear their uniforms on retiring into private life; 2nd, to wear then the Order of St. Vladimir, 4th class, and the next for the service of twenty-five years (any one of them who had served fourteen years when the siege commenced receives at once the order *de jure*); 3rd, full pensions to themselves and families as upon superannuation; officers, military or civil, to receive additional rank (every grade in Russia has to be filled for a normal period of three to four years, to be shortened by special distinctions only; non-commissioned officers and privates will accordingly not enjoy this final promotion); 4th, surgeons to receive pensions and increase of pay (with certain modifications); 5th, police officials to have higher salaries; 7th, persons holding inferior employments will not have their pensions and penalties for minor offences recorded against them when discharged; 8th, indefinite furlough (but not till the war is over)."—*Letter from St. Petersburg, Sept. 28.*

THE CZAR IN ODESSA.—The Emperor Alexander and suite arrived at Odessa on the evening of the 22nd. The Governor-General had announced that the Emperor would enter the city at noon; but he did not arrive before the afternoon, and the crowd, tired of waiting, had quietly dispersed. This circumstance is the cause why the entrance of the Czar produced so little effect upon our population, and, with the exception of the rolling of the drums, the sound of trumpets, and the measured tramp of the officers in command of the troops, there was no change visible in the appearance of Odessa. On the following day the whole population attended their daily business as usual. The Emperor resided at the Palace of Prince Woronzof. General Todleben, whose wounds are not quite healed yet, is expected in Odessa shortly. The first detachments of the Militia of the Empire, of Moscow, have arrived in Odessa. Their Commander, General Stolowin, an old man of seventy years of age, has received a kick from a horse, and is seriously ill. A great deal of anxiety is felt here, in consequence of the news of the embarkation of a considerable number of troops at Kamiesch and Balaklava. Our garrison is always under arms. The coast trenches with guns and mortars; but still greater fears are entertained for Nicolaieff, to which place a large number of cannon have been sent recently.—*Letter from Odessa, Sept. 25.*

A TRAVELLING LETTER,
APROPOS OF TREVES, AND OF THE KING OF PRUSSIA'S VISIT TO IT.

(*Continued from page 440.*)

The old Archbishops must have had a glorious time of it! All the finest palaces here belonged to them. If they wanted wine, they had the banks of the Moselle to draw upon to any extent they liked; and, if they were short of money or provisions, they only had to run down to the river side, and, stopping the first boat that came in their way, help themselves to whatever they pleased. More than this, they had soldiers, who went about in all directions as their tax-gatherers, and were not very particular in what they seized for their anointed masters. Even Englishmen were compelled to pay tribute to them; for, perhaps you may not know, Miss Julia, that Trèves at one time was the capital—the London of the United Kingdom; and ladies who wanted to be presented to Court had to travel all this distance. Only think: both Spain and France, as well as England, were under the Archbishop's thumb at the same time, so you can imagine what a large thumb it must have been. If you doubt me, ask Goldsmith, or consult the nearest Guy you have at hand. However, the old Archbishops—those unscrupulous Schinderhannes of the Moselle and the Rhine—did all they could to ornament the place, and left some beautiful monuments behind them in the churches, of which, undoubtedly, they were the greatest knaves. The moderns, certainly, do not rob nor plunder beyond the legitimate amount of extortion that is expected from all foreigners, and which is the kind of toll you pay for crossing their beautiful rivers; but then they do not beautify nor improve. They build *Bierbrauereis*, it is true, and do a little to keep the ruins in a convalescent state of repair, just as a medical man keeps a rickety patient alive for the sake of the fees he brings him in. Beyond this, dear, they are scarcely more alive than the ruins they show you. They have displayed some little energy in Layardising (excuse the word) this Roman Nineveh; but then, as if overcome with the fatigue, they have thrown themselves on the mound and barrows they have been excavating and fallen fast asleep. In their favour, however, I must say, poor fellows, that the antiquity of the place does induce one to doze and dream a bit, as though there was a possibility of walking in your sleep back to the period of which it is such a curious illustration. There is scarcely a stone but what gives you a lithographic view, as it were, of some past event, and I must say, Julia—and laugh at me as you will—that the Dark Ages do not appear to me so very dark when examined by the light that Trèves throws on them in an illuminated window upon them. What are our miserable pumps to their elegant fountains? What our threads of waterworks to their miles of aqueducts? What our Westminster and Blackfriars bridges—that crumble like a sponge-cake and shift like an old man's humour—by the side of theirs, the foundations of which have existed more than three thousand years? And what, pray, are our narrow cupboards of baths and wash-houses compared to their grand open Roman baths? Moreover, take the largest Opera-house you will, and I am of opinion it would appear no bigger than a bird-cage when dropped into the middle of one of the amphitheatres! As Mr. Ruskin has taken the "Stones of Venice" and extracted grand architectural harmony out of them, as out of a beautiful rock-harmonicon, let him take the "Stones of Trèves" now in hand, and see what eloquent music they would discourse, what a grand anthem of barbaric grandeur he would be able to elicit from them.

But, dear me! all this time we have been keeping his Majesty waiting. It is too bad that a King should be detained in an antechamber, like any common subject. Let us be quick, dear, and, wiping this classic dust off our feet, hasten loyally to his Prussian Majesty's relief. It was about eight o'clock on Saturday evening—September the 22nd (the day is written carefully in the annals of the town in the very best gold letters)—that Frederic William, the fourth of that illustrious name, came galloping into the town, his position making one think that he would with those whips, dear, he never noticed that your crack postilion invariably proportions his noise to the importance of the person he is carrying. They made so much noise on this occasion that they nearly muffled the church bells, that were ding-dong-ing away as though they must split their brazen cheeks with the loudness of the enthusiasm they were giving vent to. Then there was the populace, that fairly out-bellowed them all. It is not every day, dear, that they catch a King in these parts. They cannot send out, as formerly, into the highway, and bring one into the market-place, bound hand and foot, in which state he was locked up until he could send to his banker's (Ransom's, of course, Charles says) for so many thousand crowns for his release. So, the noise was all in proportion to the rarity Each man shouted as though it would be the only opportunity he would ever have in his lifetime of so shouting. Down came the procession, through the principal street, in two or three humble travelling carriages, that certainly would have passed unnoticed if the postilions, and the bells, and the guns had not conspired to announce that there was some one unusually important inside. The town in a minute shot into light, and then shot out again as suddenly, as though the gas had been by some mistake turned off the very moment after it had been turned on. A light vivid enough for these dark streets, so that you might, perhaps, have told the time by your Geneva watch, was succeeded by a darkness so intense that you could not have recognised your own lover if he had been by your side. The secret was, the people, the second after the procession had passed, all blew out their lights, cleverly reserving them to do duty the following evening.] The consequence was, the illumination lasted altogether—making allowance for the lighting, trimming, and snuffing—about two minutes and a half; but during that period it was, I must say, a most loyal display of rushlights and farthing candles, outshining in quantity, if not in brilliance, the stars above. His Majesty was hurrahed as far as the Commandant's house; but the people retired early, evidently reserving themselves for the labours of the following day.

About seven o'clock the next morning I was disturbed out of a most beautiful dream, all about ostrich feathers and a Court dress, by the sound of military music. I looked out of window, but not the smallest ray of a military man could I see. Still, as the sound continued, I raised my eyes from the ground gradually up to the windows of the houses. I had got as far as the fourth story, when I noticed the turret of a church that was concealed behind, and in that turret there was a long brass thing that kept protruding backwards and forwards out of the open stone-work of the balustrade, just like a pair of tongs that was being shaken between the bars of a grate. I soon discovered that the brass thing was the tube of an ophicleide, and that a whole band was stationed up in the steeple. They played a Protestant hymn of Luther's, and most beautiful was the effect. It was quite a new musical sensation to have the music of the spheres rained down upon one from a height of two hundred feet, and I would not mind being pulled out of my sleep every morning of my life as early as six o'clock, if I could only be refreshed with a similar shower-bath of harmony. You have no idea, my poor Julia—you, who hear of a morning nothing but the chirping of the dusty London sparrows—how delicious it was to have the notes come pouring down in a heavenly shower from the skies, and trickling coolly into one's ears, whispering into them thoughts of such pure joy that I dare not mention them. It filled me, dear girl, with devotion, lifting me from the earth to the heaven, to which the strains kept rising as a prayer from a grateful heart, and made me happy for the remainder of the day. I should like thus, every morning, to bathe my soul in music—I am sure, if we could, we should be all the better for it.

The town was all alive by eight. The country folks kept rushing in in all kinds of tumble-down carts—the most curious bundles of sticks, tied together with string, that ever were flung upon wheels. There was scarcely a carriage. You must not be surprised, dear, at this, for there is not a cab-stand in the whole place. You can hire a kind of hackney-coach at the hotel, if you like; but, unless you are fond of surgeon's bills, you had better walk. The consequence was, the poor agriculturists, in their blouses, kept staring at the Prince of the Netherland's carriage, and his four beautiful grey horses, as though it fairly beat everything that ever grew in their country. The poor folks are very simple here. Do you know there was an ornament in a pastrycook's window, and it was supported by flags that drooped over a big drum, the front of which displayed a large Prussian eagle, in chocolate. Well, there was a crowd collected round that shop all day, as great, as eager, as any that you saw pushing round the Queen's diamonds at the Hyde-park Exhibition! It surpassed their belief, and they came away muttering "Wonderbeautiful!" This "Wunderhibsch!" varied occasionally with a "Wunderschön!" contained their entire stock of enthusiasm. The Queen's parasol, the postilion's trousers, the coachman's cocked hat, the illuminations—everything was "Wonder-beautiful!" Then they are extremely good-tempered and orderly; the police drove them where they liked. They seemed to consider themselves so much dirt that any functionary with a sword had a perfect right to shovel into any place or position that they pleased. A sight of the King or the Queen was their greatest reward. They would stand for hours opposite a window, whilst their Majesties were quite in an opposite direction. They would plant themselves in an avenue, and remain rooted there the entire morning, in the hope of seeing a procession pass that could by no possibility come that way. Frequently, too, they cheered the wrong person. A highly-decorated footman, with a yellow fever of gold lace raging all over him, was more than once taken for his Majesty; whilst any well dressed lady was sure to be saluted as the Queen, though of course she who had the gaudiest colours on always came in, as a matter of savage pictorial right, for the largest share of the applause. Many a King and Queen reigned that day, who had to throw off their Royalty, with their fine clothes, when they went to bed. These mistakes became at last so frequent—and, I suppose, proved somewhat annoying to the real heroes—that towards the latter end of the day a functionary on horseback was deputed to gallop on in advance, and tell the gaping crowd in which carriage the King was. You would hear him calling out "The King is in the second carriage!" "The King's carriage has black horses!" "The Queen is dressed in a white bonnet!" and so on. How easily, thought I, might these mistakes have been remedied, if their Majesties had only appeared, as they appear on the coins, with their crowns on! They would not have been cheated then of a single hurrah.

The King seems to be a kind, simple-hearted man, as though he were perfectly incapable of mischief, or doing harm to any one. He is much older than I expected, and, though distributing his smiles with the greatest liberality, still you fancied you could see it was the result of a well learnt lesson, rather than the spontaneous act of a cheerful disposition. But ill-health may account for this feigned good-humour. Bad enough at the best of times, it must be terribly tiring work to keep smiling for ten hours consecutively, and smiling too when there is so very little to smile at! Poor King! he had a hard day's work of it; beginning at eight in the morning, and fagging away—talking, bowing, speechifying, listening to inflated addresses, receiving formal deputations, complimenting handsome nobodies, and elaborating elegant nothings; besides rushing and being pulled about in all directions now at a review, now to inspect the model of a pump; at one moment listening to a learned proposal to reduce the price of soldiers caps a pfennig a head, and at the next congratulating a number of fashionable ladies who have been playing at charity; and doing this up to ten o'clock at night, without a moment's blessed repose. Even at dinner-time being stared upon by strange faces, noticing every mouthful he ate. I am sure, from my heart I pitied him. Why, he must have changed his dress three or four times! If any crosses were distributed that day (and most persons of distinction here carry a small jeweller's-tray of such decorations on their breasts), the King himself, I am positive, deserved the bigger one when Silver Candlestick in Waiting came to light his Majesty to bed. With what eagerness he must have rushed to the open door, as a happy escape at last from the day's long persecution of stupid ceremonies and forms!

With the greatest eagerness, dear, to praise a Queen, I cannot say that her Prussian Majesty, Elizabeth of Bavaria, is pretty. I must painfully confess she is infinitely more *amiable* than good-looking.

From the Commandant's house the King walked to the Protestant Chapel. Here he was mobbed, even at the church door, in right royal good fashion, the crowd rushing in, as I have seen them do at the Cattle Show in Baker-street. He was then hunted to the Parade Ground, where an army, mustering nearly as strong as Bombastes', was brought out for him to review; and from this spot, fortunately, he had no great distance to journey to the Basilica.

This Basilica is at the back of the old Electoral Palace, which—partly in ruins, and having one end completely lopped off—is now turned into an immense barrack. In fact, one half of the front of the Basilica is still masked by the Palace, of which it was formerly a wing. This, of course, will have to be removed; and then the old Palace, supposed to have been built by Constantine, will be entirely swept away, and shot in that large cemetery and rubbish-ground (the largest, perhaps, in the world)—the Tomb of the Capulets. The surmises are as various as different kinds of ink, as to what was the original destination of this same Basilica. Some say it was the remains of a long Hippodrome—that is to say, of a covered way in which the Roman Consuls used to walk, planning, like a belle of the season, future conquests; others maintain, upon evidence just as strong, that it was a Hall of Justice, and, in bad weather, a Hall of Commerce—both of which pieces of resort the ancients were pleased to call Basilicas. It is not for us, dear, to enter into these learned controversies. However, it does strike me as absurd to say that it ever formed part of a Palace, for which it was in not the least fitted, unless it was used on grand occasions as a State Ball-room. The length is certainly beautifully adapted for a polka or a grand galop.

It is, without question, a most handsome edifice. It struck me as being even larger than Westminster-hall; but, as I send you the exact proportions, you will be able to judge for yourself. The height is 130 feet; the length, 220 feet; and the breadth, 87 feet. The interior is not supported by a single pillar. There are slender beams running across the roof, but these are so light and elegant that you imagine they are put up more for show than actual use. The beams are slightly touched with colour, as well as the edges of the windows, that have graceful arabesque borders running round them. The effect is far from unpleasant, as the colours have been most tastefully subdued. The proportions of the interior to me seem to be perfect, and I should say that, when finished, it will be one of the handsomest churches in Europe. I long to hear a good organ played in it. The exterior is poor and commonplace—a large, plain, red brick building, that is blushing all over from its vulgar attempt at grandeur. It reminds one of a temperance-hall, or the Ebenezer Chapel one meets in a London suburb, puffed out to a most unnatural size. To be admired in its full, regular beauty, it must be seen inside. I must tell you it is intended for the Protestant religion. With what jealousy must the cathedral of St. Peter's (founded by St. Helena, the mother of Constantine, who endowed it with the wonderful seamless coat, that in 1844 attracted 1,100,000 poor pilgrims to it, many of whom starved on the way) already look down upon it. It does seem strange that Trèves, once the Popish capital of Europe, that furnished all Christendom with priests and monks, and bulls and decrees, and wonderful relics of every virtue and price, that in its time enjoyed power superior to that of Rome of the present day, should live to see a Protestant church rearing its head defiantly at the very door of its Notre Dame. The Basilica is built partly with the old Romish and partly with modern bricks, and, it is said, the two cement and hold beautifully together. The same is said of the Roman Catholic and Protestant priests of the town, who behave with the greatest courtesy to

one another. It may be, and, I hope, is true, but still I cannot help thinking that, like rival Queens in a theatre, the one most heartily wishes the other away.

The King expressed his great satisfaction at the works in progress, and gave a half-promise to be present at the grand opening, which is expected to take place on the 16th May, 1856.

After dinner, which his Majesty was allowed to eat in peace, he was followed by hundreds of rich and poor people as far as Fallion—a hill in the neighbourhood of Trèves, where the Trèvirois saunter out of an afternoon with their pipes and knitting needles to drink coffee. It commands for miles a beautiful view of the Moselle. The mountains by the side of the river have in places a rich ruby-red appearance, as though they had been stained with port wine; and you see the vines covering them as with a kind of Bacchus cloak: it gives you a wild notion of a Titan that, flushed with imbibing too much, had slipped down amongst the vineyards and fallen fast asleep. The road down the mountain was lighted all the way with pans of pitch and tar that, as evening drew on, had a most grim appearance, and made the trees assume most fantastic shadows. It was curious to see the groups of men, chits of boys not so tall as walking-sticks, assembled in grave circles round these pans, and every one of them smoking a pipe nearly as tall as himself.

In the evening followed serenades and the remains of the previous evening's illumination. The great art seems to be to dot the window-sills with little ends of candles; so that there appears, on looking down a street, as if there were running down it two or three long stitches of continuous light. Occasionally you would have the stitch broken in two by some grand ambitious display that scorned the straight line of monotony; but then the stitch was sure to be taken up by the next house, and so continued uninterruptedly to the end. Then the moderator lamps came out in great strength, being made the centre generally of a large bouquet of flowers. Every now and then a lamp shop, or a candle-shop, would burst out with a tremendous blaze of triumph, completely snuffing out all surrounding efforts. At very long intervals you would see a small devices that effectually blocked up the thoroughfare by the large crowd of admirers it would attract opposite. One brass man had exhibited the whole of his brass candlesticks outside. It gave one the notion as if some wag had been amusing himself in purloining all the candlesticks that are placed in the hall of a large hotel, and stuck them up there already ignited. A spirit-merchant had placed bottles of spirits of different colours in a row, and illuminated them by placing candles behind them. There were two English efforts, but their pale ineffectual fires were quite dim failures, and would not have been seen in sweet stuff shops in Tottenham-court-road. The fountains that had an edging of small *lampions* round their principal figures, was the prettiest: at a distance you could fancy, dear, they had been embroidered with glow-worms. Our old Vauxhall illumination-lamps were completely absent; and of the French Chinese lanterns I noticed but one inferior display. Altogether, what with the flags waving above, the hearth-rugs and carpets hanging out of the drawing-room windows half way, and the trees and flowers drawn up flat against the houses below, you had a moving scene that glowed to the greatest advantage, flooded as it was by the oceans of light pouring in streams out every window, door, and pore, almost of every house. Though produced by very humble means, and totally unworthy of a grand London illumination-night, still it was a very pretty, animated, Carnavalesque sight, and would not have disgraced a town with more bank notes at its playful disposal to put in the fire than Trèves

PORTA NIGRA

The grandest effect, however, was that of the Porta Nigra—that magnificent old gateway, supposed to have been built previous to the invasion of the Romans. At each of the windows in each of the galleries was placed some combustible composition that threw a lurid red glare over the entire ruin, and brought out every detail with the richest brilliancy. It was indeed a warm bit of colouring, such as Danby would have clapped his hands at. There was about it a fine pictorial touch of Fand monium, at least, such as is pictured to us in pantomimes; and you expected every moment to see groups of demons with blazing torches in their hands dancing madly round it. It reminded me of that large painting of Martin's in which Lucifer is sitting in the middle on a large globe of fire. It was certainly the *bouquet*—the prize rose—the great Roman candle, of the evening

The Majesties left early on the morning of the 24th. I listened for my aerial music, but the turret was mute. I closed the door with the smallest possible *bang* that a lady's disappointment could impart to it. On the whole, Julia, I am pleased that I have added his Prussian Majesty my list of European Sovereigns that I have seen. I am pleased, also, to have observed how the wise Germans behaved themselves on such a solemn occasion. Since then Trèves has resumed its usual repose, natural to a town, of which one-half has been excavated out of the ground, and the other half consists of ruins—an antiquated compound of Rome and Herculaneum. The Porta Nigra is itself again a fit door for a City of Tombs.

* * * *

I send you a few hasty sketches, dear, the roughness of which you must excuse. They are taken with the usual number of spectators staring over your shoulders—an advantage that generally ensures accuracy.

New Prize Essay. A prize of twenty guineas has just been offered by the London Stereoscopic Company for the best Essay on the Stereoscope, Sir David Brewster acting as arbitrator. Such a publication is much wanted, for, while many are delighted with the stereoscope, very few understand it. With Sir David's admirable judgment we may anticipate an excellent selection.

A Touchy Russian Diplomatist.—A very disagreeable incident took place at the State dinner given by the King of Portugal, on the 15th of September, at the Ajuda Palace. M. Dedel, Russian Minister, could not find the place which had been destined for him at the Royal table, and being probably out of temper with news of the fall of Sebastopol, his Excellency took the matter rather warmly, but was prevented leaving the room by a Portuguese nobleman, who gave up his own place; he was ultimately pacified by the production of the card which bore his name, and had been carried off the table by Madame Ozeroff's dress. *—Letter from Lisbon*

Count Nesselrode.—I have to communicate to you the opinion which prevails here generally among the usually well-informed Russians, that it is not improbable that Count Nesselrode will retire from public life. The veteran statesman is accused of having, from the very commencement of the Eastern question, allowed it to become envenomed until war became inevitable. In Europe the opinion prevails that Count Nesselrode was always peacefully inclined. Here, on the contrary, the Russians accuse him openly of having desired war, and they are inclined to suspect him of secretly exulting at the checks they have suffered within the last year. Such suppositions will prove to you how many causes of discord there are between the Russian and German factions. So much is certain, that Count Nesselrode has not received any mark of satisfaction, either from the Emperor Nicholas or the Emperor Alexander, since the commencement of the war. The Chancellor is not mentioned in the will of the late Czar. The fact is significant, as the Emperor Nicholas cannot be accused of forgetfulness. It is rumoured that the Chancellor will be replaced by M. Drouin before the end of the year.—*Letter from Warsaw, Oct. 2.*

Saltpetre Going up in America.—The immense consumption of gunpowder which has been for some time going on between the belligerents in the Eastern war has begun to tell upon the prices of lead and saltpetre. Since the arrival of the *Baltic* there has advanced to 6½c. per lb., with free sales, on speculation, of both foreign and domestic. 3200 pigs of galena (where the lead was reading), early on Sunday morning, in order that she might walk leisurely to church, and saunter along the picturesque coast by the way. She did not appear at church, and not returning to Inverinate, the alarm was given, and search made in the neighbourhood, but without effect. Early on Monday morning, however, as Dr. Maclean was approaching Inverinate, he observed a bonnet and veil on the water; and further search having been made, the body of the unfortunate lady was found in the sea at the base of a rock, which it is supposed she had climbed to enjoy the fine view of Loch Duich which it affords. The deceased lady was sister to the late Lord Beaumont, was married in 1853 to Mr. Matheson, and has two children, the youngest only a few months old.—*Inverness Courier.*

COMING EVENTS IN ROME.

(From "Egeria, and other Poems," by Charles Mackay.)

Rome Imperial! Rome majestic!
Shade of greatness, vanished all—
Looking down th' abyss of ages
To behold thy rise and fall,
We can trace upon thy forehead,
Queen and wonder of the day,
Broadly marked the awful sentence—
"*Pass away!*"

Great, but wicked—fair, but cruel—
Sceptered mischief, worshipped long:
Never yet did men or nations
Prosper finally in wrong.
Justice did her work upon thee,
Mightier than thine her sway,
'Twas her voice pronounced thy judgment—
"*Pass away!*"

Modern Rome! thou mitred Phœnix!
Risen from those embers cold;
Looking dimly through the future,
The same shadow we behold—
Shadow of a power departing,
Spectre of a great decay,
Bearing on its front the motto—
"*Pass away!*"

Whither went the ancient Cæsars,
With the pomp of peace or war,
Thither go the modern Pontiffs,
With dominion grander far.
Papal stole and regal purple
Fall in ripeness of the day,
Cæsar's crown and Pope's tiara
"*Pass away!*"

Priestly Rome! thy cup is filling;
In our era dauntless Truth
Feels her life and struggles upwards
With the energy of youth.
Thou shalt bind her wings no longer,
Never more her progress stay;
Thou hast lived thy generation—
"*Pass away!*"

If hereafter from thy ashes
A new Phœnix shall ascend,
May she learn to dwell with Virtue,
And take freedom for her friend
If as thou she clogs the spirit,
And denies the truth of day,
On her head thy doom be spoken—
"*Pass away!*"

COUNTRY NEWS.

Navvies in the Crimea.—At the annual dinner of the Bakewell Farmers' Club, last week, Sir Joseph Paxton, in making some remarks on the way in which public affairs are managed, said he knew there were great difficulties in carrying out matters of detail; but still he believed the preparations for the war had been bad, and that they had taken no sort of precaution to use the materials which the country was eminently qualified to give them. They sent out the finest army this country had ever produced, but they had no preparation for taking care of the men. He had had thousands of navvies under his care: he knew what they could do, and that soldiers had never been brought up to that sort of work. He suggested at Coventry that they should send out a number of navvies and let them do the work which they had been accustomed to do, and keep the soldiers to fighting. The Government took notice of what he had said, as shortly afterwards he received a telegraphic message saying they thought they would make a railway, and in the spring of the present year he had received a communication soliciting him to take up this matter and organise these navvies. He did so, and should have this week sent 3000. In answer to inquiries from his superintendent, Mr. Dore, he learned that they were wanted at every turn; and instead of the soldiers being jealous, as many supposed, from the difference in the pay given to these men, they received them with the most cordial welcome in every part of the Camp. Consequently, another lot was sent: after the fall of Sebastopol the Government came on the Monday evening and wanted a force to go out on the following Wednesday morning. Another thousand, making the fourth thousand, will go out in four or five weeks; these are the men who will benefit and comfort the soldier; they will house him for the winter and make him comfortable, and in a better position. We have lost for the want of six miles of road some of the finest and noblest men which this country ever produced.

Scarcity of Labour in Wales.—Owing to the large amount of railway and dock extensions in South Wales, common labourers are earning 4s. 6d., while blacksmiths earn from 8s. to 6s. per day. Shipwrights are getting even higher wages.

A Gallant Maid Servant.—One night last week an attempt was made to break into the Abbey farmhouse, Little Coggeshall, near Ipswich, in the occupation of Mr. J. Sach. Mr. Sach was from home at the time, and the servant states that, hearing a noise about eleven o'clock she looked out of the chamber window, when she saw a man entering by the parlour window, and a second standing at a little distance. As if upon the watch. She immediately procured her master's gun, which was fortunately loaded, opened the window, and fired at one of the fellows, when the burglars made off.

Two Railway Classes Instead of Three.—The Aberdeen Railway Company is just now trying an experiment worthy of notice. Instead of first, second, and third-class carriages, they are now running first and third only, so doing away with the second-class altogether; and they now carry passengers in the first-class at what were formerly second-class fares. The object is economy—by reducing the number of carriages running in each train, which will effect an important saving in wear and tear, and the cost of rolling stock. It is a clear gain to second-class passengers, as they now travel first-class for the same fare

The Coming Eclipse.—A total eclipse of the moon will take place on the 25th of October. It will commence at fifty-three minutes past five in the morning, will be totally immersed at thirty-three minutes past six, and at its height at thirty eight minutes past seven. The moon will begin to emerge at twenty-eight minutes past eight, and the eclipse will terminate at twenty-three minutes past nine. We shall only see it partially, as on that day the moon sets at thirty-three minutes past six. The astronomers of Australia will alone be able to watch its phases.

Ruabon.—Colliers' Strike.—The strike of the colliers employed by the New British Iron Company at the collieries in the neighbourhood of Ruabon has been a most disastrous one. The turn-outs altogether have amounted to 2000, of whom the colliers, men and boys, numbered 1500, about 500 other persons (being dependent upon the collieries for employment) being thus thrown out of work. It has been calculated that at least £1000 per week has been withdrawn from circulation in the neighbourhood. The distress thus occasioned has been very great, for nearly all the families have been thrown upon the parish, and the rates have been almost doubled. Some hundreds of the men have left to seek work elsewhere.

Death by Drowning of the Hon. Mrs. Matheson.—The Hon. Mrs. Matheson, wife of Mr. Matheson, M.P., of Ardross, left the house at Inverinate, on Mr. Matheson's property of Ge-na-cauich (where the family was residing), early on Sunday morning, in order that she might walk leisurely to church, and saunter along the picturesque coast by the way. She did not appear at church, and not returning to Inverinate, the alarm was given, and search made in the neighbourhood, but without effect. Early on Monday morning, however, as Dr. Maclean was approaching Inverinate, he observed a bonnet and veil on the water; and further search having been made, the body of the unfortunate lady was found in the sea at the base of a rock, which it is supposed she had climbed to enjoy the fine view of Loch Duich which it affords. The deceased lady was sister to the late Lord Beaumont, was married in 1853 to Mr. Matheson, and has two children, the youngest only a few months old.—*Inverness Courier.*

Mr. C. Dickens's Reading.—Mr. Charles Dickens read his "Christmas Carol" to 600 persons on Friday evening in the large room belonging to Mr. Regis, builder, Mill-lane, Folkestone, which had been fitted up for the occasion. The spacious building, which is capable of holding 650 persons, was gaily decorated with evergreens and flags of all nations. Mr. Mark Lemon, Mr. Leech, and other literary celebrities were present, as also Mrs. Dickens and her family. Mr. Dickens, in his reading, drew forth much merriment and applause; his voice was clear, but not loud; altogether it was a great treat, and such an assemblage has never before been seen at Folkestone at any lecture or reading.—*South Eastern Gazette.*

Fatal Boiler Explosion.—A boiler explosion occurred upon the works of Messrs. Losh, Wilson, and Bell, Walker-on-Tyne, on Monday. The boiler, after exploding, was thrown a distance of 100 yards, and in its progress destroyed a large amount of property. Six men have been dug out dead, and many are seriously injured.

The National Sunday League.—Upon the recommendation of a Select Committee appointed to report upon the propriety of establishing such an establishment, the League was formed on September 7, 1855, and its efforts during the past month have have been devoted to the construction of rules, the appointment of officers, and the issuing of an address. In the selection of officers the attention of the committee was naturally directed to those gentlemen who had already performed active service in the cause; and in the choice of a president their unanimous decision fell upon Sir Joshua Walmsley. The committee anticipate being able to add considerably to the list of vice-presidents, and in the meantime beg to call the attention of the members to the letters from Lord Stanley, Lord Goderich, Viscount Ebrington, Sir Benjamin Hall, and Mr. Charles Dickens, in favour of the general question.—*First Report of the Committee*

Carlist Movements in Spain.—The Paris papers publish several documents showing that the Carlists are busy in Spain. One of the discovered documents is a letter, of the 29th, from Madrid. It says:—"My nephew is at your disposal; he begs of me to tell you so. Here matters go on from bad to worse. The 'Faction'—as those who call themselves Liberal, and advocates of progress, denominate us—act with more prudence than these do, for they gain ground in Catalonia. The Captain-General of that province (Zapatero) has forbidden, under the severest penalties, the journals to occupy themselves with the movements of the troops and the 'Faction.' The liberation of the officers taken by Borges, the Carlist chief, has produced an immense moral effect among the Liberals. In fact, the rumour runs that, in a month or two, we shall see some wonderful things

The *New York Daily Times* of the 22nd ult. announces that "a French company with a large capital has undertaken to consolidate all the omnibus lines of London, as has already been done in Paris."

INAUGURATION OF THE KING OF PORTUGAL.

LISBON.

The Inauguration of the new reign has been duly solemnised at the Cortes; and Dom Pedro V., adhering to the policy of the Saldanha-Magalhaes Cabinet, has confirmed the old Ministers in their portfolios; and his Majesty's acclamation has been enthusiastically received by the people. At the Royal Session of the Cortes on the 16th ult., at the conclusion of the speech of his Majesty Dom Fernando, the Regent, his Majesty Dom Pedro took the oaths prescribed by the Charter; and, having resumed his seat on the throne, delivered his speech.

The Inauguration was distinguished by several imposing ceremonies. All the Monarchs of Europe were upon this occasion represented by Ministers and special envoys, as also Brazil and the United States; nor did the exigences of our war with Russia prevent English men-of-war from appearing in the waters of the Tagus to do honour to the day. The *Sanspareil*, 70, arrived from Portsmouth on the 15th ult.; and the *Arrogant*, 120, accompanied by the *Rosamond* steamer, resolved her moorings on the 16th, just in time to join in the salute which announced the King's acclamation. The *St. George*, 120, and the *Malacca* steamer were not so fortunate, as they only arrived on the morning of the 17th ult. There was no other foreign vessel of war in port except the French steamer *Newton*.

The festivities and galeties of the Inauguration extended through three days. On the 16th, after the speeches and ceremonies at the Cortes, the King, accompanied by his father, the ex-Regent, the Princes, Princesses, Court, Foreign Ministers, &c., proceeded through the principal streets from the Parliament-house to the cathedral, and thence after the "Te Deum," to the pavilion erected in the great commercial square, where the President of the Municipal Chamber presented to his Majesty the keys of the city, as a symbol of his possession of the throne. Our able Artist, Mr. Mahony, who witnessed this impressive scene, has sketched the superb Pavilion in the great square, and the ceremony of the presentation of the keys, and the homage of the troops. At the close the Royal cortège then returned to the Palace, and in the evening his Majesty witnessed in state the representation of two original pieces at the Portuguese National Theatre of Donna Maria II.

On the 17th a general levee was held at the Palace of Ajuda, which was so thronged that it took up a great part of the day; and in the evening the King and Court attended in state the first representation this season at the Italian Opera.

The morning of the 18th, the last of the fête days, was dedicated to a review and parade of about 8000 troops, including 800 horse. They were first placed in double file round the Campo Grande, about a league distant from Lisbon, and after the King and his brilliant Staff had passed through the lines, his Majesty proceeded to Campo Pequeno, about half-a-mile nearer the capital, where a large plain, unencumbered by trees, better enabled the great concourse of people to see the troops defile. His Majesty was here joined by the younger Princes and Princesses, in one of the State carriages; but his father, the ex-Regent, and his elder brother, the Duke of Oporto, formed part of the Royal cavalcade, which presented a very brilliant appearance in the centre of the Campo.

In the evening there was a grand State dinner at the Palace of Ajuda, to which the representatives of foreign Courts were invited, as well as the Councillors of State, Ministers, and public functionaries—in all about 100 guests.

At night his Majesty witnessed a magnificent display of fireworks which took place upon the beautiful bay formed by the Tagus in front of the great square and arsenal. In the great square gas was freely used, and the illuminations were there very fine; transparent paintings of the arms of the different municipalities of the kingdom were placed between the windows of the public buildings which adorn three sides of the square; illuminated pillars, pavilions, and devices of various descriptions adorned the centre and three land sides of the square, which, witnessed from the river running along the fourth side, added greatly to the magnificence of the fireworks upon the water when the numerous merchant-vessels and the Portuguese, English, and French ships of war added their splendid illuminations and blueLights to the general effect.

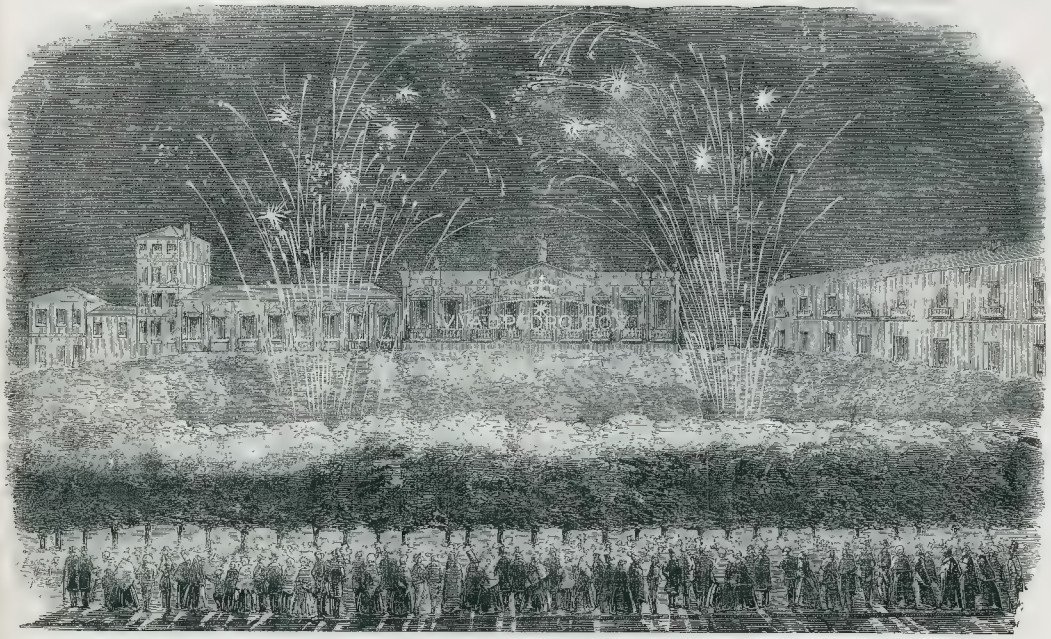
During the greater part of the three fête days and nights the new King was in the midst of his subjects, and his Majesty was everywhere cordially and enthusiastically received; he was throughout accompanied by his father Dom Fernando, the ex-Regent, who seemed really happy to give up a weight which has never appeared natural to his disposition; but which has been borne with better fortune for himself and the country than the generality of regencies.

OPORTO

The festivals held in this city in honour of the accession were very superb. On the 16th ult., at mid-day, the accession was proclaimed at the town-hall by the President of the Municipal Chamber, assisted by the members of that body and a large party of influential persons. A portrait of the young King was presented to the Town-hall, and at the close of the ceremony loud and continued *vivas* were shouted by the assembled thousands, accompanied by the roaring of cannon and the firing of rockets. The "Te Deum" was then sung, and the ceremony concluded by several military bands playing a new hymn, composed expressly for the occasion. At the Exchange, a similar ceremony was enacted, and opportunity taken of the occasion to inaugurate the Commercial and Industrial Association of Oporto. On the evenings of the 16th, and two following days, there was a brilliant display of fireworks in the Town-hall, and at the close of the ceremony loud and continued *vivas* were shouted by the assembled thousands, accompanied by the roaring of cannon and the firing of rockets. The "Te Deum" was then sung, and the ceremony concluded by several military bands playing a new hymn, composed expressly for the occasion. At the Exchange, a similar ceremony was enacted, and opportunity taken of the occasion to inaugurate the Commercial and Industrial Association of Oporto. On the evenings of the 16th, and two following days, there was a brilliant display of fireworks in the Town-hall, and at the close of the ceremony loud and continued *vivas* were shouted by the assembled thousands, accompanied by the roaring of cannon and the firing of rockets. The Clergies were magnificently illuminated with gas. At the former place was a large framework of jets eighty feet long, with the words "Viva Dom Pedro V.," in letters four feet high, the whole surmounted by a star and crown. We have engraved this grand display at the church—a framework in the shape of a triumphal arch was erected, and the words "18 de Septembro, 1855" were placed thereon, surmounted by a crown.

Great anxiety was felt by the multitude assembled in the streets to witness the first attempt of lighting the city with gas, the works having just been completed under contract to light the street lamps on the 16th Sept. When the devices we have described were lighted, their brilliantly greatly astonished the spectators, and loud and continued cheers were given. We are happy to add, the inhabitants of the city highly appreciate the advantages of gas, and its introduction into private houses and shops is rapidly increasing. The contracts for lighting the city was undertaken by Mr. Hardy Hiselop, of Lisbon, who, for some years past, has been most instigable in promoting the spirit of industry and enterprise in Portugal.

INAUGURATION OF THE KING OF PORTUGAL.—HIS MAJESTY RECEIVING THE KEYS OF THE CITY, AND HOMAGE OF THE TROOPS, AT LISBON.—(SEE PRECEDING PAGE.)



INAUGURATION OF THE KING OF PORTUGAL.—ILLUMINATION AND FIREWORKS AT OPORTO.—(SEE PAGE 443.)

THE RIGHT HON. MATTHEW TALBOT BAINES, M.P FOR LEEDS.—LATE PRESIDENT OF THE POOR-LAW BOARD.

THE retirement of Mr. Baines from the important post so ably filled by him for five years and a half lately took the public by surprise; but those acquainted with the amount of work, official and parliamentary, performed at no great a sacrifice of health and comfort, were by no means unprepared for such a step.

We are not surprised to see fr m all parts of the country expressions of regret at the retirement of so .ble a man, because it is impossible that any Minister could have held t..t responsible post with more credit to himself and more advantage to t) e country than Mr. Talbot Baines.

The name of Edward Baines (f Leeds is too well known to need any eulogy on our part. As the fo.nder of a family, many members of which are before the public, distinguished for their high ability in literary as well as in political life, we will only say that he represented his native town during four successive Parliaments, and that one of the most perfect and interesting pieces of biography given to the country is, "The Life of Edward Baines," by his second son and name-bearer.

T..E ..GHT HON M..TAL OF B..NES, M.P.

Mr. Matthew Talbot Baines was born at Leeds, in 1799, and received his education, at the Dissenters' Grammar-school, at Leaf-square, Manchester, and at Richmond School, Yorkshire. Thence he went to Trinity College, Cambridge, where his career was most honourable. In due time he was called to the bar at the Inner Temple, went the Northern Circuit, of which he became one of the leaders, was made Queen's Counsel, and subsequently Recorder of Hull. In this borough he became so popular that, in 1847, he received a requisition, signed by men of all shades of politics, to represent Hull in Parliament, and, yielding to their solicitations, he resigned his Recordership, and was triumphantly returned at the head of the poll. No sooner was he in the House of Commons than his influence was felt: the Government sought his services for some time in vain; but, upon the death of Mr. Charles Buller, Mr. Baines accepted the office from which he has just retired—abandoning a lucrative professional practice and the prospect of judicial honours, he became a Privy Councillor and a member of her Majesty's Government. The Poor-law was at that time unpopular, and the post, consequently, not an enviable one. Mr. Baines has succeeded, by consummate tact and prudence, in relieving the House and the country of all those endless grievances which seemed attached to the administration of these laws, and bequeaths to his successor an honourable and peaceful rule. That the management of 800 Boards of Guardians, with an immense staff of officials—clerical and professional—is a work of some labour, must be admitted; and it is something marvellous, that for five years the press and the House of Commons have not had occasion to refer, except in terms of high commendation, to the administration of this department of the public service. The secret of success is to be found in the fact that Mr. Baines has taken for his motto—"This one thing I do;" and, as a consequence, he is now incurring the penalty which a man suffers "when all men speak well of him." Among the many tributes to Mr. Baines's public character per-

"THE BRAINTREE CHURCH-RATE CONTEST" TESTIMONIAL, PRESENTED TO MR. S. COURTAULD.—(SEE NEXT PAGE.)

haps none is more graceful than the reference to his retirement in the *Leeds Intelligencer*, a Conservative paper :—

Politically adverse to him, we can speak with the less restraint of his many excellent administrative qualities, and of the admirable way in which he conducted the business of the public offices that have been intrusted to him. On that ward, the Presidentship of which he is now about to resign, his services have been such as to win for him the warm attachment of his subordinates, as well as the respect of all who have been brought into official contact with him. Perhaps no one has done more to render the administration of the present Poor-law effective as a system, and beneficial as a social regulation, than Mr. Baines, and his resignation of the office will leave a void which the Prime Min ster will find it a very difficult task to fill up. Indeed, looking over the adherents of Government, we can discover amongst them not one who is fitted to replace the right hon. gentleman in the arduous and responsible office which he vacates.

Mr. Baines still retains his position as member of Lords, and we can only hope that his retirement from public life may be but of short duration, for it is quite clear that amidst the loud demands for administrative reforms, such a man, sprung from the people, can ill be spared by the country.

We have always been at a loss to conceive why the Poor-law Department has not been allowed to take rank with the most important offices in the State. The man who has so much to do with the employment and education of the poorer classes ought to have a place in the councils of the Sovereign, for surely if the Curator of the Woods and Forests and the Master of the Post-office are summoned thither, the guardian of the poor of this land, upon whose welfare and contentment so much depends, ought not to be absent.

THE COURTAULD TESTIMONIAL.

THE close of the protracted "Braintree Church-rate contest" has lately been commemorated by the presentation of a splendid Testimonial to Mr. Samuel Courtauld. The gift consists of an elaborate piece of plate of the value of seven hundred guineas, and was purchased by subscription amongst those who approved the persevering efforts Mr. Courtauld made as chairman of the Committee for resisting the principle sought to be established in the Braintree Church-rate case, and desired to do honour to the success which, after a long series of years, attended his efforts

It is now two years since the judgment in this celebrated case was given in the House of Lords. The bills of cost were not, however, received till the commencement of the present year, and on the 16th of February last the Committee met and balanced their accounts and paid their costs. That being done, they felt that some distinct and public expression of gratitude was due to their worthy chairman, to whose eminent tact, practical wisdom, and unflinching resolution they mainly owed their final triumph.

The Committee do not regret the delay which has taken place; and they state one consideration which had some influence in originating this movement:—

It was believed that it could not fail to exert a favourable influence in aid of that measure which Sir William Clay had introduced into the House of Commons—for the entire abolition of church rates throughout the kingdom. Under the influence of these views there was formed, on the 21st day of February last, a Committee, who at once issued a circular expressive of their sentiments, and at the same time requesting to know the opinion of well-known persons in various parts of the kingdom. All the replies which were received were most encouraging and satisfactory. But the most conclusive proof of the desirableness of the undertaking was furnished by the formation of a large and influential committee in London to co-operate with the local Committee, comprising, among other friends of liberty, several distinguished members of Parliament.

The Committee has been encouraged throughout by communications from various friends and from most parts of the country. Out of some hundreds of letters they have received none of an unfriendly character. Contributions also have been received from most of the larger towns of the kingdom, varying in amounts from £5 5s. to 1s. It is believed that 1000 persons resid.ng in all parts of the kingdom have contributed.

After a most careful examination of the various designs submitted to them, the Committee unanimously selected that furnished by Mr. S. S. Benson, 16, Cornhill, London; and the presentation took place in the Corn Exchange, at Braintree, on the 20th ult. A cold collation was provided for the occasion; and upwards of four hundred ladies and gentlemen were present, including many from London and other parts of the kingdom. The tables on the platform and in front of the Chairman, included Sir Wm. Clay, M.P., who occupied the post of President, with Mr. Courtauld on his right hand, E. Miall, Esq., M.P.; A. Pellatt, Esq., M.P.; W. J. Fox, Esq., M.P.; H. Lennard, Esq.; J. Conder, Esq.; Dr. Forster, P. A. Taylor, Esq; J. C. Williams, Esq.; George Courtauld, Esq.; Rev. T. Craig, Edward Craig, Esq.; Rev. David Rees, Rev. J. B. Law, of Writtle; Charles Tabor, Esq.; C. S. Western, Esq.; J. J. Mechi, Esq.; S. Grundy, Esq. of Market Harboro'; James Carter, Esq.; Rev. D. Jones and R. S. Boarer, of Folkestone; W. C. Wells, Esq.; I. Parry, Esq.; and many others of the leading Dissenting ministers and laymen of the county.

The company were addressed by several gentlemen; and the Chairman, in presenting the plate, briefly narrated the history of the contest, which occupied more than sixteen years —

It commenced in the year 1837; but even for some years before that arrangements had been made, and steps had been taken, with a view to an opposition to that impost in the parish. In the year 1837 a church rate having been proposed in vestry, it was resisted, and it was postponed by a vote in vestry, of 209 to 70, or a majority of 139. The Churchwardens then, on their own authority, made a rate of 3s. in the pound for the repair of the church; and a suit followed in the Ecclesiastical Courts, known by the name of "Veley v. Burder and others," and the Churchwardens succeeded in establishing this rate in the Consistory Court. The opponents of the rate then moved for a prohibition, in the Court of Queen's Bench, and the Court granted it, which prohibited the Churchwardens from proceeding further. Against that the Churchwardens appealed to the Exchequer Chamber, when they were beaten; but, unhappily, Lord Chief Justice Tindal, in delivering his judgment, expressed a doubt as to what the decision might have been if the Churchwardens had acted in conjunction with a majority of the vestry. These words led to another suit. That was in 1841: and in the same year a second cause commenced. On that occasion the Churchwardens took care to have with them a majority of the vestry, and were thus enabled to make a rate. It was again resisted. The Churchwardens were unsuccessful in the Consistory Court, but they were successful in the Court of Arches, and again the parishioners applied to the Court of Queen's Bench for a prohibition. They were defeated. They appealed to the Exchequer Chamber—a Court constituted of the Judges of all the different Courts, and again they were defeated. The opponents of the rate then appealed to the House of Lords, and that House having called in the assistance of the Judges, and having had the matter fully argued before them, decided that a rate to be legal must be made by a majority (Loud cheers). Now that decision took place in 1853—that is to say, sixteen years after the commencement of the dispute. During that period more than one hundred and fifty legal and technical decisions, and the utmost freedom on these important questions has become the law of the land and the right of every man.

Mr. Courtauld, in acknowledging the superb Testimonial, related, at considerable length, the progress of the case, and, at the close of his address, sat down amidst great cheering. The health of the Chairman was proposed by Mr. Miall; and the company were subsequently addressed by Mr. J. W. Fox, Mr. A. Pellatt, M.P., Mr. Lennard, Mr. Mechi, and other gentlemen.

This superb Testimonial has been modelled by Mr. Foley, and is altogether a work of a high class. The general form of the group is a tripod, with seven emblematic figures in dead silver, rising from a broad base of the same metal, richly chased and burnished. The upper figure (Liberty) holds in one hand the emblem of victory, in the other a palm branch; beneath her feet are chains, faggots, and scourges, the symbols of civil and religious tyranny. Seated at her feet is Religion, with a cross and Bible, and beneath her feet is the serpent, emblematic of evil. Seated by her side is Justice, satisfied, the bandage removed from her eyes, and the sword lying by her side. Next Justice is Wisdom, pointing to a tablet, on which is the inscription. Around the base are History recording the achievements of civil and religious liberty; Civilisation residing from a book the record; with a figure emblematic of Industry and Perseverance. On the three panels are the bust of Mr. Courtauld, wreaths of oak, palm, and laurel, emblematic of Triumph, Endurance, and Peace; and thirdly, the following inscription :—

Presented by Friends of Religious Liberty to SAMUEL COURTAULD, Esq., in Commemoration of the Wisdom, Courage, and Public Spirit with which he conducted the Braintree Church-Rate Contest through sixteen years of Litigation, from 1837 to 1853, and Finally Established the necessity of a Vote in Vestry to Legalise a Rate, and the Right of a Majority to Negative its Imposition.

The height of the group is about three feet four inches; its weight nearly 600 ounces; and its value 700 guineas.

OFFICIAL DESPATCHES.

THE ARMY IN THE CRIMEA.

War Department, Oct. 8, 1855.

Lord Panmure has this day received a despatch and its inclosures, of which the following are copies, addressed to his Lordship by General Simpson :—

Sebastopol, Sept. 26, 1855.

My Lord,—I have the honour to transmit the report of the principal medical officer for the week, as well as for the week ending the 18th Sept. which, by mistake, I omitted to send before

Your Lordship will read with satisfaction that the health of the army is all that can be desired, and the marked improvement since the arduous night duties have ceased is very apparent.

The troops continue to be employed in the construction of the roads, and in making preparations for the winter, which are greatly facilitated by the fineness of the weather.

The enemy have commenced firing into the town, and the troops stationed there for the purpose of performing fatigue duties have been in consequence withdrawn. Large quantities of timber and building material are daily taken from the houses by our troops.

I have, &c.,
JAMES SIMPSON, General Commanding.

The Lord Panmure, &c.

Head-Quarters, Sebastopol, Sept. 18

Sir,—I have the honour to transmit the weekly state of the sick to the 15th instant, and have much satisfaction in being able to state that the health of the army continues to improve. During the period embraced by this return the admission from wounds, owing to the assault of the Redan Battery, have been enormous, and the number of deaths, I am sorry to say, is very considerable; but in the cases that remain are for the most part doing well, and a large portion of them are of a slight nature, and many of the men will soon be restored to the ranks.

Cholera continues to decrease, and may now be said to have almost disappeared, and during the last week there has been a diminution of every other form of disease, as will be seen by the following extract, in which it will be observed that gunshot accidents alone are in excess over the previous week :—

	This week.		Previous week.	
	Admitted.	Died.	Admitted.	Died.
Fevers	349	16 ...	396	20
Diarrhœa ...	498	4 ...	561	7
Cholera	21	11 ...	25	20
Dysentery ...	139	7 ...	169	4
Wounds	1965	150 ...	703	38
Other diseases ...	528	7 ...	481	5
	3500	194 ...	2334	112

The admissions to strength this week have been 7.52 per cent, last week they were 4.91 per cent.

The deaths to strength this week have been 0.40 per cent; last week they were 0.23 per cent.

The sick to well this week is 13.0 per cent; last week it was 10.96 per cent.

I have, &c., J. HALL, Inspector-General of Hospitals.

General Simpson, Commanding-in-Chief.

Head-quarters, Sebastopol, Sept. 25

Sir,—In transmitting the weekly state of sick to the 22nd instant, I have much satisfaction in stating that the sanitary condition of the army is satisfactory, and were the casualties of war deducted from the list it would be very favourable indeed. As it is, the admissions to strength during the present week have only been 2.98 per cent, and some of these were transfers from regimental to general hospitals.

The deaths to strength have been 0.20 per cent; and the sick to well is 10.02 per cent. Last week these proportions were 7.23, 0.40, and 12.00 per cent respectively. Deducting the casualties of war, the proportion of sick to well this week would be, 6.26 per cent, and that of deaths to strength 0.05 per cent.

The following abstract shows the near approximation of disease and death between this and the preceding week :—

	This week.		Previous week.	
	Admitted.	Died.	Admitted.	Died.
Fevers	356	15 ...	349	15
Diarrhœa ...	446	4 ...	498	4
Cholera	7	3 ...	21	11
Dysentery ...	146	5 ...	139	7
Wounds	84*	76 ...	1965	150
Other diseases...	528	3 ...	528	7
Total ...	1567	106 ...	3500	194

* Two of this number were transfers to general hosp.tal.

The only head under which there is a remarkable and decided decrease in the admissions is wounds, and two out of the eighty-four of these were transfers to the general hospital at Balaclava. The number of deaths from wounds is, I regret to say, considerable; but a great many men were shot through the upper part of the chest in the assault on the Redan, and wounds of that nature are always serious; but a large proportion of the wounds were slight, as is evinced by the discharges and the preceding week, amounting to about 1000 men, deducting those transferred to general hospital.

Cholera has nearly disappeared, and there has been no increase in the other forms of bowel complaints, and the health of all the divisions is reported by the different superintending medical officers to be highly satisfactory. In the Third Division no death occurred during the week, and in the Fourth only one, from an injury of the skull. During the week we have had strong equinoctial gales, with heavy rain, which has reduced the temperature considerably, and rendered the weather delightful

The men are employed on fatigue duties, in making roads and preparing for their own comforts during the winter; but the night duty is light. Their rations are good and abundant, and everything is favourable to health.

I have, &c., J. HALL, Inspector-General of Hospitals.

General Simpson, Commanding-in-Chief.

THE KING OF PRUSSIA AT COLOGNE.—At Cologne, on Wednesday, his Majesty the King of Prussia, accompanied by the Prince and Princess of Prussia, took part in the ceremony of laying the first stone of the new bridge over the Rhine. "The peace of Europe," said his Majesty, "has permitted us to commence this work in the midst of peace; let us pray God that we may continue it in peace; let us pray that this work may prosper under the blessings of peace; that it may rest eternally intact; and that long before the last stone is laid peace may be restored to the whole of Europe."

DIVIDING THE SPOILS.—The Anglo-French Commission sits daily, and is busy apportioning the spoils of war found in the town. The number of guns of all kinds captured exceeds 4000; immense quantities of small-arms have been carried off by the soldiers and sold, but there are still piles of them remaining. As the Russians lost 18,000 men between the morning of the 5th and the evening of the 8th of September, it is likely that we captured at least 18,000 stand of arms, not to mention the muskets in store, &c., which belonged to men rendered *hors de combat* during the preceding part of the siege. The Commission acts on the principle of dividing the spoils in proportion to the number of men actually borne on the strength of the respective armies in the camps before Sebastopol. Their labours were interrupted the other day by a Russian shell, which scarcely gave them time to adjudicate on the proprietorship of the splinters, as it burst as soon as it fell through the roof of the building in which they were sitting.—*Letter from Sebastopol.*

PREPARATIONS FOR THE WINTER.—The construction of the military roads by the Engineers and troops is being carried on with great energy. The guard of the trenches in each attack is reduced to a captain's command, and the greater number of the troops thus set free are employed either in making roads, clearing the batteries, or making the necessary preparations for the coming winter. In this respect, among others, the Russians are behindhand; for the south side, occurring as it did a month or six weeks before the commencement of the severe season, has rendered the most important service to the British force. Had it taken place a month later the winter might have caught us without any road but the railway to depend upon. Now there is every reason to expect that the plateau will be traversed in all directions by firm and substantial well-drained roads. It is impossible to overrate the great value and advantage of the opportunity thus afforded to us for ensuring constant provision against the most material exigencies of the coming winter. Those only who had occasion to observe the miseries and sufferings last winter from the want of means of transport will be able to appreciate the real value of the different circumstances under which the army will be placed during the ensuing winter.—*Letter from Sebastopol.*

WAR OBITUARY.

(Continued from page 310.)

ANDERSON (Charles), Captain 31st Foot, Assistant Engineer, eldest son of Henry Anderson, Esq., of the island of Trinidad, West Indies; killed, on the 4th September, in the trenches; aged 26.

ATTREE (Frederick Symes), Captain 31st Foot, killed in the trenches on the 8th September. He was in his 27th year, and was the youngest son of the late William Attree, Esq., F.R.C.S., of West-hill Lodge, Brighton.

BUCKLEY (Duncombe F. B.), Captain Scots Fusilier Guards, second son of Major-General Buckley, M.P.; killed, on the 7th September, in the trenches, in his 36th year.

CHAPMAN (Stephen Remnant), Brevet-Major 20th Foot, Assistant Engineer, third son of the late Frederick John Chapman, Esq., of her Majesty's Ordnance, died on the 20th September of a wound received on the 8th of the same month at the storming of the Redan

COLLYER (Major), 97th Regiment. This officer, who was the only son of the late William Colvill, Esq., of Bachelor's Walk, Dublin, the representative of the Irish branch of the Colvills, was appointed Ensign, by purchase, in the 97th Regiment, 27th December, 1833; Lieutenant, by purchase, 10th February, 1837; Captain, by purchase, 29th May, 1840; Brevet-Major, 11th November, 1851; Regimental Major, December, 1854. When in command of the depot at Canterbury, in April, 1846, the organisation and formation of the 2nd Battalion devolved upon him. This duty he performed with so much zeal and ability that he received the marked approbation of the Adjutant-General, the late General Sir John M'Donald, and also of the Military Secretary to the Commander-in-Chief, the late Field Marshal Lord Raglan, who continued to him the honour of his friendship and esteem until his death. He went out in command of the 2nd Battalion of the 97th Regiment to Malta. He served with them in the Mediterranean and in North America. He afterwards served as Major of Brigade at Chobham. On the occupation of the Prince by a combined French and English force Major Collyer was appointed Major of Brigade to the British Army, where he performed his duties with the expressed approval of Brigadier-General Lockyer. When his regiment was ordered on more active service in the Crimea, he resigned the appointment of Major of Brigade in Greece, and embarked with his regiment for the Crimea, and served as Aide-de-Camp to General Lockyer. His constitution gave way under the hardships of the winter campaign: exposure to wet and cold brought on dysentery. He died on board the *Jason*, during the four days' muddle passage between Balaclava and Scutari, in January, 1855.

COLT (Oliver), Lieut. 7th Foot, killed at the storming of the Redan, on the 8th Sept. He was eldest son of John Hamilton Colt, Esq., of Inveresk House, Musselburgh, and of Gartsherrie, co. Lanark, and grandson of the late John Hamilton, Esq., of Gartsherrie, whose mother was the daughter of the Lord President Dundas. The Colts of Gartsherrie were established in Scotland by Blais Coult, who fled from France during the persecution of the Huguenots. The young officer slain at the Redan had only just completed his twentieth year

COX (Robert Alan), Capt. 62nd Foot, killed Sept. 8, at the storming of the Redan. He was the second son of Colonel Sir William Cox, Coolcliffe, co. of Wexford, Ireland, a highly-distinguished Peninsula officer, for some years on the Staff of his Royal Highness the late Duke of Gloucester, and subsequently Governor of Almeida during the Peninsular War. Capt. Cox made his first campaign on the banks of the Sutlej, and carried the Queen's colour at the battles of Ferozeshah and Sobraon, for which he had a medal

CUNDY, (W. H.), Brevet Lieut.-Colonel 50th Foot, killed on the 8th of September, at the storming of the Redan. Colonel Cundy obtained his first commission 31st May, 1833, when he immediately volunteered to proceed to join his regiment, which was then serving in India, and upon which a red mark was placed against his name in the Horse Guards. He embarked early the following year, and continued to serve uninterruptedly with his regiment in different parts of India until 1841, when he accompanied them to China. He served at Amoy, Chusan, Chinhae (including repulse of night attack), Chapoo, Woosung, Shanghai, and Chin-Kiang-Foo, where he was severely wounded whilst leading the advance guard at the escalade of the city At the close of the war he returned to England on leave of absence, and on the return of his corps from foreign service he rejoined it, and served with it in the United Kingdom until ordered to embark for Gibraltar in 1851, to which station he accompanied it. He remained there present until 1854, when he accompanied his regiment to the East, and on the 14th September of the same year landed with the British army in the Crimea. He was present at the affair of the Bulganac on the 19th September; Battle of the Alma, 20th September; Repulse of the Russian Sortie, on the 26th October. Too ill to be in the ranks at the Battle of Inkerman, but was exposed to a heavy fire. Siege of Sebastopol, and up to the assault on the 17th October, 1854, and 9th April, 1855, upon which day he commanded the guard in the trenches, right attack, commanded guard in the trenches, right attack, on the night of the 5th May, when the enemy made a sortie on the right and left bayous, and were repulsed. Bombardments of the 7th and 17th June, and assault of the 18th of the same month, when the 55th Regiment formed part of the supporting column of the Second Division, which was to attack the salient angle of the Redan, and for that purpose occupied the third parallel. Commanded the 55th Regiment the 11th November, 1854, to the 12th June, 1855. Lieut.-Col. Cundy was killed whilst gallantly leading his regiment (Major Cure, his senior officer, having been severely wounded) at the attack on the Redan on the 8th September. Perhaps it may be out of place on this occasion to allude to the services of his father, who fell in the service of his country when at all gallantly leading his company at the storming of Bergen-op-Zoom. Lieut.-Col. Cuudy leaves a widow and three children to mourn his loss.

CUNNINGHAME (Robert C.), 42nd Royal Highlanders, third son of the late Robert Cunninghame, Esq., of Lorn House, and Ballaourris, Isle of Man, died 5th Oct., in the Naval Hospital, Malta, of fever caught in the trenches

CUTTLER (Augustus Tonyn Staines), First Lieutenant Royal Marines, only son of John Cuttler, Esq., of Ramsgate, died, aged twenty-six, of fever, at Balaclava, on the 27th Aug.

DAVIES (Owen Gwynn), Lieutenant 38th, youngest surviving son of David Arthur Saunders Davies, Esq., M.P. for Carmarthenshire, and nephew of John Henry Philipps, Esq., M.P. for Haverfordwest. Lieutenant Davies was born May 14, 1834, educated at Rugby, and entered the Army as Ensign in the 38th Regiment, Dec. 12, 1851, and became Lieutenant, by purchase, Oct. 18, 18 From the ardent manner in which this young officer followed the profession of his choice during his brief career, it was not unreasonable to hope that he would become a distinguished member of it. He sailed with his regiment for the East in April, 1854, went through all the hardships of the campaign, and, with the exception of a brief interval of illness at Balaclava, was enabled to perform all his duties until the fatal 18th June, when he fell, in the assault of the Redan on Sebastopol, aged twenty-one, leaving a father, brother, and sister, and a large circle of relations and friends, to deplore his loss

DEANE (Richard Grenville), Ensign 30th Foot, killed on the 8th Sept., at the storming of the Redan; he was eighteen years of age, and was the youngest son of the Rev. George Deane, Rector of Brighton, Hants

DONOVAN (Henry George), Lieutenant 33rd Foot, who fell at the storming of the Redan, was third son of the late Richard Donovan, Esq., of Ballymore, co. Wexford, by Frances his wife, eldest daughter of Edward Westby, Esq., of High Park, co. Wicklow.

DRUMMOND (The Hon. Robert), Captain Coldstream Guards, second son of the Earl of Kinnoull; died, aged 24, on the 1st Oct., on board of the *Indiana*, at Spithead, of wounds received in the trenches on the 24th Aug.

EDWARD (Lewis), Captain 41st Foot, second son of the late Henry Every, Esq., of Ousely Lodge, Windsor, killed, aged 21, at the storming of the Redan on the 8th Sept.

FITZROY (A. C. L.), Captain R.A., wounded at the storming of the Redan 8th Sept., and died on the 10th Sept. Captain Fitzroy joined the Royal Artillery in 1839; served with the Company in Nova Scotia, New Brunswick, Jamaica, and Antigua; was appointed to the Horse Artillery in 1846; and joined his father (then Governor-General of the Australian Colonies) in 1848, with whom he returned Home. He immediately sought service in the Crimea. The gallant and lamented Captain was member of a family which has sent no less than eight promising young men to the seat of war. The eldest of these (the heir to a Dukedom) worked in the trenches, and nursed his wounded brother—who had quitted a high post at Court, a wife, and family, to take part in the active service of his country, and narrowly escaped death at Inkerman, being shot through the face and neck. A cousin of these brothers is still suffering from a severe wound received at Inkerman; and his brother was one of the very few of the gallant 41st regiment who survived unhurt the storming of the Redan. Two other cousins went through Alma and Inkerman unharmed, though one (the Colonel of the 68th) had his horse shot under him (while aiding the lamented Cathcart); and the other fought by his side gallantly. A naval officer—a scion of the same house—is acting against the Cossacks in the Sea of Azoff; and his elder brother was the Captain A. C. L. Fitzroy, the subject of this notice. Captain A. C. L. Fitzroy's conduct was frequently noticed by those to whom exertion and daring were familiar Major-General Sir Richard Dacres, on one occasion, says:—"My chief reason for writing to his father is to bear my testimony to his son's (Captain Fitzroy's) gallantry. On the opening of the bombardment on the 17th of August (when Captain Oldfield was killed, in a very exposed battery), he volunteered his services; and his bravery was the theme of admiration of all who saw him. And Captain Keppel, another eye-witness, says: —"The last day of the bombardment, when one of his guns was dismounted, he changed the man by himself seizing the

shovel, and then jumped outside to perform that dangerous service. His whole company talk of his gallantry and coolness."

Captain Fitzroy was killed by one of the last rifle shots fired on the 8th of September.

FRASER (Lionel), Captain 93th Foot, killed in the trenches on the 31st August, eldest son of Major-General Fraser, late Quartermaster-General at Ceylon.

GAYNOR (John Sherwood), Lieutenant 47th Foot, sixth son of Captain Gaynor, Killney-house, county Dublin, and the Ordnance-house, Buttevant, died on board H.M.S. *Queen*, off Sebastopol, on the 26th August, from the effects of Crimean fever.

GODFREY (Peter), Lieutenant 19th Foot, only son of the late Edward Godfrey, Esq., of Old Hall, Suffolk, by his wife Susan, Countess of Morton, and nephew of Sir John Yarde Buller, Bart., died on the 12th October, aged twenty-one, of wounds received at the storming of the Redan. Through his grandmother, Arabella, daughter of Admiral Sir Joshua Rowley, Bart. Lieutenant Godfrey descended from a family eminently distinguished in our naval annals.

GOODENOUGH (Reginald Cyril), Lieutenant 97th Foot, died on the 20th Sept., of wounds received on the 8th same month, at the storming of the Redan. He was aged nineteen, and was the son of the Rev. R. W. Goodenough, Vicar of Whittingham, county of Northumberland. He had resigned the post of Regimental Quartermaster a few days before, in order to go into action.

HOLDEN (Edward Shuttleworth), Lieutenant 23rd Foot, died on the 9th Sept of wounds received the previous day at the storming of the Redan. He belonged, by female descent, to the Derbyshire family of Holden; and was, in the male, a scion of the old Lancashire house of Shuttleworth, of Gawthorp Hall. He was the present Edward Anthony Holden, Esq., of Aston Hall, High Sheriff of Derbyshire in 1838, was eldest son of the late Rev. Charles Shuttleworth, who took the name of Holden in 1791. Lieut. Edward Shuttleworth Holden was born 5th December, 1830.

HAMMOND (Maximilian Montagu), Captain Rifle Brigade, fell at the storming of the Redan, on the 8th September. He was third son of William Osmond Hammond, Esq., of St. Albans Court, Kent, by Mary-Graham, his wife, eldest daughter of Sir Henry Oxenden, Bart. The family of Hammond has been settled in Kent since the reign of Henry VIII. and is indeed one of the esteemed. James Hammond, the elegiac poet, was one of its distinguished members. Through his grandmother, Charlotte Egerton, the present Mr. Hammond inherits the honour of quartering the Royal Plantagenet arms. Captain Maximilian Montagu Hammond was born in May, 1824, and had, consequently, completed his thirty-first year.

HANDCOCK (the Hon. Lieut.-Col. Henry Robert), Major 97th Foot, fell at the storming of the Redan. He was sixth son of Richard, second Lord Castlemaine, and brother of the present Peer. He had married, only last year, the daughter of the late Lieut.-Col. Henry Williams, R.A.

HUTTON (John), Captain 97th Regiment, killed at the storming of the Redan, 8th Sept. He was the eldest son of the late J. Hutton, Esq., Captain 88th Regiment, and formerly of the 31st Regiment.

KERR (W.), Lieut. 30th Foot, eldest son of W. C. Kerr, M.D., Northampton, died, aged twenty-four, of wounds received on the parapet of the Redan. Lieut. Kerr was a graduate of Trinity College, Oxford. When the war broke out he entered the Northamptonshire Militia, from which, having obtained the usual number of volunteers, he was Gazetted to the 30th Regiment. Though suffering greatly from illness, he refused to be invalided, and was present with his regiment at the attack on the Redan, where he was wounded in the shoulder. He sank twenty days after, from the combined effects of his wounds and from sickness.

LAYARD (A. J.), Captain 38th Foot, Dep.-Adj. Q. M. Gen., third son of the late H. P. J. Layard, Esq., of the Ceylon Civil Service: died, aged thirty-six, on the 7th Aug., of diarrhœa, on board the steamer *Faith*, in Balaclava Harbour. Captain Layard's brother, Austen Henry Layard, Esq., D.C.L., represents Aylesbury in Parliament, and is the distinguished writer on Nineveh.

LOCKHART (James Augustus), Captain 41st Foot, was killed in the advanced trenches before Sebastopol on the 8th September. He was elder son of James Lockhart, Esq., of Sherfield House, Hants, and Lenthanz, Essex. As Ensign he had the honour of carrying the Queen's colours when the 41st arrived at Scutari, which was the first regiment that landed there.

M'GREGOR (A. B.), Lieut. 97th Foot, fell at the storming of the Redan. This gallant young soldier was son of one of the most distinguished and most esteemed officers of the Peninsular War—the present Major-General Sir Duncan M'Gregor, K.C.B., Inspector-General of the Constabulary force in Ireland.

MICHELL (Christopher), Ensign 49th Foot, died, aged 19, on the 14th September, of wounds received on the 8th of the same month, at the storming of the Redan. He was the second son of the Rev. T. P. Michell, of Standen, near Hungerford.

PATULLO (Lieut.-Col.), 93th Foot, fell at the storming of the Redan on the 8th Sept. He was son of the late Archibald Erskine Patullo, Esq., a Captain in the Madras Cavalry, by Isabella, his wife, sister of the present William Brodie, Esq., of Brodie, in Morayshire, Chief of the great house of Brodie of that ilk, so distinguished in the annals of Scotland.

PECHELL (W. H. C. G.) Capt. 77th Foot, killed before Sebastopol, 3rd Sept., while pushing some outlying sentries in front of a trench at night-anglice in the fifth parallel, and consequently close to the enemy. Some Russians, who had concealed themselves in the dark behind a small wall for which the sentries were making for shelter, fired a volley, and he was shot through the heart William Hugh Cecil Pechell, the only son of Sir George Barlee Brooke Pechell, Bart., and the Hon. Lady Brooke Pechell, was born at Castle Goring, in May, 1830, and, after passing his early days at Harrow and Sandhurst College, entered the Army in August, 1846. During the winter campaign in the Crimea he cheerfully shared in the arduous service in which the 77th Regt. was engaged. The personal regard and high esteem in which he was held by his brother-officers, and his kindness and attention to the comforts and health of the men under his command during that dreadful period, causes his loss to be most deeply deplored by them. The gallant conduct of Captain Pechell, during a Russian sortie on the 30th of August, was honourably mentioned by General Simpson in his Despatch of the 1st Sept. At the head of a small party of men, he not only drove the Russians back from the rifle pit, but also from several of their ambuscades, which they had formed behind some walls of loose stones, and compelled them to retire into the ravine.

POOLE (William Halsted), Captain 23rd Foot, died, aged 33, of a wound received at the storming of the Redan on the 8th September. He was son of Captain W. B. Poole, Half-pay Royal Artillery.

PRESTON (George Berthon), Lieutenant 97th Foot, shot on the 30th of Aug., whilst commanding, in the place of his disabled senior officer, a company of his regiment, ordered to repel a sortie of the Russians before Sebastopol. He was in the 20th year of his age, and was the third and youngest surviving son of William Robert Preston, Esq., of Minsteed Lodge, New Forest, Hants.

PRESTON (H.), Capt. 90th Foot, killed on the 8th, in storming the Great Redan. This officer obtained his commission, by purchase, as an Ensign in the 90th, in April, 1849. He succeeded to a Lieutenancy in June, 1854, and to his company in March, 1855. He was the fourth son of the Rev. W. M. S Preston, of Warcop-hall, in the county of Westmoreland; at which place his ancestors have been seated for many generations, and where his dear brother, the Rev. W. S. Preston, now resides. Capt. Preston remained with the 90th before Sebastopol, throughout the whose of the horrors of the winter, and shared in all the arduous duties of the army, until July last, when an attack of fever compelled him to withdraw for a short time to the Monastery of St George. Eager to return to his active duties, he resumed them in the middle of August. The close of his promising career is thus described by his commanding officer, in announcing his death to his widowed mother:—"Your son was killed whilst most gallantly encouraging his men to the charge. This officer, by the most strenuous exertions, had obtained a very forward position within the works; although in the column of assault under my command, it fell to his lot to start last (being the junior Captain). His body was brought into Camp and interred this day (the 9th), with two of his brother officers, in separate graves dug by their own men." He was beloved by his family and friends, who deeply deplore his loss. Their best consolation is that he died doing his duty, and was not only a brave soldier, and a thorough gentleman, but also an unostentatiously sincere Christian. Several sketches by this gallant and lamented officer have appeared in this Journal.

PRODY (Charles How), Lieutenant in the 1st Foot, youngest son of the late W. H. Prody, Esq., Commander R.N., of Lichfield, Staffordshire, and the Ryalls, Seaton, Devon, died on the 10th of October, in the Hospital at Malta, of Crimean fever, aged 21. His family is a junior branch of the noble House of Carysfort.

ROCHFORT (George), Captain 49th Foot, killed on the 8th September, at the storming of the Redan. He was only son of the late Richard Rochfort, and was descended from a noble family in Westmeath, Ireland, who for several generations uninterruptedly represented that county in Parliament. Captain Rochfort was only in the 21st year of his age: he gave promise of becoming a bright ornament to the profession, as he had already greatly distinguished himself: he served from first to last in the present war, having landed with the army in the Crimea last year. He carried the colours at the battle of the Alma, and engaged in the memorable sortie made by the Russians on the 26th of October, and again at Inkerman; was the foremost throughout that day, though he had only just returned from picket duty; nor was he a single day absent from the arduous trench duty, till severely wounded in the trenches on the night of the 5th inst. He was then taken to Scutari, but would only remain there about three weeks, scarcely allowing time for his wound to heal. He returned to the Crimea, where he has gloriously fallen, to the great grief of his family and all who knew him. Captain Rochfort purchased his company last July.

RYDER (H. S.), Lieut. 2nd Battalion Rifle Brigade, killed at the storming of the Redan, on the 8th Sept. He was the third surviving son of the Hon. Granville Dudley Ryder and Lady Georgiana Ryder, his wife, daughter of the fifth Duke of Beaufort, and niece of Field Marshal Lord Raglan. On the breaking out of the war last year he quitted Oxford, obtained a commission in the Rifle Brigade, and proceeded to the Crimea early in last May. A brother officer says of him:—"He was always regardless of shot and shell and any other danger in the trenches. Before the assault had lasted an hour Lieut. Ryder was wounded by a bayonet thrust in the throat, and fell, and was carried to the rear, and consigned to the surgeon. But, as it happened, the surgeon was engaged at the moment, he tied his handkerchief round his throat, and—though he would have been perfectly justified in remaining in the rear—again he volunteered his services, wounded as he was. They were accepted; and he was sent out with a covering party between our advanced parallel and the Redan. When the assault commenced he stayed, as in duty bound, where he was; but when some English troops were hesitating to mount the breach, having lost their officers, he, with one or two other officers, led them into the Redan; and his body was found the next morning among the foremost slain. His comrades are about to erect a stone where his and Captain Hammond's bodies are laid, in order to commemorate his gallant conduct.

SNOW (Edward Gesary), Captain R.A., son of the late Bernard Gesary Snow, Esq., of Highgate, killed on the 6th October by a round-shot, while in command of a battery of the second parallel of the trenches

SOMERVILLE (Reginald Hugh, Lieutenant 23rd Foot) fell at the storming of the Redan on the 8th September. He was the third son of the Hon. and Rev. William Somerville, Rector of Barford, co. Warwick, and nephew of the present Lord Somerville. The youthful soldier was only in his 20th year

SOMERVILLE (William Meredyth), Lieut. Royal Engineers, died on the 3rd of September, at Scutari, from illness contracted while serving in the trenches. William Meredyth Somerville was only son of J. R. Somerville (late Captain Scots Greys) and Anna Maria, youngest daughter of the late Sir Henry Torrens, K.C.B. He was nephew of the Right Hon. Sir W. M. Somerville, Bart., M.P. for Camberbury, and also nephew to the gallant Sir Arthur Torrens, K.C.B., who died lately in Paris from wounds received at the Battle of Inkerman. W. Somerville had been but little more than two years in the service: he passed a very brilliant examination at Woolwich, not only in mathematics, for he gained the first German and the second French prize. He died in the twentieth year of his age; and Sir Harry Jones, writing home, says:—"I cannot refrain from expressing my regret at the loss of this promising young officer, whose career has been thus early closed, as I found him always most zealous and attentive in the performance of his duties: he promised to be an honour to the corps he belonged to, and to the service in general.

STEVENSON (John Charles Newcombe), Capt. 30th Foot, killed on the 8th Sept. at the storming of the Redan. He was the eldest son of John Newcombe Stevenson, Esq., of Hayne, co. of Devon.

SWIFT (Arthur Dalgarno), Lieut. 90th Foot, killed on the 8th Sept., at the storming of the Redan. He was in his 22nd year, and was the youngest son of Richard Swift, Esq., of Lynn, in the co of Westmeath, H.P. 60th Rifles.

UNETT (Thomas), Lieut.-Colonel 7th Foot, died from his wounds received at the storming of the Redan on the 8th Sept. He was, we believe, a scion of the very ancient Staffordshire family, and son, if we are not mistaken, of John Wilkes Unett, Esq., of the Woodlands. He entered the army 20th Sept., 1821, and attained the Brevet rank of Lieutenant-Colonel 11th Nov., 1851. He served the campaign of 1854, and succeeded to the command of the 19th at the Alma. The anecdote of his having tossed for, and won from Colonel Windham, the right to lead the storming party is graphically told by the *Times'* Correspondent. This gallant deed of daring cost him his life.

VAUGHAN (Herbert Millingchamp), Captain 90th Regt. This gallant and promising young officer was wounded in the Great Redan, whilst leading his men in the assault upon Sebastopol, where, as recorded in the *Times* of the 26th of Sept., his deeds were "beyond all praise." He died of his wounds on the 11th of Sept. His loss is deeply lamented. He was the son of Lieut.-Colonel Vaughan.

WELSFORD (Augustus Frederick), Major 97th Foot, killed at the storming of the Redan, on the 8th Sept. He was son of the late Lieut.-Colonel Welsford, of the 101st Regt., and of Halifax, Nova Scotia, and grandson of his late Royal Highness the Duke of Sussex. He joined the 97th Regt. as an Ensign, and has been with it in different parts of the world ever since. He went with the regiment to Greece in the beginning of last year, and when Colonel Lockyer was made a Brigadier, was for some time in command of it during the last memorable winter before Sebastopol, and was never a day from duty. He repulsed a serious sortie of the Russians with 200 of his men, and was mentioned by Lord Raglan in his official despatches. He was beloved by his brother officers and revered by the men. He was a thorough soldier, and a truly good man. "It was a bitter hour for us all when the poor Major's body was brought back to us; had he lived he would have been crowned with laurels. Let us hope he has won a brighter crown now." Thus writes one of the sergeants of his regiment.

(To be continued.)

NAVAL AND MILITARY INTELLIGENCE.

PORTSMOUTH harbour and roadsteads are getting a busy look again with the rapidly accumulating returns of the members of the Baltic fleet. The steam troop-ship *Simoom* has been greatly improved, and her speed increased, it is estimated, two-and-a-half or three knots. The *Simoom* is wanted to embark upwards of 1000 troops immediately.

THE 76th Regiment are ordered home from Halifax, where they will be relieved by the 97th, from Antigua. The 69th Regiment, now at Barbadoes, will also return to England.

THE *Vedra* has sailed from Woolwich Arsenal for the Crimea with a cargo consisting of huts, trench-barrows, water-carts, bales of winter clothing, and casks of harness. The *Baltbea*, likewise for the Crimea, with a cargo composed principally of huts, having also a small quantity of shot and shell, has also sailed.

SOME wounded men arrived at Woolwich on Saturday last, and two of them, who had lost a leg each, found that they had left their crutches with their luggage at the railway station, and were attempting to walk without them as they best could, when the Major of the Royal Marines Militia, who happened to be coming out of his quarters at the moment, instantly gave his servant a sovereign to purchase two of the best crutches he could get for the poor sufferers.

THE activity so unremittingly carried on in every department of the Royal Arsenal at Portsmouth is now considerably relaxed. On Sunday the machinery was still. Profiting by this state of inactivity, three of the heads of departments have taken the opportunity of visiting the field of action the advice of Lord Palmerston on his recent visit to the Royal Arsenal. His Lordship observed that we were unequalled by the whole world in every article produced by the Royal Ordnance Department with the single exception of gun-metal, and it must be acknowledged that our neighbours on the Continent surpassed us in that material, and that this should be remedied. Colonel Earley Wilmott, Superintendent of the Royal Gun Factories; Captain Boxer, Superintendent of the Royal Laboratory; and Mr. Anderson, Inspector of Machinery, have started for an inspection of the Crimea, to examine into these deficiencies, and have proceeded for that purpose to Belgium, France, and Prussia.

THERE is no foundation for the report that the British cavalry are to winter at Constantinople. A strong reserve depôt of those regiments now in the Crimea will be formed at Balaklava; and two officers—a captain and a subaltern from the reserve cavalry, have left, or will leave to take the command of these depôts. Anticipating the fall of Sebastopol, the British Government specially the 4th Hussars and 11th Lancers, were augmented by a strong contingent of volunteers from the home cavalry, and orders have been received by the cavalry in the Crimea to be fully prepared for a winter campaign. The Inniskilling Dragoons and 5th Royal Irish Hussars have left for Eupatoria.

THE POPULATION IN THE CRIMEA.—The total number of male inhabitants in the Peninsula may be divided as follows:—156,000 Tartars, of whom 80,000 are peasants, farmers, or shepherds; 16,000 Imans and Mollahs, acting at the same time as priests or judges; 10,000 Mirzas or nobles, a kind of feudal lords whose influence and privileges have not without great difficulty resisted foreign domination; and 50,000 bourgeois and petty tradesmen residing in the towns. The Christian population does not amount to more than 22,000 or 23,000, and is entirely of European origin. The number of Russians carrying on trades, who have established themselves in the Crimea since the conquest, are not calculated at more than 3000. Turkey, and more particularly Constantinople, have furnished a contingent of 10,000 Greeks, who established themselves for the most part at Balaclava and Eupatoria. 5000 Armenians at the most followed this example; and 6000 Poles, Germans, and French, forming a more floating part of the population, complete this census. —*Letter in the Inventor.*

The late Sir Watkin Williams Wynn planted, from 1815 to 1820, upon mountainous lands in the vicinity of Llangollen, situated from 1200 to 1400 feet above the level of the sea, 80,000 oaks, 53,000 Spanish chestnuts, 162,000 spruce firs, 110,000 Scotch firs, 90,000 larches, 30,000 wych elms, 35,000 mountain elms, 80,000 ash, and 40,000 sycamores.

THE CATTLE-TRADE IN BELGIUM.—The price of live cattle brought to market here has gradually fallen within the last three weeks to the amount of about 10 centimes per pound; but this has not affected butchers' prices, which, taken one with the other, average about 8d. per pound. There has been an unusual supply of live cattle, in consequence of the continued drought having dried up the pastures, and rendered it necessary for small farmers to get rid of their beasts.—*Letter from Brussels.*

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

Prince Albert has decided upon visiting Birmingham, for the purpose of laying the first stone of the buildings of the Birmingham and Midland Institute, on the 22nd or 23rd of next month

The Grand Duke Nicholas, on his return from southern Russia, is to proceed to Berlin to visit the Prussian Court, and to invite the King to Warsaw.

Prince Frederick William, son of the Prince of Prussia, visited Ostend on Saturday last, on his way to Germany

On Saturday last a Queen's messenger was sent off with despatches for Lord Stratford. Despatches were also forwarded to General Simpson and to Admiral Sir Edmund Lyons.

The Emperor and Empress of Austria have returned to Ischl, from their visit to the King of Bavaria at St. Bartholomä, near Brechtesgaden.

The Right Hon. Sir George Grey arrived at Balmoral on Sunday last, in attendance upon her Majesty.

The King of Hanover will shortly proceed to Wurtemberg, to be present at a family fête. His Majesty will first visit Cologne.

The King of Prussia is expected in Stuttgardt on a visit to the King of Wuttemberg, and in repayment of the latter's visit to him at Stockteufels-on-Rhine.

The last accounts from the Crimea mention that the Duke of Newcastle was about to visit the Circassian coast. He was to proceed there in H.M.S. *Highflyer*.

The Imperial Court are returning by degrees from Moscow to St. Petersburg. The Empress Marie, her children, the son of the Grand Duke Constantine, most of the Adjutants-General of the Emperor, the Ministers, &c., have already arrived.

Lord Howden is expected to leave Paris in a few days for Madrid.

There is reason to believe that by the end of the present month the King of Sardinia will have sufficiently recovered his strength to be enabled to pay the long-talked-of visit to the Emperor of the French.

The Coburg Palace at Vienna, formerly tenanted by Lord Westmoreland, is shortly to be furnished for the Ducal family of the Coburgs.

Sir Richard Pakenham, our Envoy at Lisbon, returns to England by the next Peninsular packet, leaving Mr. Ward as Chargé d'Affaires.

The Count de Chambord is at present on a visit to his mother, the Duchess de Berri, at the château of Bronsee, in Styria.

The daughter of Prince Frederick Charles of Prussia was to be baptised on the 12th. The Dowager Grand Duchess of Saxe-Weimar and the Dowager Queen of Holland intended to be present at the ceremony.

An altercation is rumoured to have occurred very recently between the French Emperor and Prince Murat. "Vous n'avez rien de votre oncle," was the reproach addressed with bitter emphasis to his Majesty. "Helas! oui, j'ai sa famille," was the reply, made with sarcastic resignation

It is stated that Colonel T. Bigelow Lawrence will shortly resign his position as Attaché to the United States Legation in London, and return to the United States.

Chevalier Bunsen, lately Prussian Minister at our Court, has been named as one of the Liberal candidates for the representation of the city of Berlin in the Prussian Chamber

The Queen Dowager of Sweden, while walking on the 29th ult. in the Park of Rosersberg, was suddenly seized with vertigo and fell, and broke her arm.

The Czar has conferred the title of "actual" Privy Councillor of State, with its accompanying "Excellency," on Baron Stieglitz, the wealthy banker, for the zeal he has shown in supporting the financial credit of Russia, at home and abroad.

Telegraphic advices from Copenhagen state that the Hereditary Prince Ferdinand has been dismissed from the chief command in the island of Zealand, because he has refused to sign the Constitution.

The Earl of Bradford has become the purchaser of the Tong estate, in Shropshire; the price is reported to have been £197,000.

The Neapolitan Ambassador, Prince Carini, has received orders to return to his post at London.

M d'Usedom, formerly Prussian Ambassador at Rome, has been made governor for life of the First Chamber of Prussia.

Mr. John Macgregor, M.P., is to be in Glasgow next week to meet his constituents. He has been detained by the illness of a near relative.

A letter from Constantinople says: "It is again reported that Prince Ladislaus Czartoryski intends to organise a corps of Polish Cossacks."

Mr. Frederick Lucas, M.P., who was dangerously ill, is much better, and hopes are now entertained of his recovery.

Lord Panmure offers to English officers the appointment of Paymaster to the British Italian Legion. The pay is 6s. per diem, with the usual allowances.

The *Stade* is about to open its columns to another work of fiction by the author of "The Mysteries of Paris."

Georges Sand is said to be engaged in writing a play in five acts for the Théâtre Français, Paris.

Mr. Cuthbert Ellison, of Hebbern-hall, has no less than five grandsons, one nephew, and two grand-nephews, now serving in the army in the Crimea.

Herr Ander, the tenor singer, so popular at Vienna—generally reported to be the first tenor in Germany—and who appeared two or three seasons ago at our Royal Italian Opera, died the other day at Vienna. He was buried in state and honour.

Dr. Laycock, of York, has been elected to fill the chair of the Practice of Medicine in the University of Edinburgh, vacant by the resignation of Dr. Alison.

M. Vincenzo d'Errico, Deputy in the Neapolitan Parliament of 1848, has just died at Turin. He was one of the richest men in the country until the reaction of 1849, when all his possessions were confiscated.

A serious accident has befallen Mr. Richard P. Long, son of the member for North Wilts, one of his eyes having been accidentally destroyed by a shot from the gun of one of the keepers.

Wilhelm von Kaulbach, after having illustrated Goethe's "Reineke Fuchs," and other standard works of German literature, has now turned, for the same purpose, to the dramas of Shakspeare. The first number of his "Shakspeare Gallery" containing three highly-executed engravings after scenes from "Macbeth," has recently been published.

A woodcock was shot on Monday, the 1st instant, in Tarton, by William Rostron, Esq., of Spring Bank, Edgeworth, on his own ground. Woodcocks are very rarely seen so early.

A coin of the reign of the Emperor Marcus Aurelius Antoninus, who flourished about the middle of the second century, was found at Lancaster a few days ago.

Provisions are extremely dear in Norway. In Christiana a number of merchants have formed themselves into an association to purchase provisions by wholesale, and sell them at cost price to the poorer classes.

A boy at Alnwick last week narrowly escaped with his life through eating berries of the *Atropa belladonna* (deadly nightshade.) For more than twenty-four hours he was delirious.

A number of persons, most of them Mayors, have been arrested in Finland, by order of the Military Commandants in the various districts. The causes of these arrests—eighty in number—are stated to be political.

The colliers and stone-getters west of Dudley have obtained an increase of their wages. At a meeting of masters held a few days ago, it was agreed to raise the wages of the former 6d., and the latter 3d. per day.

The mildness of the present season has caused two of the chestnut trees in the Palais Royal, near the statue of Louis XIII., to send out flowers. One of them at present exhibits fifteen large clusters of white blossoms, and the other six.

The Governor of Warsaw has announced the abolition of the restrictions on the sale of salt, and notifies that purchasers would be permitted to import any quantity

It is said that the contract for the supply of £5,000,000 of gold to Russia has been accepted by a well-known house at Amsterdam, in connection with a London firm of high standing.

In some places on the Austrian military frontiers one-fifth of the entire population has been carried off by the cholera, and in the village of Lukovdol one-third of the inhabitants fell victims to the disease.

The export of linen from Hanover during 1854 amounted to 2,794,776 thalers (8,730,000£.), being 527,829 thalers (1,977,000£.) less than in the previous year.

The *Limerick Chronicle* says:—"The enormously-increased duty on whiskey has lessened the consumption to a degree never anticipated by the Chancellor of the Exchequer. The working class are taking to brown stout, and the higher ranks are exchanging for wine, upon which there is no advance of duty."

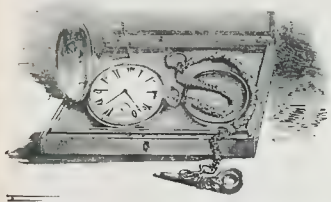
THE ALLIANCE RIBBON.

This tasteful commemoration of the union of England and France in the vigorous prosecution of the war with Russia, is displayed in the Paris Universal Exhibition, where the visitors have the gratification of seeing

THE ALLIANCE RIBBON, IN THE PARIS EXHIBITION.

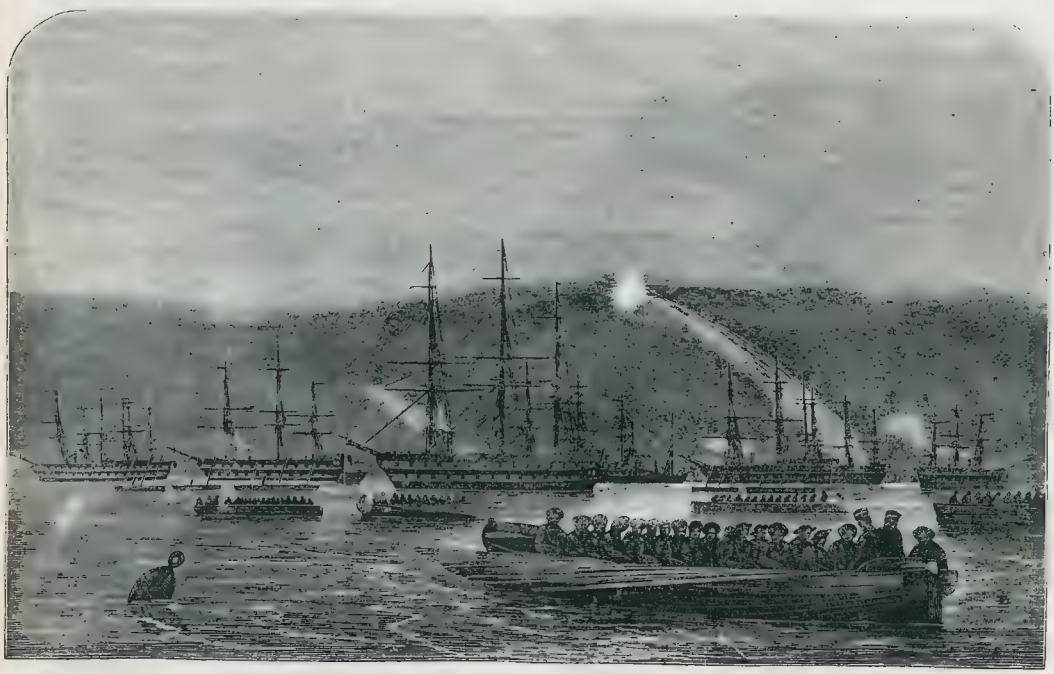
the Ribbon made in a loom worked by steam-power, by a workman in the employ of Mr. James Hart, of Coventry. The ribbon was designed by Mr. Pratt, and draughted by Mr. Robert Barton. It represents Queen Victoria and the Emperor of the French. Our Queen is placed under the tricolor; Louis Napoleon is placed under the union-jack; surrounded with the arms of both nations and wreaths of flowers, the words in English and French underneath, "May God bless the Alliance." The Ribbon has attracted considerable attention, as a proof of the advancement made by this country in her appliance of steam power to arts and manufactures.

The loom makes two ribbons at the same time—one in black and white, the other in brown and white. Each ribbon is made by a double row of shuttles—one to make the ground-work, the other to form the ornamental part. At the top of the loom are placed two 900-Jacquard-machines, containing hooks, needles, and springs. To each hook is suspended a long thread of lustring, which passes through a small hole drilled in a compass frame. At



WATCH FOUND IN PRINCE MENSCHIKOFF'S CARRIAGE, AFTER THE BATTLE OF THE ALMA.—(SEE PAGE 450.)

GUN EXPERIMENT IN A RUSSIAN PRI



ADMIRAL DUNDAS MAKING NIGHT SIGNALS OFF CRONSTADT SKETCHED BY J. W. CARMICHAEL.—(SEE PAGE 450.)

OAT BEFORE CRONSTADT, SKETCHED BY J. W. CARMICHAEL.—(SEE NEXT PAGE.)

the end of the lustring is tied a leash made of very fine patent thread, in the middle of which is fastened a small brass eye, very similar in appearance to the eye of a large sewing-needle. At the bottom of the leash is attached a small lingoe made of lead, to keep it in its proper position. The silk thread, of which the ribbon is composed, passes through the brass eye of the leash into a very fine dent of a steel sley, close to the shuttles; this is so fine as to require sixty dents to make one inch in width of the ribbon.

The cards which form the pattern hang on either side of the loom, supported by large iron cradles. These cards work round a cylinder which is full of holes. The holes in the cards, which correspond with those in the cylinder, are intended to admit the point of the needle to enter; by this means, the hook to which the lustring and leash are suspended, is pressed by a small brass-wire spring, which is fixed in a box at the side of the machine, on to a grating, or knife, which raises the thread intended to admit of the shuttle to pass under it.

There are 1824 hooks, needles, and springs; 3648 threads of silk, and 5056 cards and shutes of the shuttles, required to make the entire pattern.

CUTTING-OUT EXPEDITION IN THE BAY OF KOVITSKA, FINLAND, SKETCHED BY AN OFFICER OF THE "NILE."—(SEE NEXT PAGE.)

MENSCHIKOFF'S WATCH.

It will be recollected that among the spoils of the Battle of the Alma was the carriage of Prince Menschikoff, in which was found his Highness' watch and chain. They are of fine gold, and the watch is of Parisian make; they have been deposited, with several other spoils received from the Crimea at the Home for Children, lately established at Hounslow by the Central Association in aid of the Wives and Families of Soldiers engaged in the present War. Under a sub-committee consisting of the assistant-secretary, one of the auditors of the Association, and a lady who acts as honorary superintendent, the Home has been so organised as to form an excellent nursery for forty children. The Committee invite the inspection of all who feel interested in the welfare of the children of those gallant men whose heroic exploits at the seat of war are now filling every newspaper and employing every tongue. By an admirable arrangement, the charge of the children in the Hounslow Home has been committed to soldiers' wives, specially selected for this duty from among the thousands to whom the Central Association has been extending relief since the commencement of the war. The Home has thus a double interest, and will well repay a visit. The playgrounds and gymnastic poles show the very proper desire of the managing committee to lay a foundation of sound health and bodily vigour where, naturally, the seeds of disease, want of wholesome diet, and irregular living, are sadly evident. With many of the recent arrivals from Malta and the Mediterranean this is, in fact, the first imperative duty, but about half the number of children are sufficiently old and healthy to be sent to the neighbouring barrack school, into which, by the kind permission of Colonel Unett, 3rd Light Dragoons, they are received for instruction daily.

We take the opportunity to state that this Association, the only one affording relief to the wives and families, motherless children and dependent relatives, of the gallant defenders of our country, now numbers on its books upwards of 7000 soldiers' wives and nearly 14,000 children In the midst of our rejoicings for victory these facts cannot be too extensively published.

SKETCHES IN THE BALTIC FLEET.

The two Sketches engraved upon the preceding pages are among the results of Mr. Carmichael's recent visit to the Baltic. The larger Illustration represents Captain Boyd showing an experiment to Admiral Dundas, and the other officers of the North Division of the Baltic Fleet. The operation was briefly as follows:—Captain Boyd and Captain Codrington proceeded to place one of their lower-deck guns in a Russian prize-boat; the gun, by means of sand, was put athwart-ships, being slung at an angle of thirty degrees elevation. When fired, the shot was thirty seconds in the flight, and reached a distance of 4300 yards; and with this gun the experiments terminated, it having pitched shell into the north side of Cronstadt.

The second Illustration—a night scene—shows Admiral Dundas making signals off Cronstadt.

CUTTING-OUT EXPEDITION IN THE BAY OF KOVITSKA, FINLAND.

(From a Correspondent.)

This spirited affair was recently undertaken by the ships' boats of the *Nile*, *Pylades*, *Arrogant*, and *Centaur*, accompanied by the gun boats *Hecla*, *Ruby*, *Wasp*, and *Magpie*. This Sketch shows the boats, under command of Commander Price, of her Majesty's ship *Nile*, cutting out the vessels in the bay, amounting altogether to the number of nineteen. Our brave seamen are repelling the fire of the enemies' riflemen, who are said to have been present under cover of the woods to the number of three thousand. On each side the boats are flanked by two gun-boats. The enemy, on seeing the boats approach, immediately opened a brisk fire, but the showers of round-shot and shell from our vessels speedily dispersed them; and, strange to say, without loss of a single life on our side. The loss of the enemy must, it is believed, have been considerable. The entire arrangements reflect the greatest credit on Captain Mundy, and not less on his senior officer.

EXPERIMENTAL OBSERVATIONS ON AN ELECTRIC CABLE.

At the late Meeting of the British Association at Glasgow, Mr. Wildman Whitehouse presented the following paper, which will be read with interest in connexion with the Illustrations and descriptive details in the Illustrated London News of last week:—

After referring to the rapid progress in submarine telegraphy which the last four years have witnessed, Mr. Whitehouse said, that he regarded it as established fact that the mechanical and engineering difficulties had at first existed had been already overcome, and that the experience gained in submerging the shorter lengths had enabled the projectors to provide for all contingencies affecting the greater. With this view, a glance at our maps of creation on the face of the world, at the chain which encircles us from our colonies and dependencies, as well as from the vast continents of India and Australia, awakens at once in the mind the inquiry—"Are these remote families of the earth (or rather parts of our own family) accessible by telegraph? and if so, is there to be for ever denied the advantages which we enjoy?" The world is ready, and society is eager, for its unlimited extension. Public interest is awakened; nations are stirring; and in America as in England, capitalists are not wanting who are ready to aid in the stupendous work of ocean or a Transatlantic line. They wait only for an answer to the question—Can it be proved to be practicable, commercially practicable, and capable of working at such a speed as will admit of messages being sent at a low tariff? The author then drew the attention of the section to a series of experimental observations which he had recently made upon the Mediterranean and Newfoundland cables, before they sailed for their respective destinations. These cables contained an aggregate of 1125 miles of insulated electric wire, and the experiments were conducted chiefly with reference to the problem of the practicability of establishing electric communications with India, Australia, and America. The results of all the experiments were recorded by a steel style upon electro-chemical paper by the action of the current itself, while the paper was at the same time divided into seconds and fractional parts of a second, by the use of a pendulum. This mode of operating admits of great delicacy in the determination of the results, as the seconds can afterwards be divided into hundredths by the use of a counter, and the results are all under the same facility as a barometric observation. Enlarged facsimiles of the electric autographs, as the author calls them, were exhibited as diagrams, and the actual slips of electro-chemical paper were laid upon the table.

The various effects of electricity on the current were succinctly displayed; and contrasted with these were other autographs showing the effect of forcibly discharging the wire, by giving it an adequate charge of the opposite electricity, in the mode proposed by the author. No less than eight distinct four-line messages were in this way transmitted in a single second of time through the same length of wire (1125 miles), through which a single current required a second and a half to discharge itself spontaneously upon the paper. Having stated the principle adopted to guard against error in the observations, the details of the experiments were then concisely given, including those for "velocity," which showed a much higher rate attainable by the magneto-electric than by the voltaic current. The author then recapitulated the facts, to which he specially invited attention. First, the rate of testing velocity by the use of a voltaic current divided into two parts (a split current), one of which shall pass through a graduated resistance-tube of distilled water—and a few feet only of wire, while the other part shall be sent through the long circuit, both being made to record successively by adjacent styles upon the same slip of electro-chemical paper. Second, the use of magneto-electric "twin currents," synchronous in their origin, but wholly distinct in their metallic circuits, for the same purpose, whether they be made to record themselves direct upon the paper, or to actuate relays or receiving instruments which shall give contacts for a local printing battery. Third, the effects of induction, retardation of the current, and charging of the wire, as shown autographically; and, contrasted with this—Fourth, the rapid and forcible discharging of the wire by the use of an opposite current; and hence—Fifth, the use of this as a means of maintaining, or restoring at pleasure, the electro equilibrium of the wire. Sixth, absolute neutralization of currents for the time of reversal. Seventh, comparison of working speed attainable in a given length of wire by the use of repetitions of similar voltaic currents, as contrasted with alternating magneto-electric currents, and which, at the lowest estimate, seemed to be seven or eight to one in favour of the latter. Eighth, proof of the coexistence of several waves of electric action of opposite character in a wire of given length, of which each respectively will arrive at its destination without interference. Ninth, the velocity, or rather amount of retardation, greatly influenced by the energy of the current employed; other conditions remaining the same. Tenth, no adequate advantages obtained in a 300-mile length by doubling or trebling the mass of conducting metals. The author, in conclusion, stated his conviction that it appeared from these experiments, as well as from trials which he had made with an instrument of the simplest form, actuated by magneto-electric currents, that the working speed attainable in a submarine wire of 1125 miles was ample for commercial success. And may we not, he added, fairly conclude also that India, Australia, and America, are accessible by telegraph without the use of wires larger than those commonly employed in submarine cables?

WAR AND FINANCE.

The drain of bullion, and the consequent rise in the rate of discount, have created considerable uneasiness among the mercantile community. Of the English loan of £16,000,000 the Chancellor of the Exchequer has already received £11,974,000, which leaves a balance to his credit of £4,026,000 for the ensuing quarter, when the whole of that fund will have been absorbed. A new loan will be indispensable to continue the war, for we are now disbursing at an average about 110 millions per annum, which cannot be supplied by taxation. Although we have a resource in the mines of California and Australia unknown during the last war, our stock of bullion is liable to violent fluctuations, and it has recently escaped in large quantities. This state of things has alarmed the City Editor of the *Times*, who, in his impression of Friday the 5th, says:—"The question whether the war expenditure is beyond the means of the country must, therefore, be boldly met. If it be upon a scale to involve a permanent drain of gold there is no alternative but to lower it, or to prepare ourselves for that mitigated form of national bankruptcy which consists in a suspension of specie payments." The writer then proceeds to comment on what he designates "the *artificial* operations of the Bank of France in drawing gold from this side," and accuses that establishment of "purchasing gold at a price above its *natural value*." The phrase "natural value" is curious. With all deference we would ask, what is the natural value of a quarter of wheat, of a ton of iron, or of a hogshead of sugar? Is not gold a commodity, in precisely the same sense as those articles? and if they have a market price is no alternative but to lower it, or to prepare ourselves for that mitigated form of national bankruptcy which consists in a suspension of specie payments." The writer then proceeds to comment on what he designates "the *artificial* operations of the Bank of France in drawing gold from this side," and accuses that establishment of "purchasing gold at a price above its *natural value*." The phrase "natural value" is curious. With all deference we would ask, what is the natural value of a quarter of wheat, of a ton of iron, or of a hogshead of sugar? Is not gold a commodity, in precisely the same sense as those articles? and if they have a market price, why should not gold have its market price? The City Editor of the *Times* seems to think that our arbitrary Mint price, fixed by Act of Parliament, is identical with what he calls the natural value of gold; in other words, that it ought never to be worth more nor less than £3 17s. 10½d. per ounce; and, so far as our legislation goes, he is right; for, by the 18th section of the 56th of George III., cap. 68, whoever gives more or less for our gold coin, "shall suffer imprisonment for the term of six calendar months, and shall find sureties for his or her good behaviour for one year more, to be computed from the end of the said six months." The penalty attached to a second offence is a year's incarceration; and, for any subsequent offence, the term of imprisonment is extended to two years. This is a beautiful illustration of Free-trade, and of that maxim which teaches us to buy in the cheapest and sell in the dearest market. However, the Directors of the Bank of France, having no fear of our statute, offered more than our Mint price, and thus abstracted our sovereigns. Of course the operation may be repeated by Louis Napoleon, who seems to have small respect for the teachings of a certain school of political economy, for he has just issued a decree fixing the price of butchers' meat in Paris, ingeniously dividing joints of beef into three categories, and those of mutton into two; and, with true gastronomic discrimination, he has ordained that the *filet de bœuf* (under-cut of the sirloin), when detached, shall be considered as *viande de luxe*; and therefore it is exempted from the fixed price.

Gold leaves this country when its market price abroad exceeds its Mint price at home. The only mode of retaining it is by allowing it to rise above the Mint price among ourselves, and reach its market price. We beg those of our readers who are terrified at a drain of bullion to reflect on the following passages, which we have extracted from the speech delivered by Mr. Canning in the House of Commons, on the 8th of May, 1811. Referring to Mr. Vansittart, then Chancellor of the Exchequer, the great statesman said:—"If he will consent to let guineas go for what they are worth in the market he will have a gold currency; he will prevent the exportation of our coin. " " That by no other possible means the coin of the country can be retained in circulation, so long as the precious metal of which it is composed is intrinsically of a value so much higher than that at which it is estimated in our currency, is a position of which all experience, as well as reason, establishes the truth. The present state of the law in the present state of our currency operates, in fact, as a bounty upon the exportation of coin. " " Independently, however, of these causes, the difference between the real value of the precious metal and that at which it is rated in our currency, would be itself sufficient to ensure us against the continuance of a guinea in circulation. Demand on the Continent might be counteracted by a demand here; and gold would cease to be a preferable article for transmission abroad, from the moment at which it, like other articles, could be sold for its real value at home. But, *its prisoned in the coin*, and *degraded by its imprisonment*, gold has an unconquerable tendency to escape from a situation so unnatural; and it would make its escape from such a situation, even although you did not owe the Continent anything, and although there were no more demand on the Continent for gold than for any other merchandise."

The ordinary phrase "gold coin is always worth £3 17s. 10½d. per ounce," is more frequently uttered than understood; and the uninitiated regard the formula as concealing some occult mystery. When our ordinance of coinage was enacted in the third year of the reign of George I., for the regulation of the Mint, one ounce of gold was computed to be equivalent to fifteen ounces of silver. The ounce of silver was put at 5*s.* 2*d.* in our monied denomination; to ascertain the relative value of an ounce of gold at that time it was only necessary to multiply 5*s.* 2*d.* by fifteen, which gives £3 17*s.* 6*d.*; since that date greater accuracy has shown that the ounce of gold is worth a fraction more than fifteen ounces of silver, that fraction being expressed by 3*d.* in money: hence the Bank buys gold at the rate of £3 17*s.* 9*d.* per ounce. Now this rule of proportion between the two metals, which resolves itself into the different amount of labour required to extract an ounce of gold or an ounce of silver from the mines, is absurdly called the "standard of value," that is, the standard of universal value, while it only shows the relation between two commodities, taking no notice whatever of *all* other commodities, whose values this rule of proportion affects to determine. It is to maintain this grotesque dogma that an ignorant legislation has arbitrarily fixed the price of gold in our coinage; the consequence of which is that when gold is worth less in the markets of the world than £3 17*s.* 9*d.*, the Bank of England is, nevertheless, compelled to buy it at that price; and, on the contrary, when it is worth *more*, that price cannot be raised in our country.

We must now return to the City Editor of the *Times*, having so far attempted to sweep away the popular delusion which has grown out of the arbitrary assumption of Mr. Huskisson, that it is the essence of money to possess intrinsic value. This hypothesis has been accepted as true without proof, and almost without inquiry; but it is a mere *petitio principii*, a naked begging of the question. Were it true, mankind ought not to have commenced their industry by agriculture, but by mining; and, till they had discovered a store of gold and silver, they ought not to have departed from direct barter. The City Editor offers us one of two alternatives, either to curtail our war expenditure, in other words to render the war inefficient, "or to prepare ourselves for that mitigated form of national bankruptcy which consists in a suspension of cash payments." Does the writer mean to affirm that England was a bankrupt nation from 1797 to June, 1817, when sovereigns were first coined of 5 dwts. 3 grains, to supersede guineas? If so, then must there be great strength in bankruptcy; for we fitted out armies and fleets which defended our coasts against the world in arms, and no foreign flag waved in triumph over our fields. We wisely trusted to steel and iron: had we depended on gold, we should have been a province of France. Let the City Editor take heart by reading the following passages extracted from the speech delivered by Lord Castlereagh in the House of Commons on the 8th May, 1811:—

We should never forget that this measure (the suspension of cash payments in 1797), by supplying the country with a circulating medium of undoubted credit proportioned to its wants, has, for the first time, solved the problem of reconciling national prosperity with a state of war. In former contests the country invariably declined in its commerce, in its revenue, and even in its industry. In this war, whilst our exertions, both by land and sea, have in extent surpassed all former efforts, the country has risen in manufactures, internal improvement, revenue, and commerce, with a velocity which has never been experienced in a period of profound peace. In the American War its inevitable termination might be calculated upon from the decline of our resources. In this war we feel that our resources are augmenting, and that there is no necessary limit to our exertions in point of time, so long as the injustice of the enemy shall leave us no other rational choice than perseverance in the contest.

History was written for our instruction, and, if we follow its lessons, we need not be alarmed at the efflux of bullion. For too long a period we have made it our master, instead of treating it as a servant. As a commodity it is infinitely less serviceable than coal or iron, though human folly has made it the aristocrat of metals. Wisdom, it is true, is of slow growth, both with individuals and nations; but let us hope that the time is not distant when the worship of insentient matter will cease, and when industry will emancipate itself from the cunning yoke of Bullionism.

LORD PALMERSTON ON THE WAR.

(We conclude, from page 428, our report of Lord Palmerston's reception at Romsey.)

Lord Palmerston, on rising to reply, was enthusiastically cheered. The noble Lord (who spoke from his carriage) said—Mr. Mayor and gentlemen, on behalf of Lady Palmerston and myself, I beg to return you our most cordial and sincere thanks for the kind reception which we have met with on this occasion upon our return to Romsey. It would have been most gratifying to me to have been so received at any town in this great and mighty kingdom, but it must be peculiarly gratifying to meet with such a reception in the place to which I am bound by so many ties of personal intercourse, of local interest, of long-established family connection; and I may be permitted to say, adverting to what has just fallen from you, to which I am bound by community of office with those whom I have now the honour to see before me. The occasion which has assembled us together to exchange mutual congratulations is one, no doubt, of the most remarkable and imports at which has happened in late and recent times—I mean the capture of Sebastopol (Loud cheers). It is an event which all Englishmen may be proud (Cheers). It is an event on account of which our allies the French, the Sardinians, and the Turkish nation—may also be proud (Hear, hear). It is an event which must inspire joy and exultation in the breast of every generous free man on the surface of the globe (Cheers). We have been told by the commander of the Russian army, that in evacuating the town of Sebastopol he left nothing to the Allies but "blood-stained ruins;" and, no doubt, as far as depended upon him—as far as time allowed—as far as his means of destruction extended, it was his intention to leave nothing else to the victorious enemy. But, although in retiring, he blew up fortified works—although he exploded great magazines of powder—although he destroyed everything that could be burned within the time allowed for his remaining stay, yet we know that, when the Allies entered the town, they found among its blood-stained ruins no less than 4000 pieces of cannon, an immense quantity of powder, an enormous amount of cannon-balls and shells, and materials of various kinds, necessary for the prosecution of war (Hear, hear). Well, gentlemen, what does that teach us on reflection? Why, does it not show the vast importance which the Government of Russia attached to that stronghold of Russian power in the Black Sea? (Cheers). Why was that vast accumulation of warlike material made, more than could have been required for the most prolonged defence of the place? Why was it that elements were there accumulated for supplying great armies and for furnishing great fleets? Why, it was because they felt that in Sebastopol was the stronghold of their power in the East—that from that centre was to radiate that intense and extensive power which was to lead them to the conquest of Constantinople, and to lead them from that centre of empire to sway the destinies of Europe (Great cheering). Well, then, gentlemen, that, I think, affords a satisfactory proof of the sound judgment which was exercised by her Majesty's Government in directing against Sebastopol the great power of our army and navy in the Black Sea (Hear, hear). There were those, and some of them no mean judges either of international or of military and naval affairs—there were some, I say, who thought we ought to have sent our armies—I mean that England and France ought to have sent their armies—to the continent, to scour the Principalities, invade Bessarabia, and pursue the vanquished and retreating Russian armies—for vanquished and retreating they must have been if our armies had landed and attacked them (Cheers)—through the Steppes and great wildernesses of Southern Russia. Why, if we had done so, what practical result would we have achieved equal to what we have accomplished in the capture of Sebastopol? Then, if we had adopted that course, we should have defeated army after army, but army after army would have been replenished by the successive hordes issuing from the north, and at last we should have found nothing but vast solitudes and extensive plains, from which we should have been compelled ultimately to retire, without having in our hands the pledge of future security (Cheers). Well, then, gentlemen, we have heard much of the siege of Sebastopol, and of the gallant defence of the garrison which held that town; and I may be permitted to say that, in the proper sense of the word, there has been no siege at all, and that Sebastopol has not been defended by any garrison. Why, a garrison means a comparatively small military force, which, shut up within the walls of its own fortress, defends itself against a vastly superior army. A siege means an operation which is conducted by a superior force investing such a fortress, cutting off its communication with the rear, and, by approaches which are familiar to military men, at last make a breach in the defences, and then, by bringing superior numbers against the inferior amount of the garrison, overwhelming them, as must be the case in so unequal a struggle (Cheers). But that which has happened in the Crimea has been a transaction of a totally different kind. The Allied armies of England and France, assisted from the beginning by a portion of the Turkish forces; assisted materially by the brave Sardinians—a body of troops worthy of admiration by all for their discipline, their skill, their science, their good order, and their bravery—that Allied army has for twelve months—I was going to say twelve long months, and long I must call them, although twelve months be a short period of historical time, yet it has been pregnant with so many events, that it must be long in occupying its page in the history of Europe that Allied army has during that period not been besieged, but has been attacking a single garrison, it has been fighting the entire military forces of the Russian empire (Loud cheers). We have been contending not merely with an army in the Crimea, equal and sometimes superior to our own numbers, but I say it without exaggeration, we have been contending with the entire resources of that vast military empire—an empire which devotes a great part of its revenues to the maintenance of an enormous standing army—an army which they call a million of men, but which may be set down at 600,000, or even 800,000 men. Well, gentlemen, almost the whole, or the greater portion, of that force was set free from the Baltic to the Euxine by the neutral position of those Powers which border the European frontier of Russia (Hear, hear). Russia had nothing to fear from either Austria or Prussia (Hear, hear); she was, therefore, at liberty to send down to the Crimea and defend Sebastopol, and drive our armies, as she vainly boasted she could do, into the sea (Hear, hear). She had nothing to prevent her sending division after division—army after army (the garrison of Poland and the garrison of St. Petersburg—in fact, every man whom she could manage to feed at so distant a place (Hear, hear). She had no danger on her frontier to prevent her reinforcing the Crimean army, and replacing with new levies the losses she had sustained in battle (Hear, hear). I say, therefore, that our army has not conducted what is commonly called a siege—that it has not conquered what is properly called a garrison—but that we have been fighting in the Crimea a battle against the whole military resources of Russia, the armies of Russia being intrenched in a position strong beyond measure by nature, strengthened by all the resources of art and all the contrivances of skill and science, and that in that twelve months' struggle deeds of valour have been performed by our troops—by the British and French troops—deeds of heroism which will live to the memory of the latest posterity, and which will do immortal honour to the people of the two countries (Loud cheers). It is, gentlemen, the fashion with many to say that war is the greatest of all calamities. Now, war undoubtedly is a great calamity, but there are evils greater than war. There are the evils which spring from the success of grasping ambition, from triumphant violence, and from wrong and misrule over men. In all times, in all ages, and in all countries, those nations, which have possessed the qualities which elicit love to the human nature, have felt that these evils were evils greater than war, and they have been prepared to encounter the calamities of war, however great they may be, rather than submit to the still greater evils which I have just pointed out to you. And so it is with the people of England now. So it is with our noble neighbours the people of France; and I believe that if the nations of the Continent were to determine the course which they were to pursue simply according to their own sentiments and feelings, there are countries which are now resting in an inglorious neutrality that would join the Alliance, and do honour to them and the cause. (Cheers.) Well, gentlemen, every war is, no doubt, a calamity; but the course of the present war has brought its evils as little home to the people of this country as was possible, consistently with the nature of things. Our enemy has seen his arsenals in the Baltic flaming and blazing to the sky (Hear, hear). Our enemy has seen that great fleet, nearly twenty-eight or thirty sail of the line, for which the revenues of the country were squandered, and for which crews were consecrated, and, to make those

crews efficient, they were taught during the icy rigours of winter to mount fictitious masts, erected in their barrack-yard, and to imagine they were climbing up the rigging of the fleet (a la-gh); they have seen that fleet conveyed to ignominious safety in its harbour and in its docks, not daring to face the Allied squadrons, which, allow me to say, never were superior in numbers to the Russians, however superior in other respects on which victory depends (Cheers). They have had the mortification of seeing that all that expenditure and trouble was fruitless when the moment came in which a fleet might ever be useful. They have seen the Baltic locked up, and abandoned, during that state of things. They have had their commerce crippled and greatly reduced. In the Black Sea they have seen a fleet which not long ago proudly swaggered over the waves of the Euxine, and whose most glorious achievement was the barbarous outrage of Sinope (ironical cheers). They have seen that fleet, not captured in an open battle, or yielding after a brave resistance to a superior force of antagonists, but sinking under the hand of its own commanders, and leaving nothing but their pennants standing out of the water as marks of the degradation to which they have been subject (Cheers). They have seen this great arsenal of which they were so proud, but of which they were so chary that no paying stranger was ever allowed to enter its walls, so that the only Englishman that has ever gotten an account of it was compelled to flat his way within its gates disguised as a peasant and covered over in a cart full of hay (a laugh)—they have seen, I say, this great arsenal, which they so studiously kept from the eyes of jealous strangers, exposed, not to the eyes, but to the possession, of an enemy, after having vainly endeavoured for twelve months to defend it (Cheers). Gentlemen, we have no doubt, in many respects, felt the unavoidable pressure of war; but those wild raging fires that have lit the arsenal of Russia have reduced themselves simply to those of the extinguished lights which accompany the evening rejoicings of a town, and the only noise of cannon which has echoed in our ears has not been the cannon that has shaken the walls of Sebastopol, but those occasional harmless discharges which are the tokens of national rejoicing (Cheers and laughter). Wel., then, gentlemen, I trust and hope that a cause which has been so ably supported a cause which is so nobly defended must prosper in the end as it has prospered in the beginning; and I may say there is hardly an instance in history of an army which, in a single campaign—for it is only, so far as we are concerned, a single campaign has been attended with such great and important results We are presenting to the world one of the noblest spectacles which it is possible for nations to exhibit (Cheers). Here are the two greatest nations of the world—I say it without vanity and without exaggeration, but without one particle of diminution—I say the English and French nations, which stand at the head of everything that dignifies human nature (Cheers), are presenting to the world the noblest possible spectacle of two great people casting into the shade of oblivion all their former jealousies, rivalships, and extinct animosities, uniting for a purpose generous, and, so far as any sordid motives are concerned, entirely disinterested—looking for no trumpery profit or gain, territorial or otherwise, for themselves; but seeking simply to establish for themselves the liberties of the world in which they are so deeply interested on a solid and permanent foundation, making vast sacrifices, not mainly for abstract principle, but from a sound political view and consideration of things:—I say these two nations present the noblest spectacle that the history of the world has ever, up to this day, exhibited (Cheers) For we have seen great combinations made for purposes of conquest; but a combination made for a purpose like this, so honourable to the two, has seldom, if ever, been witnessed in history. And we have seen the armies of two nations, which had learned face to face in the battle-field to hate each other with respect, fighting side by side, and knowing more intimately the qualities of each; and we have seen them change their feelings, and convert what was formerly respect into enthusiastic admiration (Loud cheers). Well, then, gentlemen, I say ill would it become any man in the situation which I have the honour to hold (Cheers) to talk of the future and to advert to prospective measures; but this I think I am well warranted in saying—viewing the manly and unflinching spirit which animates the people of this country—viewing the generous support which Parliament has given to the Government in every measure connected with the prosecution of the war—viewing the perfect good faith and undeviating constancy of purpose which animates our great ally the Emperor of the French (cheers)—viewing the sympathy which our cause excites among the people of every free country in the world, even in places where mistaken views of interests, as, I think, lead their Governments to a different course—viewing also the justice of our cause, which entitles us to look for the protection of Providence on our exertions:—I say, viewing all these things, I am confident we may look to such a result of the contest in which we are engaged as may place the future liberties of Europe—as may place the interests—the main and permanent interests of the countries which are now allied—upon a sure, stable, and lasting foundation (Loud cheers). Gentlemen, I beg again to thank you for the great honour you have done me in the reception which we have this day received, and I assure you that such testimonies coming from you, however they may belong mainly to the great event which we are called on to celebrate, I cannot refuse to accept as in some degree evincing friendly and kindly sentiments towards my lady and myself; and I again cordially thank you for your respect, and I beg to wish al. prosperity both to yourselves and the town of Romsey (Loud and prolonged cheering).

Dr. Beddome then proposed three cheers for Lady Palmerston, which were heartily given, and her Ladyship gracefully bowed her acknowledgments Three cheers were also given for his Lordship; and, on the motion of the rev the Vicar, the proceedings concluded with three cheers for the Queen.

In the evening his Lordship entertained the Mayor and the members of the Town Council at dinner, at his seat at Broadlands. A number of the principal inhabitants dined together on the occasion at the White Horse, and in the evening the town was illuminated.

REDAN MASSEY.—A YOUNG HERO.—The following is an extract from a letter of an officer of the Light Division.—"Sebastopol, Sept. 18.—By the way, I must give you the history, in a few words, of a few hours in the life of a hero, and, depend upon it, of a future great man if he lives. He is in the next regiment to us, and I have the details from a wounded sergeant of ours who lay next him during the day and night of the 8th. I allude to young Dunbam Massey, of the 19th—I believe the youngest officer of the Army. He is now known as 'Redan Massey,' for there are three of the same name in the regiment. The noble boy, in the absence of his captain, led the Grenadier Company, and was about the first man of the corps to jump into the ditch of the Redan, waving his sword, and calling on his men, who nobly stood by him, till, left for nearly two hours without support, and seized by a fear of being blown up, they retired. Young Massey, borne along, endeavoured to disengage himself from the crowd, and stood almost alone, facing round frequently to the batteries, with head erect, and with a calm, proud, disdainful eye. Hundreds of shot were aimed at him, and at last, when leading and climbing the ditch, he was struck and his thigh broken. Being the last, he was of course left there. Now, listen to the noble boy's conduct all around him. As evening came on the Russians crept out of the Redan and plundered some of the wounded, at the same time showing kindness and in some cases giving water. Men, with heads shot, frequently raised themselves to see the body of young Massey. One fellow took away his haversack. Sometimes he feigned death. At other times the pain of his wound would not permit him. A Russian officer, with a drawn sword, came to him and endeavoured to disengage the sword, which the young hero still grasped. Seeing that resistance was in vain he gave it up. Russian amidst gently and compassionately on him, fascinated, probably, by his youth, and by his bold, unfaltering glance which met his. When the works of the Redan were blown up in the night by the retreating Russians the poor boy had his right leg fearfully crushed by a falling stone. He was found in the morning by some Highlanders, and brought to his regiment almost dead from loss of blood. Great was the joy of all at seeing him, as he was about to be returned as "killed" or "missing." "Dangerously wounded" was substituted, but he is now doing well."

A BRICK OF A BARON.—The following epistle is copied from the columns of the *Hobart Town Courier*, addressed to the editor of that journal:—"Gentleman,—As G— made me, I feel ai. n a heap, having just read the letter in your journal of to-day, published in the *Sydney Morning Herald*, and written by one who signs himself an 'Irish American Colt.' The Lord preserve us! Some one has replied to the same in the most praiseworthy manner. I can't talk; but, whoever the Colt is, big or little, old or young, I'll fight him, anyhow, anywhere, or anyone that will take his part. Before I do so, to show I am in earnest, I subscribe to the Patriotic Fund the amount of the inclosed cheque (£20). The small amount you will please to hand over to W G. Kilston, Esq., treasurer; and I sincerely hope the brute I want to see will make his appearance as soon as possible, or I will wait upon him in Sydney if he is afraid of treating this despicable figure in Hobart-town.—Yours respectfully, F. OLDHAM, Hobart-town." All honour to the manly, honest soul of Peter Oldham! Who shall say that chivalry is extinct? May heaven bring the quarrel to a speedy issue—and God defend the right!

A robbery of great audacity was perpetrated the other night at the French Exhibition. A handsome meerschaum pipe, artistically carved, and which had been purchased by the Emperor, was removed from under the glass globe in which it had been placed.

When the King of Prussia passed through a small town near Coeln, the clergy presented to his Majesty a glass of fine wine, with the observation, "The sentiments of the inhabitants around here are as pure as the wine in this glass." The King thanked the clergyman, and raising up the glass to the light to admire the fine colour of the wine, added, "I must suppose that it is not of the vintage of 1848."

CHESS.

TO CORRESPONDENTS.

EXERCISE, Lynn Club.—If we understand the point at issue, it may be expressed thus:—In a Game by Consultation, both parties being in the same room, Black play a Rook to King's Bishop's third, but by mistake announce the move to their opponents, as Rook to Queen's Bishop's third, where, there being already a Pawn standing on that square, it could not go. White thereupon contend that they can compel Black to move their Rook or else play the Rook to some other square, that being the penalty appointed for a false move. The question asked is, Can White legally inflict such penalty? *We are clearly of opinion that White are not justified in exacting any penalty.* The rule to cite which the original rules do not touch, they provide for a *bygone* minute, but not for a *bygone league*; and until we have some regulations framed for correcting games by consultation, faulty of this description must go unpunished. [We see that which may be proper course, the players must special rules for themselves before playing

SIDNEY. 1. The Rev. Mr. Lowesby was not, we apprehend, the inventor of the Indian Problem; but he had some land, undoubtedly in adapting it to the European mode of play

C. R., Glossopread, Sheffield.—The Lyceum Institution no longer exists. Apply to Mr. W. Short, of the Athenæum

P. Y. R.—You will find precisely the same position occurs in the "Rook's Pawn Gambit." See p. 399 of the "Handbook," where the best mode of play is shown.

MALTA.—A player who touches one of his men when it is his turn to play, is bound to move it, unless, at the moment of touching it, he says, "*J'adoube*" (I adjust, or arrange), or words to that effect.

WATCHING.—Yes, are mistaken. Look at it once more

C. B. It would be better, perhaps, to retain them in hand a few weeks for repeated examination, before sending it to us

J. B.—Nothing ham—No. You have failed in both instances.

R. DE R.—A reply was despatched by post

ZETA.—The principle of the mate in the Indian Problem is now familiar to this country; but if ten years ago, when it first appeared here, you had solved it in less than ten minutes, you would have done what nobody else in England did, or perhaps could. As to No. 606, which you say is no Problem at all, we shall be glad to see the Solution you propose in three moves

F. S., Lisbon.—Mate cannot possibly be effected in Problem 603 in the way you suggest. for it is obvious that Black for his second move may capture the Q Kt Pawn, followed by Kt takes Kt and rescue. We must take this opportunity of protesting against our being subjected to heavy postage for communications of this nature. Surely, the least a correspondent can do who writes for information upon any point is to pay his letters

B. and S., Westminster.—In the Position stipulated, Black cannot take the Pawn, although, if the Pawn were not between his King and the Rook he would be in check.

W. C. C., Streatham.—They shall have due attention

B. H., Chatham.—The defence is somewhat feeble and irregular, but the game is not a bad one altogether, and we may perhaps find a corner for it one of these days

ARSACE.—1. The title of the new Chess Magazine is not yet. we believe determined on. 2. The Editor of the Vienna Chess periodical is Herr Falkner 3. The first series of "The Palamede" was conducted by La Bourdonnais—the latter part by St Amant

SOLUTIONS OF PROBLEM NO. 606, by Messrs. Bridges, C.M., A. T., Maxstoke, P. D., Geordie, Albert, Sulky, M. P., Dereven, are correct

SOLUTIONS OF PROBLEM NO 607, by Omega, P. P., Tackle, Albert, B. N. S., Argus, Philip, J. B. T., Box and Cox, Radley, Felix, Lucan, W. H. K., Dots, F. G., W. P., H. M., Dorchester, Gregory, F. T. S., Roberts, Smudge, are correct

SOLUTION OF PROBLEM NO. 607.

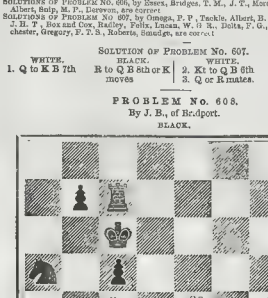
1. Q to K B 7th	R to Q B 8th or K moves	2. Kt to Q B 6th 3. Q or R mates.	Any move

PROBLEM No. 608.

By J. B., of Bridport.

BLACK.



WHITE.

White to play, and mate in three moves.

A CHESS SKETCH.

Our sketch is translated from an entertaining little book published some seasons back in Leipsic, and called the "Schach Almanach." The Pastor of a village named Rollendorf establishes among the simple-minded peasantry a Chess-club, which, in the course of time, is honoured by a visit from a neighbouring Baron—an estimable man enough, but overweeningly conceited as to his skill at Chess. He makes terrible havoc among the untutored and unpractised villagers, beating them all right and left, and overwhelming the humble fraternity with consternation and dismay. It happens opportunely, however, just prior to the great man's departure from Rollendorf, that a young native of the village, who has been many years absent, and is now settled as a Musical Director at Venice, makes his appearance, and hears of the humiliating defeat of his ancient comrades. He makes himself known to the Pastor only, and, having during his travels picked up some knowledge of Chess, determines at all risk to encounter the formidable Baron. They are accordingly introduced, and the Baron, conceiving him to be one of the members of the village club, prepares himself for another easy victory. They cast lots for the move; the Viennese gains it, and forthwith begins his game thus:—

WHITE (the Viennese).	BLACK (the Baron).
1. Q Kt to Q B 3rd	

Whereupon the Baron smiled significantly and played—

1.	P to K 4th
2. K Kt to K B 3rd	

At this move the Baron broke out, "My good young friend, what on earth are you going to do with those two Knights? Don't you see they must be attacked and driven back? and then your game will be lost before you dream of it. You should always play forward your Pawns first. There"—

2.	P to Q 3rd
3. P to Q 4th	Q Kt to Q B 3rd
4. P to Q 5th	

"I though," said the young man, very modestly, "I thought I should have time to play them afterwards." The game goes on.

5. P to Q 4th	
6. Q B to K Kt 5th	

"Ah, that's all very good," remarked the Baron, "if you could support the Pawn, but you will never be able to do so, as you'll soon discover, for your two Knights are in the way."

4.	Q Kt to K 2nd
5. P to K 4th	P to K B 4th

Baron: "That, again, is a very bad move. Don't you perceive you must now either exchange pieces or retreat? Do which you will, my game becomes developed to the disadvantage of yours"

6.	P to K B 3rd
7. Q B to K R 4th	

Baron: "Oh! If you play there, the Bishop's gone. You had better take back that move, my friend."

Viennese: "Thanks, Sir, but I never retract a move once made."

Baron: "As you please. It sounds well, though it savours a little of pride to say 'I never take back a move.' There then."

7.	P to K Kt 4th
8. K Kt takes K P	

Baron (after looking intentively at the position for some time): "Well that is the oddest piece of luck. Would you believe it? If I were now to take your Bishop I should absolutely be mated—mated, Sir, in three moves. I must take off the Kt."

8.	Q P takes Kt

Viennese: "Yes, if you had taken the Bishop, then the check of the Queen would have been obviously fatal."

Baron: "Egad, Sir, you don't play so badly as I thought you did. But I can't at all see how you can save the game after the loss of your Knight.'

Viennese: "At any rate, I shall say 'check.'"

9. Q to K R 5th (ch)	K to Q 2nd
10. Q B takes K Kt P	B to K Kt 2nd
11. K B to Q Kt 5th (ch)	K to Q 3rd
12. Q B to K 3rd	

Baron: "Back, Sir; further back with that Bishop."

12.	P to K B 5th
13 B takes K B P	

Baron: "Eh! what, another piece! Who ever saw a player fling away his men in this fashion? I shall take it of course."

13.	P takes B
14. P to K 5th (ch)	

Baron (after grave consideration): "Remarkable, indeed! you certainly have unaccountable luck. Do you know that if I were goose enough to take this Pawn with my Bishop, you could win my Queen. Fact I assure you. Look here: you would first give me check with your Kt, compelling me to capture your Queen's Pawn, and then you would play your Rook to Q square, giving check. Do you see? Fortunately, however, I can go with my King to Q B 4th, and escape all further danger. There, Sir"—

14.	K to Q B 4th
15. Kt to Q B 4th (ch)	K takes B
16. Q to K 2nd (ch)	

Here the great man pondered long, and seemed a little discomposed. At length, with affected gaiety, he looked up, and said, "You don't, I hope, delude yourself with the notion that you are going to mate me. Why, bless you, I can move my King to Rook's 4th, or even take the Knight, without any danger. If you will give away all your men, the attack must come to an end shortly. I shall take the Knight, *coute qui coute.*"

16.	K takes Kt
17 Q to Q B 4th (ch)	K to Q R 4th
18 P to Q Kt 4th (ch)	K to Q R 5th
19. Q to Q Kt 3rd (ch)	K to Q R 4th

20. P to Q R 4th (ch)	K to Q Kt 3rd
21. P to Q R 5th (ch)	K to Q Kt 4th
22. P to Q R 6th (ch)	K to Q R 3rd
23. P to Q R 7th	Mate!

Baron: "Ha! ha! Amusing enough. Your game went swimmingly. He played itself; I might have saved it easily, if, instead of taking the Kt, I merely moved my King; I intended to do so, indeed, in the first instance."

Viennese: "I beg pardon, Baron, but I thought when I examined the position at that time it appeared as if you would have been mated in fewer moves if you had not taken the Kt. Shall we put up the men and play out the game from that point?"

Baron: "No, no; I'll have no more of it. I'm heartily glad its over. I've played too many games to-day, and have got a terrible headache."

THE THEATRES.

DRURY LANE.—The reopening of this theatre with a new drama by a living author, an Englishman, and lavishly illustrated with stage accessories, is an event of no ordinary importance. Spectacle, it was lately remarked by a *Quarterly* reviewer, is significant of dramatic decline; the critic giving for his example the fact of the spectacular adjuncts with which Dryden's plays were once produced. Now, Dryden was, at least, the best poet of his day, and benefited by the scenic decoration. In our day, this prodigal display of accessories has been reserved for revivals, and the living dramatist has seldom been regarded. The expense of the spectacle seems to have precluded the notion of any extra cost for the drama, and the risk attending a new production, in addition to such extravagant outlay, has hitherto proved too formidable a difficulty to be voluntarily encountered. We can readily conceive that spectacle, under such circumstances, may discourage by superseding the display of original genius; but, in the case quoted by the critic in question, the help thus rendered to a living poet must operate as a stimulus to dramatic creation. Mr. E. T. Smith has brought back the custom of the stage in Dryden's time, by producing a new and original piece, on which he has had the courage to exhaust all the resources of pictorial and archæological illustration. This fortunate play is on an Egyptian subject, and is called "Nitocris,"—its author is the veteran, Mr. E. Fitzball; and it was acted on Monday last to an overcrowded house.

"Nitocris" is a name by Herodotus and Manetho historically connected with the completion of the third pyramid; and hieroglyphically attested for that of a queen right powerful, who married either an Egyptian or an Athenian husband—in either case a slave—with whom she became desperately enamoured. In the drama, he is a young and noble chieftain, whom *Mesphira*, King of Egypt (Mr. E. F. Edgar), had conquered and taken captive Out of the love of *Nitocris*, sister of Mesphira (Miss Glyn) for this daring youth, arise what, in the author's programme, are called "mutual and antagonistical jealousies, love, ambition, and implacable revenge;"—nor is it expedient to set out the story more in detail. The treatment of the story is so simple as to merit the name of classical, and in each instance works itself into a final tableau for the curtain to fall upon. Of such tableaux there are five, all most effectively contrived. But the third is the greatest. *Tkirak* (Mr. Sullivan), the captive lover, resorts to a desperate mode of destroying the perfidious Ministers of the Queen;—no less than causing an overflow of the Nile into the crypts of Memnon, wherein all had been partaking of "the feast of Amity." This great scene, which has the authority of Herodotus for its accuracy, was further illustrated by the "ladies of the corps de ballet," who, under the direction of Miss Rosina Wright, executed the "Egyptian pas," with a quaintness and grace so well mingled, that universal applause was extorted. We have also here to accord to Mr. Kerr due credit for the invention of a new electric tinted light, which gave to the bodies suffering from the overflow a very picturesque appearance. Next came the most desert, the great pyramid by starlight, and spectral visions of the King and a dancing bull, whose "words are things." The temple of Karnak, both externally and internally, is then presented for the final tableau, in which is set forth the triumphal return of Egyptian forces from the battle; *Nitocris* and her wedded *Tkirak* being victorious. These two characters were well performed by Miss Glyn and Mr. Barry Sullivan, though the weight of the performance fell on the latter. The character of the Queen is indeed underwritten, such opportunities are given to the tragic actress to display either her force or her finesse; but she looked magnificently. Mr. Stuart was also powerful in the part of *Amenophis* the Monarch's premier, who leads the opposition to the hero.

The liberality of the manager in bestowing this large expenditure on a new and original drama merits the warmest commendation, and we hoped would have met with public encouragement. The scenery, which is both gorgeous and accurate, has been painted by Messrs. Cuthbert, Nicholls, Cooper, Gordon, and Aglio; to the celebrated Dykwyk we are indebted for the colossal idols and other Egyptian peculiarities, as well as for the costumes; and to Madame Louise for the very characteristic dances. Altogether the mounting was remarkably complete, and, indeed, has not been excelled by any previous exhibitions.

Some dispute after the performance arose with the gallery about the programme. Two bills of the piece had been published—one describing it as in six tableaux, and the other in five. In the first a grand coronation procession was sung, danced for the fourth act; but, after a private rehearsal on Friday, the design was abandoned, and the procession deferred to the end, thus making it to succeed, instead of preceding, the victory, as also to form the fifth act. In this manner all was done that was originally announced, though in a different place: it was hard to convince the gods, however, of the fact. Mr. Smith, Mr. Roxby, and Mr. C. Mathews had successively to explain; but it was evident they were not satisfied. A ballet divertissement concluded the evening's entertainment, which the eye was at once richly regaled. In his future efforts, Mr. Smith will probably engage a better poet; in his management we remark a gradual improvement—such as would be made by a man who, commencing a grand speculation under adverse circumstances, and with insufficient experience, has to work his way through difficulties, at first obscurely, but gaining light as he proceeds. It is evident that the public like to see such endeavours made by one of themselves, and are anxious to crown it with triumph. Wishing to do well, and daily gaining knowledge at the conclusion of each doing, Mr. Smith will doubtless yet advance; and, however incomplete his success on this occasion, we may reasonably expect that it will lead to something more perfect on another.

ROSSINI'S ATTITUDE.—The Théâtre Italien, *Paris*, has opened with the "Moise" of Rossini. The Grand Opera repeats also the same work. The managers of the rival houses have each pressed the great composer to assist at the production of the opera, but he refused. "I beg you," he said, in reply to further solicitations, "not to compel me to leave my 'attitude.' I wish to be like Ancona."

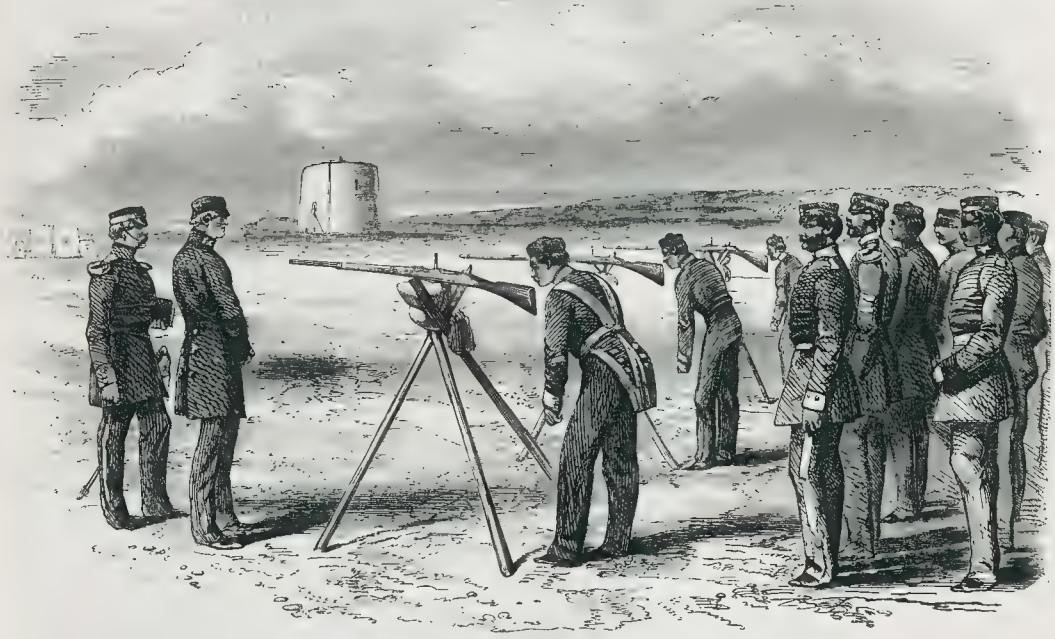
It is not uninteresting at the present moment to know the amount of the National Debt of England. On the 31st of March of the present year it was £761,845,813; the amount of interest payable on which was £23,587,306.

The *Calliance*, with upwards of 300 Government emigrants for Melbourne, and the *Mornpitre*, with upwards of 300 Government emigrants for New South Wales, left Southampton for their respective destinations on Saturday.

The Secretary of the Municipality of Alvolo, in Ticino, died so suddenly that it was impossible to administer to him the sacraments of the dying. The Curé refused to bury the deceased, and the Bishop on appeal, approved his resolution. Upon this the syndic of the place called out the National Guard, and with it proceeded to bury his colleague without the ceremonies of the Church.

The *Journal de St. Petersbourg*, of the 28th ult., publishes a great number of promotions made in the army by an order of the day, dated Sept. 8. The list includes two Major-Generals raised to the grade of Lieutenant-Generals, and fifty-one Colonels named Major-Generals.

A number of masons have left Lyons for Sebastopol, and some dozens of carpenters are to leave in a day or two. They are to receive 5f. a day and rations, and are to be engaged in the reconstruction and repairs of the buildings there.



HYTHE SCHOOL OF MUSKETRY.—AIMING DRILL.

THE SCHOOL OF MUSKETRY, HYTHE.

The School of Musketry has been established in the barracks formerly occupied by the Royal Staff Corps at Hythe, Kent; this place, owing to the great extent of level beach, being well adapted for the purposes of the establishment. It was formed by Lord Hardinge in June 1853, but its operations were not in force till the spring of 1854. The object, or design, of the School of Musketry is not to teach the whole army, or any particular regiment thereof, to shoot, but to train officers and non-commissioned officers as instructors of musketry for the several regiments and battalions on a system which will not only ensure uniformity but a maximum efficiency in the use of the rifle with which the troops are now armed in the least time and with the least expenditure of ammunition. This system is divided into two parts, viz., *Drill* and *Practice*; in the former are included—instruction in the theory of musketry; aiming, position, and judging distance drills, cleaning arms, and the manufacture of cartridges; and in the latter, target and judging distance practices. In target practice are embraced—firing singly or individually at every distance of 50 yards; from 100 to 900 yards in classes formed according to merit; firing in platoon by file and volleys, and in extended order as skirmishers, in which practice the proficiency in judging distance, and knowledge of the elevation necessary for said distance are brought into operation.

Before any soldier is allowed to fire, it is insisted on that he shall be exercised in the drills before mentioned, except the manufacture of cartridges; a brief detail of their object may not, therefore, be uninteresting, the views having a reference thereto.

Instruction in Theory.—Under this head the soldier is taught the causes which prevent the projectile discharged from a musket proceeding in the direction of a straight line, and is made to understand that its course describes a curve. The object and use of this knowledge to the soldier is to give him an idea of the error he may make in estimating his distance when firing at an object without at all affecting his fire, as also to give him such confidence, should he be required to cover an advance to a rising ground, as to enable him to fire from the rear over the heads of the body advancing, till it was within a moderate distance from the point of attack; he is likewise made to understand by familiar illustration the necessity of holding his sight upright in aiming at an object, to ensure its being hit; as also the external influences which affect the flight of the bullet, and the means of overcoming them.

Aiming Drill.—Here the soldier is taught the principle of aligning the fore and back sight of his rifle on an object at every distance of 50 yards from 100 yards to 900 yards. A double object is gained in thus causing the soldier to aim at these several distances, for the instructor is not only enabled to point out and correct any error that is manifested in each man's aim, and to discover if there is any defect in his vision, but the soldier, while aiming, receives a true impression of the actual distance the object aimed at is from him. The manner of conducting this drill is as follows:—From eight to ten men are assembled at a tripod rest which consists of three poles six feet long, tied near the top with a bag sand laid on it, to rest the rifle on. Every man in turn is called upon to aim; after each man has done so, he steps to the rear, when the instructor comes forward and examines the same, should he discover any fault, he calls the next man to the front to inspect and repeat what he can see wrong, in order that he may avoid the like error when taking aim himself; the fault is at once corrected by the individual whose aim it is.

Position Drill.—In this exercise the soldier is taught and practised in that position standing and kneeling, which will ensure the greatest steadiness in maintaining his aim while discharging his rifle; this drill is of paramount importance, for with it a man may be taught to become a good marksman without ever firing a shot, and it in a great measure compensates for the limited allowance of ammunition at present authorised for practice; the instructor is here enabled to ascertain if the soldier can aim from the shoulder with the fixed elevation for the several distances, as also if he can maintain his aim while pulling his trigger—on which hinges, to a very great extent, the certainty of hitting his mark; the kneeling position, as now taught, is one which ensures great steadiness. The body is rested on the right foot, which is drawn in under it and perpendicular; and the left elbow is brought well forward over the left knee which is kept upright, thus affording a firm rest to resist the recoil.

Judging Distance Drill.—In this exercise the soldiers are called upon to make observation on men placed at known distances of 50 yards apart, from 50 to 600 yards; their attention is first directed to the distance

HYTHE SCHOOL OF MUSKETRY.—POSITION KNEELING AND STANDING, WHEN FIRING.

HYTHE SCHOOL OF MUSKETRY.—JUDGING DISTANCE DRILL.

itself, and then to the appearance of each man at the several distances under varied aspects; having been thus practised for some time, they are afterwards required to estimate the distance from men placed at unknown distances. Each man's answer is registered, which is given in a low tone of voice, to prevent it at all influencing the judgment of his comrade. When all have given their answer they proceed to ascertain the distance by pacing towards the object in a body. The correct distance, however, is decided by actual measurement with a chain (which follows immediately in rear of the party), and is proclaimed aloud by the Instructor, when each answer receives its valuation in the register according to a fixed rule. On the proficiency in this exercise depends the important results looked for, and which are capable of being developed in rifle shooting; and it may be remarked that with practice the majority of men may be made to judge distance with sufficient accuracy to ensure efficient firing.

Cleaning Arms.—Under this head the soldier is taught the names and use of the different parts of the lock and rifle, its general management, and the method of keeping it clean and always in good condition.

The importance of these drills is established beyond a doubt as to the result that can be expected therefrom, for from the documents recording the shooting of men who have been trained thereby, and of men who have fired without any training, the contrast is so marked that one man trained is equal in efficiency to six men untrained.

THE CAMP COOKING AT ALDERSHOTT.

In this novelty we have the satisfaction to record a saving in the public expenditure combined with improved health and comfort to our gallant troops—for such is the result of this new system of cooking which has

CAPT. GRANT'S NEW METHOD OF COOKING IN THE OPEN FIELD.

lately been introduced at the Aldershott Camp. The Sketch represents one of Captain Grant's permanent cooking kitchens in operation, which are constructed of corrugated iron; and, by a judicious application of the heat, it is found that with two small fires of 18 inches square and 6 inches deep, from 1000 to 1200 men may be cooked for with comfort and economy—although each cooking house is destined for only one regiment.

A reference to the Engraving will show that the two fireplaces are constructed about twenty-five feet distant from each other, connected by a horizontal brick flue, in the centre of which is the chimney with dampers and balance-weights attached to regulate the draught upon which the economy of fuel depends; the fireplaces and tops of the flues are covered with a series of cast-iron plates having centre holes to receive the cooking-kettles, which, with their steamers attached, are dropped about half-way into the flues and supported by iron rings riveted to the kettles, forming a sort of flange. The fires are also supplied with a current of air by channels under the pavement, which, in addition to the ventilation in the fire doors, creates so powerful a draught that any description of fuel will burn well. Provision is also made for baking by means of cast-iron pots placed over the holes used for the ordinary cooking-kettles. Half a pound of coal per man a day is found to be sufficient to cook for any number of troops—the cost being one halfpenny per man a week. This system of cooking is worth the consideration of all persons who may have the direction or management of large establishments.

The smaller Engraving represents the system of cooking in the open field, by cutting a trench about a foot square, and covering it with a series of small iron plates, into which the ordinary camp-kettles are dropped through holes made to receive them. The chimney is made with square pieces of turf, having a centre hole cut in them, and piled about 3 feet high. A fire is made at the other end of the trench; and by this simple contrivance the cooking is easily carried on. The soil at Aldershott being of so sandy a nature, these cooking trenches require to be lined with brick, and draining-tiles substituted for the turf chimneys; but in ordinary soils this would not be necessary.

THE DOCKS OF SEBASTOPOL.—Walking round the edge of Dockyard Creek, we soon came to the dock. We arrived suddenly among the wonders of Sebastopol, and all that we had heard of the glories of the place faded away before the magnificent reality. First of all we inspected a dock where ships of the largest size are hauled up out of the water, or launched again, by means of a cradle, placed on a tram-road. This is the work of the Englishman Upton. Then we came to the intended Government foundry, whose walls were rising to the height of ten feet, over a space of nearly twelve acres, part of this was obtained by cutting away the spur of a mountain. The remainder of the hill was upheld by a freestone wall, every stone beautifully squared and fitted, to the height of 350 feet! We had the advantage here of joining two English engineers, who had been employed for many years in Sebastopo; these became our guides, and gave us a great deal of information. We then went to see the famous docks. These consist of a series of locks, like canal locks, the upper one being twenty feet higher than the entrance lock, which is even with the level of the sea. The upper and has three locks abreast. Then comes a compartment equal in area to three, then again three more, the middle one of which is entered by three other locks from the harbour; making altogether nine chambers as it were, and the large space in the middle. These are all dry, but can be filled with water pumped into them by two steam-engines. Each chamber is 270 feet long, 60 feet wide, and contains from 26 to 37 feet of water, at pleasure. A large ship can be floated into an upper lock, all the water can then be let off, and the ship left in her cradle as dry as if on shore. The docks, with their magnificent masonry casings of gigantic granite blocks, steam-engines, and iron gates, with the aqueducts for bringing down water from the Tchernaya, cost £20,000,000 sterling. In one of the docks a steamer had been burnt; all her machinery was standing complete, but not one bit of wood remained.—*Letter from a Naval Officer.*

THE BLACK SEA.—The Isle of Serpents, or Fidonisi, the only island in the Black Sea, is a barren and naked rock, lying about twenty miles off the mouths of the Danube, almost east by west with the Sulina, the principal mouth of the river. There is on this island a lighthouse 200 English feet above the level of the sea. The light is not kept up at present. The delta of the Danube is quite flat, the landing-places have little depth of water, and the shores are not seen until, as it were, you touch them. Nature seems to have placed the Isle of Serpents in this spot to claim the mariner's gratitude. It is very desirable that the lighthouse should be illuminated before winter. Tendra, where the cruising ground (off Odessa) usually lies, is a very sandy peninsula, very little elevated, and situated to the south of Otchakoff. It appears to be formed, like all this part of the coast stretching from Cape Kinburn to Perekop, of the alluvial deposits of the Bug and the Dnieper, leaving here and there apertures, which the sea has reserved capriciously for itself. Tendra, in rounding off from the north to the south and the west, forms a vast and secure bay, the soundings of which, both inside and outside, have been frequently taken by the Allied cruisers. The two squadrons might, in case of need, find safe shelter there. The peninsula is evacuated by the Russians.—*Letter in the Moniteur.*

CAPT. GRANT'S PERMANENT COOKING-KITCHEN AT THE CAMP, ALDERSHOTT.

Memorabilia,

LITERARY, ANTIQUARIAN, SCIENTIFIC, AND ARTISTIC.

"A little chunk may let in much light."—OLD PROVERB.

THE present column is intended as a receptacle for notices of whatever is curious, interesting, and not readily accessible, in the shape of old books, old ballads, and old tunes—illustrations of ancient manners, costume, and language—quaint epigrams and epitaphs—odd men and odd phrases—unpublished letters—disputed dates and readings—strange facts and strange fancies;—in a word, *un peu de tout* that occasionally engages the attention of the author, the antiquary, and the desultory student. But while it is appointed to be all this, we trust it will be something more. Taking advantage of the unexampled popularity of the ILLUSTRATED LONDON NEWS, our endeavour will be to render this portion of it not merely a depository for *disjecta membra* such as these, but a great and general medium of correspondence between all—and these name is Legion now—who feel an interest in matters of the kind.

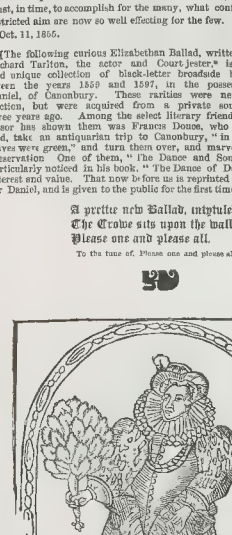
In this design, it is obvious we can advance no claim to merit on the score of originality; and we make no pretence to superiority of knowledge, or to exclusive sources of information. What we are about to attempt others are attempting likewise, and with probably quite as much zeal, and at least as much ability as we shall bring to bear. Our only 'vantage ground will be the immeasurably wider range of circulation this publication can command, and it is by this ascendancy, we trust, in time, to accomplish for the many, what contemporaries of more restricted aim are now so well effecting for the few.

Oct. 11, 1855.

[The following curious Elizabethan Ballad, written by the celebrated Richard Tarlton, the actor and Court jester,* is from an extensive and unique collection of black-letter broadside ballads, printed between the years 1559 and 1597, in the possession of Mr. George Daniel, of Canonbury. These rarities were never sold by public auction, but were acquired from a private source about twenty-three years ago. Among the select literary friends to whom the possessor has shown them was Francis Douce, who would often, we are told, take an antiquarian trip to Canonbury, "in summer days when leaves were green," and turn them over, and marvel at their wondrous preservation One of them, "The Dance and Song of Death," he has particularly noticed in his book. "The Dance of Death," as of singular interest and value. That now before us is reprinted by the permission of Mr Daniel, and is given to the public for the first time.]

A prettie new Ballad, intytuled:
The Crowe sits upon the wall,
Please one and please all.

To the tune of, Please one and please all.



Please one and please all,
Be they lyrcat be they small,
Be they little be they lowe,
So pyeth the Crowe,
a-tting upon a wal:
Please one and please all,
please one and please all.

Be they white be they black,
Have they a smock on their back,
Or a kercher on her head,
Whether they spin silke or thred,
Whatsoever they them call:
Please one and please all

The goodwife I doo meane,
Be she fat or be she leane,
Whatsoever that she be,
That she Crowe taide me,
sitting uppon a wal:
please one and please al.

Be they shrtteh be they gay,
Love they worke or love they play,
Whatsoever he theyre cheere,
Drinke they ale or drinke they beere,
Whether it be strong or small:
please one and please all

If the goodwife speake aloft,
Sea that you then speake soft,
Whether it be good or ill,
Let her doo what she will:
and to keepe yourself from a-all.
please one and please al

Be they sower he they sweete,
Be they shrewish be they meeke,
Weare they silke or cloth so good
Velvet bonnet or frenel-hood,
upon her head a-top or all
please one and please al

If the goodwife be displeased
All the whole house is dismaied,
And therefore by my will,
To please her learne the skill,
Least that she should shewise brall:
please one and please all

Be they halt be they lame,
Be she Lady be she dame
If that she doo weare a pa-ne,
Keepe she taverne or keepe she I-ne,
I her bulke he a-e-a
please one and plea-e a.

If that you bid her doo ought,
If that she doo it not,
And though that you be her goodman,
You-e not-hing doo it then,
be-a-a-h-r or m-hah-
please one and please all

Be they wanton be they wilde,
Be they gentle be they milde:
Be shee white be shee browne,
Doth shee skould or doth she frowne,
Let her doo what she shall:
please one and please all.

Be she coy be she proud,
Speake she soft or speake she loud,
Be she sumple be she faunt,
Doth she trip or doeth she taunt,
the Crowe sits upon the wall:
please one and please all.

Is she huswife is she none,
Doeth she drudge doeth she grone,
Is she nimble is she quicke,
Is she short is she thicke,
Let her be what she shall:
please one and please all.

Be she cruel be she curst,
Come she late [and come she first,
Be they young be they olde,
Doo they smile doo they scold,
though they doo nought at all:
please one and please all.

Though it be some Crowes gaise,
Ofteatimes to tell lyes,
Yet the Crowes words dooth try,
That her tale is no lye,
For that it is and ever shall
please one and please all.

Please one and please all,
Be they great be they small,
Be they little be they lowe,
So pipeth the Crowe,
sitting upon a wal:
please one and please all,
please one and please all.

FINIS. R T

Imprinted at London for Henry Kirkham, dwelling a. the little North doore of Paules, at t. sygne of the hooke I or.

The above Cut, like one of those picturesque adornments of the Catnach lyrics, served no doubt to illustrate a very extensive category of ballads. It might originally have been intended to represent the Queen herself, as it bears a more than accidental resemblance to her portraits; or, it might have been meant to depict my lady *Light of Love*. In an anonymous work called "The Glasse of Man's Folie," 1615, 4to, the author tells us, "There be wealthy housewives, and good house-keepers that use no starch, but faire water; their linen is white and they looke more Christian-like in small ruffes, then *Light of Love* lookes in her great starched ruffs, looke she never so hie, with eye-lids awrye."

QUERIES.

This department of our paper is so well adapted for a channel of communication between those who take an interest in the subjects of which it professes to treat, that we have made no scruple of inserting inquiries upon such matters. We shall, indeed, set an example in this respect, by soliciting information upon a few topics, respecting which we are for the moment at fault. To begin:—

1. BUTON has an allusion to some port in the Euxine which was anciently understood to possess the singular property of rendering every one who entered it demented There is a port, we al. know, in that sea which, only a few months since, appeared to have the same unhappy quality: but can any of our readers enlighten us on the subject of that particular bay to which our quaint old friend refers?

2. In a MS. diary of the latter part of Elizabeth and beginning of James I., *Harl.* 6353, we meet with the follow.ng epigram:—

The radiant splendour of Tom Horton's nose
Amates ye ruby and puts downe the rose.
Has I a jewel of soe rich an hewe,
I wo.ld present it to some monarch's viewe
Sa.) be ought not to weare such gems as these,
Therefore our Prince should have Tom Horton's nose

Query, Who was TOM HORTON, and to what Prince is the a.ason made?

3. WAS SHAKSPEARE EVER IN SCOTLAND?—Has it happened to any of our numerous readers either to have seen or to have heard of a play "enacted at Scone, before his Majesty King James VI.," and printed, it is believed, at Perth, in which, and as having personated one of the *dramatis personæ*, stands the name of Will Shakspeare? Such a play, we are assured by a gentleman in whose veracity and memory we rely, was shown to him in his student days by Mr. James Christie, mathematical teacher, Edinburgh, as a great curiosity; and our informant remarks, "I remember when our having commented together on the interest of the fact that Shakspeare must have stood on Dunsinane Hill, and looked towards Birnam Wood. The play was, I think, in the ordinary quarto shape of the period. Mr. Christie left Edinburgh somewhere either shortly before, or in the course of, 1820. I myself visited him in London, I think in that year, at a tavern called the Edinburgh Castle, in the Strand He can hardly be alive now, for he was then a man of fifty years of age." Perhaps some one under whose eye this notice may fal. was acquainted with Mr. Christie, and may know what became of his books

4. IN BEN JONSON'S play, "The New Inn," Gifford's edition, vol. v., p. 388, we find this passage:—

"—— made the Drive barcheaded n. the rain,
That she might be mistaken for a Countess.

Can any reader inform us whether (as this extract implies) it was the custom of people of rank in the seventeenth century to be driven by a bare-scooned coachman?

CURIOUS EXTRACTS

ANTIPATHY OF FLIES TO A MAGNET.—Southey quotes the following from *Voight's Journal*:—"A person having an artificia. magnet suspended from the wall of his study, with a piece of iron adhering to it, remarked for several years that the flies in the room, though they frequently placed themselves on iron articles, never settled on the artificia. magnet, and even that if they approached it, they in a moment again removed from it to some distance.'

THE SKIN OF RED HERRING SAID TO PREVENT BEER FROM FROTHING. In Nashe's "Lenten Stuff," *Harl. Misc.*, vol. ii., p. 281, he says:—"There is plain witchcraft in his skin, which is a secret that all tasters w.l curse me for blabbing: for do but rub a cann or quart-pot round about the mouth with it, et the cunningest lick-spiggot swill he head out, the beer shall never foam or froth in the cup, whereby to deceive men of their measure, but be as settled as if it stood all night."

A HINT TO THE ORDNANCE.—OUR ancestors in very early times knew nothing of 13-inch mortars and monster Nasmyth guns; but what they lacked in science they sometimes made up by ingenuity. In "Ellis's Specimens of English Metrical Romances" (vol. ii., pp. 2.2, 223) there is a romance of Richard Cœur de Lion, from which we learn that he took *fourteen ship-loads of bee-hives with him!* which, when he had need sure, he threw from a mangonel into the town. The Saracens were dreadfully annoyed by this novel mode of warfare, and said:—

King Richard was full fell,
When his fives bitten at wel.

The Editor quaintly remarks, "There must have been some inconvenience in charging a machine with such implements of offence."—Yours truly, WILL EGNES COME.

To Correspondents.—All communications having reference to this department of the paper, should be addressed, distinctly, "MEMORABILIA."

GLOOMY PROSPECTS IN SYDNEY.—Ex.epting in speculations in flour, which has advanced to £40 per ton, business in Sydney remains in a stagnant state, to a degree unprecedented for some years past. Shipments of flour are expected from the United States and California, and colonial wheat of the last harvest being about to be brought into the market, it is hoped that bread (which is now 1s. the 2 lb. loaf) will be cheaper. In all branches of labour wages are considerably gone down, and still declining. Carpenters and others employed in building, who six months ago were paid 25s. to 30s. per day, can with difficulty find work at 14s. to 18s.; and as provisions of all kinds are advancing, it is feared there will be much distress amongst the operatives.—*Letter from Sydney, June 20*

PUBLIC FEELING IN ST. PETERSBURG. The St. Petersburg correspondent of the *Press*, writing on the 26th ult., says:—"Since the whole of the Court quitted our capital, and the Emperor accompanied the Empress to Moscow, there has been received here no news respecting events in the Crimea. Complete uncertainty and melancholy sadness prevail, and as at St. Petersburg especially that the bounds must manifest their discontent. Reviews and parades cha.acterised their warlike ardour. These have ceased, and the absence of the high functionaries, civil and military, who have followed the Emperor, leaves the ladies at liberty to manifest the difficulty in which Prussia has been placed by the war of the East. Hence their discouragement, which manifests itself openly in their words. Moreover, adding to their discontent, certain pamphlets pass more easily from hand to hand, and cherish these melancholy feelings. The discontent, it is impossible to deny, has reached the lowest classes of the population, and the peasants are now seeking to escape the conscription. This is not al.. A practice which has been rare in the Russian army is extending itself on a large scale—I mean the desertion of soldiers, which has become so marked that the Government has considered it necessary to adopt measures and apply penalties which are quite unusual against those who desert their colours."

THE PARIS UNIVERSAL EXHIBITION.

(From our Special Correspondent.)

THE SEVRES COURT.

THE way to the Panorama Building is between lines of glittering cabinet-work, from the central fountain to the opening into the great Court or hall in which the china of Sèvres, the crown diamonds, and the manufactures of the Gobelins and Aubusson, are artistically grouped. This court, arranged in a few days, by M. de Cabrol, architect, forms one of the most remarkable effects of the Exhibition. There the contributions are all costly, all valuable, both for material and for the art employed upon it. The walls glow with tapestries from the Gobelins and Beauvais—the splendid designs from Aubusson, serving as a gorgeous background to the costly china of Sèvres; the dinner-service of Christofle, with the immense case of Imperial diamonds, rising in the centre. Most people turn, in the first instance, to the display of jewels, although it is necessary to fall in line, and follow an eager crowd through a narrow passage. These jewels belong to France. The finest is the large isolated stone in the centre, and widely known as the Regent. Readers may be reminded that it was bought by Philippe II., Duke of Orleans, during the minority of Louis XV. It weighs 136 carats and a fraction; and its value is estimated at £200,000. Valuations of the State jewels of France had been made more than once. According to that of MM Bassot and Lazare, made in obedience to an Act of March 2, 1832, the brilliants belonging to the State were 64,512 in number, and 18,751 carats and a fraction in weight. It was also calculated that they were worth 20,702,703 francs. It may be interesting to the reader to learn that many of these stones have been recently set by M. Lemonnier, and figure in the crowns of the Emperor and Empress. We believe that "the Regent" is destined to figure upon the summit of the Emperor's crown. Turning from these glittering tiaras, these nodding diamond buds, these long sparkling necklaces, we may point the reader's attention to the wonderful establishments of France, as Sèvres and the Gobelins, without at once seeing how it is that in art-manufactures France is so far before us. In France the Government makes great sacrifices to nurse the artistic genius of the people to the utmost. The people have not Schools of Design to force to pieces in futile efforts to make them self-supporting; they enjoy the advantages of gratuitous art-education, measured only by their capacity to learn. The pupil with a real vocation may rise from school to school, nor see, in the course of his studies, hopeless efforts made to carry into the national development of his art the worst instincts of rapacious commerce. Surely we should afford to have Schools of Design that did not return, in so many pence, the market value of the copy-books and pencils Surely these wondrous tapestries, these most marvellously elaborated vases, would never have seen the light, had the parents of the institutions of which they are the result, thought of husbanding twopences and spoiling the scholars! These reflections must have risen to the minds of many English visitors to the Paris Universal Exhibition as they surveyed the results of national efforts made by Continental States to rear populations of art-workmen. The national workshops and printing-office of Vienna, the Royal manufactory of ceramic wares of Saxony, the State establishments of Prussia, the Imperial printing office of France—all display results in the Exhibition, against which the isolated efforts of individual English manufacturers go for nothing. In proof of this, let the visitor compare the specimens of printing exhibited from the national printing-office of Vienna with all the printing exhibited by England. He will be convinced at once. To encourage excellence money must be spent; and money could not be more safely invested The result of such investments by Continental nations has been the monopoly of all markets dealing in articles of luxury, that is articles the chief value of which consists in the taste that pervaded it their elaboration.

We now turn to the western side of this fine Court. The dinner-service made for the Emperor by Christofle and Co. is undoubtedly the principal object of attraction in the western half of the Court. The centre-piece represents France distributing wreaths to various heroes,—to the hero of War, driving a war chariot; to that of Peace, a female figure in a chariot drawn by oxen This centre-piece is surrounded by allegorical statues of Religion, Justice, Concord, and Force. The service includes also four large vases, with figures representing the North, East, South, and West of France The candelabra have illustrations of the Sciences, the Arts, Agriculture, and Industry. MM. Giberi, Diebolt, Daumas, Caudron, Briant Brothers, Montagny, Rouillard, Demay, &c., are contributors to this service. We give the names of these men, because we hold that, in an exhibition like the present, taking place in a country where, above all others, the workman is honoured, we may imitate a custom, the observance of which would bring about the happiest results. In addition to the dinner service, M. Christofle has other points of attraction in the Palace. There are two silvered flower-baskets: one belongs to the Emperor, and has handles sculptured by Comolera, representing two swans; the other is in bronze gilt, and was made for the Ministers of Finance and Agriculture. Here may be remarked, also, a centre-piece, ornamented with groups of children in oxydised silver, illustrating the Arts, Commerce, and Industry distributing abundance under the protection of eagles. The Count de Morny has ordered this piece for the residence of the President of the Corps Legislatif. There are also to be noticed two pairs of candelabra in the style of Louis XVI, one of which has three figures after the style of Clodion; and a clock by M. Henri Bouilliet, nephew of M. Christofle.

According to the returns of the French Mint authorities, the manufactures of the French silversmiths, goldsmiths, and jewellers, consume annually gold to the value of 12,469,730 francs, and silver to the value of 14,226,204 francs; the total value being upwards of one million sterling. It is estimated that the labour employed upon these metals about equals the value of the raw material. Thus the annual value of the manufactures sent forth to the markets of the world by French goldsmiths, silversmiths, and jewellers, is upwards of two million sterling.

HERCULANEUM.

(From our own Correspondent.)

THE view presented of Herculaneum is taken from an entirely new point, and was suggested by Cav Bonucci, the director of the excavations in the kingdom of the Two Sicilies, in whose company we recently visited this interesting site. Vesuvius, which is visible in the distance, was then just beginning to pour forth its liquid fire, and report threatened these ruins, so lately disinterred, with a second entombment. Yet nearer, we see some portion of the modern city which is erected on the ashes and lava of the mountain, and effectually prevents all further excavation towards the north. Happily for modern taste and refinement there was no superstructure to the south and west of this point, and to this fact we are indebted for those wonders of art which, within the last century, have created a revolution in the domestic habits and tastes of the world The height of the modern above the old Roman city is well marked by the houses on the left, and also by the cutting in the soil around, and nothing shows more clearly the oblivion which awaits human grandeur than the fact that a city which abounded in the richest works of art should have slumbered under the soil so many centuries under so thin a crust of soil. On the right of the picture the excavations have been terminated. No other ruins are found in this direction, as at the time of the great catastrophe, the sea came up to this point, and the ground on which those gaily-frescoed vines appear (purchased for the purpose of excavation) is about to be exchanged for the yet untried ground in front. Here, it is anticipated, that treasures of art will be found; for beyond those colonnades, and under the soil, lies buried unburned clothed for

NEW BOOKS, &c.

This day, with Illustrations, by J. B., price 5s.,
THE LANCES of LYNWOOD. By the Author of "It-zcraine," the "Heir of Redclyffe," &c.

IMPORTANT TO LADIES.—BAKER and CRISP hereby notify that the first delivery of their NEW CHEVROTIN GLOVES with the Registered Joujou d'Argent Fastening, for sale on early Tues. Pres. Two-Buttoned, per pair, or One Guinea per dozen. The great complaints that are continually made, as to the breaking of the latch-cord (it being utterly useless after one or two days' wear) and the defects attending the buttoning mode, have induced Messrs. Baker and Crisp to introduce this immense expense) an entirely new Fastening, of a highly ornamental character, and one giving a perfect finish to all other productions of the kind.

This unique invention is attached to the new glove, manufactured from the real Chevrotin—a French kid skin, and not from its counterfeit imitation, generally sold under the designation of Alpine Kid This will be obtainable in the undermentioned colours by the present season.

Chevrotin	or Olive Coloured	Fraise	or Ash
The Vert	" Tea Green	Chasseur Vert	" Dark Green.

THE SEVRES COURT, IN THE PARIS UNIVERSAL EXHIBITION.—(SEE PAGE 454.)

have belonged to an apartment of a very inferior character, and which held out the promise therefore of finding some valuable work of art. As it was, the only piece of furniture we observed was a bronze cooking-vessel neatly worked, and containing the maker's name on the handle.

The point from which we took the Sketch is highly interesting, not merely as presenting a new and entire view of the city, but as embracing distant objects of picturesque and historical celebrity. Beginning with the modern city, the eye sweeps round the horizon, taking in, one after the other, Vesuvius, Sorrento, and finally Capri—"cronching," as it has been well described, "like a lion at the entrance of the Bay of Naples." Its irregular outline can be just seen above the surface of the blue and sparkling waters.

H. WREFORD.

DE [illegible].—FROM AN ORIGINAL SKETCH.

THE ILLUSTRATED LONDON NEWS

No. 766.—VOL. XXVII.] SATURDAY, OCTOBER 20, 1855. [WITH A SUPPLEMENT, FIVEPENCE.

WHAT ARE THE OBJECTS OF THE WAR?

THE organ of Mr. Disraeli—though we are glad to see that it is not the organ of Lord Derby or the Protectionist party—affirms that the objects of the war are accomplished. We need not follow its reasonings on this point, but will simply ask, "What *are* the objects of the war?" It will be quite time enough to declare that they are accomplished when we know in what they consist. We need not inquire in what way Lord Aberdeen originally understood the war, or what was the limitation which Sir James Graham, or Mr. Gladstone, or Mr. Sidney Herbert, or Lord John Russell would have imposed upon it; but in what sense it was and is understood by the British Parliament and people, by Napoleon III. and his gallant nation, by the Turks, by the Piedmontese, and by the universal sympathy of civilised Europe.

The outbreak of the war was long foreseen by the ablest statesmen and diplomatists of England, Germany, and France. It was not only Napoleon I.—as great a statesman and philosopher as he was a soldier—who predicted it as inevitable, unless Europe prevented it by the establishment of great constitutional States on every side of the Russian frontier; but such men as Prince Metternich in Germany, and Lord Palmerston in England, who for the last five-and-twenty years have been fully aware that, sooner or later, it would be found necessary to limit by force of arms the encroachments of Russia upon the territories of her neighbours. The ambition of Russia was no secret. The means, diplomatic, commercial, and military, domestic as well as foreign, by which the late Czar Nicholas sought to accomplish his ends, though not so obvious as they ought to have been to the people of England—a people proverbially ignorant or careless of foreign policy—were patent to all the advanced spirits of the age. The voice of warning was scarcely ever mute; but, engrossed as the nation was with its domestic politics, and its immense trade and commerce, the voice was for the most part unheeded, and those who raised it were accused of being alarmists. But our principal statesmen knew perfectly well the danger before them. When in 1853 the Czar, through the medium of Prince Menschikoff, threw off the mask, and aimed a blow against the independence of Turkey, it was universally felt both by statesmen and people that, if Russia persisted in her demands upon the Sultan's Government, it would be impossible to prevent a war. Even Lord Aberdeen knew this. He felt that such a war, if it ever broke out, would be a war of principles, a war that would not last merely for a few months, or years, or involve only two or three Powers, but that might last for a generation, and extend to the whole of Europe. For this reason he did his utmost to prevent the outburst. He endeavoured to adjourn the evil day; to procure a peace, or at the least a truce, by diplomacy, by negotiation, and by appeals to the justice, if not to the fears, of the Czar. He would at that time have been quite contented, as he himself avowed, if he could have arranged a pacification that would have lasted for twenty years. Lord Aberdeen was selfish enough not to care for posterity. What he desired was to save the men of the present day from the unutterable miseries of a European war, and to leave our children or our grandchildren, if the course of events so decreed it, to fight a still harder fight for their own independence and that of the world. For this it is now useless to reproach Lord Aberdeen or the statesmen who acted with him. Their great forbearance—though it pampered the pride of the Czar Nicholas, and taught him to believe in his own invincibility—at least proved the reluctance of the rulers of this great nation to provoke war, their deep sense of its evils, and their innocence of all attempt or inclination to hasten or to exasperate it.

But the men to be blamed at this juncture were the cowardly King of Prussia and the irresolute Emperor of Austria. These men, if they had boldly supported the remonstrances of Lord Aberdeen and the Emperor Napoleon, and plainly notified to Nicholas that, if he drew the sword, they would fight against him, would have procured peace without bloodshed, by making it evident to the ambitious Czar that he stood alone, and

THE NEW OFFICE OF THE WAR DEPARTMENT (BUCKINGHAM HOUSE), PALL-MALL.—(SEE NEXT PAGE.)

would have had the whole of Europe—Governments as well as peoples—arrayed in arms against him. They failed to adopt this wise and conservative policy. As an inevitable and palpable consequence, the objects of the war immediately extended themselves. The independence of Turkey, the first ostensible object, would have been its last. If the great German Governments had been alive to their duty and their interest, that object would have been secured by their co-operation, and the world would in all probability have enjoyed the peaceful twenty years which Lord Aberdeen had reckoned upon. In the meantime events might have been so moulded by wise statesmanship that Europe would have opposed to the growth of Cossackism, in the North and North-East, the growth of Constitutional Government in her Central States, and have met encroaching barbarism by the strength derivable from the wealth, the spirit, and energy of a civilisation developed in the enjoyment of rational liberty.

But this was not to be. The Czar was haughty and blind, and the Sovereigns of Germany, great and small, were traitors to the dignity of their own crowns and to the interests of their people; and, by their pusillanimity or their ignorance, allowed a war, that might have been a little one and easily strangled in its birth, to grow to the proportions of that mighty giant which we now behold it. On their heads will some day fall the penalty. Many of our statesmen, who knew full well the magnitude of the war which they had so ardently striven to prevent, lacked the genius or the courage to direct it; and one by one they dropped off from the Government, till, backed by the indomitable "pluck" and sterling good sense of the British people, there came into power, under the presidency of Lord Palmerston, a Ministry equal to its task, and fully comprehending it. It is certain that the great statesman was not, and is not, blind to the fact, that the object of the war ceased to be limited to the mere independence of Turkey the moment it became evident that Prussia and Austria would not take part with Great Britain and France in combating the pretensions of Russia. He and his countrymen know that it has now a wider scope. It is not enough that the independence of Turkey should be secured. The attack on Turkey was but a portion of a great scheme to make Russia the dominant Power of Europe—to procure egress into the Atlantic for her war navies—either by command of the issues of the Baltic, or by the deep fiords of the north-western portions of Norway, from which even now her territories are separated by scarcely fifty miles; and to have similar command over the Mediterranean, by possession of the Bosphorus; and thereby to give the law to the civilised world in our hemisphere.

The instinct of Europe fell long ago that such were the objects of Russia; that she pursued them by the subjugation, bit by bit, of Turkey, and by the robbery, piecemeal, of every state or nation which had the misfortune to have her for a near neighbour. True statesmanship and the popular interest were agreed on the point. There was and could be no mistake about it on the part of any one claiming the possession of ordinary clear-sightedness. The success of Russia in those objects, or in any one of them, would be the downfal of England, and of France also. Both of those wealthy and powerful nations would sink into the second or third rank. London would become as desolate as Venice, and Great Britain would be of as little account in the world as Spain or Holland. The glory of France would be a tale of the past—as dead and as infructuous as the vanished glory of Greece or Rome. The conviction that this is the true position assumed by Russia influences, and will continue to influence, Europe until far higher objects are secured than the independence of the Turks. The Allied Powers will fight for their own independence and freedom as well as for those of the Ottomans; and they will not sheathe the sword which they have drawn while they have a man to send to the fight, or a shilling to pay him. If they fail—which they will not and cannot—there is an end to better things than the Turkish Empire. If they succeed—which they must and shall, with the blessing of Heaven on their just and righteous cause—they will conquer not only the independence of Turkey, but of all Europe; and will not only restrain and punish a heinous malefactor, but will secure the inestimable blessings of peace by the surest of all modes—the coercion by the strong hand of him who refused to listen to reason, and set at defiance the remonstrances as well as the rights of mankind.

NEW OFFICE FOR THE WAR DEPARTMENT, BUCKINGHAM HOUSE, PALL-MALL.

ANOTHER nobleman's mansion is about to be appropriated as a Government office, making the fourth edifice of the class which has been converted to official purposes within the past year. Thus, we have recorded the change in Burlington House, Herrington House, and Uxbridge House; and we have now to add Buckingham House, the lease of which has been purchased by Government for £11,000, and, we understand, is to be appropriated to the War Department, in conjunction with the Ordnance-office—the "Correspondence" department of which is at No. 86, Pall-mall, five doors from the mansion of which the Government has just obtained possession. "This day Mr. Pitt will have a levee, at the Cockpit, Whitehall." Thus we read in the *Daily Universal Register* of May 4, 1786—a threepenny newspaper, the title of which was subsequently changed to the *Times*. What a succession of changes has been made in the location of our Government offices during the seventy years since the Premier held his levee upon the site of the Cockpit of the old Palace of Whitehall; and we are now upon the eve of an entire remodelling of the Government offices upon the same spot. For this purpose a plan has been submitted to the Board of Works by Mr. Pennethorne, the architect, which has for its recommendation the location of the several offices in convenient contiguity, independently of the great merit of the plan as a work of architectural embellishment. It has been proposed by the Government to take down the present offices and rebuild them upon a large scale. The scheme, however, appears to have had a check in the House of Commons; and the grant is now confined to clearing a large plot of ground—we hope, however, not to lie waste, like the large space adjoining Downing-street. The buildings are to be postponed until plans approved by Parliament are agreed upon. Meanwhile the large sum of £25,000 is paid annually for office rent, so that no time should be lost in reducing, if not altogether saving, this large and uneconomical expenditure in official "lodgings." We agree with a correspondent of the *Builder* that "The necessity is now admitted on all sides for not only rebuilding the present dangerous and dilapidated offices, but also for a great and comprehensive centralisation; and if, instead of laying out £11,000 in buying up the lease of Buckingham House, the present Ordnance-office had been sold, and accommodation in immediate connexion with the War Department and Commander-in-Chief provided, an immense sum would be realised in furtherance of a truly national structure. The estimated outlay is, or rather was, little short of £600,000; and when to that is added a sum necessary for the accommodation of all existing departments, with their external structure, it is not too much to suppose an expenditure of three times the amount will be required. Surely this is a prize worth contending for, and one, from its position, that will not fail to enlist in competition the first talent of the country."

We return to Pall-mall, where Buckingham House is, we believe, intended to serve as a temporary location for the War Department, in conjunction with the Ordnance-office, until the new design at Whitehall shall be carried out. The mansion just referred to is faced with stone, and was built in 1790-94, as the town-house of the Marquis of Buckingham. It was one of Soane's early works, and possesses but slight architectural character. It has a Doric portico, and in the upper part are sculptured the arms of the noble house of Buckingham and Chandos. The rooms are large; but the staircase is gloomy, but pretentious; however, the garden in the rear, bordering upon St. James's-park, has a more cheerful aspect. Here the late Duke of Buckingham assembled his large and valuable collection of prints, and other items of art and *virtu*, the choicest of which were transferred to Stowe; and upon the great sale of the ducal property, a few years since, Buckingham House was dismantled, and the furniture, pictures, &c., disposed of. The mansion was then let as a club-house; and it was so occupied by the Carlton Club during the rebuilding of their house adjoining. Altogether we cannot look upon Buckingham House without remembering that herein dwelt a noble descendant of the Plantagenets: it is now gloomy and tenantless. Leftward is a superb pile of Sansovino's palatial architecture; and in the house on the right, No. 99, lived Mr. Denison, the stanch Whig, who sat in Parliament thirty-one years for Surrey; and here he died in 1849, in his eightieth year, bequeathing two millions and a half sterling. (*Curiosities of London.*) How strangely fates and fortunes, and the extremes of wealth and want, meet in this great town of ours.

As we are in Pall-mall, it may be as well to note that the façade of the gateway of the British Institution, No. 50, nearly opposite Buckingham House, has just been repainted; so that the large bas relief of Shakspeare, attended by Poetry and Painting, and for which Alderman Boydell paid Banks, the sculptor, 500 guineas, may now be distinctly seen.

SCOTLAND-YARD.—The building so long occupied as the Court-house of the Palace and Marshalsea Courts jurisdiction (now extinct) has recently been partially taken down and the front rebuilt, and, although only in brickwork, is of substantial and appropriate design. For the future the new erection will be appropriated to the uses of the metropolitan police in respect of the "cab department," the "lost-property offices," and for the requirements under the "Common Lodging-house Act." These works have been conducted by Mr. Reeves, the Surveyor to the Commissioners of Metropolitan Police.—*Land and Building News.*

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday

THE arrival of the Duc and Duchesse de Brabant has given a little movement to the town, which, despite the approaching close of the Exhibition and the consequent influx of foreigners, has yet for the last six weeks been extremely dull. On Friday their Royal Highnesses arrived in Paris, but, the train being somewhat before its time, the Prince Napoleon, who was to have received them at the rail way station, had not yet arrived. The Imperial carriages being, however, in waiting, the august visitors proceeded at once to St. Cloud, being joined *en route* by the Prince Napoleon, and attended by the Cent Gardes and a body of Cuirassiers. A variety of amusements are prepared for the entertainments of the young Duke and Duchess—visits to the Exhibition, the Beaux Arts, the Jardin des Plantes, St. Germain, in the morning; in the evening, fêtes at St Cloud, and representations at the Opéra Comique, Théâtre Français, &c.

On Monday took place, with much éclat, the Exhibition banquet offered to the Prince Napoleon at the new Hôtel du Louvre. The *salons* were for this occasion magnificently decorated, the Gallery of the Panoramas being emptied in order that many of the objects—the splendid Sèvres vase especially—therein contained might serve for this purpose.

On Tuesday the hotel, of which we feel bound to give a description, was thrown open to the public. The Hôtel du Louvre is unquestionably by far the most magnificent institution of the kind yet established. The ground it occupies covers a space of 8000 mètres, swallowing up many streets formerly existing on the spot. There are three interior courts. The centre, or *cour d'honneur*, has a magnificent entrance by the Rue de Rivoli—an inferior one by the Rue St Honoré. It is covered with glass, so that in all weathers visitors can get in and out of their carriages without risk. The exterior walls are covered with sculptures, and rich candelabra give a brilliant light all night. An immense hall, by a double staircase, leads to the first story. The dining-room is forty mètres long, thirteen wide, and ten high. This apartment, with its vestibule, is splendidly decorated with mirrors, sculptures, gilding, caryatides, and pictures: it is capable of containing 350 guests. The rest of the building, from the *salons* on the first to the smallest bed-rooms on the fourth and even fifth story, displays all the refinements of comfort and luxury. Below, splendid furniture, rich hangings, decorations where art and taste are as prominent as magnificence, everywhere appear. Above, airy elegant apartments—the highest of all with terraces, contain excellent beds, good easy-chairs, handsome mirrors, every requisite for ease and comfort. And this at the rate of two or three francs a day! Of the dependencies of such an establishment it is difficult to form an idea; suffice it to say that kitchens, bath-rooms, smoking room, reading-rooms, laundry, &c., all are on a scale proportioned to the necessities of a building of this nature and extent. But beside these a photographic establishment is being organised at the summit of the hotel, and, in order to save the fatigue of the ascension to the sitters, an ascending chamber will raise them from the ground-floor to the ateliers. Not the least marvellous part of this last undertaking is the fact that but thirteen months and a half have been employed in carrying it into execution, from the laying of the foundation-stone to the opening of the doors to the public, and that with the intervention of one of the severest winters on record, where the masons' works were of necessity, during many weeks, kept wholly at a stand-still.

The Exhibition is at present more crowded, perhaps, than it has ever yet been—except, of course, on special occasions and principally by buyers. No doubt, on the closing of the building, few but the products whose price places them out of the reach of most fortunes will remain unsold. The Empress, at her last visit, purchased a variety of articles of furniture. Among others, a bureau and jewel-case combined in one. This *meuble* contains innumerable secret drawers, *cachettes*, and mysterious receptacles of all sorts, wholly invisible, and only opened by springs impossible to be discovered by any but the initiated; and the whole closes with a single key.

We learn that Charles Dickens, whose intention to pass the winter in Paris we were already informed of, has taken the house of M. Arsène Houssaye at Beaujon—a charming residence, whose decoration was but just completed when death removed its young mistress, the woman for whose gratification so much time, and taste, and money had been expended on it by her husband.

On Saturday, the 27th inst., M. Henri Hertz proposes giving a concert at his rooms in the Rue de la Victoire, for the benefit of the widows and orphans of the troops in the Crimea. Several eminent artists will aid on this occasion; and M. Hertz will perform three pieces of his own composition—"L'Ecole du Nord;" a new Tarantella, and the Andante of his fifth Concerto. In addition to the musical performances there will take place in the evening, between the first and second parts of the concert, a raffle for the upright piano exhibited by M. Hertz at the Exposition Universelle. Each person taking a ticket for the concert will be entitled to a lottery-ticket gratis.

At the Exhibition of the Beaux Arts the Emperor has purchased a number of pictures, principally of the Belgian school, and some of the French; among others, the great painting of the "Battle of the Alma," by Bellanger. The Prince Jérôme has also made some acquisitions, especially a beautiful picture by the Belgian artist Bossuet.

The Italian Opera has, we are happy to say, in a great degree redeemed the non-success of its opening representation by the manner in which it has produced "La Cenerentola," with Mme. Borghi-Mamo and Zucchini. Notwithstanding what the former leaves to be desired in appearance, the richness of her voice, her energy, her animation and expression have won her a marked triumph. In the *rôle* of *Don Magnifico* Zucchini is admirable: voice, physique, acting, costume, all were made to represent the part almost faultlessly, and the success was immediate and complete. Carrion, as *Ramire*, performed the *rôle* creditably; Everardi was a very good *Dandini*; and Mlle. Poggi was more at ease, and consequently better, than in the *Sonnade* of "Mose." An amusing little *bêtise* has appeared at the Opéra Comique, under the title of "Deucalion and Pyrrha." The plot is nonsense, but sufficiently sprightly nonsense; the music very pretty; and the whole charmingly represented and sung by Mocker and Mademoiselle Lemercier.

SPAIN AND THE WESTERN ALLIANCE.

At a meeting of the Cortes, on the 12th, M. Labrador and M. Orense opposed the bill for increasing the army to 70,000 men; General San Miguel and the Minister of War defended it. The latter, in the course of his observations, said: "The proposed increase is necessary, not only from local considerations, but from the fact that what is taking place in the Crimea may lead to a general war, into which our own interests may draw us, even against our will. If under any circumstances the Government should think it necessary to take part in the war, it will submit the question of alliance to the Cortes in due time." The Minister afterwards made a eulogium on England for her services for their relations with Spain. One of the Madrid newspapers says that, in consequence of the increase of the army, a new levy will be necessary.

THE OUTBREAK AT ANGERS.—SENTENCE OF THE PRISONERS

A few months ago an outbreak of a Socialist character took place at Angers—a part of France where a disturbance of that nature was least to be expected, the Angerians being known as strenuous Legitimists, and the theories of Messrs. Proudhon, Cabet, Ledru Rollin, never having found favour among them. Availing themselves of the discontent which prevailed among the slate quarrymen of Angers, owing to the high price of provisions, some of the leaders of the Marianne Secret Society succeeded in inflaming the minds of these poor workmen against the upper classes. Under the combined influence of want, brandy, and the not less intoxicating orations of the *Montagnistes*, a numerous band of these labourers followed their leaders, who intended to renew in Angers the atrocities committed by their brethren in the adjoining department of the Nièvre, at the time of the *coup d'état*. The authorities, however, were on the alert. A charge of cavalry routed the band, and numerous arrests were made.

This week the ringleaders, forty eight in number, were tried at Angers. The investigation left no doubt of the guilt of the prisoners, who, for the most part, indeed, made no secret of their intentions. They were all found guilty, and on Tuesday night, at eleven o'clock, sentence was passed upon them—fourteen are to be transported for life, and the remainder to be imprisoned for periods varying from two to ten years.

AMERICA.

The steam-ship *Baltic*, which left New York on the 3rd inst., arrived at Liverpool on Sunday. The news of the fall of Sebastopol had been received in New York, and its effect is thus described in the *New York Herald*:—

The news of the fall of Sebastopol took this city by surprise on Thursday, and spread with the greatest rapidity—and especially among the French and English residents of New York, who were greatly excited and rejoiced. At one place, in the vicinity of Wall-street, where the news was promptly read out to a promiscuous crowd of merchants, including some English and French business men, three hearty cheers were given for the fall of Sebastopol. On 'Change the great event formed the principal theme of conversation, and many mutual congratulations were exchanged. In the evening the usual resorts of our French citizens, including Delmonico's and several other restaurants, were crowded, and the greatest hilarity displayed, enhanced by the free use of champagne and other wines, which was kept up until a late hour of the night.

A Washington paper says:—

The fall of Sebastopol is a serious blow to the political prestige of the Administration and of the Democratic party, which are also imbued with an unaccountable Philo-Russianism. It cannot but be observed that while few persons or presses in the United States express any decided feeling on that great event, the disaster of the Alma, on the 18th of June, which appeared to establish the impregnability of the place, called forth a very general shout of exultation from the organs of the Government, particularly those most noted for the ultra-partisanship of its southern policy. Had the catastrophe befallen the other side, the slaves would have been rent with cries of *vae victis* towards their enemies.

The *New York Herald* publishes the charge of Judge Kane, of the United States District Court at Philadelphia, to the Jury in the case of Hertz and Perkins, tried upon the charge of violating the neutrality laws in enlisting men to serve in the British Foreign Legion. Hertz was convicted, but Perkins, who seems to have been a mere booster, was acquitted. The Judge alludes pointedly to the part taken by Mr. Crampton, the British Envoy.

The Whig and Abolitionist State Conventions had closed their sessions in Syracuse. The fusion movement was eminently successful. The Whig party was swallowed up by the Abolitionists, and its very name is now only a matter of history.

New Orleans papers of the 10th ult. contain copious details of the injuries sustained from the terrible storm which raged along the shores of lakes Borgne and Pontchartrain on the 15th and 16th. The damage was very extensive.

The news from Central America is highly interesting. Colonel Kinney's paper, the *Central American*, has been fairly started. The first number contains the Colonel's inaugural proclamation to the people of San Juan del Norte and its territory, on the occasion of his being elected governor of the same. At a mass meeting of citizens, held subsequently at Greytown, the civil and military departments of a government were duly organised. The *Central American* publishes important intelligence from the interior. On the 3rd instant Colonel Walker, with 150 men, encountered Guadiola with treble that number of troops at Virgin Bay. The latter were repulsed, leaving fifty of their men dead. Col. Walker only lost one white man and four natives. It was said that in all probability he would attack Rivas within a few days.

From Mexico we learn that General Carrera resigned the office of Provisional President, because Alvarez, Comonfort, and Llave refused to meet him at Dolores, in order to arrange a new plan of settled rule. The partisans of Mexico had chosen General Le Vega their chief. News has been received from the west coast of Mexico of the success of the insurgents in that quarter. Zapaltan had succumbed to the assaults of Gen. Comonfort. After its capture the city was sacked and entirely demolished. The fight lasted two hours, during which two hundred men were killed and many wounded on both sides. Colima had surrendered, and the soldiers of the garrison joined the Revolutionists. Subsequently General Comonfort marched with five thousand troops to attack Guadalajara, where Generals Blanquez and Gamboa were fighting, the former being in favour of General Uraga for President, and the latter in favour of General Ceballos.

THE SANTHAL INSURRECTION.

The *Bombay Times* of September 12, received by the last Overland Mail, speaks of the insurrection as not quite subdued:—

The insurgents are still scattered over the country, but the outrages with which their career commenced have in a great measure ended. The hope of supremacy in Bengal has fled them. Their leader has been captured. Seven thousand of those engaged in the outbreak have surrendered. They find that the rifle and arrow have not the slightest chance against our machinery, and that any mass of them, however large, is scattered by any detachment of our troops, however small. As the movement has thus become as purposeless as it is impotent—as the malcontents are without a guide or a purpose—and as they find themselves shot down or made prisoners wherever they are overtaken, all idea of danger from them has ceased. They are said to be endeavouring to emigrate with their families deeper into the mountains, in hopes of finding a place of refuge so remote that justice will not reach them. Their recent outrages cannot be overlooked, and the plan formerly hinted at of deporting them wholesale to British Burmah seems very likely to be fallen back upon.

LIEUTENANT PEARSE, Royal Marine Artillery, has arrived in England from the Baltic, bringing despatches from the British Embassy at Copenhagen.

ENORMOUS SKATE. Last week a gentleman caught, at Corran of Ardgour, Argyleshire, with the herring, a skate which proved to be the *Raia chagrinea* of Montagu (the shagreen ray), of the extraordinary length of 16ft., and measuring [illegible] in breadth across the wings. The length from nose to tip of tail [illegible] The monster of the deep was a female fish: a small skate was hooked, and this voracious creature, wishing to regale herself on one of her own species, gorged the smaller one, and was caught herself.

THE WAR IN THE CRIMEA.

(From our Artist and Special Correspondent.)

CAMP, SEBASTOPOL, Oct. 6, 1855.

THE week has been marked by one important incident, of which the entire bearings are not as yet fully before us. Orders were issued to the Third Division, and a portion of the Fourth, to hold themselves in readiness to embark at Kamiesch; and on the morning of the 4th the 20th, 17th, and 57th left Camp at daybreak on their way to some expedition of which the destination is not made public. Batteries of artillery were embarked yesterday at Balaclava, and French troops have also proceeded on board of transports and ships of war to form part of the new expedition. It is rumoured that the point of attack is Kinburn, a large fort on the land commanding the entrance to the lagoons of the Bug and Dnieper. It is well known that this point has been strongly fortified by the Russians, as well as Otchakoff, a second fort of great strength, which defends the opposite side of the strait. The object of the expedition, supposing it to be Kinburn, would doubtless be to effect a landing in a place where intrenchments might be thrown up, and a secure footing established, in view of an attack on Nicolaieff, which the Russians are now strengthening as a fortified position. In order to render it still more doubtful in what direction the troops are to sail, orders have been issued for the embarkation of the Light Brigade of Cavalry, which will also put to sea immediately. As cavalry is not required at Kinburn, where it cannot act, the expedition is supposed by many to be destined for some other place. But I believe that the infantry and cavalry are not really intended to move in the same direction, and that the latter will proceed no farther than Eupatoria. In the meanwhile the aspect of affairs in Camp has not changed, and another explosion in Sebastopol is the only piece of news to be noticed. A few drunken men set fire to some cartridges in the cellars of the Dockyard Barracks on Sunday, and caused an explosion which blew out the front of the buildings, and set fire to the whole edifice. The flames burst forth with great rapidity, and the buildings were gutted. The stones thrown up by the explosion killed a sentry in the dockyard, and some score of persons were singed.

General Vivian is here after dispatching the First Division of the Turkish Contingent to Kertch. The Second Division will follow in a few days, when General Vivian returns to Constantinople. The weather has been very bad, and rain continues to fall almost daily—a change for the worse on the fine days of the same period last year. Great activity prevails in the building of roads and huts for the winter.

The French Chasseur d'Afrique Cavalry Brigade have advanced to Baidar.

THE BOMBARDMENT OF KINBURN.

After a week of suspense regarding the movements of the Allied fleets in the Black Sea, we are at length informed that an attack has been made upon Kinburn. For several days the general impression was that the Allies intended to bombard Odessa. On the 10th inst. eighty ships were in sight of the harbour, which caused great alarm. A descent on the town, or a bombardment, was hourly expected. On the 12th it was known at St. Petersburg that the fleets had sailed from Odessa and anchored three miles from Kinburn, where they very soon commenced operations, as will be seen from the following despatch, received on Thursday :—

Berlin, Wednesday.

The telegraph from St. Petersburg informs us that on the 15th the English landed a small force at Kinburn, not far from the Salt Lakes. In the evening six steamers began to bombard Kinburn. The fortress replied, and one vessel was injured. On the 16th a commande took place between the forces of Kinburn and the gun-boats of the Allies.

Kinburn and Otchakoff are the two fortresses which guard the estuary, or, as it is commonly called, the liman of the Dnieper. Into that estuary the Dnieper, the Bug, and one or two other rivers flow, forming a capacious natural basin, which is separated from the sea by a spit of land, of which Kinburn forms the extreme promontory, and which approaches at the extremity to the main land, within a mile of where the fortress of Otchakoff is placed. If these two forts can be reduced or taken possession of, the road to Nicolaieff, the great ship-building port of Southern Russia, and to the arsenals of the fleets, and its destruction would be second in importance only to Sebastopol itself. If the expedition to Odessa was intended as a feint to uncover Kinburn, and if the ruse shall have had that effect, and enabled the Allies to strike a blow in that direction the Allies may well congratulate themselves on the success of their scheme

Otchakoff is chiefly defended by a citadel, where Hassan Pacha offered a resistance that entailed a severe loss on the Russian army that captured the town. It is said that the citadel has been strengthened by the Russians, who may also have added to the works formerly existing to defend the passage. In the event, however, of an attack being directed by the Allied fleets on Otchakoff, their formidable artillery would speedily overcome any resistance. The entrance to the Strait of Kinburn is practicable for vessels of heavy draught, and the lake offers likewise a depth sufficient for the purpose in view.

The Russians evidently entertained apprehensions of an attack in this quarter, for the Vienna *Military Gazette* states that the Emperor Alexander went on the 1st October to Otchakoff, to examine the batteries constructed between that fortress and Kinburn for the defence of the mouths of the Bug and Dnieper

The movements of the Emperor in the south are still kept very secret. A despatch received at Vienna on the 12th states that he had arrived at Perekop, accompanied by the Grand Prince Nicholas and the Duke of Mecklenburg. Shortly after his arrival he received General von Kotzebue, who had been sent to the Imperial tent by Prince Gortschakoff. A council of war was to be held there forthwith

The correspondent of the *Times*, in his letter of October 5, gives the following list of the forces of the expedition to be embarked under Brigadier-General Hon. A. Spencer: -

Ship.	Regiment.	Officers.	Men.	Horses.
Royal Albert	17th Regiment	23	756	—
Algiers	20th Regiment	30	474	—
Hannibal	21st Regiment	21	643	—
Leopard and Sidon ...	57th Regiment	32	734	—
Princess Royal ...	63rd Regiment	30	522	—
St. Jean d'Acre ...	Royal Marines	37	800	—
Indian	Cavalry	1	20	21
... ...	Royal Engineers	3	60	4*
... ...	Staff	...	...	7
... ...	Medical Staff	7	...	2
... ...	Regtl. Staff	...	23	23
... ...	Commis. Staff	4	...	1
... ...	Royal Artillery	}	}	}
Arabia	Royal Artillery	4	200	160†
Prince Alfred ...	Royal Artillery	}	}	}
Charity ...	Land Transport Corps, Ints, Ictors, &c.	3	60	120‡

The *Orient* with medical comforts, blankets, &c.
The *Lady A. Lambton* with one month's provisions and forage.

* 15 tons of stores, &c. † 6 guns, 6 waggons. ‡ 15 carts.

We are told (he says) this expedition is going to Otchakoff, at the entrance to the Bug, or Kinburn, or other abstruse places, known in England only to the Hertfordshire Incumbent and a few Fellows of the Geographical Society. The exact number of French I do not know, but I have heard that they will number 15,000.

THE CAVALRY ACTION NEAR EUPATORIA.

A supplement to the *Invalide Russe* of Oct. 9 contains Prince Gortschakoff's report of this mortifying defeat, which took place on the same day as the Turkish victory at Kars. According to the Russian General, General d'Allonville's force consisted of "a considerable body of infantry, cavalry, and artillery," but he does not mention that the French General had only twelve squadrons of cavalry, while the Russians brought nineteen into the field. After giving the names of the various regiments which were engaged in the affair, Prince Gortschakoff says :—

In accordance with the instructions which had been issued in the case of an attack by the enemy in superior force, these two detachments were to fall back—the first on Karagouni, and the second on Boz Oglou. Major-General Bezpetersky executed this order; but Lieutenant-General de Korff, before arriving at Karagouni, having lost sight of the enemy, who was marching in pursuit of Major-General Terpetzevsky, halted between Koumoulan-Kenaghez and Koughili, made his men dismount in order to raise the guns from their fore-carriages, and did not dispose his advanced posts in convenient order, and at the requisite distance from his position. The result was, that a great part of the enemy's cavalry, numbering from two to three thousand men, making a rapid movement to the right, appeared suddenly on the right flank and the rear of Lieutenant-General de Korff, who after that had no time to draw up for battle or prepare for a combat. The regiment of Lancers were compelled to disperse, and to fall back upon Karagourt, fighting with the enemy. Six pieces of the Horse Artillery opened fire on the appearance of the enemy, but they had lost the opportune moment for attack, and they were surrounded and captured. Two other pieces which were not loaded were replaced on their carriages, and carried off at a gallop. Our loss consists of 150 Lancers, one subaltern officer, and the six pieces, with a part of their attendants.

OVERWHELMING DEFEAT OF THE RUSSIANS AT KARS.

AFTER several months of alarm on account of the critical state of affairs in Asia, all fear of General Mouravieff has been dispelled by the news of his complete defeat on the 29th ult. The only official account of the victory which has yet been received is the following brief telegraphic despatch from Lord Stratford:

Constantinople, Oct. 13

An official report from the Commander-in-Chief at Kars communicates the following intelligence

On the 29th of September the Russians had attacked Kars; the assault lasted eight hours; during the conflict, which was fierce and obstinate, the enemy several times gained an entrance into some of the batteries with all their force, but were again driven back with considerable loss. After having made the greatest efforts, the Russians were compelled to yield before the courage of our brave troops, and to retire, completely routed. Besides the dead and wounded carried away during the action, they left in and around the trenches of the fortress 4000 men killed, 100 prisoners, and one gun. Our loss is from 700 to 800 men, among whom we have to regret the death of several superior officers. The Russians are preparing to retreat, and abandon the siege.

A private despatch which has been received at Hamburg from an authentic source states that at one time the Russians succeeded in taking two batteries; but before they had time to turn the guns round, or even to spike them, the Turks rushed upon them with such vigour as not only to regain possession of the batteries, but to decide the fortune of the day. Being repulsed with such fury, the Russians were quite taken by surprise, and fell back upon their comrades, who were thrown into confusion. The Turks then rushed out of the fortress, and slew an enormous number of the enemy before they had time to form their ranks and recover from their surprise. The despatch (which is from a Russian source) adds that, although a great number of killed and wounded were carried off the field of battle during the action, more than four thousand were left dead under the walls of the fortress. A couple of hundred Russians were made prisoners, and some pieces of ordnance fell into the hands of the Turks. In consequence of this disaster the Russians determined to raise the siege; and when the courier left they were making preparations to carry this resolution into effect. As the Turkish army which Omer Pacha has collected at Batoum may ere this have reached Artuan, it will be able to menace the line of retreat along which General Mouravieff must necessarily conduct his routed and disorganised army on their way to take up a position for the defence of Georgia and Mingrelia. This retreat the Russian General has to effect across a country which has already been ravaged by both armies.

This victory and the gallantry of the Turks are the more creditable to our allies from the shameful neglect with which they were treated. If, indeed, say army might be excused for want of gallantry, the forlorn condition of the defenders of Kars would assuredly afford an excuse. And yet, though numerically so inferior, disorganised and half-starved as they are represented to have been, their defeat of the assailants surpasses the glory of Silistria

The following telegraphic despatch, containing the Russian announcement of the attack on Kars, speaks of the blockade being still maintained, but that is rather unlikely :—

Berlin, Thursday, Oct. 18.

A despatch received from St. Petersburg states that on the 29th of September the Russian army attacked Kars. In consequence of several officers of high rank having been killed or wounded early in the action, the assault was unsuccessful. General Mouravieff adds that, notwithstanding their losses, the Russian troops captured fourteen Turkish flags, and that the blockade of Kars is re-established on the same footing as before the attack.

DESTRUCTION OF TAMAN AND FANAGORIA.

The *Moniteur* of Thursday publishes a letter from Admiral Bruat dated the 2nd of October, which announces that an expedition against Taman and Fanagoria has completely succeeded. It appears that on the 24th of September Commandant Bonet left Kertch for Taman with ten gun-boats, an aviso, and a steamer. On arriving off Fanagoria, he threw some shells into the redoubt, and proceeded to disembark a. about a mile from the fort. During the interval the Russians abandoned the place, and the Allies took possession of it in the presence of a force of cavalry from 600 to 800 strong, which retired immediately after a few shells had been thrown among them. On the following day our troops were employed in destroying all the houses in Fanagoria that could have been converted into shelter for troops at Cape St. Paul. Sixty-six cannon and four mortars were found in the fort: at Taman there were eleven 24-pounders buried in the sand. By the 2nd of October the destruction of Taman and Fanagoria was complete. The expedition was about to return to Kertch. Commandant Bonet warmly eulogises the active co-operation of Captain Dall, with three gun-boats.

WRETCHED CONDITION OF THE RUSSIAN ARMY.

IF it be true that General d'Allonville says he is able to intercept the passage of any troops or stores from Perekop, the Russian army under Prince Gortschakoff will very soon be in a hopeless condition. The retreat to the north side seems to have been with a view to fall back on Perekop, as they are evidently falling short of provisions. The following extract from the letter of the *Times* Correspondent of the 5th inst. leaves very little room for doubt on that head :

"On last two who arrived at General Simpson's were a Pole and a Russian, and both of them were in such a condition as to excite the liveliest compassion among our soldiers. Their clothes were in rags, and the fragments of their boots scarcely clung to their feet. They came from the army near Baidar, and they stated that the whole of the men were in the same state; that all they had to eat was bread or biscuit and barley, and that they had no meat, and had only occasional issues of quarter rations of vodka, or spirits. Their officers told the troops that the Allies were starving, and had no forage for their horses; and when two men were observed to laugh and throw up their hands in astonishment they passed the great piles of provisions accumulated at our dépôt on the Col. They said they were laughing at the lies which had been told to them. They were in such a forlorn state that Colonel Estes, the kind and feeling Commandant of the Head-quarters Camp, sent down an active and intelligent non-commissioned officer (Sergeant Gillespie) of the Provost Marshal's Department, under whose immediate control all prisoners are placed, to the Russian stores at Sebastopol, to get them great-coats and clothing; but he could not find any boots, and it was observed that no boots were in store when the place was taken, and that the prisoners were very badly shod. This is very unusual with Russian troops, and shows the straits to which their army must be reduced. When the place was evacuated the English took sixty-two prisoners, many of whom were drunk and asleep amid the ruins of the houses, and they were all badly dressed, and ill-provided with shoes or boots. The wounded men taken in recent affairs of outposts by the Sardinians present the same appearance, and the fact is evident that the Russians are rapidly deteriorating in condition and in external efficiency. The men state they get 3 lb. of bread or 1½ lb. of biscuit a day, and a little barley, which they boil into a kind of soup, and that is all their rations. They say, then, as I have said, they receive a small allowance of wheat or barley brandy. They are kept alive by assurances that the Allies must soon go, and then they will have (poor deluded creatures!) the spoils of the English Camp, which is rich in everything but food.

On the 9th inst. Prince Gortschakoff says :—"The enemy has advanced from Eupatoria, threatening Perekop, but retired on meeting the advanced posts of our left flank. The enemy put in disorder sixteen battalions from Kokoulousses, Dansyasch.

On the 14th he speaks in a despatch to Prince Paskiewitsch of a simultaneous organised concentric advance of the Allies from Eupatoria, Baidar, Kertch, and Amburn, with the intention of surrounding and cutting off the Russian force :

This announcement seems intended to prepare the way for his retreat from the Crimea if he could only see a safe road out of it. Perhaps he will find that he has postponed the march of his troops till it is too late.

On the 15th Lord Panmure received intelligence that Sir Colin Campbell had been sent to Eupatoria with a considerable force of infantry and artillery. To all appearance a crisis is at hand.

DESPATCH FROM GENERAL SIMPSON

War Department, Oct. 18.

Lord Panmure has this day received a despatch, of which the following is a copy, and its inclosures, addressed to his Lordship by General Simpson : -

Sebastopol, Oct. 6

My Lord,—Marshal Pelissier having signified to me his wish that the cavalry force under General d'Allonville, at Eupatoria, should be reinforced by some English cavalry, I at once acceded to his request, and have ordered the brigade of Light Cavalry, under Brigadier-General Lord George Paget, composed of the Carabiniers, 4th and 13th Light Dragoons, and 12th Lancers, and one troop of the Royal Horse Artillery, under Captain Thomas, to be sent for this service. I am in hopes that transport will be found to convey them early next week.

I have the honour to transmit to your Lordship the copy of a report I have received from Lieut.-Colonel Ready, with the details of an expedition undertaken against a fort and buildings on the island of Taman. The object was entirely carried out, and the troops have been enabled to supply themselves with a large amount of firewood and building materials.

Since I last had the honour of addressing you I have seen Lieut.-General Vivian, and I am happy to inform your Lordship that he quite approves of the decision I had formed of uniting the Contingent at Kertch. Some few thousand men have already arrived there, and every exertion is being made to ensure them their supplies of food and fuel for the winter

The corps of General de Salles have, during the past week, pushed forward their advanced posts to the high ground on the left bank of the Belbec, overlooking Fort Sala. Their supports occupy a ridge from this place, stretching towards the south to Markul. The main position of the army is on high, bold ground, extending from Aitoda to Markul, with the reserves posted between the village of Urkusta and the Bridge of Tash. The corps is further to be reinforced with the view next week of making a strong reconnaissance of the ground from Fort Sala towards Wyenbash, on the left bank of the Katcha.

I am permitted to report that Lieutenant-General Markham has been compelled, by illness, to return to England for a few months. He sailed on the 29th ult.

I beg leave to inclose the lists of casualties.

I have, &c., JAMES SIMPSON, General Commanding

The Lord Panmure, &c.

SUPPLEMENTARY RETURN OF PRIVATES KILLED FROM THE 8TH TO THE 27TH SEPT., 1855

KILLED, at Battalion Rifle Brigade: Private David Mathews, by the explosion of a magazine in the town of Sebastopol

Wounded, 4th by the explosion of a magazine in the town of Sebastopol, Sept. 27th, viz. Foot: Privates Thomas Miller and Michael Spring, severely; John Loughria, slightly. 1st Battalion Rifle Brigade: Colour-Sergeant John Round, severely; Private Daniel Lewis, Michael Gleeson, William Cox, and George Best, slightly.

THE BALTIC FLEET.

The strength of the naval forces in the Baltic is gradually decreasing. The gun-boats, under convoy of the *Hogue*, left for England on the 8th inst. They were to proceed first to Faro Sound, thence to Elsinore, Wingo Sound, and Christiansand, with orders not to start from the latter port unless the wind was to the northward of west. In order to lessen their top-weight, which causes them to roll excessively, their heavy guns have been removed and placed on board the *Royal George*, *Cressy*, and *Edinburgh*. They have taken in a month's supply of provisions, water, &c., and their crews were paid the monthly allowance up to the end of last month.

The fleet, lately so powerful and magnificent, is now reduced to little more than a squadron, consisting of a few line-of-battle ships and some large steamers; and, should the weather continue long as bad as it has lately been, it is not at all improbable that even some of the remaining vessels will be compelled before long to seek a safer anchorage than is to be found in the Gulf of Finland

The Commander-in-Chief proceeded lately, in the *Duke of Wellington*, to the eastward, to reconnoitre Cronstadt. Most unfortunately the weather was hazy and thick, and although he went as far as the old anchorage on the north side the island, and consequently very close, little could be seen; nothing new, however, seemed to have been done along the coast. Nine block-ships, three small ones, two paddle-steamers, and several steam gunboats, could be counted along the northern entrance and three-fathom bank. Two line-of-battle ships and two frigates, with topgallant-yards across, together with two three-deckers, with topmasts struck, could be seen inside the harbour. As the weather was so thick, it was useless going round the south side, so he returned to Seskar.

THE FLEET IN THE PACIFIC.

From the *San Francisco Herald* of August 22 we learn that the frigate *Amphitrite* arrived in that port on the previous day, from Ayan and Sitka, Russian possessions, and anchored at Sausalito—all well. By this arrival we are informed that she reached Petropaulovsk on the 11th of June, after a passage of thirty days from Honolulu. She sailed from Petropaulovski for Ayan, Amoor river, on the 14th June, and arrived there on the 15th after a fine passage of twenty-six days. The *Amphitrite* was five days lying at anchor in the channel leading to the entrance of Amoor river, during which time she was engaged in sounding. She found the town of Ayan almost entirely deserted. It is a neat little place, built of wood, and contains a neat wooden church and thirty-five houses. While lying at Ayan a Russian iron steamer was blown up, and at the same time a proclamation was issued to the inhabitants of Ayan, that all private property would be respected and spared—everything, with the exception of the steamer. The English vessels of war then proceeded to the mouth of the Amoor, but were unable to enter in consequence of a sand bar running across. Boats were sent out, which advanced considerably up the mouth, but no fortifications, Russians, or Russian ships of war could anywhere be discovered. What the Russians have done with themselves and their ships of war is involved in mystery. If the allied vessels of war could not enter the mouth of the Amoor in consequence of the sand bar running across, it is evident that the Russians could not have got their vessels across, and that they are now anchored in some of the bays in those regions, probably in the Gulf of Tartary.

The *Amphitrite* sailed from Ayan July 15, and arrived at Sitka August 8, after a passage of twenty four days. There was nothing new at Sitka; all was quiet. It will be recollected that, after the second visit of the Allied fleet to Petropaulovski, information was obtained that the Russians were in strong force at the mouth of the Amoor river, which rises in Mongolia and falls into an arm of the Ochotsk Sea (Gulf of Saghalien), opposite the north end of the peninsula of the latter name. The peninsula extends north and south about 170 leagues, connecting, according to the best navigators, with the main land southward from the mouth of the Amoor, and thus forming with the main land the Gulf of Saghalien on the north, and the Gulf of Tartary on the south. It is thought by some that Saghalien is an island, and that vessels can sail through the Gulf of Tartary to the Gulf of Saghalien. "It is not absolutely determined," says Findlay, "whether Saghalien be an island or peninsula; but, as all evidence certainly tends towards the latter opinion, that appellation has been retained."

BARON BRUCK,

THE AUSTRIAN MINISTER OF FINANCE.

IN 1822 or 1823, when the Greeks were in arms to assert their independence, a young man with a staff in his hand and a travelling knapsack on his back presented himself at the office of a Greek merchant at Trieste, to whom he had a letter of introduction. Filled with youthful enthusiasm for the once glorious name of Greece, he was on his way to the Morea with the intention of joining the Greek insurgents, as Lord Byron did about the same time. The merchant, pleased with his appearance, and perhaps influenced by the letter of introduction, thought it a pity so much intelligence should be employed in warlike rather than in peaceful pursuits, and endeavoured to dissuade him from his purpose. To give effect to his arguments he offered the adventurer a clerkship in his office. The offer was immediately accepted. The young man's name was Bruck. He doubtless devoted himself with much zeal to his patron's interests, for in a few years he became the head clerk and manager of the business. A courtship was shortly afterwards carried on between him and his patron's daughter, which ended in marriage and a partnership.

In addition to the private interests of his business, M. Brück now devoted himself to public affairs, and more especially the formation of an Austrian Steam Navigation Company—the few steamers which plied on the Adriatic being at this time almost exclusively in the hands of English speculators. He it was who established that well-known institution, the Austrian Lloyd's—for which he was indebted for a name to the commercial phraseology of England and which he founded on principles similar to those by which the English Lloyd's is conducted. As railroads began to extend themselves in France and Germany, M. Brück, anxious

that his own country should not lag behind the rest of the world in this respect, favoured their introduction in Austria: and it is to his energy and public spirit that the world owes the remarkable railroad which is to connect Venice with Trieste, and which passes over the Styrian Alps at gradients which at one time would have alarmed the ablest engineers, and winds amongst some of the most beautiful scenery in Europe. This railway is at present completed from Vienna to Laibach. The remaining seventy miles, from Laibach to Trieste, through a dreary and difficult country, are in course of construction.

After the revolutionary disturbances of 1848, and the accession of the present Emperor, M. Brück was called to the Ministry in the Department of Finance. In this department he has proved himself an able administrator; but has been, it is believed, the main obstacle to the warlike policy in favour of the Western Powers, which the circumstances of Europe, no less than of Austria herself, ought to have dictated. Baron Brück is said to be of opinion that if Austria had not concluded a treaty of alliance with the Western Powers she would have been able to come to an understanding with the Bund. "And such (says the *Times'* Correspondent at Vienna) would doubtless have been the case; but then Austria would have been what Prussia and the rest of the German States now are—the secret ally of Russia. The Minister of Finance, who in a high degree enjoys the confidence of his Imperial master, has probably called his attention to the fact that by his policy in the Eastern question he has lost the influence which he formerly had over the second-rate German Courts; and it must be confessed that, if he has done so, he has not misrepresented matters. It was, however, a question, whether Austria should adopt the policy of Prussia, Bavaria, Saxony, Wurtemberg, and other States, or whether those States should adopt that of Austria." "Baron Brück (adds the same writer) seems to think that Austria would have done well to consent to play second fiddle in Germany, and there is reason to fear that he has managed to convert persons of influence to his opinion."

The financial project with which he has been engaged for the last few weeks, and which has just resulted in a contract with the house of Rothschild, has greatly occupied the attention of diplomatists and the press. The object was to establish in Austria a Mortgage Bank on the principle of the *Crédit Mobilier* in Paris. M. Pereire of that establishment went to Vienna to consult with the Austrian Minister. It was reported at the commencement of the present month that Baron Brück, having found it impossible to induce that gentleman, or any other financier, to advance the necessary funds, had tendered his resignation to the Emperor; but subsequent information proved the rumour to be unfounded. Though M. Brück came to a preliminary understanding with M. Pereire on the subject of the statutes of the proposed bank, the question as to the amount of capital remained unsettled. Perhaps some other matters were also in dispute, but, however this may be, the negotiations were ultimately broken off, and the Vienna branch of the great house of Rothschild and Co., after consultation with Baron James Rothschild, of Paris, is understood to have taken the contract, and M. Pereire has left Vienna. On the morning of the 8th instant Baron Brück proceeded to Ischl, the summer and autumnal residence of the Emperor of Austria, and submitted to his Majesty the propositions of the house of Rothschild. The *Times'* Correspondent at Vienna, writing on the 12th inst., says:—"It is a settled matter that a Crédit Mobilier will be established in Austria; but it will not take the French establishment which bears that name as its model. On his return from Ischl, Baron Brück will bring with him the sanction of the Emperor to one or other of the propositions which have been made. The house of Roth-child is believed to have the best chance of success. It is whispered that the French Crédit Mobilier has agreed to take the Italian railroads off the hands of the Austrian Government. The Crédit Foncier, or Hypotheque Bank, will be entirely in the hands of this bank, which is to manipulate with a capital of 20,000,000 silver florins. The plan may be a good one; but the landed proprietors of half-a-dozen of the Hungarian 'comitats' would require the whole 20,000,000, if they were resolved to put their affairs in order."

These anticipations have been confirmed, for we learn by a telegraphic despatch from Vienna, dated Monday, the 15th, that the house of Rothschild will establish an Austrian Bank of Crédit Mobilier with a capital 60,000,000 florins.

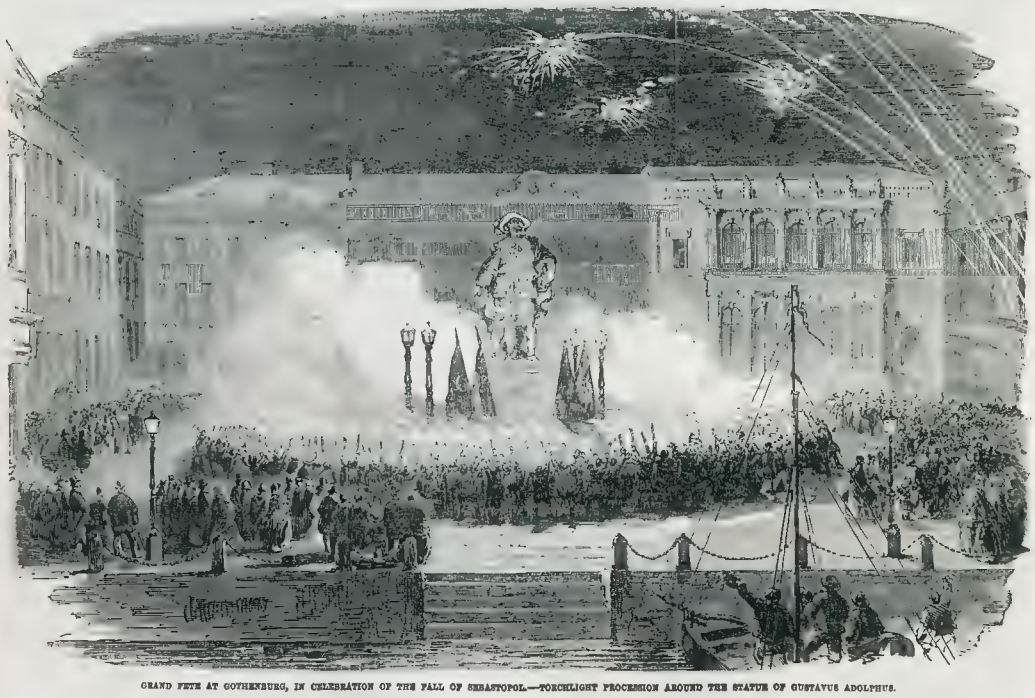
BARON BRÜCK, THE AUSTRIAN MINISTER OF FINANCE.

FETE AT GOTHENBURG IN CELEBRATION OF THE FALL OF SEBASTOPOL.

THIS commemoration is of special interest, inasmuch as it goes far to prove that, whatever policy the Swedish Government considers it advisable to follow, the people are not without warm sympathy for the cause of the Allied Powers, or, in other words, of liberty and civilisation, in a war from which Sweden, perhaps more than any other nation, must expect to derive advantage, being nearest neighbour to the Colossus, from whose open or secret aggressions she has so often and fatally suffered.

Circumstances had delayed the demonstration, so that it could not take place till Monday, the 1st inst., in the Brunnspark, a public garden near the middle of the town, surrounded on three sides by water. The numerous vessels in the busy harbour of Gothenburg displayed flags throughout the day and, as it began to grow dark, crowds of persons to the amount of some fifteen thousand assembled in the handsome streets, whose breadth and regularity render this town peculiarly adapted to display public pageants to advantage. About two thousand persons who had taken tickets for the fête gradually assembled in the Park, which was brilliantly illuminated for the occasion; a sparkling wreath of lamps, doubled by reflection in the calm waters underneath, ran round the whole inclosure, on one side of which a transparency, bearing the names Sebastopol, Alma Inkerman, Tchernaya, glittered among the dark trees opposite to it an illuminated pavilion was seen in the background; and in the middle, between two brilliant pyramids of light, rose the rostrum, tastefully decorated with green branches and bright autumn flowers, and surmounted by the flags of the four Allied Powers, with that of Sweden waving above. Gay parties of ladies and gentlemen kept moving about in all directions, admiring the fairy-like scene around them. Gradually the crowds thickened around the rostrum, listening with frequent cheers to the first speaker who ascended it, and proposed in warm and eloquent expressions two important toasts—"The fall of Sebastopol," and "The Allied Powers," who had effected it. Music and showers of brilliant rockets succeeded each toast, which was responded to with loud and enthusiastic shouts. The French and English Consuls, who had been duly invited to join the fête, then returned thanks in the names of their respective nations; the latter in particular called forth great applause by the graceful and felicitous turn given to his speech, in which he expressed his conviction that if the *arms* of Sweden were denied us we might still be sure of its *hearts*. "Partant pour la Syrie," and "Rule Britannia," were struck up by the band at the conclusion of each speech. Toasts for Sweden and the future were then proposed in eloquent speeches, followed like the others by appropriate music and fireworks.

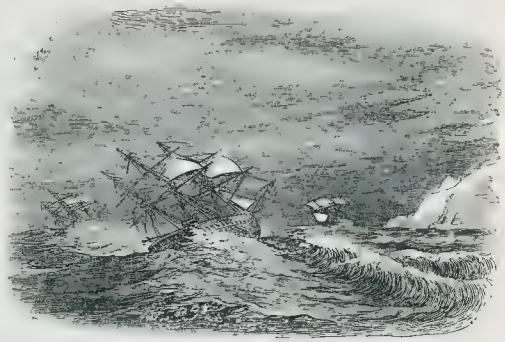
Suddenly torches flitted about on every side, emerging from behind the trees, mingling, approaching, until a long line was formed, and a procession of several hundred torchbearers, accompanied by the band, the vocal performers, the Consuls of the Allied Powers, and the Swedish and four Allied flags borne at regular intervals, proceeded to leave the Park; and, slowly working their way through the crowd, wound like a vast fiery serpent through the principal streets of the town, and, crossing the Lion Bridge, marched on to Gustaf Adolph-square. Here a beautiful spectacle presented itself: the glittering line gradually formed into a circle, surrounding the colossal bronze statue of Gustavus Adolphus, the last and most splendid work of the celebrated Fogelberg, which was inaugurated about a year ago, and adorns the middle of the square. It seemed as if a chaplet of stars had fallen from the skies at the foot of the great warrior—"the King without a fault,' as he has been called. Proudly he rose in the midst of those subjects whose forefathers he had once led on in a yet greater cause. If that heart could still beat how warmly would it have responded to the call of the present day; for since the world began there have been no two wars of principle equal in importance to the war for religious liberty contested by the hero of Lützen and that for political liberty and civilisation now waged by the two foremost nations in the world. The four flags waved round the marble pedestal, the band played national airs, while the health of King Oscar was proposed amid loud and continued cheering, followed by a brilliant display of fireworks and Bengal lights, which seemed to convert the handsome buildings round the square into palaces of marble, gave an unearthly grandeur to the noble statue of the Monarch, towering in the midst. At a given signal the glittering wreath unwound; the procession moved off; they passed the bridge, each of the torchbearers threw his flambeau into the canal: star after star disappeared in the water, and soon nothing was left of the dazzling pageant but the gas lamps, the dark statue of the King, the black sky above, with a few pale moonbeams struggling through the breaking clouds, and the memory of it in the hearts of the spectators. May this touching and interesting fête be an earnest of a yet closer sympathy between the brave people of Scandinavia and their British brethren, who are so ready to stretch forth the hand of fellowship! Every enlightened patriot must see on which side the true interests of Sweden lie.



GRAND FETE AT GOTHENBURG, IN CELEBRATION OF THE FALL OF SEBASTOPOL.—TORCHLIGHT PROCESSION AROUND THE STATUE OF GUSTAVUS ADOLPHUS.

OPERATIONS IN THE PACIFIC.—VISIT OF AN ENGLISH SHIP TO JAPAN.

H.M. SHIPS "HORNET" AND "BITTERN" SOUNDING THE BAY OF MATSUMAI, ISLAND OF JEZO.



THE "SYBILLE," "HORNET," AND "BITTERN" IN A CALM IN THE GULF OF TARTARY.

EVERY glimpse of Japan affords fresh interest to the reader, more especially if it be accompanied by illustrations of the scenery of the country, and of the every day life of its people. We have, therefore, much pleasure in acknowledging the graphic contributions of an officer of the —— in the seven engravings from pen-and-ink Sketches, which convey vivid pictures-in-little of the Japanese. The descriptive details we have condensed from the *Friend of China*, whose "own Correspondent" "at and above Japan," in H M S *Sybille*, has lately addressed to that journal this, his first communication, consisting of four letters—the first in the form of a diary commencing on the 28th of April last (the *Sybille* left Hong-kong three weeks before that date) the second communication is dated the 23rd of May, at sea, about 300 miles north of Hakodadi (Japan); the 3rd and 4th are dated the 13th and 29th of June respectively:—

"April 28, 1855.—Off Hakodadi, on board her Majesty's ship *Sybille*, the *Hornet* and the *Bittern* at anchor near. Noon. A boat came from the shore with three Japanese officers and an interpreter in Dutch. Commodore told me to tell them to walk into the cabin, where they made inquiries as to where we

JAPANESE INTERPRETER AT HAKODADI.

were from, what we wanted what was the Commodore's name, and or what country we were. I told them this was a ship belonging to the Queen of England, that we were from Hong-Kong, but where we were going I did not know. Commodore told me to ask if any English ships had been here, or any other place on this coast, which I did; at same time, for my own satisfaction, I asked if any Russian ships were thereabout. He replied no English ships had been there, but made a difficulty in answering about the Russians. I told the Commodore what I wanted to know, and asked if I should press for an answer. He told me not to mind, and so I did not then find out that they had been there. This I find out afterwards, however, from a Japanese on shore, and learnt that an American brig,* with 150 Russians on board, had been there on her way from Simoda to the northward.

April 29, Seven a.m.—Five boats came alongside with provisions. There were 250 catties of fresh fish, 800 catties of sweet potatoes, 600 catties of greens, 200 large pears in four cases, and 2000 eggs, the cost of which was 27 dollars Mex.† This was Sunday, and in the forenoon some Japanese officers came on board. In the fore-cabin hung a picture of her Majesty Queen Victoria, and one or the officers asked me if the men came there to worship the picture? I immediately told him how shocked I was that he could think we worshipped a picture. I felt as though I could break it. I replied "No," and pointed with my finger up to heaven, and told him we worshipped one God in heaven, and the Queen of England herself did the same. He looked at me with astonishment. After a few minutes I secretly managed to give half-a-dozen New Testaments (in Japanese‡) to a native in the junks. At half-past one the Commodore, taking me with him and most of the officers, went on shore, where we remained nearly four hours. Accompanied by Japanese policemen, the officers and men, in twos and threes together, were allowed to walk through any street they pleased, but might not enter into any of the houses, nor buy anything excepting at a stall on one side of a temple, to which goods were brought from the shops to be bought. Nearly all the shops were shut up. We visited three temples, and walked up the face of the hill, from which we got a good view of the town. It appears slightly built, the houses mostly of wood. A Japanese mandarin accompanied us (the Commodore's suite), with whom I held some conversation; dwelling particularly on the bearing of the English with each other, and of the friendly feeling which they entertained for all the world; and I told them that the Americans, speaking the same language as the English, were the same. I told him my belief was that all this proceeded from the nature of their (our) religion—it made them kind to every people. The Commodore and the two officers went up the hill and left us sitting talking. And such was the result of my first visit to the shore at Hakodadi.

May 1.—I had many questions given me to put to the Japanese officers, but, though I did this in as courteous and friendly a way as possible, they looked at me very sharply and answered unwillingly.

JAPANESE CANOE.

May 2.—A ship was seen the other side of the island or Hakodadi, and the *Hornet* and *Bittern* went out to see what she was, as she showed no flags, and made off as soon as ours were seen. This day had been appointed for an interview with the Governor, and at twelve o'clock we landed, taking our way to the Governor's house, which had to be entered through a temple. From the first gate to the entrance of the first room, about forty men, armed with spears seven feet long, lined the way on one side, and on the other side were thirty men more, armed with what appeared to be muskets, but the lock parts were covered over, and I could not see whether they had flint or match arrangements. From the first to the second room there was a similar number on guard. Altogether there were fifteen officers from the *Sybille*, and a seat was placed for them along the left side of the hall of audience—a long bench covered with red cloth. The Commodore, with a gentleman, his guest on board, as secretary,§ had separate seats apart from the rest, and opposite to them was the Governor by himself. On his Excellency's right hand, at about a foot distance, stooping on the floor with a copybook, was a Japanese to take down what was said. Three Japanese officers were in rear of the Governor, and nine others behind them. The name of the Governor is (our Correspondent here gives us the Japanese characters only) ——, and, after all were seated, he came and bowed his head all round the room, first to the Commodore, and then to the English officers. When seated, pipes and tobacco were served to each officer, followed by cakes and fruits and tea on small Japan tables. The Governor then, addressing the Commodore, said it was the first time he had seen an English high officer, and that he was happy to make his acquaintance. To this Commodore Elliot replied, that the Emperor of Japan and the Queen of England had now much friendship, a treaty having been made between the two countries, which, duly ratified, was then, he believed, at Nagasaki, with Admiral Stirling. The Governor said he had heard that an English war-steamer had been taken by five Russian men-of-war. The report had come by the way of Nagasaki. Commodore Elliot replied there was no possibility of truth in such a report. The Governor then asked how long the war was likely to continue, and then how went the civil war in China! Was it true Pekin was taken by the rebels? I told him that when we left there was a good deal of trouble and fighting near Canton; but we did not know much in the south of China how matters went on in the interior and at the north. The Governor then said, if the Russians should be seen off or on the

NATIVE OF JONGUIERRE BAY, GULF OF TARTARY.

coast of Japan, he hoped Commodore Elliot would not hurt them. Commodore Elliot replied, his respect for the Emperor of Japan, and for the Governors of Nagasaki, Simoda, and Hokodadi, would prevent him from thinking of such a thing (ironically). Commodore Elliot then said how delighted he should be if the Governor would pay a visit to the *Sybille*, to which his Excellency replied that he should be most happy did the state of his health permit; his deputy, the next in rank, would pay his respects for him instead. A conversation then sprang up about coal, of which the Governor said there were two kinds in Japan: one all black, the other with iron rusty veins, the totally black was considered the best. Several of the Japanese officers said they had never seen coal, and the Commodore promised that when the *Hornet* returned he would show them some English.

On parting, the Governor was warm in his adieus, and said he was desirous of exhibiting as cordial a welcome as he could. According to etiquette, his

JAPANESE BOATS.

THE "SYBILLE," "HORNET," AND "BITTERN" IN JONGUIERRE BAY, GULF OF TARTARY.

Excellency left the room first, and when we came out we found the guards still in attendance in the same attitude.

This ends the first communication. The next is dated May 23rd, and runs:

The Russian squadron was found by Commodore Elliot at Castries Bay on the 20th. It was on a Sunday, and as soon as Divine service was over the order was given to down bulkheads and captain's cabin; the Commodore going on board the *Hornet* to try the depth of the water in the channel towards where the Russians were lying. The *Hornet* went in quite close to them, and counted one 44 or 50 gun frigate, two or three 24-gun corvettes, one barque of 16 guns, a store-ship, a steamer, and a 22-gun corvettes, one barque of 16 guns, a store-ship, a steamer, and a schooner. All our seamen were cheering with each other at the thought of going to fight. Three shots were fired at the Russians, and flags run up as a challenge to them to come out, for it was found impossible, by the narrowness of the passage, to get the *Sybille* in closer. The Russians refirmed our challenge with two guns. About seven o'clock the Commodore came on board, after having been out sounding in the *Hornet* all day, and ordered the ship to be got under way to stand out. The men were very angry at this, and asked out loud if we were going to run away from the Russians? The Captain had to talk to them himself, and tell them all he wanted was to go to a sufficient distance to allow the Russians an opportunity of coming out into deeper water. "Once they are out," he said, "and they are ours." All that night all hands were at quarters with everything in readiness for action—shell, grape, and canister—every one in high glee at the hope of a fight—but the Russians would not come. I finished this in a hurry, as I hear a meal is about to be closed.

The next communication is dated the 13th of June. Running some distance off the land, in order, it would appear, to allow the Russians to come out into an open field, Commodore Elliot, on the 24th of May, dispatched the *Bittern* to Japan to bring up any other ships of the squadron to be found there. On the 29th of May he ran again in to Castries Bay, but the birds had flown. Steaming in the *Hornet* into the inner harbour, they landed at a place where there were a few huts, all deserted in a hurry, and shortly after, for crown bread was found in the oven, and a half emptied tumbler of gin on a table. Commodore Elliot found here, too, a large new storehouse containing quantities of spars, anchors, boats, pigs, fowls, and five barrels of flour, furs of all descriptions, and some warm clothing. The *Sybille*, on the 29th of May, again left Castries Bay, and three days afterwards met the *Winchester*, *Bittern*, and *Spartan*.

Castries Bay appears to be a deep inlet under two high headlands, with from ten and a half to six fathoms, until a passage to the inner harbours is met running between two small islands—rocks and reefs dotting the water in a formidable manner for an attacking force. The extreme end of the bay, about W.S.W. from the entrance, where the steamers were lying, was filled with ice.

Our last note, dated the 29th of June, is very brief. The *Winchester*, *Sybille*, *Bittern*, *Spartan*, and *Hornet*, at that date, were all lying in Jonguierre Bay, where a coal-mine had been found, from which the boats of the squadron were replenishing the *Hornet*. On their arrival there on the 26th all inquiry was made of the Saghalians, but no information of any moment could be obtained. On the 27th Commodore Elliot again went in the *Hornet* up to Castries Bay (returning on the 29th), sounding in towards the Gulf of Saghalien to two and a half fathoms of water. Only a man-of-war's boat could be seen all round. The Correspondent concludes: "The report is we are going to Ockhotsk Sea, as we cannot enter the Amoor River on this side."

A subsequent note, dated "Salmon Bay, 7th July," states that the French frigate *Sybille* was met on the 1st ult. with so many as 120 men sick on board. The *Sybille* reported also the loss of the services of the French steamer *Colbert*, now at Shanghai repairing. The Japanese authorities at Arnowa (Salmon Bay) were said to be the most generous, sending off, free of expense, to the British *Sybille* and *Hornet*, fifteen bullocks a-piece, and 10,000 fresh salmon, besides bags of rice. They had been equally liberal to the French, who had also obtained some planking, of which they stood in need.

The first of the accompanying Sketches shows the *Hornet* and *Bittern* sounding and examining the bay of Matsural, in the island of Jezo. The tops of the most distant hills are covered with snow; lower down is a mass of beautiful verdure and wood—the Prince of Matsural's grounds, surrounded by a white wall, with small white turrets. Below this park-like hill are an extensive wooden town and a fleet of boats of the country; and the island at the end of the bay is surmounted by a small white turret.

The second Illustration shows Commodore the Hon C. Elliot's "Flying Squadron," consisting of her Majesty's ships *Sybille*, *Hornet*, and *Bittern*, encountering a furious gale and stormy storm in the Gulf of Tartary, during their search for the Russian squadron, on May 13. To the windward lies the snow-clad land of Saghalien.

In the first of the lower Engravings in the page are the three ships in Jonguierre Bay. In the foreground are natives and their huts and dogs. A party of natives is hauling the whale-boat of the *Bittern*; and the three natives in the foreground are consulting on the appearance of the ships. Here we have, as in the first view, the snow-capped hills and their wooded base at Hakodadi.

In the next View we have a group of Japanese boats, running sometimes as large as 100 tons: they are used with a single loosely-fitting white cotton sail, always bearing a black mark in each corner. Towards the centre of the page is also a canoe, or boat, made of thin slabs of pinewood, pinned together with pegs of the same material, and strengthened with lacings of grass; no iron being employed in their construction, such as is used in the island of Saghalien.

Upon the right is a portrait of a native of Jonguierre Bay, in his seal-skin coat, leggings, and boots. In the opposite column is the portrait of a Japanese Interpreter at Hakodadi, one of the three ports lately opened to British trade by Sir James Stirling's Convention. He carries the two swords customarily worn by the Japanese officials, thrust awkwardly high up into the folds of his loose dress. The stiffly plastered and curiously tied-up hair on the shaven crown will not escape observation.

THE CASE OF ELIZABETH M'INTOSH, OR SCOTT.

(From the "Scottish Press," Oct. 16th, 1855.)

HANGING is an ugly business at all times, and everybody agrees as to the propriety of making capital executions as scarce as a regard for public justice and respect for public opinion will allow. By the laws of England and of Scotland many offences may yet be punished with death; but, by the common consent of both people and rulers, the penalty is inflicted only in cases of murder. Again, by custom, only aggravated murders are really punished with death—a large proportion of persons convicted of that crime being reprieved by the exercise of the Royal prerogative. Infanticide has virtually ceased to be a capital offence; for it is long since a female was executed for the murder of her child, even when it had reached the age of some months or even years. The Government has probably considered that a mother murdering her young child by an act of sudden violence must do so under an impulse which overcame for the moment the natural yearnings of maternity; nor are we aware that any evil has resulted to society from the leniency which we describe.

A case occurs to us at this moment which took place in the south of England during the period that Lord Palmerston held the office of Secretary for the Home Department. A young woman named Sherwood deliberately strangled her child, six years of age, on Brighton Downs, and left the body stripped of its clothing, whilst she returned, apparently unconcerned, to her master's house. Except in the very madness of the act itself, we are not aware that either insanity or any overwhelming motive could be pleaded in mitigation, yet Sherwood was reprieved, and her sentence commuted to transportation for life.

We are induced to call attention to this subject by the fact that, on the Perth circuit, as our readers would observe at the time, a young woman named Elizabeth M'Intosh, or Scott, has been condemned to death by Lords Cowan and Handyside for the murder of her child, five months old, by throwing it into an old coal-pit. The jury recommended the woman to mercy by a majority of one. That recommendation was, doubtless, transmitted to London, but we have not yet learnt that it has received favourable consideration from the officers of the Crown. Of the special merits of the case—of the extent of the inducement which led to the perpetration of a crime so horrible—we have not data; but on the broad principle of justice we cannot understand how Sir George Grey can allow this wretched woman to suffer, in the face of such precedents as the acts both of himself and his present chief abundantly furnish. We understand that Mr. Cowan, M.P., and other gentlemen have taken up the case, and heartily wish them success.

NOTE.—We understand that Elizabeth M'Intosh, or Scott, the young woman in question, gave birth to five children by the same marriage, of which her husband *was not* the father. This became the fruitful source of domestic broils, and of much unkindness from her husband's relatives. These things operating on her mind drove her, in a great measure, to perpetrate the murder, which she did by throwing the infant down a coal-pit—a fact which she admitted upon her apprehension and judicial examinations. We do not, however, wish to found on these circumstances, alleviating although they be considered. But what we wish specially to direct the attention of the public to is the fact that in the above extract from the *Scottish Press* are to be found references to several cases of child murder by the mother far more aggravated than the present where the sentence has been mitigated, on appeal to the Secretary of State.

CALENDAR FOR THE WEEK.

SUNDAY, Oct. 21.—20th Sunday after Trinity. Battle of Trafalgar, 1805.
MONDAY, 22.—Lord Holland died, 1840.
TUESDAY, 23.—Royal Exchange founded, 1567.
WEDNESDAY, 24.—Edict of Nantes revoked by Louis XIV., 1685.
THURSDAY, 25.—Battle of Balaclava, 1854. Battle of Agincourt, 1415.
FRIDAY, 26.—Hogarth died, 1764. Riots at Bristol, 1831.
SATURDAY, 27.—Sir Walter Raleigh beheaded, 1618.

TIMES OF HIGH WATER AT LONDON-BRIDGE, FOR THE WEEK ENDING OCTOBER 27, 1855.

Sunday.	Monday	Tuesday	Wednesday.	Thursday.	Friday	Saturday.

LIST OF ENGRAVINGS
IN THIS WEEK'S "ILLUSTRATED LONDON NEWS."

SKETCHES FROM THE CRIMEA (by our own Artists):—
Scene in a Street of Sebastopol. Allied Soldiers Singing "No more Trenches," to the Air of "Des Lampions" (drawn by G. Grard) *page* 464
Remains of the Hospital in Sebastopol (sketched by E. A. Goodall) ... 465
French Troops Taking Ammunition to the Mortar Battery near Fort Nicholas (sketched by E. A. Goodall) 468
Street in Sebastopol (sketched by E. A. Goodall) 469
Pass of Perce, Baidar (sketched by J. A. Crowe) 468
The Valley of Baidar (from an Original Sketch) 468
Grand Fête at Gothenburg, in Celebration of the Fall of Sebastopol—Torch-light Procession around the Statue of Gustavus Adolphus) 469
Portrait of Omer Pacha (from a Photograph by Fenton) 472
Portion of the Camp of Omer Pacha, upon the Eastern Shore of the Black Sea (sketched by Laurence Oliphant) 473
The New Office of the Minister-at-War (Barrack-yham House), Pall-mall ... 477
Portrait of Baron Bruck, the Austrian Minister of Finance 480
Operations in the Pacific—Visit of an English Ship to Japan:
H.M. Ships *Hornet* and *Bittern* Sounding the Bay of Matsural, Island of Jezo 481
The *Sybille*, *Hornet*, and *Bittern* in a Gale in the Gulf of Tartary ... 481
Japanese Interpreter at Hakodadi 481
Japanese Canoe 481
Native of Jonguierre Bay, Gulf of Tartary 481
Japanese Boats 481
The *Sybille*, *Hornet*, and *Bittern* in Jonguierre Bay, Gulf of Tartary ... 481
Indian Cotton—The Webs of Dacca:
Cotton Carder—The Bow—Cotton Roller—Yarn Winding (2 Cuts) ... 473
Twisting the Thread—Warping—Drawing—Weaving—Beaming ... 473
Spinning—The Shuttle 474
Fountain for the City of Concepcion, South America 476
Monument to the late Archbishop of York, Minster 476
The Bishop's Mercy at Worcester Cathedral 476
Monument to the late Sir Joseph John Gurney, Bart., in Lombard-street ... 476
Testimonial presented to Mr. Joshua Cooper, F.R.S. 477
The Regent Rifle Challenge Cup 477
Testimonial presented to Mr. G. Gunn, factor for the Duke of Sutherland ... 477
New South Wales Rowing-Match Prize and Regatta Cup 477
Testimonial presented to Mr. James Henderson, R.N. 477
Submarine Electric Telegraph between Newfoundland and Cape Breton:
Terminus at Cape Ray, Newfoundland 480
The Laying of the Electric Cable 480
Arrival of the Wire-steamer *Arena*, after the Breaking of the Cable ... 480
Sketches in the Baltic Fleet, by J. W. Carmichael:
Midshipmen going on board H.M.S. *Duke of Wellington* 481
The *Hastings*, *Cormorant*, and *Amphion* encountering the Batteries of Sundham 481
Panorama of a Russian able Wedding (25 Engravings) 484
Scene from the new Egyptian Drama of "Nitocris," at Drury-lane Theatre—the Coronation Procession 485
Gray's New Portable Treating 485
Implements for Ditto 485
Nooks and Corners of Old England—Old Combat at Kensington (2 Engravings) 486
New Camera Lucida (2 Engravings) 486

*** The Portrait of his Excellency Vicomte de Paraguy will appear in the ILLUSTRATED LONDON NEWS of next week. Also, the Grand Paris Exhibition Fête, at the Hôtel du Louvre (Three Illustrations); Views of the Interior of Sebastopol continued, &c.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, OCTOBER 20, 1855.

A REPORT is in circulation that the Bank Directors have applied to the Government to suspend the Act of 1844, by which the operations of the Bank, including the amount of bank-notes issued, are regulated, as it was suspended in a money crisis on October 25th, 1847. We have reason to believe that this report is not correct; that the circumstances of the Money Market are not considered at present to warrant such a step. Should they continue to get worse, as they have done for several weeks, the law, we believe, must be suspended, however much the disciples of Sir Robert Peel on the question of the currency may object. In the present week the bullion in the Bank has again declined, and is now not much above £11,500,000. The Bank Directors have accordingly raised the minimum rate of discount on bills not having more than sixty days to run, to six per cent; and on bills having upwards of sixty days to run, to seven per cent. Bills having more than ninety-five days to run will not be discounted. The suspension of the Act of 1844 may therefore be regarded as imminent. The policy or necessity of such a step is the common topic of conversation in moneyed circles. It is the burden of numerous letters addressed to the newspapers. It deeply interests the whole commercial community, which is generally hostile to the Act of 1844. Whether it be suspended or maintained, the general condemnation passed on it at every period of monetary pressure proves that it is ill-adapted to the condition of society, or the necessities of a commercial nation. It has only been eleven years in existence, and has never been universally approved. Circumstances exclusively connected with our own trade, when the country was in profound peace, unscared even by any breath of war, compelled the Ministers and the Bank in unison to suspend the Act in 1847. We are now at war, but we have hardly begun to feel its pressure. Our trade is perfectly sound, and there is not one circumstance to aggravate the natural effects of a state of hostility to which we are always liable, except speculation in France.

A comparatively small loss of bullion has been experienced by the Bank, and immediately there has arisen an opinion that the Act of 1844 cannot be maintained. It appears, therefore, to be suitable neither for peace nor war. It does not regulate our monetary affairs, but hampers them. It is intended to promote our welfare, and it only chafes and galls us; and the necessity which arises under different circumstances to suspend it proves, *ipso facto*, that it is an improper law. On principle it was opposed when it was passed. It is inconsistent with free-trade and unrestricted competition. It is contradictory, too, in itself. It purports to regulate the issue of bank-notes beyond a certain amount of bullion or gold in the Bank, with a view to make the currency equal in amount to what it would be were there no bank-notes in circulation, when it is quite certain that the use of bank-notes economises the use of the precious metals, is equivalent to the creation of capital, and requires an additional quantity of money to carry on the additional business caused by such creation. This is wholly independent of the growth of society, which, as it increases in itself and in its business, requires more currency. At the present time the bank-note circulation of the whole empire is only £36,294,318; in 1853, at this period of the year, it was £39,888,200. The Government, by the employment of troops abroad, takes away from commerce a great quantity of gold. By sanctioning loans to foreign countries it permits or encourages the exportation of a still greater quantity; and, when it has done this, and when more currency is required, the Act of 1844 comes into operation and declares that the amount of bank-notes issued shall be limited by the small quantity of gold left in the Bank of England. The Government deprives commerce of its ordinary food, and the law forbids it to seek a supply elsewhere. Thus the Act of 1844 is a direct violation of the principles of free-trade, and we are not surprised, therefore, that at every crisis in the Money Market, whether this country be at peace or war, a necessity arises to suspend the Act. All this is most mischievous, and proves that the Act ought to be not merely suspended, but repealed.

ODESSA again escapes, but only, it would appear, because the armament of the Allies has a greater game in view than the destruction of a city which could be—and can be—demolished whenever the Commanders of the fleets have three days to spare. Eighty vessels were counted by the watchmen on the fire-tower of Odessa, and the town gave itself up for lost. But its relief must have been unspeakable when, on Sunday, the 14th, the fleets departed without flinging a single shell into the Empress Catherine's city. They quitted the roadstead, and cast anchor three miles from Kinburn, a name that would seem rather to belong to some Scottish glen than to a point on the Euxine Sea. Of the subsequent operations we will speak presently.

There are two solutions which will apply to the present proceedings of the Commanders, previously to offering which let us say a few words in explanation of the situation of the fleets. The river Bug descends from Nicolaieff, which is in the Cherson province, down to a strait which runs nearly east and west, and at the east end of which is the city of Cherson itself. Kinburn is at the mouth of this strait: the northern shore of which is the province above mentioned, while the southern coast is that of the Taurida, to which province the Crimea is joined by the isthmus of Perekop. Ochtakoff is opposite to Kinburn. The position taken up by the fleet will, therefore, enable the Allies to do one of two things, or even both. They can land a force in the Taurida, which, advancing in a south-easterly direction, may meet and utterly annihilate a routed or escaping army, should such a body, contrary to all expectation, contrive to struggle across the isthmus of Perekop. Or, leaving such army to its chances—of which more hereafter—they may enter the strait, and do what else the size and draught of their vessels will permit. Their own deep keels are their most stubborn opponents; but, supposing they have the means of overcoming this difficulty, what was done at Taganrog and Genitschi may be done at Cherson; and the great arsenal, Nicolaieff, tremendously as its works have been strengthened, may fall under a combined assault by land and water. It is evident that most important operations are before the naval armament; and the readers of this Journal will recollect that, several weeks since, we pointed out the course which has now been taken, as that which should be adopted and followed up—whether with a view to the annihilation of the Russian army in the Crimea, or to the destruction of the enemy's valued and vaunted resources in the Cherson.

The first step of the Commanders has been to attack Kinburn itself. They lost no time, for this was done on the 15th. The only account we have is from St. Petersburg; and this is a despatch from Nicolaieff, which states that on the above day the Allies effected a landing at Kinburn, near the Salt Lakes, and that six steamers began to cannonade the town towards the close of the day, and the fortress replied in such a manner as to keep the enemy at a distance. This last little brag may be permitted, as in all probability is the last from Kinburn. The number of troops disembarked is stated not to have been considerable. Ere this, no doubt, they will have proved enough to do all that was designed. We can only await the next despatches; but let us add that we cannot see the least justice in complaints that the telegraph is not more constantly used for the announcement of intended movements. What has been done should be told, but what is to be done should be kept secret. A contemporary has well observed that to use a telegraph which passes through countries saturated with Russian bribery is simply to send information to the Czar, and that, even if the tidings be not diverted in their way, there are Greeks at each end of the wire; and wherever there is a Greek there is a Russian tool and spy. We had really rather wait for information than permit childish impatience to injure the mighty interests involved in the war. The *Times*, which is good enough to "admire" us, but does not "look for early information" in our columns (forgetting that the ILLUSTRATED LONDON NEWS had details of the fall of Sebastopol four days before any other London paper, and actually sent its information to its daily contemporaries, to enable them to gratify public curiosity in the absence of their own letters), will, we hope, on consideration, take this view of the case.

As regards the position of the Sebastopol armies, it is evident that the Allies are closing in upon Prince Gortschakoff, and that he must speedily fight or fly. Probably he will do both. A strong force of cavalry and infantry has been sent to Eupatoria, under Sir Colin Campbell, and had been preceded by General d'Allonville's French cavalry, which had at once engaged and conquered. This powerful army will occupy the line which Gortschakoff, driven from Sebastopol, must take in his way to Perekop, or it may anticipate such flight by moving down upon him. On the other hand, Marshal Pelissier is with 36,000 men in the Valley of Baidar. His work is to force the Russian position on Prince Gortschakoff's left, and to do this it is necessary that there should be a road made from the Valley of Baidar to that of the Belbec, the present road being impassable to heavy troops and to artillery. The Marshal has set 4000 men to work to construct this road, and there is little danger of Crimean grass growing

under their feet. When the road is ready the French will launch themselves upon the Russians; and the latter, if they fight, will do so with the pleasant knowledge that the English from Eupatoria will be their next assailants. Before the Prince, moreover, rests a British army, in its old locality, ready to act as may be needful; and we trust that the next word of command which moves that army will be given by the successor to General Simpson.

The deep interest taken in the European struggle must not cause us to forget the operations in Asia. The gratifying news has reached us that there, as elsewhere, the Russians have been baffled and defeated. Kars, defended at every dissdvantage by the Turks, under our gallant countryman, General Williams, and three other Englishmen, whose names deserve to be known to fame — Colonel Atwell Lake and Captains Laughorne Thompson and Teesdale—and indefensibly left without assistance from the Sultan's forces, would, it was feared, fall, when the Russian leaders should make their final rush upon it. But Kars has proved another Silistria. The Russians, whether impatient at the long resistance offered, or desirous to strike before the dreaded Omer Pacha should arrive, hastened their attack, and have been repulsed and routed by the brave garrison. The slaughter is variously stated, but it is supposed that upwards of 4000 Russians have fallen; and, what is of far greater consequence, the Russian forces in Asia are represented as being so disheartened and disorganised, that Omer Pacha will probably be enabled to make short work with them. But, for the moment, it is difficult to withdraw our eyes from the more imposing spectacle offered by the European contest. Never have the belligerents been placed in positions of more gravity, either as regards the sea or land attack. No operation can now be unimportant or uninteresting. Terrible as is the game, it seems, humanly speaking, to be in the hands of the Allies. The crisis of the dread drama was in Sebastopol—the catastrophe now approaches.

It is the peculiarity, and it has been not unjustly the boast, of this country, that it is the inviolable refuge for the political exiles of all nations. The Sovereign dethroned by his people the Red Republican, flying from the vengeance of the constituted authorities whom he has striven to overthrow—and the philosophical anthusiast, who would remodel society and abolish all existing laws, including those of property, in order to establish his Utopia or the Millennium upon the ruins of the past;—all find on the shores of England a safe retreat from the scaffold or the dungeon which might be their doom in their own land. But in return for this hospitality they owe, if not gratitude, at least obedience to our laws. If our authorities do not call upon them to renounce either their opinions or their pretensions, and would, in case of need, defend them against any agencies of their own Governments that would seek to molest them, there is a limit to the promulgation of their views within which considerations of decency ought to restrain them, and which, if decency be inoperative, the strong arm of the law ought to compel them to respect. We say nothing of the Poles, the Italians, and the Hungarians—though we should think it very extraordinary and ungrateful if they maligned the Sovereign under the protection of whose Government they are permitted to live; though we might not feel very indignant at any wrath they might express against the rulers from whose tender mercies they have managed to escape. But with Frenchmen the case is widely different. The intimate alliance subsisting between France and England—the engrossing war in which they are engaged—the unspeakable importance of this alliance to their own welfare and to that of Europe—make England and France, for the time being, one in sentiment, in feeling, and in duty; and cause the people of these islands to look to the Emperor Napoleon as next to their own Sovereign in the respect and deference to which he is entitled. But when a clique of French ruffians hold a meeting so near to the shores of France as Jersey, and publish in a newspaper printed in that island the vilest and most abominable attacks, not only against the Queen of Great Britain, but against the Emperor Napoleon, the friend and ally of this nation, we think it more than time that they should be taught the fact that they are guilty of the high crime of sedition. Men like the miscreants who at Jersey have held up the wretched assassin Pianori to the admiration of the world, and proclaimed it to be a deed of heroism to rid the world of the Emperor of the French, are malefactors of the most heinous kind. Much is forgiven in this country to foreigners actuated by political zeal; but incentives to assassination are not among the things which can be tolerated; nor are personal attacks upon our own beloved Sovereign, whose only crime in the eyes of these sanguinary ruffians is her alliance with the Great Ruler whom they hate, an offence which in their case can be overlooked. The inhabitants of Jersey, scandalised at these infamies, have held a public meeting to repudiate them; and we are glad to learn that the local authorities have taken the hint, and ordered the dangerous madmen who have so abused a generous hospitality to quit the island on or before Saturday, the 20th inst. (this day). We do not advocate their deportation to the nearest French harbour, though such a punishment would not be too severe. Their expulsion from British territory will be sufficient. Should they fall into the hands of the French authorities, the fate of Pianori, whom they pretend to look upon as a martyr, and whose conduct they teach the world to emulate, would be no inappropriate one for themselves. The man who preaches assassination is himself an assassin—in everything but the courage.

Mr. Crauford and his Constituents.—The member for the Ayr district of the burghs has been making his annual visit to his widely-scattered constituents during the last fortnight. At Campbeltown, where he was entertained at dinner in the Town-hall by the Provost and magistrates, he gave an account of his stewardship, and entered into a long detail of the war policy of the Earl of Aberdeen and Lord Palmerston. He expressed his confidence in the latter as a Minister suited to the present emergency, and declared his determination to support the existing Government as worthy of the nation's confidence.

That Little Word Home.—There is something in that little word Home which lifts the heart into the throat, and ever excites intense emotion in the British soldier on service. Let, for instance, but the bugle of a light regiment play "Home, sweet home," in the evening about tattoo time, and you will, here in the Crimea, perceive an uneasiness creep into every chatting circle; and then silence will ensue, and many a head will be turned aside from the watch-fire to listen to that air, which, perhaps more than any other, conjures up in the mind's eye of all of us the comforts of Old England.—*Letter from the Camp.*

LATEST INTELLIGENCE.

THE RUSSIANS RETREATING.

By accounts of the 13th from the Crimea, the advanced posts of the Allies were on the 12th within five leagues of Bagtcheseral. The Russians were retiring slowly. Everything led to the belief that General Liprandi intended to defend the line of the Belbec, and to rest upon the corps commanded by Prince Gortschakoff. The *Post Ampt Gazette* says:—

According to accounts from the Crimea which reached Vienna, the advanced posts of the Allied armies were on the 12th only five leagues from Bagtcheseral. The Russians were retiring very slowly; and it appears that Liprandi, who is constantly extending his flank, has an intention of retiring on the one of the Belbec, and of meeting on the position of General Gortschakoff. It is thought that the battle which must definitively decide the possession of the ground will take place very shortly. What is certain is that the Russians can no longer cut off the Allies from the road of Bagtcheseral. It is singular enough that the Russians should have surrounded the north side with a chain of new fortifications, and placed it in a state to support a siege. All the plateau on the north side is covered with redoubts and earthworks, and on the line of the Belbec new works, constructed in the form of the Mamelon, have been raised.

The present position of the Russians is such, that, should General Liprandi get the worst of it in this first encounter, General Osten-Sacken, who occupies the position of Inkerman, will also be compelled to abandon that; and Prince Gortschakoff, whose head-quarters are at this time at Divaskoi, will scarcely be in a position to hold the road to Bagtcheseral. The district of the springs of the Tchamayn, as far as Schula, as well as the Upper Valley of the Belbec, is wholly in the possession of the Allies.

THE BOMBARDMENT OF KINBURN.

St. Petersburg, Oct. 17.

A despatch from Nicolaieff, of this day's date, says that up to the evening of yesterday nothing had taken place beyond an exchange of cannonade between the fortress of Kinburn and the gun-boats of the Allies. The latter had attempted no further movement.

THE COURT.

HER MAJESTY'S RETURN FROM SCOTLAND.

Her Majesty the Queen and his Royal Highness Prince Albert, accompanied by the youthful members of the Royal family, and attended by the ladies and gentlemen of the Royal household, arrived at the King's-cross terminus of the Great Northern Railway at twenty-six minutes after six o'clock on Wednesday evening from Scotland. Her Majesty left Balmoral at an early hour on Tuesday morning, and, travelling post to Banchory, took the Deeside Railway, thence to Aberdeen. No stoppage took place here, but at Stonehaven her Majesty alighted, and partook of a luncheon provided at the station. At Forfar, where the train stopped to change engines, the Queen's presence was welcomed by a large crowd of her northern subjects; and at the ancient burgh of Stirling, where her Majesty halted for the first time, a large body of Highlanders were out to greet their Sovereign. The journey thence to Edinburgh was satisfactorily performed, and the Queen entered her palace of Holyrood shortly after six o'clock on Tuesday evening.

On Wednesday morning, at half-past seven o'clock, her Majesty resumed her journey southwards. The Duke of Buccleuch, the Duke of Hamilton, and General Viscount Melville, accompanied the Queen through the Queen's park to the St. Margaret's station, where the Royal party took the railway. The directors of the North British Railway conducted her Majesty to the saloon carriage, and at a quarter before eight o'clock the Royal party left the Scottish capital amid the cheers of the spectators assembled on both banks of the railway. The run from Edinburgh to Berwick-upon-Tweed was admirably accomplished. The inhabitants of the border town were out in great numbers, and a numerous body of militia lined the railway. The directors of the North-Eastern Company here took charge of the Royal train, and attended her Majesty thenceforward to York. The first stoppage for water took place at the Belton Junction, at three minutes past ten, and at fifty-two minutes after that hour the train ran into the High Level station at Newcastle-upon-Tyne. The forty miles between Newcastle and Darlington were ran in fifty-eight minutes, and thenceforward to York the journey was performed in little more than an hour.

At York her Majesty was received by General Arbuthnott, General Sir Harry Smith, and the leading authorities of the city. The Lord Mayor, with his two predecessors in office, Mr. Meek and Mr. Leman, was in attendance. The station was prettily decorated, and lined with a double escort of military. Her Majesty alighted here, and partook, in the station hotel, of an elegant *déjeuner* prepared for the Royal party. At forty minutes past one her Majesty re-entered the saloon carriage, and the train moved out of the station. The Royal party being now attended by Mr. Evelyn Denison, chairman; Mr. Packe, deputy-chairman; and a large party of directors, of the Great Northern Railway. The run from York to Doncaster was admirably performed in one hour and twenty-two minutes. The station at the latter place was thronged with spectators, who received her Majesty with every mark of loyal affection. At Newark, which was reached at twenty minutes past three, a great many persons had assembled to greet the Royal party. Peterborough was reached at twenty-four minutes past four, and Biggleswade at a quarter after five. Her Majesty had not previously stopped at this station, and a great many residents of the district availed themselves of the opportunity of paying their respects to the Sovereign. From Biggleswade the run to London was accomplished in one hour and eleven minutes, the train running into the King's-cross station within half a minute of the time set down in the programme of the Royal journey. Here several of the Royal carriages were in waiting to convey her Majesty to the Paddington terminus of the Great Western Railway, *en route* to Windsor Castle. The arrival and departure of the Queen were greeted with loud cheers by the company assembled within the station.

The whole of the arrangements for the journey were under the control of the Great Northern Company, whose representative, Mr. Seymour Clark, travelled with the train from Banchory, and personally exercised a vigilant superintendence, which was effectual in preventing any delay or inconvenience throughout nearly 600 miles of travelling. Her Majesty, before leaving King's-cross, expressed her acknowledgments to Mr. Denison, chairman of the company, and also to Mr. Clark, for the care and attention manifested for her convenience, and her satisfaction at the ease, rapidity, and safety with which the whole journey had been conducted. Her Majesty arrived at Windsor Castle at a quarter before eight o'clock.

The Prince Arthur and Prince Leopold, attended by Lady Caroline Barrington and Colonel the Hon. N. Hood, had arrived from Osborne in the course of the day to meet their Royal parents.

His Royal Highness the Duke of Cambridge, attended by Colonel Tyrwhitt, returned to town on Saturday, from visiting the Earl of Derby, at Knowsley-park. His Royal Highness attended Divine service on Sunday morning in the Chapel Royal, St. James's.

His Serene Highness Prince Edward of Saxe-Weimar arrived in town a few days ago from Gordon Castle, near Fochabers, N.B., and has since joined his battalion of the Guards at Aldershott.

The Earl and Countess Spencer, after a tour of visits in Scotland, have arrived at Spencer House from Althorpe Hall, Northamptonshire, preparatory to the Countess's accouchement, which is daily expected.

CHURCH, UNIVERSITIES, &c.

Appointments.—*Rectories:* The Rev. W. M. Leir to West Bagborough, Somerset; Rev. E. Hill to Woolstone, near Newport Pagnell; Rev. W. Barrington to Nolton, near Haverfordwest; Rev. W. J. Dare to Chipstable, Somerset; Rev. F. J. Rawlings to Fiddington, near Bridgwater; Rev. C. Norris to Melton Constable with Burgh Parva, and the vicarage of Preston, Norfolk. *Vicarages:* Rev. J. Arnold to St. Mary-le-Wigford, Lincoln; Rev. G. M. Gorham to Walkeringham, near Gainsborough; Rev. O. F. Owen to Child's Wickham, Gloucestershire; Rev. F. Latham to Helpringham, near Sleaford, Lincolnshire; Rev. C. A. Dickens to Tardebigge, near Bromsgrove; Rev. J. H Noyes to Ketton with Tixover, Rutland; Rev. G. E. Escott to Wednesbury; Rev. J. Clarkson to Great Sandall, near Wakefield. *Incumbencies:* Rev. G. S. Palmer to Owston, Leicestershire, Rev. H. Parry to Bylehan, near St. Asaph; Rev. R. G. Pym to Fylingdales, near Whitby; Rev. R. Lewis to Broadway, Somerset; Rev. J. W. Twiss to Christ Church, Liverpool; Rev. H. Cresswell to Newcastle, Clun, Salop; Rev. H. Baugh to Trinity district, Liverpool; Rev. R. Heslop to St. John's Church, Sheffield; Rev. E. G. Kelly to Otterford, near Taunton; Rev. F. Warre to Cotheleston, Somerset *Curacy:* Rev. Mackenzie Walcott, M.A., of Exeter College, Oxford, and Lecturer of St. Ethelburga's, Bishopsgate, to All Saints', Knightsbridge.

The Martyrdom of the Bishops at Oxford in 1555.—In commemoration of this great event, a sermon was preached in the Church of St. Mary Magdalen on Tuesday afternoon by the Rev. J. C. Miller, M.A., of Lincoln College, Rector of St. Martin's, Birmingham, and Honorary Canon of Worcester, from the 12th chapter of the Revelations of St. John, verse 11. The discourse was listened to by a crowded church. On this occasion the beautiful memorial of Cranmer, Ridley, and Latimer, adjoining the north end of Magdalen Churchyard, was ornamented with evergreens; large plants in pots occupying the steps within the iron railing, which had a pleasing effect.

TOWN AND TABLE TALK ON LITERATURE, ART, &c.

There is a readable article on the Fourth Estate, or the Newspaper Press of England, in the new number of the *Edinburgh Review*. The writer takes an enlarged and able view of the vast influence of the press at the present moment in conducting the gov ernment of the country, and in forming the opinion of the public in all matters of public moment. An evil in the magnitude of this influence is indicated by the writer, but the cure he does not see. An odd mistake occurs in the opening of the article—the writer attributing the origin of newspapers among us to a man of the name of Nathaniel Butler, of whom he evidently knows nothing, and not to Nathaniel Butter, of whom he knows as much, and of whom this accidental mention of his name reminds us that we have something to tell that is new. This Nathaniel Butter, to whom we owe the introduction of newspapers into England, was a publisher of name and fame early in the reign of James I. It was Butter who published Dekker's "Beliman of London," and at least one edition of Chapman's "Homer" while Chapman was still alive. It is this Nathaniel Butter with whose name and news Ben Jonson has made himself merry in one of his plays. To this Butter it is that Beaumont and Fletcher allude. Butter was fond of strange intelligence; and one of his many publications was a volume of Sir Anthony Shirley's "Travels into Persia." No one has told us when Butter died; but we have accidentally discovered that he died in 1662, and that his fate was that of too many public benefactors—he died very old and very poor. Future historians of the Fourth Estate, and future editors of Ben Jonson and Beaumont and Fletcher, will be glad of these particulars.

There can be no doubt that December will give to us two more volumes of Macaulay's History. The trade publish the important fact in a variety of ways. We have had at least six circulars from London booksellers, all anxious to catch subscribers. Here is a sample notice:—

We beg to inform you that the Third and Fourth Volumes of Mr. Macaulay's "History of England" will be published early in December. As it is our wish to ensure a simultaneous delivery of the work to our customers, we respectfully solicit your order at the earliest possible period, to prevent disappointment.

P.S. Supplied for cash at a discount of twopence in the shilling from the published price; if in the country, the new rates of postage additional.

One dealer in gossip has actually seen the sheets of the third volume. "Yes, indeed he has." He is nearer (with all his Pisgah view) than the happy person who had known a man who knew another man who had seen the actual warming-pan in which the old Pretender, then a new-born infant, was conveyed into the bed of his supposed mother, the Queen of England.

The Thackeray dinner was a triumph. Covers, we are assured, were laid for sixty; and sixty and no more—each person having previously paid his two guineas—sat down precisely at the minute named to do honour to the great novelist. Sixty very hearty shakes of the hand did Thackeray receive from sixty friends on that occasion, and hearty cheers from sixty vociferous and friendly tongues followed the Chairman's proposal of his health, and of wishes for his speedy and successful return among us. Dickens—the best after-dinner speaker now alive—was never happier. He spoke as if he was fully conscious that it was a great occasion, and that the absence of even one reporter was a matter of congratulation, affording ampler room to unbend. The table was in the shape of a horse-shoe, having two Vice-Chairmen; and this circumstance was wrought up and played with by Dickens in the true Sam Weller and Charles Dickens manner. Thackeray, who is far from what is called a good speaker, outdid himself. There was his usual hesitation; but then hesitation becomes his manner of speaking and his manner, and is never unpleasant to his hearers, though it is, we are assured, most irksome to himself. His speech was full of pathos, and humour, and oddity, with bits of prepared parts imperfectly recollected, but most happily made good by the felicities of the passing moment. Like the "Last Minstrel"—

> Each blank in faithless memory void
> The poet's glowing thought supplied.

It was a speech to remember for its earnestness of purpose and its undoubted originality. Then the Chairman quitted, and many near and at a distance quitted with him. Thackeray was on the move with the Chairman, when, inspired by the moment, Jerrold took the chair, and Thackeray remained. Who is to chronicle what flow passed?—what passages of wit—what neat, and pleasant, and sarcastic speeches in proposing healths—what varied and pleasant, sy, and at times sarcastic, acknowledgments? Up to the time when Dickens left, a good reporter might have given all, and with ease, to future ages; but there could be no reporting what followed. There were words too nimble and too full of flame for a dozen Gurneys, all ears, to catch and preserve. Few will forget that night There was an "air of wit" about the room for three days after. Enough to make the two next companies, though downright fools, right witty

Artists are speaking with critical approbation of the clever manner in which M. Herviéu has managed to fill a circular panel on the principal staircase in the princely mansion at Cliefden-on-the-Thames, built by Sir Charles Barry for the Duke of Sutherland. The panel is about fourteen feet in diameter, and has been thus appropriated by our modern Correggio. He has designed an impersonation of the Seasons—and in figures the size of life. The children of the Duke and Duchess represent the "Seasons." The Marchioness of Kildare is "Spring," the Duchess of Argyll "Summer," Lady Blantyre "Autumn," and the Marquis of Stafford "Winter." If there is little novelty in the idea, there is great merit in the execution. The general treatment is graceful, the colouring good, and the effect what was sought for. Has the selection of the subject, let us ask, any reference to the poet of "Seasons," whose image of "Britannia," in which our National Anthem appears, was first acted at Cliefden-on-the-Thames, on the site of the house which Barry has built?

When Steele started his "Town Talk" it had only a nine weeks' existence. He designed his paper, he tells us, as a packet of little results from discourse among men of good sense, like that kind of writing to be found in Selden's Table Talk. It would have been impossible, he tells us, for any man to be able to furnish a weekly paper of Town Talk that would be worth reading without having recourse to the best conversation. With this view he was in the habit of frequenting the best places of resort. Covent-garden, he tells us, was his "Town," and the Playhouse his Townhall. Few who cater for columns of Town Talk would pick up much that is available in Covent-garden or the playhouse.

Some unpublished letters of the witty Earl of Chesterfield have just turned up. In one he gives a lengthened criticism on Richardson's novels, and observes that when Richardson gets into high life he loses himself, and is untrue to high life. This is said, we understand, especially of "Sir Charles Grandison." The letters are now in Lord Stanhope's possession.

Coloured Candidate for the Attorney-Generalship of New York.—Among the candidates nominated is George B. Vashon, of Cortland County, for Attorney-General. He was born in Pittsburg, Pa.; is about thirty years of age, of medium stature, and light complexion. He is father, J. B. Vashon, was an old and influential coloured man (a barber) of Pittsburg; was tolerably well educated, and did much in his day for the bettering of his race. He died a year or two ago, deeply regretted by a large circle of his acquaintance. The present candidate was early sent to school; and, after acquiring a good English education, his father sent him to Oberlin College, Ohio, where he graduated with distinguished honours. He then returned to Pittsburg, and studied law under the Hon. Walter Forward (one of the ablest lawyers Pennsylvania ever produced, and Secretary of War under General Harrison), but on account of his colour was refused admission to the bar of his native State. Nothing daunted, however, on the recommendation of Judge Forward he came to New York, and was shortly thereafter admitted to practise in his profession. His health not being good he visited Hayti, and while there interested himself in the political affairs of that country. The Emperor tendered to him the appointment of Secretary of State, which he accepted, and retained with great satisfaction to the Emperor until some urgent business recalled him home.

SCENE IN A STREET OF SEBASTOPOL—ALLIED SOLDIERS SINGING "NO MORE TRENCHES," TO THE AIR OF "DES LAMPIONS."—DRAWN BY GERARD.—(See page 465.)

REMAINS OF THE HOSPITAL IN SEBASTOPOL.—SKETCHED BY E. A. GOODALL.—(SEE PAGE 466.)

SKETCHES OF THE INTERIOR OF SEBASTOPOL.

We this week engrave four large Views of the strange aspect which the streets of Sebastopol have presented since the siege.

In the first of these scenes, three of the Allied soldiers are seen in a drunken carouse, singing a song which has become very popular, the burden of which is "No more trenches," to the air of "Des Lampions." We regret that such scenes are but too often the concomitants of war; and that in the moment of the flush of victory the soldier but too often forgets the dignity of his profession.

The heap of ruins upon the opposite page—a large hospital—presents a fearful picture of the destructive effects of shot and shell.

In one of the pair of Views at pp. 468, 469, the right-hand foreground is strewed with pieces of column and cornice which the balls have dispersed; and the shattered arch and shaft—like a test the work of destruction. The principal building in this view is the new Church, which has the cupola so common in Russian edifices. The adjoining tower is called by the French the *Tour de la Marine*. The life of the scene is a party of French troops taking down ammunition to their mortar-battery near Fort Nicholas.

The second of these Views shows a principal street in Sebastopol, in which the public building upon the right, and the ordinary house upon the left, alike present a fragmentary ruin.

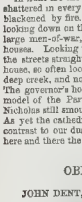
The last three Sketches are from the pencil of our Special Artist, Mr. E. A. Goodall, who writes: "My time during the last week has been taken up by making detail sketches of the principa. public buildings for a large drawing of Sebastopol, which I shall forward from Constantinople."

The *Times* Correspondent gives the following description of the scene of ruin and destruction on looking from the back of the Redan:—

In front are the barracks, arsenal, and stores, their beautiful cut-stone fronts shattered in every direction, the roofs falling in, and the walls here and there blackened by fire. On the right the Malakoff rises in a commanding point, looking down on the dockyards, the hospital, and the magnificent basins for the large men-of-war, the intervening space occupied by ruined and smouldering houses. Looking to the left, the main part of the town stands on high ground, the streets straight, and imposing even in their present condition. The club-house, so often looked at with envy, stands on a beautiful spot over the harbour deep creek, and now bares its blackened walls the focus of last night's fire. The governor's house has shared its fate, but as yet the well-known temple, a model of the Parthenon, stands entire, and is protected by sentries. Fort Nicholas still smoulders, and the houses in its neighbourhood are in a blaze. As yet the cathedral is untouched; around it are some fine gardens, a fine contrast to our dusty camp. The remnants of the bridges float about; and here and there the masts of the large vessels project above the water.

OBITUARY OF EMINENT PERSONS.

JOHN DENT, ESQ., OF SUDELEY CASTLE, CO. GLOUCESTER.



This much-respected gentleman died on the 8th inst., aged seventy-eight, having survived his brother William (of whom we gave a memoir) about a year. He was a justice of the peace, and served as High Sheriff of Worcestershire in 1849-50. In the year 1837 Mr. John Dent, and his brother William, who were engaged in commercial pursuits in the city of Worcester, and had realised a large fortune, purchased from the late Duke of Buckingham the Castle of Sudeley, having previously acquired from Lord Reaves the bulk of the Sudeley estate, with the manors of Winchcomb and Sudeley. Subsequently Mr. Dent devoted considerable time and money to the restoration of this historically famous structure, and it now forms one of the chief ornaments of Gloucestershire. Mr. Dent was eldest son of the late John Dent, of Worcester, merchant, and grandson of Lawrence Dent, of Yarm, co. York. He never married. His heir is, we believe, his nephew, John C. Dent, Esq., of Severn Bank, county Worcester, barrister-at-law.

RICHARD HICKMAN, ESQ., J.P., D.L., &c.

This gentleman, whose decease occurred at his residence, Oldswinford, in the county of Worcester, on the 8th ult., was second and eldest surviving son of the late Richard Hickman, of Oldswinford, Esq., by Martha, his wife, daughter of John Devereux, of Newtown, co. Montgomery, and grandson of Edward Hickman, Esq., of Oldswinford by Anne Mann, his wife, daughter of Richard Greene, Esq., of Belleston, co. Leicester.

Mr Hickman, the subject of this notice, was Captain of the Stourbridge troop of Worcestershire Yeomanry, and an active magistrate and Deputy Lieutenant for the county of Worcester and Salop. He was formerly a Lieutenant in the Royal Marines.

Captain Hickman married, first, in 1815, Elizabeth, daughter of Boghurst, Esq., by whom he leaves a numerous issue. He married, secondly, a

daughter of the Rev. George Frank Blakiston, D.D., by whom (who survives him) he has had no children.

MRS. HODGETTS-FOLEY, OF PRESTWOOD, CO. STAFFORD.

This lady, whose decease occurred at Prestwood co. Stafford, on Sunday, the 9th ult., was Charlotte Margaret, second daughter of the late Hon. John Gage, of Rougate-lodge, Hants, younger brother of Henry, third Viscount Gage, by Mary, his wife, only daughter and heiress of John Milbanke, Esq., by Mary, daughter and coheir of Charles, last Marquis of Northampton. Miss Charlotte Margaret Gage was married in 1825 to John Hodgetts Hodgetts-Foley, Esq., M.P., of Prestwood, second son of the Hon. Edward Foley, of Prestwood, and his wife, the heiress of the Hodgetts. Mrs. Hodgetts-Foley, by her marriage (Mr. Hodgetts-Foley survives her), leaves issue an only son, Henry John Wentworth Hodgetts-Foley, who was born December, 1854, the Hon. Jane Francis Anne, second daughter of the late Lord Vivian.

REAR-ADMIRAL PERCY.

REAR-ADMIRAL the Hon. William Henry Percy, who died on the 5th inst., at the Earl of Beverley's residence, 8, Portman-square, after a protracted illness, was the fourth son of Algernon, first Earl of Beverley, and brother of George, the second and present Earl, and of the present Bishop of Carlisle. The Hon. William Henry Percy was born 24th March, 1786, and entered the Navy as first-class volunteer, in May, 1801, on board the *Lion*, 64 guns; and in November of the following year was Midshipman on board the *Medusa*. In 1814, early in the spring, he was appointed to the command of the *Hermes*, 20 guns—which vessel, after having twenty-five men killed and twenty-five wounded in an unsuccessful attack on Fort Bowyer, Mobile, was set on fire and destroyed, to prevent her falling into the hands of the Americans. Captain Percy had under his orders at the time, besides his own ship, the *Canon*, 20 guns, and *Sophie* and *Childers*, 18 guns each. Of all these in the Royal Marines the *Hermes* he was, by a court-martial, honourably acquitted in June, 1815. In March, 1815, he arrived in England with despatches from Sir Alexander Cochrane, reporting the defeat of the army before New Orleans. During this period he never held any naval employment. He formerly represented Stamford in Parliament, and has been for many years past a Commissioner of the Excise. He was made a Lieutenant the 6th July, 1807; and became a Rear-Admiral (retired) the 1st October, 1846. He was never married.

WILLS.—Probate of the will of the Right Hon. and Rev. Robert Lord Viscount Hereford, M.A., Canon of Durham, was proved in London under £8000 personalty. The Rev. Fox, D.D., Provost of Queen's College, Oxford, £25,000 personalty within the province of Canterbury. The Rev. Ralph Ord, Rector of Semley, Wilts, £70,000; and has bequeathed £2400 to the Societies for Promoting Christian Knowledge, for Propagation of the Gospel in Foreign Parts, and for Promoting the Enlargement, Building, and Repairing of Churches and Chapels; and to the Bath General Hospital and Salisbury Hospital and Infirmary, £150 each. William Hoof, Esq., of Kensington, £100,000. Thomas Webb Hodgetts, Esq., of Hagley, Worcestershire, £—.

WOLVES AMONGST OXEN.—The occupiers of a farm at Eclaibrognes (Deux-Sevres) were awakened a few nights ago by the bellowing of three oxen which had been left in a field; and on going to the spot they saw that four wolves were attacking the animals. The noise they made caused the wolves to take to flight, and they returned home. But before long the wolves recommenced the attack on the oxen, and had again to be driven away. Some of the farm labourers remained on the watch until morning, and then they were surprised to find the dead body of a large she-wolf—she had been killed by one of the oxen running its horn right into her heart. Prizes were awarded by the authorities for the slaughter of wolves, and one to the owner of the ox.

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS
TAKEN DURING THE WEEK ENDING THURSDAY, OCT. 11

Month and Day	Corrected Reading of Barometer at 9 A.M.	Thermometer. Highest Reading	Thermometer. Lowest Reading	Mean Temperature of the Day	Departure or Temperature from the Average.	Degree of Humidity.	Direction of Wind	Rain in Inches

Note.—The sign + denotes above the average and the sign — below the average. The numbers in the seventh column are calculated as the opposition that the amount of the air is represented by 100

The reading of the barometer decreased from 29·60 inches at the beginning of the week to 29·57 inches by the 12th, increased to [illegible] inches by the 13th, decreased to [illegible] inches by the 15th, and from [illegible] inches by the end of the week. The mean for the week, at the height of eighty-two feet above the level of the sea, was 29·63 inches.

The mean temperature of the week was 49·6°—being 0·6° below the average value.

The range of temperature during the week was 20

The mean daily range of temperature during the week was 16·8°.

Rain fell during the week to the depth of nearly 0·60in. in inch.

The weather during the week was, for the most part, fine, and the sky about one half covered with cloud.

Lewisham, Oct. 13. JAMES GLAISHER.

HEALTH OF LONDON.—During the week ending last Saturday the births of 1564 children were registered in London: of these, 793 were boys and 771 were girls exceeding their averages of the ten corresponding weeks of the ten previous years by 17 and 134 respectively. The deaths of 440 males and 430 females—in all 870 persons were registered during the week being 225 below the corrected average mortality of London. 22 persons died from the zymotic diseases, 44 from due to cholera, 50 to scarlatina, 46 to typhus and other fevers, and 4 to cholera. Consumption was the cause of 108 deaths, apoplexy of [illegible] bronchitis and pneumonia of 84, diseases of the heart, &c., 14; diseases of the digestive organs, 47; to diseases of the kidneys, &c., 11; to old age, 23; and to violence, cold, privation, and intemperance, 27 deaths are attributed—18 of which are due to violence alone.

THE REGISTRATIONS.—MIDDLESEX.—At the registration just ended the total gain to the Conservatives on objections was 270. The new votes added to the register by both parties amount to about 750. On these the Conservatives have a clear majority of 270. The result is due to the large number of new votes added through the instrumentality of the Conservative Freehold Land Society, and partly owing to [illegible] tions used this year to register Conservatives [illegible] general election; but it would be impossible accurately to [illegible] whole gain without canvassing the whole of the new voters.

LONDON OMNIBUSES.—It is said that a meeting of the London omnibus proprietors has been held in Hungerford hall, for the purpose of taking into consideration overtures which have been made to them by the "Société du Crédit Mobilier," for the purchase of their property and interest in their omnibuses, horses, and the entire establishment connected therewith. The discussion was very protracted, turning chiefly on the precise terms which ought to be accepted. Ultimately, it appeared to be the general feeling that the society should be required to pay [illegible] for each omnibus with its horses, that sum to include the goodwill as well as the stock. There are, it is stated, 700 omnibuses plying on the different routes in and immediately round the metropolis, and if terms are agreed upon, the society contemplate working them upon the Paris system of "correspondence," by means of which a passenger can pass from one vehicle to another (with the same fare) from the one end connected therewith. The discussion was very protracted, turning chiefly on the precise terms which ought to be accepted. Ultimately, it appeared to be the general feeling that the society should be required to pay [illegible] for each omnibus with its horses, that sum to include the goodwill as well as the stock. There are, it is stated, 700 omnibuses plying on the different routes in and immediately round the metropolis, and if terms are agreed upon, the society contemplate working them upon the Paris system of "correspondence," by means of which a passenger can pass from one vehicle to another (with the same fare) from the one end of the metropolis to all parts of the capital. Should the society succeed in organising the omnibuses, they will, no doubt, turn their attention to the cabs.

THE CRYSTAL PALACE HOTEL.—On Wednesday last the assignees and mortgagees of this property offered it for sale at Garraway's. The property was divided into four lots; the first, comprising the hotel, tavern, and grounds, of which the purchaser would have to take a lease for ninety-six years, at a ground-rent of £500 per annum, was knocked down at £7100. The auctioneer declared the property bought in, the reserved price being £9000. The other lots were withdrawn.

SECESSIONS FROM THE CHURCH OF ENGLAND.—Cardinal Wiseman held an ordination on Sunday last, when he admitted two clergymen of the Church of England into the priesthood of the Church of Rome, namely, the Rev. William John Roberts, M.A., of Merton College, Oxford; and Rev. John Hilary Pope, M.A., of Exeter College, Oxford, and lately a missionary of the Established Church in the diocese of New Zealand. Mr. Dale has been appointed priest of the new chapel of the "Angel Guardians" at Holloway, in connection with the missionary rectorate of Holloway.

A STORMY PEACE-MEETING IN FINSBURY.—On Wednesday evening Mr. George Thompson concluded an address against the war in the British School room, Cowper street, Finsbury, with moving a resolution condemnatory of the continuance of the war, and requesting the Government and the representatives of the people in Parliament to bring it to a speedy and honourable conclusion. Mr. Taylor seconded the motion. Mr. Utting moved the following amendment:—"That this meeting, believing the sentiments of the Peace party, as to right expounded, to be inimical to the best interests of the country, and their [illegible] to establish [illegible] the peace of England amongst the nations, hereby denounces emphatically their attempt to impose upon its common sense, rejects their resolution, and pronounces for a rigorous prosecution of the war until Russia shall be rendered powerless for future aggression." Mr. Howell seconded the amendment, and Mr. Washington Wilks supported the original motion. The latter was offering some remarks derogatory to the character of Louis Napoleon, when he was received with such a storm of hisses that for several minutes he was not allowed to proceed. The chairman then entreated the meeting to hear Mr. Wilks, but the greatest uproar prevailed every time that gentleman attempted to speak. At length a motion was put as to whether he should be heard or not, and the affirmative was carried. After a few minutes engaged in an ineffectual struggle, however, he sat down. The chairman then put the amendment, and afterwards the original motion, and declared the resolution carried; but many persons were of opinion that the decision ought to have been the other way.

A MEETING IN HYDE-PARK.—Toward the end of last week large placards were posted on the hoardings about London, deploring the present high price of bread, setting forth possible causes and remedies for the evil, and calling on the working-men of the metropolis to meet in "Our Park" on the next Sunday, for the purpose of giving expression to their feelings on the subject, and taking measures for bringing about a change in so sad a state of affairs. Accordingly on Sunday, at about two o'clock, great numbers of persons were found to be wending their way towards the Park, where already had assembled many not of the best order of society, and of those itinerant gentry who ply their various callings on such occasions. Until three o'clock nothing of an unusual character occurred; but shortly after the hour named a movement towards the centre of the park gave indication of something exciting, and a rush from all parts to the point of attraction brought together, in a sudden, a crowd which continually increased, until at last as many as 5000 persons must have been assembled together, the majority of them being of respectable appearance. All the available force of the police, and those mounted, were quickly on duty for the day, were disposed about the park. In case their services should be required, but not the slightest interference in the subsequent proceedings took place. Presently several immense rings were formed, and a man of serious aspect made his way to one of the spaces thus made, and addressed the people. He said he was a hardworking man; that it was no vain desire for popularity that had induced him to leave his large family on the Sabbath for the purpose of meeting his fellows in Hyde-park; it was because he believed he had it in his power to help his fellow countrymen to a right understanding of the purpose for which they had assembled together. After two of the most plenteous harvests that ever blessed the earth bread was at famine prices. The war was set forth as the cause of this. It was no such thing. There was plenty of corn in Turkey, which could be imported at 20s. a quarter, and yet Russian corn, at 73s. per quarter, was permitted to be brought over. The speaker had proceeded in this strain for upwards of an hour, when a counter agitation seemed to be rising within twenty yards of the crowd which had gathered round the baker, trotted off with him at a smart pace, followed by an immense number of persons, among whom were those who appeared to be most bent on mischief: they ran on, following the baker and his guard towards Apsley gate and outside the park. Returning to the carpenter, whose audience had been considerably thinned, he was found to be still holding forth. He continued to speak and to declaim against "the powers that be" until dusk, when he brought his harangue to a close.

STRAHAN, PAUL, AND BATES IN PRISON.—On Thursday a general meeting of the magistracy of Middlesex was held at Clerkenwell for the consideration of the business of the county. After the usual report from the Visiting Justices of the House of Detention had been read and disposed of, the chairman of the committee read a special report which stated that certain prisoners, committed on a charge of misdemeanour, had not been subjected to the ordinary regulations of the prison; that a searching investigation and inquiry into all the circumstances had been instituted; and that the Visiting Justices, at the conclusion of their investigation, were surprised to find, from the admissions and statements of the various officers examined in the course of the inquiry, that all the rules laid down by the Court for the government of the prison, and sanctioned and confirmed, as required by law, by the Secretary of State for the Home Department, had been deliberately violated by the Governor and also by several officers in some instances by his express direction. The Visiting Justices were of opinion that the conduct of the Governor had been highly reprehensible, and that they felt it to be their duty to lay the whole of the evidence before the Court for their decision. It appeared from the evidence that Messrs Strahan, Paul, and Bates, had not been subjected to the same treatment as other prisoners. Visitors had been freely admitted to them at all times; their letters were not opened; and they were allowed to associate with each other, and take exercise together. After some observations, Mr. Woodward moved a resolution to the effect that the Governor of the House of Detention be called in and publicly reprimanded, for the manner in which he had permitted the rules and regulations of the prison to be broken and violated, by himself personally as well as by the subordinate officers of the prison. Mr. E. E. Antrobus moved as an amendment, "That the Governor of the House of Detention be suspended, and that the evidence which has been taken be circulated and taken into consideration on a future day." For the amendment twenty-four magistrates voted; for the motion, five. The amendment was then declared to be carried, and Mr. Sims, the Deputy-Governor, was appointed Governor *pro tem.*

WHITTINGTON CLUB.—The new building in Arundel-street is rapidly progressing; and, until it is ready for occupation, the committee of the club have made arrangements for holding the usual drawing-room evenings at the Freemasons'-hall, Great Queen-street; so that the members will not be deprived, during the ensuing season, of the enjoyment afforded by the pleasant evenings.

RISE IN THE PRICE OF BREAD.—On Thursday morning there was a general rise in the price of bread of one halfpenny per [illegible] making it 9d. and 8½d. (seconds) at the cheap bakers. The full price remains as before, viz., 9½d. and 9d. Flour is also 1s. per sack dearer, making it 45s. and 44s. The bakers in 10½d., and at the corn-dealers generally 1d. less per quartern. In reference to this rise in the price of bread, a correspondent of the *Globe* makes the following remarks:—"At the price of wheat as it was at 63s. a quarter, which is the price at present; five bushels make one bag of flour, £2 2s. 6d.; say profit for miller, 1s per cent, 6s. 8d.—£2 9s. One bag of flour makes 16 quartern loaves, which at 8½d. each would yield £2 8s. Add to this, profit for baker, 15 per cent, 1½d. each loaf, or 8s. on the whole, and the amount will be £2 18s. According to this calculation the price at which the loaf ought to be sold is 7½d. The only point open to dispute appears to be whether 20 per cent is sufficiently remunerative for the millers and bakers."

THE NORFOLK GIANT.—Among the bail cases in the Insolvent Debtors' Court, on Monday, appeared Hales, the Norfolk giant, and landlord of the Craven Head public-house, in Drury lane. The announcement attracted a crowded court to witness his debut. The officer of the Whitecross street prison, where Hales had been some time confined, applied that he might stand at the corner of the court, as the box allotted to insolvents was not of sufficient dimensions for his accommodation. The Commissioner said he might stand where it was convenient. Having inspected the schedule, the Commissioner granted the application without a single question.

ROBBERY OF A CHURCH IN THE CITY.—On Monday morning, at an early hour, it was discovered that a most daring robbery had been committed in the vestry-room of the parish church of St. Giles Without, Cripplegate, by some expert thieves, who had entered by an opening in the window. They had apparently examined the safe and its contents, and succeeded in taking away the gold and silver there deposited, which, however, was not a very considerable sum. Several of the drawers in the vestry had been "picked" or forced with a lever. The thieves, having been defeated in obtaining any important amount of plunder, then forced the door from the vestry leading into the church, and attempted to force the confessional box, but which, from its great strength, resisted their efforts, for the contents remain secure. Being thus foiled, it appears that they then opened the closet containing the "tent" or "sacramental" wine. This, it appears, was not great booty, as they left the bottle upon the floor, and the glass they had used partially filled, standing beside it, only a small portion having been used from the bottle.

ROBBING SAILORS.—There are at present a large number of the well and the actively employed in shipping the various ships. Numerous landlords and others not agreeing to the terms. A quarrel appeared to arise, and the seaman was invited to interfere, with a promise of £5 or £6 for his trouble if he could effect the purchase of the gold. This he foolishly agreed to, and paid down to one of these rogues £47, with which he very speedily decamped, leaving the unfortunate sailor minus his money as well as the gold-dust.

A DANGEROUS FIRE IN CHURCH-ROW.—Between three and four on Wednesday a fire broke out at the Green Man public-house, Greenstreet, Southwark. Before the inmates could be awakened the flames had taken possession of the premises, and made escape by its mean impossible. The inmates made for the windows, threw up the sashes, and commenced calling loudly for help. The police-constable went for the fire-escape from the Surrey-road station, but so dense was the smoke that every person in the house was nearly stifled. Mr. Halliwell, the landlord, jumped out of the window. When the escape arrived the conductor was informed that two other persons were in one of the top rooms. The man at once ascended, and found Miss Sophia Sutton, niece of Mr. Halliwell, had jumped from the bed-room into the yard. A lodger, named Wilkinson, who had taken refuge on the roof of the Church-street Sunday-school, was severely burnt. Mr. Halliwell, Miss Sophia Sutton, and the lodger Wilkinson were conveyed to St. Thomas's Hospital most painfully burnt. Mr. Halliwell died on Wednesday night. The firemen were unable to subdue the flames till the house was completely gutted.

TICKET-OF-LEAVE MEN.—At the adjourned Middlesex Sessions, last Monday, James Trelawney and George Williams, two ticket-of-leave convicts, who were charged with Trelawney was sentenced at the Old Bailey, in 1851, to ten years' transportation for burglary, and he was liberated on the 2nd of last month. On the 22nd he and Williams got into a house in Kingsland-street, Bethnal-green, and were detected in preparing to carry off a large quantity of property. The Assistant-Judge said it was almost beyond belief that theorists should continue to act in positive opposition to the practical experience of the working of the ticket-of-leave system. Its results were of the most mischievous kind. Take the case of the prisoner Trelawney as an instance—he was a notorious thief, and in 1851 he was convicted of burglary and sentenced to ten years' transportation. On the 2nd of last month he was set at liberty on a ticket of leave, and in less than three weeks afterwards he was found in the company of a known confederate in the act of breaking into a house, and, when detected, making a savage assault on the landlady. In one case which came before him a man was found, two days after he had been liberated on a ticket-of-leave, in the house of a boy of 13 the art of picking pockets. Such was the result of letting these men go at large; they were turned loose on the town, with sums of money in their pockets, on condition that they proceed to their former place of residence, where they joined their old companions in crime, and began their career again. However he might differ from other authorities on the system itself, he thought they would all agree that when a person had shown the leniency which had been shown them, and returned to their old habits, they should be severely punished. He should sentence Trelawney to seven years' penal servitude; and as the authorities thought it necessary that term and again set him at liberty, that lay with them. The Court, in the discharge of its duty, considered this was the term of punishment the case merited. As to Williams, he would be remanded for further inquiry as to his previous character.

MR. GLADSTONE ON THE COLONIES.—The Right Hon. W. E. Gladstone, who is at present on a visit to Sir S. Glynne, at Hawarden Castle, delivered a lecture on "The Colonies," on the 12th inst., at the Literary Institution in the neighbouring village. After all, due to the great increase which has taken place in emigration from Great Britain and Ireland during the last few years, he went on to dwell on the benefits and advantages of colonisation. The prevailing opinion was that we should keep our colonies with a view to maintain the political prestige of England—an idea which he entirely discla.med. He would have England estimated by what she really was, and no more. It had been said on the floor of the House of Commons that if you strip England of her colonies she would inevitably fall. This he considered as much a vain fallacy. England's greatness depended not upon the extent of her foreign possessions, but rather upon her own internal resources. But although there was still great diversity of opinion regarding what should be done with the colonies, all parties were inclining towards a more liberal and enlightened policy, from a conviction that it was only by that course we could hope to obtain the full advantage and benefit of our great territorial dependencies.

Apples are remarkably low in price in New York. A very fair dessert apple is selling at the rate of one dollar per bushel, and at wholesale at one dollar and a half to two dollars per barrel.

NOTES OF THE WEEK.

From her Majesty's Scottish dominions to her isles in the Channel there is but one feeling; and it is interesting to note how, at those two distant localities, such feeling has just taken a different form of demonstration. At Glasgow there has been a magnificent gathering in honour of the success of our arms in the Crimea; and for the sake of the good cause which brought the guests together, and in consideration of the genial and rational character of most of the speeches, one is content to forget that the gentleman whom Mr. Disraeli described as "Mr. Wordy, who wrote a book in twenty volumes to prove that Providence was always on the side of the Tories," made divers remarks of no very great wisdom or appropriateness. The cup was raised, and the shout went up, in triumph for the victory of Right over Wrong. In Jersey—usually so tranquil—the vulgar, mischievous, and brutal writings of certain of the French refugees to whom we have given shelter—and who repay the protection of Queen Victoria by calling, from their place of safety, to assassins, bidding them murder the Sovereign of France, or any other Monarch upon whom they can lay their hands—have excited the indignation of the loyal islanders; and a great meeting has been held to protest against the insults to our Queen, and the treason against the Emperor of the French. It is not improbable that the Home Secretary may endorse the resolutions of this meeting. It was gratifying to observe that M. Lemoine, one of the ablest of the exiled journalists of Paris, insisted on disclaiming any share in the ruffanism of the Reds

A meeting of a less satisfactory kind has been held in Hyde park, and may be renewed. It is not surprising that the high price of provisions, and a knowledge that at this moment the French Government is interfering to procure cheap food for the Parisian, while the Londoner is left to endure the fluctuations of the food market, should have induced a spirit of repining and discontent among the classes most affected by the present state of things. Accordingly, a "Bread Meeting" has been held, and the speakers have adduced the rough hard facts which strike themselves and their order, with a natural but deplorable "ignoring" of the principles of economy upon which circumstances, apparently anomalous, and certainly painful, are explained, and shown to be inevitable. One cannot hope to make an uninformed man comprehend why, after the most splendid of harvests, bread may be dear, and yet the miller and baker not deserve the lamp-post, but his bewilderment must not be treated with levity, or his murmurings with roughness. He must be met kindly; and it might not be amiss if, instead of talking of police interference, any two or three public men in whom the people have confidence would give the pheasants a holiday, and attend one of these gatherings with some words of sense and helpfulness. If the masses cannot understand political economy, they can perfectly well understand sympathy and encouragement.

Incessant railway accidents, and verdicts which do not touch the real offenders, the parsimonious, careless, or obstinate directors of lines, continue to make the traveller tremble, and render everybody else indignant. On one line the latest of these inquiries shows that one of the most important duties, one on which the safety of a whole train depends, was entrusted to a boy of fourteen, who, moreover, had been two years in the service of the company. I was looking over a file of [illegible] lately, and I observed an indignant article directed against the management of the New Jersey line, in consequence of a [illegible] from wilful neglect. The journalist spoke energetically against [illegible] which allowed impunity to the "rich and respectable," and [illegible] he had spoken truthfully—"In England, directors of railways have been committed to gaol for a term for similar offences." It is to be so, unluckily. We send sometimes a pointsman, or a station-master, or some over worked, unskilful, or underpaid subordinate to prison, but the idea of taking a director from his mahogany and port wine, and punishing him for being an accomplice in slaying his fellows—not we. I followed up the American case, and I find that the New Jersey men escaped, juries directors do here; but I am glad to think that the fiery comment of the American editor upon the working of the "model institutions" would be unjust were it applied to our own. "The fountains of justice have been poisoned by the money of these public offenders. Not less than 250,000 dollars is annually paid to the State by the management. It is a bribe, and the ministers of the law are silent. The jury at Burlington were faithful to their compact; they uttered not a word of complaint of their masters." Our fountains of justice are poisoned simply by the conventions of "respectability" and routine. I may as well, while on the subject, add an American magistrate's testimony to the working of another of the institutions of the States:—Alderman Briggs said, "Our police system acts thus—the guilty always escape, the innocent are dragged into court and sent to prison."

The subject of Reformatory Institutions is, we must all rejoice to see, exciting much attention, and the visit of M. de Metz, who founded the Mettray system, and has been giving at Bristol most interesting explanations of the Continental experiments upon the subject, reminds me of a conversation I had, a short time ago, with a gentleman who had been visiting and minutely examining the institution at Mettray, which is near Tours. His report was exceedingly favourable, and his judgment was formed, not merely upon the pleasing spectacle of a mass of lads, uniformly dressed, and learning in subordination and harmony, but upon inquiries into the character and results of the system. Juvenile offenders are taken from the age of five, when a poor child can have been but a tool in the hands of others, up to the age when a hardened lad is supposed to be almost incurable: and the treatment is very stringent, while very just. The system is so far military that the lads form in lines, move to a march, and act on signals; but the coercion is slight, except when sound punishment is applied. There are no barred gates, and the inmates of the institution cannot be called prisoners. They are taught trades, as in a species of plebeian college; and, when they are fit to be employed, situations are found for them; and, if they are thrown out of these, they are, under certain restrictions, received back to Mettray until new occupation can be procured. When they offend, they are tried by a jury of their fellows. The punishments are graduated, and various; there is no flogging, but there is a lowered diet, a solitary cell, and even a dark cell for the heaviest offences. Under this system the youth is weaned from his bad habits by having good ones taught him, and by encouragement to distinguish himself; and the emulative principle is advantageously brought into play a stimulus which has been too much lost sight of in England. I think that a careful study of the Mettray system would assist some of our own educational experimentalisers to some new and useful ideas, and every step in this science is of incalculable value to society—the man who discovers a single sound theory of tuition is a far greater man than the discoverer of ten new planets. At York, in Dorsetshire, in Devizes, and elsewhere, the subject is being taken up in practical earnest.

And if we cannot all at once reform the youth of England, we may at least protect the babies of England against the greedy and vulgar speculators who seek to profit by the mingled vanity and cupidity of a low class of mothers. The Baby-Show abomination ought to be suppressed by police interference, as any other assemblage for a cruel, immoral, or offensive purpose would be. One need not speak of the impurity and ribaldry which must be generated by the character of the competition in question, or of the coarseness of mind of the women who can submit their infants to be stripped, weighed, handled, and generally inspected, as if they were animals for sale, and whose fatness, firmness, and healthiness made them valuable. Nor need one remark upon the exceeding profanity of the affair, or the adjudging a prize to the handiwork of Providence—to the best-looking casket of a soul. I merely ask that the poor children may not be exposed to the cruelties incident to these shows, to the crowd, noise, and excitement of the earlier scenes, and then to the violence of "frantic and disappointed mothers (so runs the last report) who hold out the screeching babes at arms' length, vociferating for justice, and behaving like incensed viragos." One meeting may have more or less of these outrages than another, but the idea is intrinsically vicious, and founded upon knowledge of the worst part of human nature, and in the working out it is indecent and cruel. The respectable part of the press is speaking out indignantly on the subject, and I hope that the police will speedily receive instructions. No licensed victualler getting up or abetting such a show should be able to obtain a renewal of his license.

What shall be said of vulgar offenders, when the Lord Ernest Vane, or Vane-Tempest, comes into a criminal court, charged with indecency, ruffianism, and cowardice, and proved to be guilty of all three? What a fortunate thing for his Lordship that he lives in a country where we seldom or never punish people of condition. In France, for any one of the offences—especially the indelicate intrusion into the dressing-room of female artists—he would assuredly have been sent to gaol. In England, for completing a series of outrages by declaring his intention to murder, by hurling his victim down-stairs, and then striking him in the face while on the ground, a small portion of the pay which the nation hands to Lord Ernest is confiscated—something under the price of a dozen of champagne—and his connection, our Commander-in-Chief, permits him to exchange from the Second Life Guards to the Fourth Light Dragoons, that he may go out and share the honours of the heroes of the Crimea. That his outrages were committed at Windsor, under the very palace of his Sovereign, is scarcely an aggravation, amid so much that is dirty and ferocious; and so the military authorities appear to have thought, from taking no notice of the circumstance. "O quel bonheur d'être Milord!" as a French song goes

The Worcestershire justices were men of another kind than that of the Windsor magistrates, who showed so proper an awe of nobility, and who have since written letters abusing the victim, not the criminal. In Worcestershire "stubborn justice (justices' justice) takes her course," at least when a peasant is the offender. Everybody remembers the sentence that was passed upon the poor man who reaped his own handful of corn one Sunday morning, and everybody noticed how very lightly the plea was held that the poor man's corn might have spoiled if not garnered; while in the case of the two labourers who begged half a day to see a review, and were sent to prison for taking it, this assertion, made on behalf of the rich farmer's crop, was considered as justifying the incarceration. Now we have had a third thing to notice—namely, that the Home Secretary having upset the Worcestershire conviction, and severely rebuked the justices, they rebel, in the very spirit of their prototype, Sir Tunbelly Clumsy, and one of them rebukes the authorities, and declares that the conviction was right. "Nay, if thou art joking wi' a Deputy-Lieutenant, down wi' thee!"

The Jews are to be allowed to slaughter their animals in their own way, the Animals' Friend Society notwithstanding. Sir Peter Laurie decides that the mode adopted by the Hebrew butchers is not cruel, *and* has been in use 3000 years, *and* is the mode Christian butchers adopt with pigs, calves, and sheep (Mr. Forster, the Animals' Friend, denies this); *and* that, if he stopped it, all butchers would be obliged to shut up shop, unless they took some other means of slaying. Four reasons—physical, historical, conventional, and commercial—and every one of them sound and satisfactory.

Mr. Gladstone has at length been heard of, but not in connection with the war. He has been delivering at Hawarden, a lecture upon our colonial system, and has enunciated many very wholesome truths in reference to the method in which England should deal with what are still called her "dependencies." Mr. Gladstone takes the most advanced view of the subject, and contends that the most advantageous course which we can adopt is to allow the utmost freedom of action to the colonies. One remark in reference to the old Greek colonists was strikingly put. "The Greeks," said Mr. Gladstone, "were the first and probably the best colonisers, for they might almost be said to carry their colonies with them." Mr. Gladstone introduced no allusion to the alleged coalition said to have been proposed between himself, Mr. Bright, and Mr. Disraeli—a combination which the Conservative organs indignantly repudiate. But perhaps the three Pacificos "may come together without knowing it" when Parliament reassembles.

A Damper for our Old Fogies.—"Do not suppose that I hold youth is genius; all that I say is that genius, when young, is divine. Why, the greatest deeds of ancient and modern times both conquered [illegible] at 26. Youth, extreme youth, overthrew the Persian empire. Don John of Austria won Lepanto at 25—the greatest battle of modern time; had it not been for the jealousy of Philip, the next year he would have been Emperor of Mussulmania. Gaston de Foix was only 23 when he stood a victor on the plain of Ravenna. Every one remembers Condé and Rocroy at the same age. Gustavus Adolphus died at 38. Look at his captains—that wonderful Duke of Weimar, only 36 when he died. Bener himself, after all his miracles, died at 45. Cortes was little [illegible] when he gazed upon the golden cupolas of Mexico. When Mozart's Jupiter Symony died at 29 all Europe acknowledged the loss of the greatest captain and the profoundest statesman of the age. Then there is Nelson, Clive—but these are warriors, and perhaps you may think there are greater things than war. I do not. I worship the Lord of Hosts. But take the most illustrious achievements of civil prudence. Innocent III., the greatest of the Popes, was the despot of Christendom at 37. John de Medici was a Cardinal at 15, and, Guicciardini tells us, baffled with his craft Ferdinand of Aragon himself. He was Pope as Leo X. at 37. Luther robbed ever him of his richest province at 35. Take Ignatius Loyola and John Wesley—they worked with young brains. Ignatius was only 30 when he made his pilgrimage and wrote the "Spiritual Exercises." Pascal wrote a great work at 16 (the greatest of Frenchmen), and died at 37. Alfred died at 37, which reminds me of Byron—greater even as a man than as a writer. Was it experience that guided the pencil of Raphael when he painted the palaces of Rome? He died at 37. Richelieu was Secretary of State at 31. Well, then, there are Bolingbroke and Pitt, both famous before their own leave of cricket. Grotius was in practice at 17, and Attorney-General at 24. And Acquaviva—Acquaviva was General of the Jesuits, ruled every Cabinet in Europe, and established Jesuitism before he was 37. What a career! the most splendid of Europe! That was indeed a position! But it is needless to multiply instances. The history of heroes is the history of youth."—*Disraeli's "Conningsby."*

The New Sebastopol.—The Russian Government would almost appear to have been governed by a presentiment of the fall of Sebastopol, and has therefore provided for its navy, in the event of a defeat, a refuge which would be inaccessible to the enemy's vessels. It is certain that the Bug is not of a sufficient depth to allow the passage of vessels of any great burden, but itself, and that river is only navigable for ships of war to a point named Glebokoe, which lies at a considerable distance to the south of Nicolaieff. It [illegible] be necessary to the vessels of war [illegible] direct communication with the sea. [illegible] direct communication with the latter, and [illegible] dispatch thither the largest hulls that are launched from its dockyards. The Bug is deep enough even at Nicolaieff to carry vessels of that description before they have received their armament. The vessels launched at Nicolaieff are neither armed nor equipped until they arrive at Glubokoe. At the latter point the river is deep; but, owing to the existence of sandbanks at its mouth, it is customary to transport the ships full rigged and armed to the Black Sea on a species of raft. The Russians employ the same method on the Neva, in transporting to Cronstadt the vessels constructed at St. Petersburg. That new city alone be carried by a land force disembarked from the shipping. This disembarkation does not appear judicious to us at the present moment, when the Allies are compelled to make face with their main strength to the Russians on the Tchernaya and at Eupatoria. It would, therefore, be hazardous to dispatch the 30,000 or 40,000 men that could be spared to a distance of 25 to 30 leagues in the interior of the country, where they would encounter the Russian army of reserve which occupies these provinces, and also be deprived of regular communications with the fleet which would have transported them. Kherson is situated at the mouth of the Dnieper. The river is broad, but contains sandbanks which render its navigation to Kherson impossible for vessels of large tonnage, except at the period of the great rise, which takes place in the spring. The Allied ships would, therefore, not be enabled to appear before Kherson; but, on the other hand, a distance of only five leagues separates that town from the spot where the Dnieper flows into the sea; and thus a *coup de main*, if undertaken at a favourable moment, might be successful.—*Constitutionnel.*

MUSIC.

Kidderminster Festival.—A handsome and spacious music-hall having been newly erected in this town, its opening was inaugurated by a Musical Festival held on Tuesday and Wednesday last. The profits are to be in aid of the erection of the organ, and "for the establishment of cheap concerts for all classes"—a most laudable object, and worthy of every encouragement. The organ, built by Hill, cost £800, and is a noble instrument. Lord Ward, who has extensive property in the neighbourhood, was president of the festival; and the list of vice-presidents comprised the most distinguished noblemen and gentlemen of the county. The principal singers were Madame Clara Novello, Miss Dolby, Mr. and Mrs. Weiss, and Herr Reichardt. The orchestra, chiefly selected from the Royal Italian Opera, was led by Sainton. On Tuesday morning the performance consisted of Haydn's "Creation," and Spohr's "Last Judgment;" and in the evening there was a miscellaneous concert. On Wednesday the "Messiah" was performed in the morning; and a ball in the evening concluded the festival. The musical performances were very satisfactory, and greatly applauded by crowded audiences.

MUSICAL PUBLICATIONS.

Il Trovatore; Opera tragica. Poesia di S. Cammarano; Musica di G. Verdi. Boosey and Sons.

L'Etoile du Nord; Opéra comique. Paroles de M. Scribe; musique de G. Meyerbeer. Paris: Brandus and Co; London: Cramer and Co.

The two latest great works of the lyrical drama, which dividing the admiration of our musical public during last season at the Royal Italian Opera, have been made accessible to amateurs by means of the elegant editions, published in London and Paris, of which the above are the titles. It is not our purpose to enter into criticisms on works which most musical people have already heard on the stage, and which we fully described at the time of their production at Covent Garden; but we wish to recommend them, in their published form, to the attention of our readers. Those who, in the theatre, were delighted with their musical beauties and dramatic effects will derive additional pleasure from their perusal, and from their performance, round the pianoforte, in the domestic and social circle. In this way they will not only derive agreeable reminiscences of the impressions they received at the Opera-house, but they will obtain a clear comprehension of the means by which those impressions were made—of the mechanism (as it may be called) of the musician's art—of the constructive skill which has given form and symmetry to his ideas—and of the peculiar features of melody and harmony which constitute his style. It is thus that we gain the most valuable lessons in musical composition. It is a great mistake to suppose that it is to the professional student only that such lessons are profitable. The amateur who cultivates music as an elegant accomplishment is incapable of enjoying its highest pleasures while he is ignorant of its principles as an art. It is another mistake to say that the amateur ought not to attempt music of a high order, because he cannot emulate its execution in public by great performers. Such abstinence would reduce our Musical de Société to a very low ebb. Presumptuous display is, of course, to be avoided; and no lady of sense and modesty will ever think of making herself ridiculous in society by murdering the brilliant bravuras of a Grisi or a Bosio. But every opera of real merit contains many beauties which do not depend on vocal power or executive dexterity; and such things will always please when sung (imperfectly though it may be) with taste, expression, and unaffected simplicity. Used thus discreetly, the scores of even such difficult operas as "Il Trovatore" and the "Etoile du Nord" may be made (and are often made) productive, in the drawing room, of great and legitimate pleasure.

There is no similarity between the styles of Verdi and of Meyerbeer; but it does not follow that, because they are dissimilar, one of them must be bad. This cannot be, in the face of the undoubted fact that these two masters divide between them the sovereignty of the lyric stage. It has been too customary among musical critics to depreciate the Italian composer. The epithets shallow, noisy, commonplace, and so forth, have been so often repeated in connection with his music, that they have become a kind of cant, applied indiscriminately to every thing he has written. In the earliest of his numerous works (though even they must have had many beauties, otherwise how could their popularity have spread over all Europe?) there was room for such criticisms. Verdi, like many of his countrymen, was not highly educated, and his lack of scholarship was sufficiently apparent in his scores. But Verdi, during his long career, has necessarily been educating himself by the practice of his art; and remarks perfectly just as regards the "Lombardi" or "Ernani" are no longer applicable to the "Trovatore" or the "Vepres Siciliennes." It is impossible to examine the score before us—to observe the construction of the long and highly-wrought concerted scenes, the richness and variety of the harmonies, and the boldness and power of the modulations—without being convinced that Verdi is a skilful artist as well as a man of genius.

Meyerbeer's claims of other kind, received in his youth a thorough German education. In precocity of genius he resembled Mozart, and, at nine years old, was reckoned one of the best pianists in Berlin. His studies were conducted by the celebrated Abbé Vogler, the most profound contrapuntist of his time; and his most intimate friend and fellow-student was the author of the "Freischütz." His earliest essays in composition were ecclesiastical pieces; and, when he began to write for the stage, he failed from the scholastic elaborateness of his style. Profiting by the lesson thus learned from experience, he resolved to go to Italy in order to study melody. How he succeeded he showed by his charming "Crociato in Egitto," an opera which divided the applause of Europe with the masterpieces of Rossini, then in the zenith of his fame. But Meyerbeer himself was not satisfied; and when, after an interval of several years, he again came before the world with his "Robert le Diable," he evinced an originality and individuality of style more and more strikingly developed in his succeeding operas the "Huguenots," the "Prophète," and the "Etoile du Nord." Many critics place this last above all his other works; as it seems it is the most strongly marked with his peculiarities. Of all his works it is the most difficult to perform, and the hardest to understand. Were even an able musician, without having heard it on the stage, to sit down to the score, it would at first be as a sealed book to him; he would be lost amid its strange rhythms, its chromatic harmonies, and enharmonic modulations. But with further acquaintance the darkness is dispelled; what once appears obscure becomes clear; what was crude and rugged becomes smooth and genial. On every repetition we discover some fresh beauty, some happy thought, some fine trait of genius; and (as is the case with all works of the highest order of art) the ultimate possession of such discoveries is one of the greatest sources of our pleasure.

In the present, certainly, the music of Verdi is not comparable to that of Meyerbeer. His beauties are less recondite; they lie more upon the surface, and are mingled with much that is trite and familiar. His scores, therefore, neither demand so much study, nor repay it with so rich a harvest. But Verdi, notwithstanding the length of his career, and the number of his productions, seems still to be in a state of progress. On his latest works his reputation will rest; and to them, we believe, the next age will assign a higher place than has been awarded by the general voice of contemporary criticism.

Cuba and the Americans.—The *Powerful*, 84, Captain Massie, sailed on Sunday for the West Indian and North American station. In reference to the augmentation of the squadron on this station, the *Hampshire Telegraph* says:—"The *Powerful*, 84, is ordered to join the squadron under the *Cumberland*, 80, *Pembroke*, 60, and *Rosamond*, 6, to go to Bermuda. It is rumoured that the movement is in consequence of the American Government having refused to receive the instructions made to them by the British Government on the subject of Cuba in a tone insulting to this country in the highest possible degree. The American Government bids the English Government to beware what they are about; tells them that England has its hands full enough; and that, in defiance of England's interference with them, they will do what they please as to Cuba.

The Anglo-French Commission.—The following is a list of the members of the Anglo-French Commission sitting in Sebastopol:—French: Marmier, General d'Artillerie; Feldtmann, Capitaine du Genie; Laurent, Lieutenant de Vaisseau; Cazeux, Capitan d'Artillerie; Bouter, Adjutant à l'Intendance; De Calac, Capitaine d'Artillerie; Cadinot, Chef de Bataillon du Genie; [illegible] de la Coche, Capitaine de Frégate; [illegible] Gabrunere, Sous-intendant. English: Captain Drummond, R.N.; Brigadier-General Jephson, R.A.; Major Stanton, R.E.; Commander F. Martin, R.N.; Assistant Commissary-General Crookshank; Captain Shaw, R.A.; A. Rumble, S.; Lieutenant Buller, R.N.; Captain Dunsmuir, R.E.; Assistant Commissary-General Lumley; Captain Dickson, R.A.; A. W. Johnson, Secretary to the Commission.

The inside of the Cathedral of Bâle (built from 1010 to 1019, by the Emperor Henry the Second) is being restored on a large scale.

Indications of gold have been discovered in French Guiana. Specimens of the ore have been brought to Cayenne, and they have been found to yield 50 per cent of gold and 10 of silver.

The plague of flies and insects has infested the Channel Islands. In Jersey whole acres of cabbages have been eaten by the caterpillar.

The Parliamentary Session in Piedmont is to commence on the 12th November.

STREET IN SEBASTOPOL.—FRENCH TROOPS TAKING AMMUNITION TO THE MORTAR BATTERY NEAR FORT NICHOLAS.—SKETCHED BY E. A. GOODALL.—(SEE PAGE 466.)

TREET IN SEBASTOPOL.—SKETCHED BY E. A. GOODALL.—(SEE PAGE 468.)

THE THEATRES, &c.

HAYMARKET.—A new comedy in two acts, entitled "The Little Treasure," by A. Harris, Esq., has been completely and deservedly successful. Derived from a French piece called "La Jeunesse de la Maison," it has some traces of manners not altogether in accordance with our own, but in the main it is anglicised ably, and there are points of nature in it which belong alike to all countries. *Gertrude* (Miss Blanche Fane) in half an orphan, for she has never known a father, and always resided with her mother, *Lady Howard* (Miss Swanborough), and her grandmother, *Mrs. Meddleton* (Mrs. Poynter). Nevertheless, her father is living, —in Italy, as pretended by the two maternal ladies, but really in Mayfair, as a gay bachelor. In fact, husband and wife had been separated for twelve years, owing to the interference of *Mrs. Meddleton*. At length poor *Gertrude* learns these facts from her cousin, *Captain Walter Maydenbush* (Mr Buckstone), who has lately returned from his travels without having got rid of his constitutional shyness. She soon finds that she can "rule his spirit" by her own determination, and conceives a plan for bringing her parents together by rendering their joint consent necessary to her own marriage. She makes love to *Walter*, and succeeds in effecting her object. For this purpose, she ventures on a clandestine visit to her father, whom she finds in the company of his fast friends. With one of these he is under the necessity of engaging in a duel, in defence of his wife's reputation, whom the frivolous wilding had in cautiously spoken of with disrespect. The scene with the father is touching, and the duel becomes the ultimate means of reconciliation with her mother. Miss Blanche Fane has one of those indefatigable parts which make the actress the heroine of a play; and all the situations are dependent on her voluntary activity. Her *abandon* and *naiveté* are charming; and this little piece is composed of a series of truly delicious scenes, in which this young lady is the principal agent. Mr. Howe, too, as *Sir Charles Howard*, the husband, acted with a sensibility which was really affecting in its truthfulness and its tenderness. Mr. Buckstone, as the modest cousin, was at home in his part, which was indeed admirably adapted to his style. Miss Swanborough was exquisite in the offended wife; and Mrs. Poynter, as the proud and irascible old lady, acted with discrimination as well as force. Indeed, we have seldom seen a play so perfectly appointed, so fitly adapted for the performers, and so responsive to their efforts—rewarding those of the humblest as well as of the more ambitious characters with ever-ready success.

CREMORNE GARDENS.—The season, which has exceeded the half-year by a fortnight, has just terminated at this place of amusement. With the exception, perhaps, of the Great Exhibition year, the season of 1855 has been the most fortunate that this establishment can boast of. The horticultural and other fêtes, especially the celebrated Wellington Fête, which enabled Mr. Simpson to contribute £1100 to the Wellington College Fund, were very successful.

NATIONAL SPORTS.

WITH the "hay and corn" meeting, which occupies the whole of next week, the Newmarket season comes to an end. The Criterion Stakes has been generally so fatal to John Scott's Derby winners—West Australian and Daniel O'Rourke to wit—that we doubt whether Fly-by-Night (6 lb. cx.) will stem the combination. Milton, and Artillery, are all the same gramity; Porto Rico has a 9 lb. one, and Queen's Head a 8 lb. one; and hence, if George Brown and the Result have really anything in them, "an eligible opportunity now occurs." &c. The match between the Duke of Bedford and Lord Glasgow will probably follow suit with their 1000 gs. one of the previous meeting, and Plum Pudding will pay forfeit to Mincepie on Saturday. Seventy-eight out of 183 horses have accepted for the Cambridgeshire Stakes, which is the great event of Tuesday, and a strong field will be found at the post. Pigeon (6 st. 8lb.) is all the rage after his Cesarewitch running; but when John Scott has turned a horse out of his stable for being a cur we cannot help distrusting him at any distance. This style of horse will, like Indian Warrior, perpetually run a good second, but never, if he can help it, finish first. Flatcatcher (7 st. 4 lb.) is likely to run very well, as he is fresh, and his great speed and splendid hocks and quarters will help him up the hill. We prefer his chance and Wellman's (6 st. 10 lb.) to that of both Crown Pigeon and Calumus (7 st. 10 lb.). We are forced to mere chicken handicap and selling races, but some good sport is promised on Thursday. Lord Chesterfield's long-looked for Peter Wilkins will probably make his maiden appearance in the Glasgow Stakes, though the bad running of Dramatist will rather make him shake hoof. The Nabob is a very doubtful starter; and Voivode, like another 1000 gs. colt, Mario, is said not to be worth as many shillings. The Royal 1000 gs. colt Yellow Jack, who has been spiritedly backed for the Derby, is in a 80 sov. Sweepstakes on the Wednesday (6 st. 4 lb.), and Chalice (6st. 12lb.), and Sneer colt (6st. 8lb.) will probably meet for the 100 sov. handicap, A.F. From their Ascot running there seems little to choose between the latter two, while the Ascot-Cup winner ought just to beat them both, to get at the top weight. On Tuesday there is a meeting at Cashel, the Down Royal Corporation hold theirs on Wednesday, and the Armagh people on Thursday. The sports at the latter principally consist of steeplechasing, four of which races will be run at the Irish Metropolitan Meeting on Monday. There will also be a small day's racing at Newburgh Park, in Yorkshire, on Thursday, and some steeplechases under Lord Londesborough's agreeial patronage at Selby on Friday. Lord Waterford's horses are for sale at Curraghmore on the latter day, and consist of fifty-six lots of all kinds, from Coranne down to "a black pony."

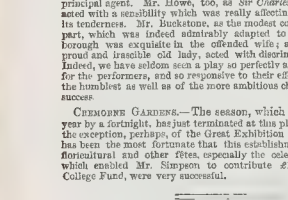
There is a "call" of the Jockey Club at Newmarket next week, to discuss the F. P. question, and Lord Derby and Admiral Rous, and three-fourths of the club, have not given in their adhesion to the proposed change, which strikes us as most foolish and ineffective, things are pretty certain to remain as they are. Mr. Lawley has followed up the luck which attended him in his joint purchase with Mr. John Stanley of the Eglinton Stud, by hiring Mr. Sykes for £1000, and winning nearly £7000 in bets and stakes with him. His confederate, Mr. J. Stanley, after winning £4015 in sixteen out of thirty-nine runs with Orlando, sold him for £800 the day before his death. He had won a £50 plate on the Monday, run sixth for the Cesarewitch on the Tuesday, had a heavy trial on Wednesday, and fell dead while running well up in a race on Thursday. Only two other horses have to our knowledge died in this way during the last thirteen years; but previous to that, Sultan (a winner of the Derby) and Albert both died in their stride at exercise. Mrs. Osbaldeston intends to enter horses in her own name in future, being the second lady within our recollection who has done so. Virago is for sale; Sir Tatton Sykes's Norton, who gave 1000 guineas for the yearling Zuyder Zee, has given 500 guineas for a yearling half-sister to Dervish.

Poor Harry Bell, who won the St. Leger on Foig-a-ballagh and the Oaks on Refraction, has committed suicide. He had left his riding for some years past, and had enlisted as riding-master into a cavalry regiment.

The coursing meetings for the week begin with the Wiltshire Champion, on Monday, &c.; South Minster and Limerick are fixed for Tuesday and Wednesday; and both Lancashire (O for Wednesday before his death; the Nithsdale and Galloway St. Leger, &c., for Thursday and Friday; and the Dirleton St. Leger, &c., for Thursday, Friday, and Saturday. While the courses are thus up and doing before the frost, the velveteen shooting-jacket will hardly be exchanged for the scarlet before the end of the month; but Sir Richard Sutton both had some great sport among the partridges at Cheveley, and killed a Billesdon Coplow fox, after a capital run, early last week. The Melton season is not expected to be great, though some strong studs have arrived.

Kelly and Mackinney row a £100 a side match on the Thames, on Wednesday; and a sculling £10 a side match, which starts at Woolwich, is fixed for the following day. *Apropos* of water, we may mention that an enormous spotted otter has been killed. This monarch of the rivers measured 4 feet 9½ inches, and had long tried the proverbial patience of the followers of the gentle craft.

WARWICK AND LEAMINGTON OCTOBER MEETING.—TUESDAY.



EDUCATION AND REFORMATORY INSTITUTIONS.

—At a meeting of the diocesan institutions at Wells, on Thursday week, the Bishop of Bath and Wells referred to the necessity of education as a preventive of crime. Although they did find educated criminals, such as a Paul or a Strahan, and every assize brought before them cases of forgery committed by persons who had received a good portion of instruction, yet the offences of felony and licentious brutality were invariably the result of ignorance. His Lordship then quoted from the statistical returns of Mr. Stevens, to show that although the population of the large towns had greatly multiplied, and in some instances quite doubled, within the last thirteen years, yet the school accommodation had almost remained stationary, and thousands of children were left without the slightest means of instruction or education. In Massachusetts they educated one-fifth of the population, and yet in parts of Somersetshire only one-eighteenth were educated What they called education was not really such, because the child was sent forth to labour so early that he left the school uninformed as to morals, and untrained as to his duty to God and man; and if they took into consideration the fact that the mass of children left their schools before the minds were formed, they would see the necessity for reformatory schools; and on this account they wanted such a school in that neighbourhood. He did not mean to say that there were not many of their criminals who were indicated in vice; but he did say that in many instances the child sinned because no man cared for him, and they wanted a *locus penitentiæ* for such subjects as had sinned, not so much by their own fault as by the fault of those by whom they were trained.

A SPLIT AMONG THE REVOLUTIONISTS.—M. Louis Blanc, the leader of the Socialist section of the Republicans, has written a manifesto disowning from the means and the end proposed by Messrs. Kossuth, Mazzini, and Ledru Rollin. He advocates "*gradualism*" before the Revolution as the called on to fight. He adds:—"The Republican form of government is not the object: the object is to restore to the dignity of human nature those whom the excess of poverty degrades, and to enlighten those whom intelligence, from want of education, is but a dim, vacillating lamp in the midst of darkness; the object is to make him that works enjoy all the fruits of his work; the object is to refranchise the people by endeavouring gradually to abolish the double slavery —ignorance and misery. A very difficult task, indeed, the accomplishment of which requires long study, deep meditation, and something more than discipline! As to the Republican form of government, it is the most valuable of our family, and which we ought to strive to conquer, even at the cost of life, but which it is very imprudent to mistake for the aim, as the consequence might be to make us take the shadow for the substance, and run through a heap of ruins to fatal delusions."

FAILURE OF THE MAINE LIQUOR LAW IN PORTLAND. The Maine Liquor Law is now no longer enforced in the city of Portland. Some the result of the late election, in which there was a decided popular minority against the law, Major Dow, the author of the prohibitory policy, and present chief magistrate, is reported by the *Portland Argus* to have determined to make no further efforts to enforce it, as he says effort is impossible. The people voted for rum and now they may have it." The same paper states that the Mayor has withdrawn from the wharf the policemen stationed there to search or liquor on the arrival of the Boston steamer.

There were no less than twenty-two inquests in Liverpool last week, being nearly one-half more than the average of corresponding weeks in previous years.

Out of a train of 300 emigrants who were travelling through Oregon 150 were killed by the Indians, and all their stores captured. The remainder of the train reached Salt Lake City in a starving condition

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

AUTHORITY there have been increased money transactions in the Consol-market since our last, prices have rapidly declined, and the rise in three days' end of last and the beginning of the present week has not been supported. The [illegible] shocks-ments have been made to any quarter; while it is asserted that the Bank of France has now received the whole of the supply lately contracted for. The last return of that institution shows very unfavourable results, viz.:—

Coin and bullion	.. ..	[illegible]
Bill discounted	.. ..	[illegible]
Circulation	.. ..	[illegible]
Treasury Deposits	.. ..	[illegible]
Private Deposits	.. ..	[illegible]
Advances on French Government Stocks	.. ..	1,000,000 francs increase.
Advances on Railway Shares	.. .. ..	4,186,100, decrease .. 382,930

The great falling-off in the stock of bullion—the decrease last month being £2,005,500—and the large increase in the bills discounted, have afforded matter for great uneasiness.

There has been rather more money available for commercial purposes, but the rates of discount have ruled higher On Tuesday another instalment of 10 per cent fell due on the April Loan of £16,000,000; and one of 20 per cent will be payable on Turkish Scrip on Saturday. On both days the applications have been large. On the Stock Exchange loans on Government security for short periods have been made at 5½ to 4¾ per cent; but in Lombard-street 5½ to 6 per cent has been the current rate for the best paper.

On Thursday the Directors of the Bank of England advanced the minimum rate of discount to six per cent for bills not exceeding sixty days, and seven per cent for those having longer currency. This will, we presume, remove all doubt, check any further demands upon us for gold; but it is to be regretted that the commercial interests of the country should suffer from speculations which may, in all probability, prove injurious to those engaging in them.

The imports of bullion have been only £42,000 from New York, and about £90,000 in silver from Holland, and 850,000 dollars from Mexico. We learn that the last has been packed for exportation to Bombay. Shipments have been made to that destination this year. The Irish Bank returns are, on the whole, very favourable. The total circulation of notes is [illegible]

On Monday Consols for Money were done at 97¾ 88¾; the Red used, 87¾ down to 87 ex div.; and the New Three per Cents, 88½ to 87¾. Long Annuities, New Loan, 16 5-16. Exchequer Bonds, 99¾. Bank Stock, 208 to 209 The dealings on Tuesday were limited. Bank Stock quoted 209 to 207. The Three per Cents Reduced were 88¾ ⅛; the Three per Cent Consols, 87, ⅛ 87¾; and the New Three per Cents, 87¾ ⅛. India Bonds, 2s. prem. Exchequer Bills, 7s. to 3s. discount. Exchequer Bonds, 99¾ ⅛. On the next day the following rates were marked:—Bank Stock, 207 to 209; Three per Cents Reduced, 88¾ to 87¾; Three per Cent Consols, 87¾ to 88¾; and the New Three per Cents, 87¾ to 88; Long Annuities, 1860, 3½; India Stock, 225; India Bonds, 2s. to 3s. prem.; Exchequer Bills, 2s. to 7s. dis. Exchequer Bonds, 99¾ ⅛. On Thursday, owing to the advance in the rates of discount, Consols fell from 87¾ to 87¾ for money. The Three per Cents Reduced were 87¾ to 88¾; and the New Three per Cents, 87¾ to 87¾; Bank Stock, 209 to 207; India Stock, 226; India Bonds, 1s. premium; Exchequer Bills, 7s to 5s discount

There have been rather numerous sales of Foreign Bonds; and the following are the leading prices of the week:—Buenos Ayres Six per Cents, 84; Chilian Six per Cents, 103; Ecuador Three per Cents, 26; Mexican Three per Cents, 21¾; Peruvian Four-and-a-Half per Cents, 73¾; Portuguese Four per Cents, Small, 45; Sardinian Five per Cents, 84; Spanish Three per Cents, 37¾; Ditto New Deferred, 19¾; Ditto New Six per Cents, 81; Swedish Four per Cents, 93; Venezuela Four-and-a-Half per Cents, 26; Belgian Four-and-a-Half per Cents, 93¾; Dutch Two-and-a-Half per Cents, 64¾; Dutch Four per Cents, 93¾; Brazilian Four per Cents, 81; Ditto Five per Cents, 93; Chilian Five per Cents, 93; Grenada One-and-a-Half per Cents, 18½; Russian Five per Cents, 95½; Russian Four-and-a-Half per Cents, 88; French Rentes Three per Cents, 4 prem

Most Joint-Stock Bank Shares have been unsaleable:—Australasian ruled 85½; English, Scottish, and Australian Chartered, 16½; London Chartered of Australia, 19½; Ditto, New, 4½; London Joint-Stock, 32; London and Westminster, 47¾; Union of London, 29¾

Miscellaneous Securities have been heavy and drooping:—Australian Royal Mail, 4¾; Canada Company's Bonds, 153; Ditto, Government Security, 107; Peninsular and Oriental Steam, New, 14; Royal Mail Steam, 70 ex div.; Scottish Australian Investment, 1⅞; Victoria Dock, 20; London, 100. Ashton and Oldham Canal Shares have marked 139; Derby, 84; Rochdale, 60; Stourbridge, 260. Rungerford Market Shares were sold at 212; Waterloo Bridge, 21¾. All other securities have been exceedingly heavy, and the quotations have ruled nominal.

Railway Share have been exceedingly dull and drooping. The supply of stock in the market has become extensive. The following are the official closing prices on Thursday:—

ORDINARY SHARES AND STOCKS.—Aberdeen, 23; Caledonian, 88¾; Eastern Counties, 9¼; East Lancashire, 68; Great Northern, 83¾; Ditto B Stock, 119½; Great Southern and Western (Ireland), 109¾; Great Western, 81¾; Lancaster and Carlisle, New Stock, 133; Lancashire and Yorkshire, 73¾; London and Brighton, 95½; London and North-Western, 99½; London and [illegible] 82; Manchester, Sheffield, and Lincolnshire, 22; Midland, 83¾; North-Eastern, York, 85¾; Oxford, Worcester, and Wolverhampton, 24, Scottish Central, 101; South-Eastern, 56¾; South Wales, 31¾; Vale of Neath, 19

LINES LEASED AT FIXED RENTALS.—Buckinghamshire, 93; East Lincolnshire, 152½; London, Tilbury, and Southend, 11⅞; Midland Bristol, 56.

PREFERENCE SHARES.—Aberdeen, No 2, 109; Caledonian, 88; Eastern Counties, New Stock, 14; Great Northern Five per Cent, 113½; Ditto, redeemable at 10 per cent prem., 107; Great Western Four-and-a-Half per Cent, 95; Ditto, Five per Cent, 99; Ditto, Birmingham Stock, 68; Midland Four-and-a-Half per Cent, 94¾; Oxford, Worcester, and Wolverhampton, 102¾; South-Eastern, 22½.

FOREIGN.—Antwerp and Rotterdam, 8; Dutch Rhenish, 10½; Eastern of France, 35; East Indian Five per Cent, 22; Ditto, Extension, 11; Grand Trunk of Canada, 8; Ditto, A, 4; Ditto, B, 4; Ditto, Preferential, 6; Great Luxembourg Consti Shares, 4; Great Western of Canada Shares, ex div.; Ditto, New, 7½; Namur and Liege, 9½; Paris and Lyons, 44½; Western and North-Western of France, 30 ex div

So little has been done in Mining Shares that the quotations have ruled almost nominal. On Thursday United Mexicans were 4¾ to ½

Friday Evening

Since the morning the Consol-market has been heavy, and the Three per Cents have given way fully ¾ per cent, the last quotation being 87. The Three per Cents Reduced have marked 88¾. Exchequer Bills have been 2s to 10s discount, India Bonds having sold at par Foreign Bonds and Railway Shares have been excessively heavy. The Bank of France has raised the rate of discount to five per cent.

THE MARKETS.

CORN-EXCHANGE (Friday).—Very moderate supplies of English wheat were received up to our market to-day, and the show of samples was very limited. For most kinds there was a good enquiry, and prices ruled from 1s. to 2s. per quarter higher than on Monday. Foreign wheat—the imports of which have amounted to 8310 quarters—sold steadily, and, in some instances, at an advance of [illegible] Nothing [illegible] changed hands [illegible] high [illegible] [illegible] on former terms. [illegible] was [illegible] extent of trade, full prices. The [illegible] was [illegible] to the demand was steady, at Monday's quotations [illegible]

Arrivals into London last week:—Wheat, 2780 load, 1400; oats, 300; flour, [illegible] sacks, 7993. Foreign, wheat, 831; oats, 5893

English.—Wheat, Essex and Kent, red, 50s to 51s; ditto, white, 54s, to 56s.; Norfolk and Suffolk, red, 50s to 50s.; rye, 48s. to 52s.; grinding barley, 31s. to 37s.; distilling ditto, 35s to 39s.; malting ditto, 37s. to 43s.; Lincoln and Norfolk malt, 71s. to 78s.; brown ditto, 64s. to 66s.; Ringston and Ware, 70s to 76s.; Chevalier, 72s.; Lincolnshire and Yorkshire [illegible] ditto, 47s to 54s.; Yonghal [illegible] ditto, 42s. to 44s.; [illegible] oats, 23s. to 24s.; [illegible] ditto, 22s. to 23s.; grey peas, [illegible] ditto, 40s. to 42s.; boilers, 40s. to 46s. per quarter. Town-made flour, 45s. to 47s. per sack; Essex and Suffolk ditto, 42s. to 44s.; and Yorkshire, 40s. to 42s. per 280 lbs. American, 38s. to 40s. per barrel.

Meals.—We have had a very moderate supply of foreign arrivals during last week's currency [illegible] Indian corn [illegible] Barley being [illegible] Malting [illegible] Oats [illegible] Beans [illegible] Peas [illegible] Flour [illegible] The demand [illegible] Linseed cakes, English, £13 10s. to £14 ; ditto, foreign, £12 to £13, rape cakes, £6 10s. to £6 15s. per ton. Canary, 56s. to 60s. per quarter.

Bread.—The prices of wheaten bread in the metropolis are from 10½d. to 11d. of household ditto, 9½d to 10d. per 4lbs loaf

Imperial Weekly Averages.—Wheat, 70s. 7 ; barley, 38s. 4d.; oats, 23s. 6d.; rye 38s. 8d.; beans, 40s. 11d.; peas, 42s. 7d.

The Six Weeks' Averages.—Wheat, 76s. 7d.; barley, 35s. 3d; oats, 23s. 5d.; rye, 37s. 8d.; beans, 40s. 8d., peas, 41s. 5d.

Supplies Imported Last Week. Wheat, 152,443 barley, 43,320; oats, 15,397, rye, [illegible] beans, 370; peas, 1225 quarters

Provisions.—The Irish public [illegible] week; but the transactions have been [illegible] Friday's demand is tolerably active, and common round congous is worth 9d. per lb.

Sugars.—Our market [illegible] and, on the whole, rather more money has been obtained for [illegible] Monday [illegible] to 43s.; and Bengal, 42s. to 42s. per cwt. Foreign sugars, [illegible] have been tolerably [illegible] Refined goods move off freely, at 43s. 6d to 56s. per cwt. The total stock of sugar in warehouse on the 20 ult. was 200 tons less than in 1854

Coffee.—The demand is very [illegible] and [illegible] at on our market has been at [illegible] fully last week's currency. Nominally [illegible] Ceylon [illegible]

Teas.—There is a good demand for Irish [illegible] to 2s. per cwt. [illegible] Monday [illegible] to 10½; Waterford, 9½ to 10d.; Limerick, 9½ to 9¾; Sligo, 9½ to 9¾; Belfast, 9½ to 9¾; Cork, 9½ to 9¾; Newry, 9½ to 9¾; Dublin, 9½ to 9¾; Drogheda, 9½ to 9¾; Londonderry, 9½ to 9¾; Galway, 9½ to 9¾; Tralee, 9½ to 9¾; Kilkenny, 9½ to 9¾; Wexford, 9½ to 9¾; Carlow, 9½ to 9¾; Kildare, 9½ to 9¾; Meath, 9½ to 9¾; Westmeath, 9½ to 9¾; Longford, 9½ to 9¾; Leitrim, 9½ to 9¾; Roscommon, 9½ to 9¾; Mayo, 9½ to 9¾; Sligo, 9½ to 9¾; Donegal, 9½ to 9¾; Fermanagh, 9½ to 9¾; Cavan, 9½ to 9¾; Monaghan, 9½ to 9¾; Armagh, 9½ to 9¾; Down, 9½ to 9¾; Antrim, 9½ to 9¾; Londonderry, 9½ to 9¾; Tyrone

Admission, 1s.; Monday, 6d.

SUBSCRIPTION.—The sudden death on the 18th of September last, of Mr. SAMUEL COLLINS, who was for nearly 20 years on the staff of the ILLUSTRATED LONDON NEWS as Assistant Publisher, has left a Widow, 36 years of age, in distressed circumstances, and six children almost entirely destitute of the means of support.

The family consists of four boys, aged respectively seven, nine, eleven and thirteen years; and two girls, two and five years old.

These distressed circumstances have induced the friends of the deceased to commence a subscription for the purpose of purchasing an Annuity, or otherwise providing for the support of the bereaved family.

The following Gentlemen have most kindly consented to receive Donations:

HERBERT INGRAM, Esq., 198, Strand (who will act as Treasurer).
THOMAS N. STOKES, Esq., 12, Clement's-lane, City.
FREDERIC WEST, Esq., 3, Charlotte-row, Mansion-House.

SPRING GROVE STATION, on the Windsor Line. Right Miles from Hyde-park Corner. Trains every hour to and from Waterloo Terminus. Substantial VILLAS, with Gardens and Paddock, commanding extensive views, to be LET, on Spring Grove Estate, which is one of the most healthy situations on a fine gravel soil, between Osterley park and Spring Grove. These houses are good gardens attached to them, an additional land may be obtained if wanted. Particulars for rent on lease, or purchase, may be had on the Premises, or of the Estate Office, near the Station, Spring Grove, at 17, Warwick-street Regent-street.

AT LAST THE MYSTERY IS SO. VED.—A MAGIC MADE EASY.—All the best Tricks and Sciences, Apparatus and Secrets, by Robert, the Great Wizard of the Northern Realm, &c., all of Paris Manufacture, are now to be conducted at the Wizard's Paris Warehouse, 45, Charles-street, Middlesex Hospital. A splendid Magic Table on Sale at present

MEDICAL PUPIL.—A Surgeon, M.R.C.S. and L.S.A., in practice in a sea port town in the South of England, has a VACANCY for a well-educated YOUTH as PUPIL, who will have the advantage of extensive private and practical practice; also of witnessing operations at the Hospital. He will be treated as one of the family, and have a comfortable home. Premium moderate. Address, Mr. Jones, care of Messrs. Gale, Baker, Warde, and Oldfield, Bouverie-street, Fleet-street.

VISITORS to LONDON. The QUEEN'S FAMILY HOTEL, Queen's-road, Bayswater, near Kensington-gardens, is distinguished for bed-room purity and family comfort. Apartments, with full board, 5s. 6d. per day, or £2 12s. 6d. per week, which includes all charges. Meals charged separately if required.

VEUVE CLICQUOT'S GENUINE CHAMPAGNE, only 70s. per dozen. N.B. Carriage free to any part of the United Kingdom. CAUZE WINE COMPANY, 66, St. James's-street.

ROUSSILLON, 30s. per dozen (from the Pyrénées Orientales) possessing a fine violet tint and rich ruby and mellow fragrant flavour. Purity guaranteed. TRATED NEWS of 16 February. The society of 15 years' standing demonstrated by actual experiment that the pure wines from this district, when duly matured, are wholesome and superior to sherry. Those who desire a pure and wholesome wine should procure it. Dinner Sherry, 20s., 30s.; Standard, or Natural, 36s.; Old Fruity Browning Port, 42s., 48s.; Moselle (grand flavour), 36s. 42s. Sparkling Champagne, 36s.; Red Burgundy, 36s., 42s., 48s. Cash Carriage-free to all Rail Stations on receipt of Remittance. Price Lists of all Wines and Spirits will be forwarded free on application. Just published, "Gatherings from the Wine Lands," to be had of all Booksellers.—POSTER and INGLE, Mitre-court, Milk-street, Cheapside.

NEW BOOKS, &c.

Crown 8vo, cloth, price 2s. 6d.; post-free, 2s. 10d.,
LONDON AS IT IS TO-DAY; WHERE TO GO, AND WHAT TO SEE: with Two Hundred Engravings. London: H. G. CLARKE and Co., 239, Strand.

Just published, in handsome cloth, price 3s.
THE AUTOBIOGRAPHY of a BEGGAR BOY; in which will be found related the numerous Trials, hard Struggles and Adventures of a struggling Genius; with Glimpses of Social and Political History over a Period of Fifty Years. By JOHN BUNYAN, 32, Strand.

Foap 8vo, 388 pages, cloth, extra, 6s.,
THE ISLES of LOCH AWE, and other POEMS of my YOUTH, with Sixteen Illustrations. By PHILIP GILBERT HAMERTON.
London: W. S. PAINTER, 342, Strand.

In 4to, Crown Parts, each complete in itself, 300 Examples,
WATER-COLOUR WITHOUT a MASTER. Superior Objects in Landscape shown under various tints, and afterwards composed into Pictures. By THOMAS HARTON
London: REEVES and SONS, 113, Cheapside.

In the 1st of November will be published, price 3s. 6d.,
PUNCH'S POCKET-BOOK for 1856. With a Coloured Plate by JOHN LEECH, and numerous Wood Engravings by John Leech and John Tenniel.
London: BRADBURY and EVANS, 90, Fleet-street

STARTLING NOVELTIES from PARIS in the LADIES' GAZETTE of FASHION for NOV., price 1s. (Post free, 1s. 6d.) Full Size coloured Patterns of New Paris Cloak, the "Amazon Riding Habit," and 10 other Cloaks, Dresses and Bonnets.
G. BERGER, Holywell-street, Strand.

THE ART of ENGRAVING on GLASS, either Opaque or Transparent, and in Colours. Further information, with Catalogue and Testimonials, gratis. Published by T. M. PRITT, 59, Windsor-street, Brighton.

Just published, fifth edition, price 1s., 8vo, bound,
THE ART of BREWING, FERMENTING, and MAKING MALT; containing correct Tables of Mashing, Heats, full Directions for Brewing Ales, Strong Beers, &c. &c., and every other necessary information, by strict attention to which success in this Business may be obtained. Also, the results of 30 years' practice, by JOHN LEWIS, late of the Anchor Brewery.—JAMES EARL, 27, Paul's Churchyard.—Carriage-free on receipt of Post-office order

"The only journal of fashion upon which any reliance can be placed."—Morning Post.
LE FOLLET, Journal du Grand Monde, 1st October, 1855, contains Coloured Fashions, Models of Caps, Bonnets, Dresses, Mantles, Jackets, Superb Novelties in Embroidery, Lace, Trimmings, Head-dresses, Hair-dressing, Waltzing, Evening Dresses, Fancy Costumes, &c. &c. La Mode for November; with Reviews of the Theatres, Balls, &c. In the Literary Department there is "Une Journée à Londres," "Nature and Art," "The Maid-of-all-work," &c. &c.
The 1st November will contain Models and Descriptions of the Winter Costumes, Fancy Dresses, &c. Price 1s. 6d. Subscription, 6s. per quarter.
Office, 3, Argyll-street, and all Booksellers.

THE PICTURE TIMES, for SATURDAY, OCTOBER 20th, the Largest and Cheapest Illustrated Paper—PRICE ONE PENNY—contains, among others, the following Brilliant Engravings:—
Portraits of Commanders in the Crimean Expedition (Page Block) of Sebastopol—Departure of the Naval Brigade from Balaclava—Capture of Baron Bazancourt—Arrival of the Duke of Cambridge at Paris—Review of the Guards in the Champs Elysées—Opening of the Park for an Evening Promenade—Arrival of the Duke of Cambridge at Boulogne—Entrance-gate to the Arsenal—the Club-house of the Soldiers' Artillery Ship, near Portsmouth—Arrangement of the Plans after the Capture of the Town, from a Sketch by M Roux—View of the North Side of Sebastopol, during the Assault—Fort Paul, Place Bonaparte.
The Monthly Part for September is now ready, price 1s. 10d. The Trade must order immediately, as the demand is already enormous. Also, the PICTURE TIMES, Office, No. 1, Orange-court, Newcastle-street, London. Sold by all Booksellers

DISEASES of the EYE and Operative Ophthalmic Surgery. By HAYNES WALTON, F.R.C.S., Surgeon to the Central London Ophthalmic Hospital. An extensive Collection of Cases, with Illustrations. Price 10s.
London: JOHN CHURCHILL, New Burlington-street.

HOOKHAMS' LIBRARY (Established 1764). The Newest Books—the best and cheapest supply to Single Subscribers.—Book Societies and Literary Institutions supplied on Liberal Terms.—Prospectuses free.—H. HOOKHAM, 15, Old Bond-street.

BINDING the ILLUSTRATED LONDON NEWS. Subscribers and Purchasers can have their Numbers BOUND in the appropriate Covers, at 3s. 6d. Cases, at 1s. 6d. Volumes, by sending them, carriage paid, or by order, parcels to LEIGHTON, SONS, and HODGE, 13, Shoe-lane, London. Any Binder authorised by the Proprietors.

PHOTOGRAPHY.—A complete Apparatus, for 5l. 5s. Sent free on receipt of 5l. 11s. Send for a list to GILBERT PLAINE & SON, Oxford-street, Author of "First Steps in Photography," price 1s. by post, 7d.

POTICHOMANIA and DIAPHANIE.—By the first Vases are decorated by the second stained Windows are executed. Materials for both in great variety at J. BARNARD'S, 339, Oxford-street (opposite Bond-street), London. Wholesale and Retail.

MONEY ADVANCED by way of Mortgage on the Security of Personalties, or L.s. Interests secured more Cheaply and Promptly than elsewhere, by the Directors of the Chancery, &c. and on the Estates of Deceased Persons, Intestates, &c. Apply at the Offices of Messrs. HOWARD, MORLEY, and MORLEY, Bankers-Solicitors, Nottingham.

CLEANLINESS.—NIXEY'S BLACK-LEAD. The most durable and brilliant Polish for Stoves, Grates, Fenders, Iron Work, &c. Sold by Grocers, Oilmen, Ironmongers, &c. Sold wholesale and for Shipping, by NIXEY, Patentee, 11, Bishopsgate-street Without, London. Sold in packets, 6d. each.—W. G. NIXEY, Patentee, 22, Minor-street, Bath.

DULLETT and Co.'s Celebrated Prize Medal Pens, Nos. 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40,

OMER PACHA.

As the expedition of Omer Pacha is full of interest, our readers will doubtless be gratified with the accompanying Sketch of a portion of the Encampment of Omer Pacha upon the eastern shores of the Black Sea. The locality is thus described by the sketcher:—

About eight miles to the eastward of Batoum, and within the same distance of the Russian frontier or Georgia, is situated the picturesque old Castle of Zikinzir. Its ivy-grown battlements crown the summit of a hill which rises abruptly from the sea-shore. The surrounding country is clothed with the richest verdure; magnificent trees are scattered over the green hill sides like those in an English park. Long creepers and tangled underwood almost conceal the precipitous walls of rock which overhang the sea. White tents gleam everywhere from beneath the rich foliage; for Omer Pacha has chosen this lovely spot as a camping-ground for a portion of his army. Their tents line the shore, and creep up the mountain sides until they are lost in the wood. Towering above all, at a great distance, rise the snow-capped peaks of the Ossurgheff. It is altogether a fairy-like scene, and one which the Tunisian regiments encamped here, with their swarthy African officers, are certainly not capable of appreciating.

In the view on the extreme right is a central mound crowned with low fortifications; in the valley between which and the castle is the picturesque castle ruin, behind which are tents, and many more on the slope of the hill to the left. The distant range of hills is covered with snow; the middle range is richly wooded; and the foreground, reaching to the sea-shore, is covered with tangled underwood and occasionally fine trees.

Our acknowledgments for this Sketch are due to Mr. Laurence Oliphant, who, at the date of his letter, was staying with Omer Pacha in Georgia, and intended proceeding from thence into Circassia, having already coasted along the shores of the Black Sea, touching at the principal places between Anapa and Trebizond.

OMER PACHA.—FROM A PHOTOGRAPH BY FENTON.

It is now several months since it was reported that Omer Pacha was to lead a Turkish army through the wild mountain passes of Armenia to the seat of war. Time rolls on, and the issue is that this distinguished General, who by the last accounts had reached Batoum, is sent without an army to restore the balance of affairs by his own genius and skill. At Batoum he was organising his army, with which he intends to assault Kaleesi. He is greatly vexed that the promise that was given him that his old troops should be placed at his disposal has not been kept; and it has cost considerable persuasion to prevent his throwing up his command, as he originally intended to do. The victory at Kars will, however, probably enable Omer Pacha's forces to undertake some important operations in the Crimea. The Allied forces would then amount to 200,000.

Omer Pacha himself (says the *Times'* Correspondent, writing Sept. 24) is still at Batoum; and Ferhad Pacha (General Stein) is in command. At present, however, the number of troops actually landed amounts only to about 4000: and the duties of the General consist chiefly in preparing for those who are shortly expected from Varna. The Commander-in-Chief will arrive in a few days with the remainder of the troops, which have been encamped in the neighbourhood of Batoum. It is much to be regretted that this expedition was not undertaken earlier in the year. It will be impossible now before the winter to do more than advance on Kutais. Under the most favourable circumstances the army cannot commence the march before the beginning of November, and at that late season of the year the advance of a large army for more than 100 miles through a difficult and almost unknown country is, to say the least of it, a hazardous undertaking. However, it is not the fault of Omer Pacha that this is so. The Seraskier in Constantinople is not more prompt in its proceedings than the War Department in Whitehall-gardens; and, in spite of the efforts of his Highness to get his army under way sufficiently early to enable him to operate with effect this summer, he has been vexatiously detained until the advance on Tiflis has become an impossibility. * * * The Turkish Commander has a serious ground of complaint against the Allied Generals, who refused to spare more than the Turkish force in the Crimea, which for so many months has been an encumbrance rather than an assistance to the operations in that peninsula. It is to be hoped that the importance of affording the Turkish army a prompt and energetic support will be recognised in England, and that a Christian force will be sent without delay to operate with it. Apart from the necessity which exists of adding to the numerical strength of the present army of invasion, there are the strongest reasons why the reinforcements should consist rather of Christians than of Mahometans. The antipathy of the Christian population in Asiatic to the Turks has already manifested itself. They look with suspicion and distrust upon the soldiers who are now occupying the Russian town, and, so far from desiring to facilitate their progress through the country, they have destroyed some of the bridges, and otherwise injured the roads upon the line of march. Prince Michael, the Princess Dadian, and other nobles through whose properties the army will pass, do not hesitate to confess to Russian sympathies, and, if their subjects do not share in an actual predilection for Russia, they do not approve the prospect of the substitution of Ottoman for Muscovite rule—a result which they naturally expect to follow the invasion of their country by Turkish troops. This distrust would be completely dispelled by the presence of an English or French contingent.

The Correspondent concludes:—

Her Majesty's ship *Cyclops*, Lieutenant Ballard, has just steamed out of the harbour (Souchum Kaleh) for Batoum, where she is to wait for Omer Pacha and his suite, who are to return in her to this place. Although Souchum Kaleh is somewhat further from Kutais than Batoum, the roads are so much better as to render it a more desirable basis of operation. The absence of any harbour at Redoubt Kaleh or the mouth of the Rhion has limited the choice between Batoum and Souchum. Mr. Longworth, the British Commissioner, is here, preparing for an expedition into the interior of Circassia, where he will confer with the Naib and some of the more influential chiefs upon matters relating to the present operations. The French Consul, M. Champoiseau, remains at Souchum. Prince Michael has been sent for to meet Omer Pacha, who will call upon him to declare his sentiments, and, in the event of his not offering that assistance which will be expected from him, he will be compelled to leave the country. There is a good deal of fever still prevalent among the Turkish troops, but, although the sick-list is in consequence large, the malady here is not often attended with fatal results. The approach of winter is already driving it away, and a few miles from the coast the country is perfectly healthy.

The accompanying Portrait of Omer Pacha is copied, by permission of Messrs. Agnew, from one of Mr Fenton's beautiful photographic pictures taken in the Crimea. It shows the General on horseback; his seat, though too Turkish for our notions of equestrian propriety, is firm and easy.

TE DEUM FOR THE FALL OF SEBASTOPOL.—On Sunday last, in accordance with an order issued by Cardinal Wiseman, a solemn "Te Deum" was chanted throughout the Roman Catholic diocese of Westminster for the fall of Sebastopol and the further successes of the Allies. The prayers of the faithful were likewise asked for the gallant men who have fallen; and the subject was noticed by the officiating clergy.

PORTION OF THE CAMP OF OMER PACHA, UPON THE EASTERN SHORE OF THE BLACK SEA.—SKETCHED BY LAURENCE OLIPHANT.

INDIAN COTTON.—THE WEBS OF DACCA.

To this branch of ingenious manufacture a new interest has been attached, by the display of several beautiful specimens in the Paris Universal Exhibition.

Our Engravings illustrate the mode of preparation of the raw material, and the several processes of manufacture of the finer sorts of Indian mus-

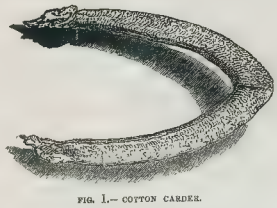

FIG. 1.—COTTON CARDER.

lins, some of which are woven from threads of such extraordinary delicacy, that a single pound of cotton is spun for it into a length of 250 miles; and with all our genius of invention, our wonderful machinery, and extraordinary skill, we have never yet been able to equal the muslins

FIG. 2.—THE BOW.

of Dacca, of which Tavernier says, "they are so fine that you can hardly feel them in your hand." An English writer of the seventeenth century, speaking contemptuously of them, termed them "the shadow of a commodity;" but they have been called by those of higher taste, who looked at their exquisite delicacy and evenness with wonder, "webs of woven air."

The general idea as to this wonderful manufacture is, that it is produced almost at random, and with the rudest tools—that the Indian is guided by a kind of instinct in its make, and is but a rough and careless-fingered worker. We are told of the weaver cleaning his cotton with a piece of fish-bone, using as a spindle a hollow reed, hanging up his loom by a river side between two trees, digging a hole in the ground for his legs, and there weaving forth those moon-cloud webs that queens of old were proud to wear.

FIG. 3.—COTTON ROLLER.

There is some truth in the description, but none in representing the Hindoo as a manufacturer at random. In his case, as in every other, the excellence is attained by a minute attention to every detail in the preparation of his material, and of all circumstances influencing its condition during the process of manufacture—an amount of knowledge, no doubt, arrived at slowly, but still attained to ages ago; for these muslins of the East are mentioned amongst the earliest articles of commerce; and in one of the hymns of the Rigbeda, dated fifteen centuries before our era, there is reference to cotton in the loom. Nor is it strange that the native Indians should, by practice, from generation to generation, have acquired surpassing skill in the manufacture of a material indigenous to their soil, and the fabrics of which were

FIG. 4.—YARN WINDING.

especially suited to their climate. Speaking of India, Herodotus says, "the wild trees in that country bear fleeces as their fruit, surpassing those of sheep in beauty and excellence, and the Indians use cloth made from those trees."

KNOWLEDGE OF THE QUALITIES OF COTTON.

The cotton from which the Hindoos weave their finest muslins is of inferior quality. The best-informed Manchester manufacturers state that all Indian is coarse, short in staple, and unfitted for the fine spinning for which American sea island cotton is alone employed in this country.

FIG. 5.—YARN WINDING.

This finest American cotton is cultivated with utmost care, and the best selected for the finest English manufacture.

The native Indian, on the contrary, is but a careless cultivator of cotton, and neglectful of attention in picking and preservation, which would save much after-labour. He is, however, thoroughly well

FIG. 6.—TWISTING THE THREAD.

acquainted with the qualities of the different kinds, and makes up for indifferent sawing by a profusion of labour and pains in the after preparation of the material. He knows that the thread made of cotton grown to the east of Dacca must be used in the very season it is grown or it will not swell in bleaching; and this swelling constitutes his distinction between the best and inferior cotton; and for spinning with the fingers the short fibre suits as much better as the long for machinery.

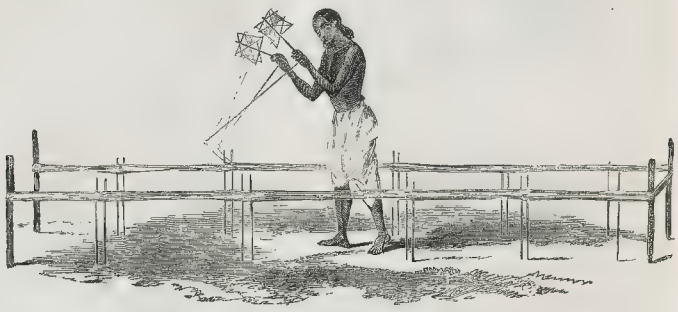

FIG. 7.—WARPING.

PROCESS OF CLEANING, PICKING, AND CARDING.

As the cotton is not cleanly picked in the field, it is first necessary to pick out carefully with the fingers all fragments of the leaves or bracts, stalks, and capsules. The next process, previous even to the separation of the seeds, is a kind of carding to which the seed-cotton is subjected. For this purpose the Hindoos of Dacca make use of the jaw-bone of a fish, one of the *Sparoida*. The teeth of this fish, being very numerous, closely set, and recurved like those of our pike, act as a fine comb in removing

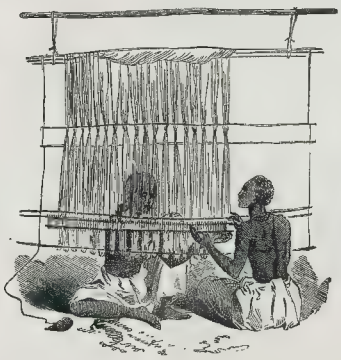

FIG. 8.—CARDING.

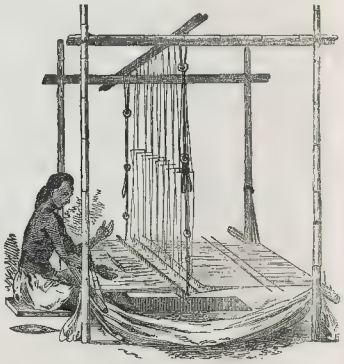

FIG. 10.—THE LOOM. WEAVING.

the loose and coarse fibres of the cotton, as well as minute particles of earthy or any other extraneous matter. (Fig. 1.)

BOWING.

The next process is that *bowing* (Fig. 2), which has been so named from a *bow* being the instrument employed, and which has given its name to one kind, the *bowed* Georgian cotton, though the instrument is not used in the present day in America. It consists of a large bow, which is suspended to the roof of a room, often to the string of another bow. The string, while in contact with the cotton, being struck with a conical-headed

FIG. 9.—BEAMING.

mallet, the cotton, by its vibration, flies about in a light fleecy cloud, and is thus separated from dust and dirt. This instrument is still in use in some of our manufactories—for instance, in hat-making.

But the cotton for the fine Dacca muslins is bowed or teased with a bow of more delicate construction, as it consists of a piece of bamboo, with two elastic slips of the split rattan, or other material slipped into its two ends, and strung with a cord made of catgut, morgan silk, or of plantain or ratan fibres twisted together. The bamboo slips are moveable within the centre piece, and, according as they are drawn out, or pushed back, so is the tension of the cord increased or diminished. The whole, being of a size to be held in the hand, can easily be managed.

SPINNING.

The cotton, by the aid of this instrument, being brought to the state of a fine downy fleece, is then "spread out and lapped round a thick wooden roller." This being removed, the cotton is pressed between two flat boards, then rolled round a piece of lacquered reed about the size of a quill, and, lastly, wrapped in the smooth soft skin of the *Cuchia* fish, and is so preserved from dust or soil whilst it is held in the hand during the process of spinning.

The spinning of the fine yarn is entirely performed by women, usually under thirty years of age, and it is to their delicate organisation and exquisite sensibility of touch that is due the inimitable specimens of their skill.

SPINNING.

The spinning apparatus, which is usually contained in a small flat work-basket, not unlike the *colothiers* of the ancients, comprises the cylindrical roll of cotton, a delicate iron spindle, a piece of shell embedded in clay, and a little hollow stone containing chalk-like powder, to which the spinner occasionally applies her fingers. The spindle is not much thicker than a stout needle, and has attached to it, near its lower joint, a small ball of unbaked clay, which gives it sufficient weight in turning. This rests in the hollow of the piece of shell, and she turns the spindle between the finger and thumb of one hand, whilst she at the same time draws out the single filaments from the roll of cotton held in the other hand, and twists them into yarn upon the spindle; and, to obtain the requisite moisture of air, it is sometimes necessary, the thermometer being 82, to spin over water.

For ordinary purposes the cotton, instead of the above-described carding, is sometimes thrashed, that is, spread out upon an outstretched apron of coarse cloth, and beaten with switches, when the seed, &c., fall through. Instead of the primitive mode of pulling the cotton from the seed to which it adheres, the cotton is placed on a board and an iron roller moved backwards and forwards over it either by the hand or foot (see Fig. 3); thus the fibres are separated without the seeds being crushed. The foot-roller is used in the southern Mahratta country, and the hand-roller in Bengal; but generally all over India they use the *charka* or cotton-cleaning machine, formed of two cylinders kept in close opposition, and moved upon each other by their ends being formed on the principle of the Archimedean screw; the instrument, though usually clumsily made, answers its purpose well; the cotton is drawn between the cylinders, the seeds unable to pass through are separated and fall down, and the fibre is not injured.

The coarse kind of cotton which is grown in the hills near Dacca, and called *Bhoga* cotton, is used in the manufacture of thread for coarse fabrics. This is separated from its seeds by the common Indian, or hand-gin, and the wool is *bowed* in the usual manner. It is then spun into thread by the common spinning wheel, which is like the old wool wheel, called also big wheel from the size of its wheel. But the Hindoo wheel, though apparently more rude, has advantages in working which readily become obvious in changing its form: thus, for instance, the rim being formed of string instead of wood or metal, gives a certain degree of tenacity as well as of elasticity. While the straight spindle is set in motion by the wheel, the finished yarn or roving is held in a sloping position to the spindle, so that at every turn of the spindle the yarn slips off its point and gets twisted without getting wound upon it.

PREPARATION OF YARNS BY THE WEAVER.

Winding.—The yarn obtained for the weaving is first tried in water. Being usually wound on small pieces of split cane, called *nuris*, it is first passed through these, and then fixed in the cleft end of a piece of bamboo. The weaver, holding the latter between his toes, draws off the yarn from the reel, which revolves upon the stick passed through it, and winds it upon the reel (see Fig. 4) which he holds in the other hand, and whirls round in a small cup of smooth cocoanut-shell. When the yarn is in the form of a skein, it is put upon a small wheel made of fine slips of bamboo and thread, and then wound up upon the reel (see Fig. 5). The finest thread is separated from the coarser, and the reel for the *woof*. The latter is steeped for several days in water, which is frequently changed, reeled, and dried. Skeins of a convenient size are then wound up, again steeped in water, and tightly twisted between two sticks (see Fig. 7); they are again reeled, untwisted, unwound, and put into water mixed with charcoal-powder for two days, then rinsed in clean water, and hung up to dry in the shade. Each skein is again reeled, steeped in water for one night, dried, and spread over a flat board, smoothed down with the hand, rubbed over with a paste, or size, made of rice and arsenic, and with water. The skeins are then reeled upon large frames, the threads widely separated, and then dried in the sun. The thread is again reeled and sort of prepared for three separate times. The yarn for the warp of striped or chequered muslins is prepared by twisting a certain number of threads together, viz., two for each stripe of the *Doorea* and four for that of the *Charkana* muslins. The yarn for the woof is not prepared till two days previous to the time it is required for weaving. It is steeped in water, rinsed, wound on large reels, and then lightly sized with rice-paste, and again reeled and left to dry in the shade, and used daily.

Warping (Fig. 8).—The thread employed in weaving is well known to be of two kinds: that which stretches lengthwise being called the *warp*, and is usually stronger, harder, and more twisted than that which runs across, and is called the *woof* or *weft*—and is softer and less twisted than the other. The yarn being properly prepared, the next step is to arrange the threads which are to constitute the warp alongside of each other in one parallel plane. The Hindoo performs the operation in the open air, first fixing four short bamboo posts into the ground at measured distances, according to the intended length of the cloth. He then places between them several rods, about four feet apart, in two parallel rows. The weaver, holding a small wheel of warp-yarn in each hand, passes the latter over one of the posts, and then walks along the rows, laying down two threads, and crossing them by crossing his hands between each pair of rods, until he comes to the post at the opposite extremity. He then retraces his steps backwards and forwards as often as there are threads of the warp to be laid down. The small reels on which the warp yarn is wound are made of fine splits of bamboo and thread, and are each furnished at right angles to a piece of stick, forming an arm, at the end of which there is a ring of coarse glass, through which the yarn runs. In striped and chequered muslins, two pairs of hand-reels, one with single and the other with twisted thread, are required for the warp. This is the simple form of the warping-frame, or warp-mill, with its heck—and is used either the warping-frame or warp-mill, with its heck—and is used to divide the warp-thread into the proper number on the two alternate reels, one for each hank.

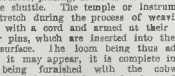
Applying the Reed to the Warp, or Drawing in (in Fig. 9).—This part of the process is by the Hindoo women performed either immediately after the warping, or sometimes not until after that of the *beaming*. The *reed* is so called from having been originally formed of split reeds, but by the Hindoo weaver it is generally formed of fine splits of bamboo, firmly fixed between ribs of split cane. Mr. Taylor states that the finest reed used in the Dacca looms contains only 2800 dwts. in a space of forty inches in length. The warp, being folded up in the form of a bundle, is suspended from the roof of the weaver's hut, with one end of it unfolded, and hanging down to within a foot or two from the ground. The reed is then suspended by two slight cords to the warp-roll and loose rods, and hangs in front of the unfolded portion of the warp. One weaver sits in front of the reed, and another workman on the other side of the reed. The end loops of the warp having been cut with a knife, the weaver in front passes an iron wire or sling hook through the first division of the reed to the other workman, and the ends of the two outermost threads being twisted upon it by him, it is drawn back, and the thread thus brought through. Thus two threads are drawn through each of the divisions of the reed in succession. The ends of the threads are then gathered up in bunches of five or six, and knotted; a small bamboo is then passed through the loops formed by the knots.

Beaming, or applying the Warp to the End Roll of the Loom (Fig. 10).—Like the warping, performed in the open air. A workman holds the warp folded upon the reed in the form of a bundle. The end of it being unfolded, a thin slip of bamboo is passed through it, and it is then received into a longitudinal groove in the end roll (yard beam) and fastened to it with pieces of string. The roll rests in two loops of cords attached to two posts, and is turned round with a winch. The warp threads are next arranged, and much in the same way as in this country, adopted probably from the East. The outermost thread being placed according to the intended breadth of the cloth, a portion of the warp is unfolded and kept on the stretch by the person holding the bundle, while two workmen proceed to arrange the threads in the middle. This they do with a small piece of cane, softened and beaten out at one end into the form of a brush (like the separator or ravel), and then gently tap them with an elastic cane, held in the form of a bow, to bring them into a state of parallelism. The portion of the warp thus arranged is carefully wound upon the end roll. Another portion is then unrolled and similarly prepared.

Preparing the Healds or Heddles.—For this purpose a portion of the warp behind the reed is unfolded and stretched out, when a broad piece of bamboo is placed edgewise between the threads of the warp, in order that the weaver may have sufficient room to form the loop of the heddles. These are formed of reddish-coloured cotton, which is passed between the separated threads of the warp to the opposite side and is fastened to a cane, to which is attached an oval piece of wood of about eight inches in length. The weaver then dips two fingers between the outermost thread of the warp and the one next to it, and brings up the loop of the cotton-thread string, which passes upon the inside of the oval piece of wood, and is crossed upon the cane above. The same process is repeated between every two threads of the warp, the cane and oval piece of wood being gradually moved across the warp as the work proceeds. Two sets of loops are formed on each side of the warp; when those of one side are finished, the warp is removed from the post, reversed, and stretched out as before, and the process of the other side is repeated. The canes on which the loops are crossed are fastened by strings to four small bamboo posts, and two upper ones being attached, when placed on the loom, to the strings of the heddles, and the two lower ones to the weights of the treadles.

The Loom and Weaving (Fig. 11).—In most accounts of Indian weaving the weaver is described as suspending his loom between two trees, and allowing his treadles to fall into a hole in the ground, into which he inserts his legs and feet. But in Dacca the loom is horizontal, and always erected under a roof—either that of the weaver's house, or that of the shed built for the purpose. Four bamboo posts are firmly fixed into the ground, and connected above by two side-pieces. On these is supported a transverse rod, to which the sling of the lay or batten and the balances of the heddles are attached. The warp wound on the end roll (or yarn beam), and having reed and heddles attached to it, is brought to the loom and fixed to the breast roll (or cloth beam) by a small slip of bamboo, which is passed through the loops of the warp, and received into a longitudinal groove in the beam. The end and breast rolls are attached to the four standards, and are turned round with a winch. The lay or batten consists of two broad flat pieces of wood, grooved on their inner edges for the reception of the reed, which is fixed in its place by iron or wooden pins passed through the ends of the lay. It is suspended from a transverse rod above by slings passing through several pieces of sawed shell. By altering the distance between these segments of shell, which is done by lengthening or shortening the intermediate slings, the range of movement of the lay may be diminished. The extent of this range of motion regulates, in a great measure, the degree of force which is applied to the weft in weaving. The proper adjustment of this part of the apparatus is considered by the weavers as one of the nicest operations connected with the loom. The balances of the heddles being suspended to the transverse rod, the treadles, made of pieces of bamboo, are contained in a pit dug in the ground.

The Shuttle is made of light wood of the beetle-nut palm (*Areca catechu*), and is spear-shaped from point to point. It is from six to eight inches in length, and three-quarters of an inch in breadth, and weighs about two ounces. It has a long open space in its centre, in which is



THE SHUTTLE

longitudinally placed a moveable iron wire, upon which the reel of the weft thread revolves, passing, as it is thrown off, through an eye in the side of the shuttle. The temple or instrument for keeping the cloth on the stretch during the process of weaving is formed of two rods connected with a cord and armed at their outer ends with two brass hooks or pins, which are inserted into the edges of the cloth on its under surface. The loom being thus adjusted, we see that, however rude it may appear, it is complete in all its parts. And the weaver, being furnished with the above cooperative yarn, plays his unrivalled skill in performing the various delicate operations necessary to the weaving of these webs of woven air. To lessen friction on the two threads of the warp during the process of weaving, the shuttle, reed, and lay are all

BAKERS, MILLERS, AND FARMERS.—THE PRICE OF BREAD.

A DEMONSTRATION was made on Sunday, in Hyde-park, to take measures for procuring a reduction in the price of provisions, and especially in the price of flour and bread. The occasion is appropriate, therefore, for bringing under consideration the present high price of bread, and the circumstances on which it depends. In general, the people seem impressed with a notion that the high price is the consequence of a combination amongst the bakers, the millers, and the farmers to extort something from the consumers to which they have no right; and that, but for this combination, bread and flour would be considerably cheaper. But our readers are well aware that there are two or three bakers in almost every street who live in perpetual rivalry, tempting customers by splendid promises of selling on the lowest possible terms. They do not combine. The total number of bakers in the metropolis, men and women, old and young, employers and journeymen, is 12,123; and the number of employers is at least 1781; but the population returns concerning employers are essentially incomplete—many of them, in some trades "*more than half* of the whole number," having omitted to fill up their schedules properly. Taking only the number mentioned—though probably much too small—is a combination amongst nearly 2000 tradesmen, every one avowedly contending with another for custom, conceivable? We can supply, however, a proof, if there be such a combination, that its effect is to reduce, not to enhance, the price. To 1815 the price of all the bread sold in London was fixed by the Lord Mayor and Court of Aldermen, by an examination of the price of flour; and under that regulation the price of bread was much higher in proportion to the price of wheat than it has been since and is at present. The average price of wheat, for example, in the last six weeks, was 76s., and the price of the 4lb. loaf is 10d. In September, 1814, the last year that the assize of bread was published, the price of the quartern loaf was 1s. 1½d., and the price of the quarter of wheat was 77s. 7d., the difference in the price of wheat at the two periods being 1s. 7d., and the difference in the price of the loaf 3½d., the former a reduction of 2 400 per cent, and the latter a reduction of 23 per cent. But the quartern loaf weighed 4 lb. 5 ounces, or about one-fourteenth more than the 4 lb. loaf. The real facts, therefore, and the real relation are, that in 1814 69 ounces of bread cost 1s. 1½d., with wheat at 77s. 7d., and in 1855 64 ounces cost 10d., with wheat at 76s. In relation to the price of wheat, bread is now in London about 18 per cent cheaper than it was in 1814. This proves, therefore, that the combination of the bakers, or rather their competition, has greatly reduced the price of bread to the benefit of the consumers.

Nor is this relative cheapness the result of modern adulterations, as some persons may suppose; for gypsum, marble dust, and other substances less innocent than potatoes were formerly and frequently mixed with the flour. Reports of Committees of the House of Commons and the records of the courts of law assure us of these facts. If adulteration be now continued, it is by no means a modern invention. It is of long standing, in general, and is the vice of the public, not exclusively of bakers. It is found in high offices, where imperfect or very highly-adulterated services are palmed off on the tax-paying people, as well as at lowly counters. Indeed, it has been remarked that adulteration of bread diminished very much after the Corn-laws were repealed. The low price of wheat and flour between 1850-1853 put an end to the temptation to adulterate, which has again become powerful since the bad harvest of 1853, and great consumption raised the price of wheat exorbitantly in 1854. Roguery may be found in all classes—amongst bankers and brokers as well as bakers; and, if the latter be not more honest than their neighbours, none surpass them in diligence to serve the public.

Baking involves no difficulties, and requires no great amount of capital. Almost every old woman in the rural districts was in her youth a baker, and almost every family can, if it please, bake its own bread. Many of them have a little oven by the side of the kitchen fire. A combination of bakers, under such circumstances, to keep the price of bread higher than it ought to be, in order to pay them for their labour, is an impracticability. If they be injurious to the welfare of others, why are they so largely employed? No person is bound to employ them. They are not like Custom-house officers, or Excise officers appointed by the State, who must be paid. The people employ them voluntarily, and have given up baking bread because the bakers do the business better and cheaper for them than they can do it themselves. Half a century ago there were scores of villages in the county of Kent alone in which there was not a single baker, and, except at the public-house, it was as difficult to buy a loaf of bread in such villages as a sheet-anchor. Now there is not a village without two or three bakers. In 1804 there was not, Mr. M'Culloch informs us, a single baker in Manchester; now, men and women, masters and journeymen, there are 1329 persons engaged in the baking business in that city. By common consent the great usefulness of the baker is recognised, and from the common demand the number of bakers has continually increased. Private families have almost universally given up baking their own bread, because they find it more advantageous to buy bread of the bakers. If these latter have a monopoly it is conferred on them by their customers, and the wrong done, if any, is the fault of the complaining public.

Millers require more capital than bakers, and their trade is in fewer hands. The number of them in the metropolis is—employers, 24; total, 779 persons. But the business of supplying the metropolis with flour is not exclusively in their hands. Every week, and perhaps every day, quantities of flour are brought to London by every railroad. Last week 910 sacks, home made, arrived in Mark-lane. We must extend, therefore, the radius of our supply for the metropolis to the whole of the country. The number of millers, employers, in England and Wales, is 2394; and of persons engaged in the business 32,832. Amongst them there cannot be a combination. Further, the source of our supply is not circumscribed by our own territory. Almost every week flour arrives in the London market from Spain; last week, of foreign flour, 4160 sacks were imported. For many months none has been brought from America, because the price there was higher than the price here; but now it is again beginning to come. Combination amongst the metropolitan millers is effectually kept in check by the millers of all England, who watch all the markets, and send their flour by rail or by sea to any market wherever they can get 6d. a gallon more for it than at their mill. Combination amongst the millers of all England—were such a thing possible—is kept in check by the competition of the millers of Spain, France, and the United States. It is customary, we know, to abuse the millers; but they are as guiltless as the bakers of any combination, except it be a combination to manufacture flour better, and supply it more abundantly and cheaper, which they have accomplished; and flour, like bread, has become cheaper in relation to the price of wheat than formerly.

And what can be said against the 270,000 farmers and upwards? Is it possible that they can enter into a combination to keep up the prices? Why, they are obliged, the instant they can thrash out their corn, to hurry with it to market in order to have the means of paying their rent and taxes and continue the cultivation of their land. Combination amongst them, to be successful, must embrace the whole empire. All the markets are now watched by thousands of diligent observers with more intensity than ever cat watched a mouse, and the slightest movement a knowledge of which is at once conveyed by telegraph—in any one market, by which a dealer at ever so great a distance can make 6d. a quarter, is eagerly pounced on, and the advantage greedily seized. There is a continual desire on the part of farmers and dealers to send their corn to the dearest markets, which keeps all markets down. Our markets, too, are open to all the world. If the merchants of Rostock, or Dantzic, or New York, or Alexandria—and with most of them there are telegraphic communications—saw that any money could be made by sending corn hither, hither it would be sent. In fact, however, corn at all these places has for some time been as dear as in England, and no profit could be made on sending it hither. Wheat is now selling in New York at a price equivalent to 68s. 8d. per quarter, which scarcely gives a profit on importation at our present prices—though some is coming.

In 1854, and to the present time, the price of corn in France, Belgium, Holland, and Prussia, has been as high as in England; and very often lately corn previously imported, or of our own growth, has been exported from England to those countries. The supposed monopoly of our farmers has therefore been shared by all the world, and all the world has competed to supply our markets as cheaply as they could be supplied.

The farmer must be paid for his labour, and he must sell his corn at a price which enables him to pay his taxes, his rent, his tithe rent-charge, his labourers, his greatly-increased expense for manures, &c., and continue his cultivation, or we should all starve. What is a just price can only be known by the higgling of the market. There is no other means of determining it. The Government cannot settle the price. For the buyers themselves exclusively to fix it is a barefaced injustice; neither sellers nor buyers can settle the matter exclusively; it can only be settled by their mutual dealings; and when the market is open and free as at present, when corn can be brought from every quarter of the globe, when flour can be sent to the metropolis by every miller in the land, when bakers can open shops in every street, the public may be assured that bread is always sold at the very lowest price compatible with properly remunerating all the industrious and skilful men who grow corn, make flour, and bake bread. By this means we at all times ensure their services, and ensure as abundant a supply of food as Providence vouchsafes to bestow on their united and untired industry.

Some persons allege that bread ought to be cheaper than it is because the harvest has been abundant. On this point opinions differ; the yield is very different in different places, and no one believes that the harvest of 1855 is equal to the harvest of 1854. Certain as was the wheat crop in that year, and undoubtedly it was the largest ever grown in England, it did not suffice to supply the wants of the people. Between the end of August, 1854, and the end of August, 1855, the quantity of grain, meal, and flour imported of all kinds, but principally wheat and flour, was 5,786,816 qrs. About one-sixth of all the bread consumed was made of foreign wheat or flour. Thus the largest harvest ever grown in England, the produce of greater skill and industry than ever before were engaged in cultivating the land, did not suffice, by one-sixth part or two months' consumption, to feed the people. England is a lovely land—it is our native land; but its produce, whatever may be our skill and industry, will not suffice to feed and clothe us. We must have recourse to other lands and other people for the means of our subsistence and our welfare. Providence has so created the world, making other nations dependent for the means of subsistence and of welfare on the produce of England and of English industry.
